Appendix

Address by Hon. Hubert H. Humphrey, of Minnesota, Before Minnesota Association of Student Councils

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. HUMPHREY. Mr. President, it was my privilege to address the Minnesota State Association of Student Councils at their annual meeting in Thief River Falls, November 8, 1957.

This student council association represents the elected study leaders of our Minnesota high schools. Here we find bright, alert, inquiring young minds seeking answers to the many perplexing issues which confront our society. It is always a real privilege and a challenge to speak to this group.

I ask unanimous consent to have printed in the Appendix of the RECORD the text of my address prepared for the annual meeting of the Minnesota State Association of Student Councils.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BEFORE MINNESOTA ASSOCIATION OF STUDENT COUNCILS BY SENATOR HUBERT H. HUMPHREY, NOVEMBER 8, 1957

Every time I think about those Russian satellites sailing over our heads every 90 minutes, the thought is brought home hard to me that some 150,000 topnotch young Americans, this year, and last year, and the year before that, did not go on to college—just because of financial difficulties. One hundred and fifty thousand students out of the top echelon of their classes in high school did not go on to study in college—just because of a lack of means to pay for college.

How many of those who did not go to college 10 years ago, for that same reason, would now be available to help our country in its desperate shortage of scientists and engineers—had they had the chance?

Every time I get a briefing from the State Department specialists on the Middle East, or India, or any other part of the Asian-African world where the United States vital interests are increasingly concerned, I am appalled once again by the fact that only a handful of Americans can talk the language of the peoples of Asia and Africa—let alone of Europe. The lack of a common language is an almost unsurmountable barrier at times to the transmission and exchange of ideas. Yet too few American students today are preparing through language and area studies for the challenge of America's growing role in these vast, underdeveloped areas of the world.

The last 10 years have seen almost incredible changes in our world.

Atomic energy—with all its shattering dangers and unlimited opportunities—is intruding into our lives more each month. We have a bear by the tail, a locomotive that threatens to run away down hill with us. We have to tame this great power before it enslaves us, or destroys us.

The beep-beep-beep of the first Russian satellite told us that we have crossed another threshold—into the age of space flight.

No longer is it idle speculation that man may some day reach the moon and the planets. The new speeds of today—of a revolutionary nature—are destroying all our old ideas of space and distance, revolutionizing military strategy, revealing new concepts of communication and travel.

These profoundly important technological breakthroughs have made almost desperate the problem of providing enough scientists and technicians of sufficient quality to regain, and hold, world leadership in the technological race.

But the vast political changes in the world, in the relationship between nations, the breakup of the old colonial empires, the creation of a new Soviet empire headed by ruthless and tenacious leaders, the birth of new nations, and the rising tide of nationalism in Asia and Africa—these political-social changes in the world pose an equal challenge to American leadership.

They dramatize the imperative need to find among our young people, not only brilliant research and technical workers, but also leaders for the next generation in every area of our social and economic life.

If we needed more scientists and technicians 10 years ago, we need them doubly now. If we needed then more young people trained to work with the peoples of other nations, and to lead our own, we need them doubly now.

If we needed in 1947 to seek out and encourage creative, industrious, intelligent men and women for every field of American effort, that need is more imperative, more despearte than ever before.

For the truth of the matter is that the backward peasant nation that was the Soviet Union even 30 years ago has raised itself—at what cost in human suffering and the loss of human dignity we can only estimate—to a high level of technological accomplishment. This remarkable feat cannot help but attract the young nations of the world who are themselves now taking their first faltering steps out of their age-old poverty and domination by colonialism. The sputnik merely dramatizes the whole broad field of Soviet accomplishments.

It is not only Soviet missiles and rockets that face us. There is, indeed, a formidable Soviet military challenge, in the form of intercontinental ballistics missiles, in a vast fleet of missile-equipped submarines, and in its huge standing army. We do face a shrewd and ruthless Soviet leader—not at all adverse to the use of threats and of force, if need be. And it is literally true that we have, through the most incredible kind of complacency, permitted the Soviet Union to leave us some months, and perhaps years, behind in rockets and missiles.

But make no mistake about it. It is not only Soviet missiles and rockets we face. Nikita Khrushchev has thrown down the gauntlet across the board. He boasts that the Soviets will be supreme in nuclear power, in consumer-goods production, in cultural activities, in agricultural production, in education.

Yes, the new nations of Asia and Africa, representing the great uncommitted weight of the world's manpower and resources, are watching intensely the onrushing Soviet drive in science and technology.

It is time we realized that the Soviet is waging allout war on us, and that we are locked in a struggle which will demand every resource of our intelligence and our spirit if we are to survive. We are in a one-game world series and we cannot afford to lose any more innings.

The two sputniks are signs in the sky that the race between the Soviet world and the West has entered a new, a deeper, a more profound dimension. We have been shocked into a realization that we must engage the Soviet in every area in which human intelligence can be brought to bear but our own leaders have not yet charted the way for our Nation to pull itself out of the spiritual and psychological doldrums of the past weeks.

We should not fear this competition. We should welcome it.

First of all, we must decide to compete.

That is a decision which must be taken by the President, specifically, but ultimately it must be taken by us all, as a people, as a Nation. I am not sure that either the President or our people have yet actually made up their minds that we must compete. We have not yet faced up to the implications of this competition. We have not really assayed the costs in energy, in money, in worry, in sacrifice, to compete effectively with the Soviet Union, across the board.

A second great decision we must make, if we are to compete effectively, is that there must be a fundamental change in America toward the intellectuals—the scholars in our midst.

What America needs is more eggheads and fewer fatheads.

I agree.

Anti-intellectualism—the fear and distrust of thinking people—is a disease we simply must stamp out. We cannot afford any more the luxury of laughing at eggheads as too often some have done, or of suggesting there is something treasonable about being an intellectual.

It was Soviet eggheads who got the sputniks off the ground, and it will be American eggheads who get our nation off the ground—if we but give them the support they need!

Frankly, I am on an egghead search. I am looking for more scientists and engineers, more gifted young people in every field of American effort.

And I predict that since the launching of the two sputniks, the whole country will be out looking for eggheads before long. We have them. They are here. You have quite a collection right here in your auditorium. But one needs to find them all, to encourage them, to help them.

Not all eggheads are geniuses. Not all eggheads are potential scientists and engineers. An egghead is simply a thinking, reflecting person, who may well have a strong streak of creativity in him—or her. The basic hallmarks of the egghead are concern primarily with ideas, a restless, inquiring mind; a dedication to something higher and outside himself.

Some are hard boiled and some are soft boiled—but we need them all, and it is high time that the American people and our United States Government decided to make it possible for a far higher percentage of young potential scholars to move up into positions of leadership!

I have indicated my distress over the fact that 150,000 brght young Amercans every

year do not even go on to college after high-school graduation because of financial difficulties of one kind or another. But how many thousands more promising young people have to drop out of college after a year or two, for the same reason? We know it is the leading cause of dropouts after the freshman year. How many truly brilliant scholars find it necessary to forgo postgraduate work because they have to get out and make a living for their families?

I just don't think we can any longer afford to look on these losses among our budding intellectual leadership as something that isn't our business and our Nation's business.

We can no longer view these drop-outs and failures to proceed educationally as simply personal tragedies. They are—each and every one—a loss to us all, a loss to our society, a loss to the free world.

Every time a gifted young man or woman fails to go on to college, or has to drop out of college because of a lack of financial support, we lose a battle in the cold war. In this total struggle between ways of life, we must engage the enemy in depth. We must have reserves. We must look far into the future.

There are many, many things we can do to cut our losses of this nature, and to make sure that we are using effectively all the vast creative forces that lie within the ranks of our young people today. I shall outline for you in a moment some of the things I believe our Federal Government can and should do, through new legislation, to prevent this tremendous waste of good brainpower.

But I want to emphasize that not everything can be done through the Federal Government. The task of providing genuine educational opportunity for our young people must inevitably fall largely to our local communities and school disrticts, our school boards, and the local taxpayers who provide the salaries for teachers, and the classrooms and the books.

It is also a very real challenge to student councils.

We must have more teachers, and we must have better teachers. That means higher teachers' salaries, so that a teacher can afford to work at only one job, so that he or she can afford to take further training during the summer months. An average salary of $4,420 is unthinkably low.

Industry's higher salaries are bidding away our teachers—particularly our science and mathematics teachers. Just to cite one figure—only about half of the chemistry and biology teacher graduates in 1956 actually went on into the teaching profession.

Last week at Chicago, at a conference of more than a thousand educators and laymen interested in education, the point was made over and over again that high-school students are capable of handling much more solid intellectual fare than many are now receiving.

I think that you will agree with that. The quality and the intensity of our higher education can be rather sharply increased, by changes in the curricula. This would have two important effects: to give those who are going on to college a running start, and to interest and motivate many young people who perhaps would not otherwise seriously consider going to college.

For several years I have been striving to bring to the attention of our executive department the growing and now desperate shortage of scientists and engineers as compared with the Soviet Union. Just to show you the caliber of the opposition, and the degree to which a Russian high school graduate is being force fed with scientific education—a recent estimate indicates that such a graduate will have had 10 years of mathematics, 4 of chemistry, 5 of biology, 5 of physics, and 1 of astronomy. Shades of the sputnik. This is all before they go on to college.

Here again, student bodies themselves, through their student councils could make a real contribution, in terms of expressing student sentiment for a more challenging curriculum.

Again I want to emphasize that we should not put all our eggs in one basket by concentrating on the education of scientists and engineers to the exclusion of all other professions. But the Russian data surely demonstrates that many American high school students could take a considerably richer diet of education, with a strong seasoning of the physical sciences.

Now, what can the Federal Government do to help in this gigantic national effort which our people must make to provide the yeast of opportunity for the gifted young people among us?

Many things can be done.

Let me touch on some of the high points embodied in legislative proposals I made and introduced in the United States Senate in January of this year—supplemented later in the session, and to which I plan to add this coming January.

I call it my youth-opportunity program, and if it was vitally important before the sputnik began sailing over our heads, it is doubly important now.

DIRECT SUPPORT OF STUDENTS

First of all, we need a really intensive program of Federal scholarships, administered on the basis of merit and need. We need to make available at least three times as many scholarships as are now available through private and industrial sources. In my Student-Aid Act of 1957, I have proposed 40,000 such scholarships each year—carrying up to $1,000 grant per academic year. My best estimates of current average annual expenses of college students are nearly $1,200 for students in publicly owned institutions and about $1,700 for those in privately supported institutions.

With such a program alone, we ought to be getting into college 3 out of 4 of the top 25 percent of the high-school graduates—instead of 2 out of 4, which we are now getting.

In the same bill I have proposed a long-term, low-interest loan program for college students—loans to be made by the colleges themselves and insured by the Federal Government, much as we insure housing loans through the Federal Housing Administration. Such loans could be made up to a maximum of $1,000 to any one student in any academic year, and would postpone the first repayment until 4 years after completion of full-time education. The total program would involve a Federal loan insurance of up to $25 million in any one year.

You may be interested in a special feature of this loan provision. The bill provides that a college graduate who enters the teaching profession upon graduation may write off his loan, a certain percentage of the loan being forgiven for each year he or she remains in the teaching profession. This is an incentive that would keep many young people from taking the jump out of teaching in those first years of typically low teaching salaries.

Last March I introduced another bill with special applications for the teacher shortage, and for the upgrading of teaching quality. It would permit teachers to deduct up to $600 per year in their Federal tax reports for expenses incurred in improving their qualifications through college courses. Incredibly enough, a lawyer can deduct the cost of attending a tax or real estate institute, an insurance man may deduct for a short course in new methods of writing insurance, a doctor can write off a refresher course on the use of antibiotics, and an actor can deduct a course in physical culture for the purposes of losing weight and thereby keeping in good condition. But a teacher who goes to summer school or takes courses during the winter toward an advanced degree or simply to broaden her professional competence cannot deduct the cost. My bill would permit a deduction of up to $600 each year for such extra expenses.

Getting back to direct support of students, I am a strong advocate of the GI education bill. This fine program gave hundreds of thousands of World War II and Korean veterans a lasting reward for their service to the country, but it was also a program of almost infinite value to our country. Since January 31, 1955, men and women who enter the armed services no longer have the opportunity to attend college under the GI bill. I think they deserve the opportunity. The demands of military service are as rigorous today as they were in January 1955. As long as we are requiring young men to serve in the armed services through selective service, we ought to have the GI bill for them.

During the last session, my bill, S. 667, had extensive hearings before the Committee on Labor and Public Welfare. Practically every Minnesota college and university president publicly supported the bill. Unfortunately, there has not been until now a sufficient sense of urgency among our people as a whole to persuade Congress to pass this bill. The administration has opposed the bill. Perhaps now the climate is changing for the better, and we may have favorable committee action and passage by Congress of this legislation at the next session.

GRASSROOTS AMBASSADORS

I am also preparing a different kind of scholarship program—a specialized program to produce what I call grassroots ambassadors. In my observation as a member of the Senate Foreign Relations Committee, I am more and more impressed with the shortage of trained, qualified, dedicated Foreign Service personnel. And we need technicians as well as diplomats; we need young people who can speak other languages, who have a zeal to serve the cause of freedom by a willingness to work among other peoples anywhere in the world.

We need to encourage young men and women to dedicate their lives as grassroot ambassadors, both in international public service and international private service for churches, foundations, and private enterprise.

We need more young people trained in diplomacy, with a broad liberal-arts background, to invigorate our posts abroad. But we also need young people who go abroad armed with technical knowledge, trained to get across practical ideas on sanitation, nursing, on farming, engineering, and construction methods, to people at the neighborhood and village level. We need young people who can speak the language of the region and understand the customs and mores of the people with whom they are working.

I am convinced that we need a Foreign Service Academy to provide us with most of our professional diplomats, and I intend to introduce legislation to this effect. But we can also proceed right now, without constructing one building, to get an incentive program underway in our colleges and universities to provide a corps of young men and women to carry out a technical-assistance program and a foreign-economic policy which could also accomplish wonders in winning the understanding of the peoples of Asia and Africa.

These young people should be carefully selected for their personable qualities as well as for their intelligence, for their ability to get along under unusual conditions as well as for their technical skills.

They should be drawn from all levels of our population, from all parts of the country, especially from farm families and the families of workingmen, from our people who have themselves known difficulties, who have had to work hard with their minds and their hands. These are the kind of young people who could make contact with the peoples of Asia, Africa, and South America, who can talk their language—both literally and philosophically—who have the common touch. These are the kind of people we ought to have in India and Pakistan and Indonesia—good, solid American young men and women, tough-minded and practical and knowledgeable.

From these grassroots ambassadors could come future Foreign Service career diplomats, as well as future commercial representatives overseas. And from those who eventually return to careers in the United States will come leaders in American public life who will bring to the Government and education the invaluable experience of detailed knowledge of peoples and places which are for the most part today unknown to most Americans.

COLLEGE WORK-STUDY PROGRAM

Another student-aid proposal which I believe will merit careful congressional study and for which I am preparing legislation is the establishment of a college work-study program based on the highly successful National Youth Administration program which expired in 1943.

Between 1935 and 1943, more than 2 million different students were helped to continue their college educations in useful work at American colleges and universities, under the NYA. I have found a very considerable interest among educators today in reviving some similar work-study program which would not only provide income for students in jobs which are closely allied to their studies, but would also help to relieve the crushing workload now being imposed on our college staffs and faculties.

All of these proposals can help the superior student who has made up his mind to go on to college.

But the problem of finding, identifying, and encouraging these superior young people while they are still in high school is as important a program as making it financially possible for them to go on to college.

Here I think is a real role to play for student organizations, student councils. Few persons are more qualified to judge the capacity and intelligence of a student than his fellow students, many of whom have known him for many years, know his family background, his integrity, his capacity for work far better than it may be possible for teachers.

There is a real challenge to student organization here. There is the challenge to develop systematic procedures to steer promising students into college. And there is the equal challenge to encourage promising students even at the freshman and sophomore levels to take courses which will help prepare them to go on to higher education.

Social pressure, as we all know, is a powerful and pervasive influence on the actions of an individual. It can be a force for good, or for bad. Too often, I am afraid, there has been a climate of disapproval in high-school student bodies for those individuals who are serious about their studies. Just as our Nation as a whole must reconsider its tendency to regard intellectuals as people who are somewhat odd and even suspect, I think that leaders in our high schools have a duty to mold student-body opinion into a more favorable climate for the eggheads in their midst. I said that I am on an egghead hunt. Let me invite you to join me. Let me urge you to make it your personal business as student leaders to look for the other eggheads in your high school. Most of you are the fortunate kind of egghead—the kind who has drive and initiative, and rises quickly to leadership. Not all eggheads, you know, have that ability. Many are shy, retiring. Many are slow starters. They need a helping hand—and no one is better equipped to give it to them than you are.

Do your part to help find our potential leaders in science and industry, the profession, in Government. And I shall try to do mine—to provide these young people with the opportunity they deserve, and which our Nation's own vital self-interest demands, the opportunity to develop their talents and faculties through higher education.

In the generations of struggle which face us and our friends of the non-Communist world, it will not be me, but you and your children, who will decide the issue. It will be your faith and your dedication and your intelligence that will determine whether the world will be free or slave.

Let us hope and pray that my generation will have the foresight and the courage to decide now, before it is too late, to provide you with the opportunity and the training to carry on the battle on at least equal terms.

Senior Citizens of America and Rogue Valley Manor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. NEUBERGER. Mr. President, some of the former outstanding officials of that fine organization, the National Education Association, have founded another excellent organization known as the Senior Citizens of America. Its purpose is to widen the horizons and knowledge of citizens of mature interests. Its activities include scientific research, personal counsel, and correspondence. Its officials include Dr. Joy Elmer Morgan, president, and Dr. Willard E. Givens, chairman of the board of trustees. Both were formerly leading personages in the National Education Association.

The March 1958 issue of the Senior Citizen, monthly periodical of the Senior Citizens of America, published an article by Staff Writer Gertrude Leach entitled "Rogue Valley Manor, Medford, Oreg." This article describes a vast $5½ million apartment-house project in a beautiful city of southern Oregon, which is designed to cater to retired men and women of modest means.

Because all of us are interested in improved housing for the aged, I believe this article from the Senior Citizen magazine should appear in the Appendix of the RECORD, and I ask unanimous consent that it be printed, Mr. President.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROGUE VALLEY MANOR, MEDFORD, OREG.

(By Gertrude Leach)

In a residential section of Medford, a city of 30,000 people in the lush "fruit basket" valley of southwestern Oregon, construction will begin this year on Rogue Valley Manor, a $5.5 million apartment house project designed not only as a place but a way of retirement for men and women of modest means.

Business, civic, and professional leaders of the community and the ministers and bishops of the Methodist, Presbyterian, and Protestant Episcopal churches of the area jointly sponsored the development which will be operated as a nonprofit corporation under the direction of the sponsors' 36-member board of trustees.

Before building plans were decided upon, a thorough study had been made of several retirement manors already in operation elsewhere; the best features of the earlier types have been combined with the most up-to-date design, facilities, management and financing for the Medford project. When completed the establishment may well become a model for similar housing for people of retirement age.

In addition to the somewhat unique joint sponsorship, the method of financing the project also embodies some departures from the usual, the principal one of which is the distribution of costs over about three "generations" of occupants. This makes possible a considerable reduction in charges to the original purchasers of space in the building.

Construction costs and the expenses of management, maintenance and operation have been carefully estimated and form the basis for the charges paid by residents. These include: (1) Cost of "membership," which varies according to size of the apartment chosen by the occupant and ranges from $6,800 to $23,000. An equitable means has been devised for refund to the purchaser, or to his estate, of a proportional share of this sum in the event of withdrawal under certain conditions within five years; (2) Life-Care, a monthly fee, initially estimated at $110 per month, to cover cost of meals, medical care and all other services; (3) A cash investment in the Life-Care Assurance Fund of a sum calculated at a fixed rate based on latest actuarial life expectancy tables. The fund draws interest at 4 percent annually and the entire principal is returned to the member during his lifetime in monthly payments, or to his estate if death occurs before the entire amount is repaid.

Although financial responsibility is necessary for admission to Rogue Valley Manor, the trustees consider character and personality of the applicant to be the most important requisite. At least two written references must be submitted. These are carefully checked in an earnest effort to admit only people "who have learned the invaluable art of happy, productive living."

A medical report is required as evidence of satisfactory health; only applicants who are ambulatory, generally well for their age and able to care for themselves can be accepted. Those who meet the financial, personality, and health requirements acquire the privilege of life membership in the manor. A deferred member plan is available to those who desire to make the usual deposit and enter at retirement or other later time.

The manor, a 284-apartment building, occupies a 15-acre tract on the crest of a gently rising hill. From the picture windows of every apartment the residents will have views of widespread orchards and of the distant Siskiyou and other mountains. Architect John W. Maloney, Seattle, Wash., who designed the building, also planned the various details to provide greatest possible comfort, beauty, convenience, and safety.

On the first floor are the main lounge (others with TV and radio are on each floor); offices, a large auditorium for group activities and worship; a chapel; the dining room. Ground-level facilities at disposal of members include a launderette; club room with completely equipped kitchen; women's activities room for sewing, weaving, ceramics, painting; hobby shop with tools and equipment for wood and metal working and re-

lated activities; smoking room (a men's retreat); a game room.

The spacious apartments are of 5 types, each with full bath, ample closets and storage; all but 40 have pullman kitchenettes. Rooms are completely furnished, including wall-to-wall carpeting and window blinds, but residents may bring their own treasured pieces of furniture. House telephone, emergency call bell, connections for TV and radio, thermostat for personal control of heat and air-conditioning, are standard equipment. Apartments with kitchenette range in size from 387 square feet to a few 2-bedroom units of 838 square feet. Guest rooms are included for visitors or family when space is not available in the member's own apartment.

One of the most important facilities provided for the members of this remarkable home is the 40-bed infirmary on third floor with its single, double, and other types of rooms. A staff doctor and nurses will be on duty day and night; bedside care in a member's apartment will be provided for minor ailments.

The moderate climate of the region—average temperature 54°—will contribute to outdoor enjoyment of the landscaped site where formal gardens, putting greens, croquet, horse-shoe and shuffleboard courts, picnic grove, parking lot, plots for vegetable and flower gardening by residents, will be developed.

Busy downtown Medford, only 2½ miles away by free Manor bus, offers opportunity for participation in church, civic, and cultural affairs. Within easy driving distances are Crater Lake and Mount Lassen National Parks, Mount Shasta, California Redwoods, and the Oregon coast.

Rogue Valley Manor aspires to be interdenominational and welcomes members of all faiths with the assurance of dignity, comfort, and security in the golden years of life, in a home of their own.

Occupancy is scheduled for early 1959. Further details are available from Walter M. Higgins, executive director, Rogue Valley Manor, Inc., Medford, Oreg.

Right of the Blind to Self-Expression and Organization

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. PROXMIRE. Mr. President, S. 2411, introduced by the junior Senator from Massachusetts [Mr. KENNEDY], is, I believe, a most worthy and desirable piece of proposed legislation. The bill aims to protect the rights of our blind citizens to self-expression through organizations of their choice.

In my State of Wisconsin there is one of the most active components of the National Federation of the Blind, and also one of the most outstanding leaders of the movement, Mr. George Card, of Madison. Mr. Card and his organization have obtained in Wisconsin one of the most enlightened programs of rehabilitation and assistance for the blind that exists anywhere in the country.

I am, therefore, happy to support the proposed legislation, which will guarantee the rights of blind citizens elsewhere to achieve the same results through organization.

Similar bills have been introduced in the House of Representatives. My good friend, the Honorable CLEMENT ZABLOCKI, of Wisconsin, is the author of such a bill. I hope that these bills will receive the rapid and favorable consideration they deserve.

Mr. President, I have prepared a statement in support of this legislation, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PROXMIRE

America is the Nation which above all others is dedicated to the protection, development, and dignity of the individual. The architects of our Constitution were zealous to erect the strongest possible protection for the rights of the individual. The individual is guaranteed the right to speak as he likes, write as he likes, worship or not worship as he likes. He is fully protected from unreasonable searches and seizures, from cruel or unusual punishment, from the abrogation of his contracts and so forth. In the judicial processes his rights are treated with the utmost deference, even at the risk of delay, obstruction or frustration of justice. In a myriad of ways the law demonstrates its solicitude for the individual, no matter how far he seems to have removed himself from the pale of society.

And this solicitude pervades all phases of our thought and all our institutions. In education, we strive to give the child every opportunity and every encouragement to develop his own special talents and interests, with the minimum of compulsion. In medicine, the last flickering spark of human life must be preserved to the last possible moment. In religion, every shade of doctrine and ritual has its adherents and its expression. In business, we still cling to the ideal of affording everyone the opportunity to stake his judgment and skill in the area and manner of his choice. In the field of social work, everything possible is done to redeem the criminal, to salvage the delinquent, to heal the mentally deranged, to develop the retarded and occasionally even to facilitate the blossoming of genius and to educate, train, and assist the physically disabled. We revel in the ability of an individual to triumph over adversity and nullify the decrees of birth and circumstance.

It has long been recognized that the individual cannot attain the fullest measure of expression and achievement unless he is free to associate and combine with other individuals in similar conditions or with similar aims and aspirations. Thus, included among the rights which were enshrined in the Constitution is that of freedom of assembly. Even in the frontier community where rugged individualism probably reached its most luxuriant fruition, each man was dependent upon the cooperation and support of his fellows. The society of Davy Crockett and Johnny Appleseed was also the society of the quilting bee, the husking bee, and the vigilante committee.

As the Nation grew in size and in complexity, it became ever more difficult for the lone individual to combat the forces of nature and of society without the help of his fellows. Since the power of big business, big government, and big labor burgeoned, the isolated individual became ever more helpless. But by joining his efforts and his influence to those of his fellows with similar goals, his strength was multiplied manifold. He could improve his living conditions, exchange valuable information and experience, wrest concessions from government, or remove inequities and discriminations.

A large group of our blind citizens have found that they must unite to advance their own interests. Excluded from normal participation in most other groups, they feel the necessity for uniting their strength with that of their fellow blind. Being confronted with deeprooted prejudices and misconceptions about the blind, they feel impelled to join in a concerted assault to remove them by a well-designed and well-directed campaign of education. Being confronted by problems of adaptation and improvisation in which the experience of other blind people can be of immeasurable assistance, they have found it necessary to come together to exchange ideas.

The blind, therefore, have formed organizations in various communities throughout the country. These have affiliated into State organizations in 44 States, which in turn are federated into 1 national organization, The National Federation of the Blind, which aggregates a membership of 40,000. I am proud that my own State of Wisconsin has contributed not only one of the most active components of this organization, the Wisconsin Council of the Blind, but that it is the home of one of the most outstanding leaders of the movement, Mr. George Card, of Madison, who has given most lavishly of his time, his energy, his deep understanding, and his varied and considerable abilities. He holds the office of first vice president of the federation, fund-raising chairman, unofficial organizer, editor of its official organ the Braille Monitor, representative on the World Council for the Blind, and a unique place in the esteem and affections both of his fellow blind and of his fellow citizens in general.

The work of the Wisconsin council reflects the wisdom and persistence of Mr. Card and many other able blind citizens of my native State. The organization has fought for and obtained in Wisconsin one of the most enlightened programs of rehabilitation, of vending-stand administration, and of financial assistance for the blind that exists anywhere in the country.

The organization contains as one of its components a group of vending-machine operators who meet regularly to exchange experiences and ideas for improving their businesses, and everyone of whom was enabld to become established in business because of a loan from the organization.

Another branch of the council is an organization of vending-stand operators who have combined to make the Wisconsin vending-stand program one of the most outstandingly successful in the country.

Another project which this organization of blind people conducts is the Badger Home, where living accommodations and board are provided to blind people at cost.

Still another is the sponsorship of a visual-aids clinic, where glasses can be procured which enable persons to read who have only a very slight amount of residual vision. Largely through the efforts of this organization, Wisconsin has an outstanding record in the placement of blind people in competitive industry, commerce, and the professions.

These successes were achieved through organization by Wisconsin's blind citizens by their own concerted and effective efforts, and against some resistance. Wisconsin now recognizes the value of its organized blind movement, but unfortunately, blind citizens have not found this to be the situation everywhere. In some instances, they find the blind are still regarded as wards who must be kept under constant surveillance and supervision, rather than stimulated and helped to attain self-reliance and self-support as they desire. Many of the blind need the services of agencies which are still particularly vulnerable to these misconceptions of the needs of the blind. For this reason, the federation has asked Congress to protect the constitu-

tional rights of blind citizens to freedom of expression and assembly.

S. 2411, introduced by the Senator from Massachusetts [Senator KENNEDY], would afford this protection by requiring the Secretary of Health, Education, and Welfare to institute procedures assuring that Federal administrators will not interfere with the rights of the blind to organize. The bill would also make grants to the States dependent on State administrators and employees desisting from such interference. And finally, the bill requires the Secretary to consult with organizations of the blind in the formulation of policies affecting the blind.

I believe this legislation is both necessary and desirable. Surely this Nation, which values so highly the rights of the individual, will not withhold its protection from this small but worthy group of individuals. Surely it will encourage them to realize their fullest potentialities by uniting for mutual assistance and protection.

Surely the experience, the understanding, and the vital interest which they have in the solution of the problems of the blind should be tapped by the formulators of governmental policy through consultation with them. There are many who will give the Department of Health, Education, and Welfare the approach which regards the blind person as a statistic, a problem in social engineering, a Mr. X in a social casebook, or a subject for medical experimentation. But where else except from these organizations of the blind can it learn the impact of blindness upon the life of human beings, the insight that is gained by human experience, and the inspiration that is generated by the undaunted human spirit?

Our governmental experts ought not to be permitted to disdain this human experience, insight, and inspiration. The bill introduced by Senator KENNEDY will facilitate its fullest development and expression. I shall give it my unqualified support, and I urge my colleagues to do likewise.

Conservation and the Nation's Farm Programs

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Representative HAROLD D. COOLEY, the distinguished chairman of the House Committee on Agriculture, at the annual meeting of the National Agricultural Limestone Institute, in the Hotel Statler, in this city, on January 22, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONSERVATION AND THE NATION'S FARM PROGRAMS

(Address by Representative HAROLD D. COOLEY at the annual meeting of the National Agricultural Limestone Institute, Inc., Hotel Statler, Washington, D. C., January 22, 1958)

Mr. Chairman, I am very grateful to you and to the members of your organization for this opportunity to speak to this fine audience, which includes many of my colleagues in Congress, on a subject which is very close to my heart.

The subject is Conservation and the Nation's Farm Programs.

The subject is calculated to cause me to feel the urge, the dedication and the drive of an evangelist. Although I have never pretended to be a preacher, I like the gospel of conservation.

Nature does not promise to build civilizations nor to establish dignity and peace on earth and among men.

There is no penalty in nature more certain nor more severe nor more precise than that meted out to man and to nations that abuse and destroy the resources of the good earth.

Look back, if you will, through the ages and think for a moment how man has exploited his stewardship of the land. See the sad and sorry consequences—the harsh testimonials of land exploited. Turn back to biblical times.

Babylon, once a rich and beautiful city, now is desolate.

Nebuchadnezzar's famous stables are now buried deep in deposits of sand and loam.

In north Syria among Alleppo, Antioch, and Hama, there lie the skeletons of the flowering villages of biblical times, embraced in bare and desolate countryside. The old city of Timgad, north Africa, is today an abandoned ruin.

Indeed, at the traditionl site of the Garden of Eden, in old Mesopotamia, the land is barren; it is ruined and forsaken.

Turn in your Bible to Jeremiah 12: 10–11, American translations, where the prophet spoke:

"Many shepherds have destroyed my vineyard, they have trampled down my portion; they have made my pleasant lot a desolate waste. They have made it a desolation, in its desolation it mourns to me, the whole land is made desolate, because no man layeth it to his heart."

Mr. Chairman, ladies and gentleman, these citadels of civilization fell victims of soil suicide.

History's pages are filled with the accounts of kings, their wealth, their slaves, their laws, their might, their victories and their defeats. These old civilizations have vanished. Their decline and ultimate downfall was not usually by the turn of events on a battlefield, but from the ruin of their farm lands in the milleniums of use and neglect.

Is it not surprising then that only in recent years has the soil become a matter of concern and of national policy in America? Is it not more surprising, is it not astonishing—is it not a travesty upon the intelligence of our times—that our program, so hard won, to save America from soil suicide, now is lambasted and assailed in many places?

Our forefathers found here a land with deep and fertile soil, fortified with countless minerals. These virgin lands seemed inexhaustible. And for 150 years after this Nation was founded, our soil washed and ran down to the sea. We followed the old route of soil suicide.

It is now only 30 years since the United States took its first step toward the inauguration of a national program of soil and water conservation. Our national effort in the new field of applied soil conservation dates back, actually, to 1928, when Representative James P. Buchanan, of Texas, offered an amendment on the floor of the House to an agricultural appropriations bill, making money available for research in soil erosion on farmlands—and the amendment was adopted without dissent.

We have come a long way in so short a time.

Naturally enough, at the outset our emphasis was on halting soil erosion. Then we began paying more attention to sustaining and building soil fertility. Still more recently, special emphasis has been placed on water management.

It was by the enactment of the Soil Conservation and Domestic Allotment Act in 1936 that we began our great national conservation effort with the average farmer.

At that time the Congress, in effect, declared that it was in the national interest to have a partnership between those who produce food and all those who consume food, to stop the great wastage of our natural resources. No one is more aware than members of the National Agricultural Limestone Institute, our host tonight, of the effect of this program which we now know as the agricultural conservation program.

Within a very short time after passage of the 1936 act, millions of American farmers joined with their Government in carrying out conservation practices on the Nation's farms.

Mr. Chairman, your own industry, which had been supplying the Nation's agriculture with 1 to 3 million tons of agricultural limestone a year, expanded production so that by 1947 it furnished over 30 million tons. This, of course, meant more and better crops of clover, alfalfa, and other legumes, more conservation of the soil, and more minerals, principally calcium, in the food for use by the Nation's consumers. Other conservation practices had equally significant increases.

But, in spite of the tremendous increase in all practices we are still a long way from the goals which the soils specialists at our agricultural colleges say we should attain. For example, in the case of agricultural limestone—the colleges tell us that the farmers of the Nation should be using 80 million tons a year. This is far in excess of the peak 30 million tons used in 1947 and the 20 million tons currently being used. Examples of important practices carried out by farmers under the 1956 program are:

1. Initial establishment of permanent vegetative cover, 4.7 million acres.

2. Applying liming materials to conserving crops, 6.5 million acres.

3. Improvement of vegetative cover, 2.4 million acres.

4. Livestock watering facilities to permit better grassland management, 93,724 structures.

5. Establishing permanent sod waterways, 2 billion square feet.

I believe that every dollar invested in ACP programs has been a dollar well invested in the future security and welfare of our country.

ACP cost-sharing assistance may be used to carry out farm and ranch conservation work planned by other agencies and groups. For example, ACP often enables farmers to accomplish conservation work recommended by Soil Conservation Service technicians to soil conservation district cooperators. Also it is used to help farmers pay for practices needed and recommended on farms in watershed projects and in planting trees on reforestation projects. It is used to carry out needed conservation work on farms developed as a project of the Extension Service and other organizations.

Ladies and gentlemen, the ACP program with our other sound conservation activities, constitutes an investment to insure the future strength of this Nation. Our soil, with the brains and enterprising nature of the people who tend it, is the foundation of our strength.

Yet, this ACP program has been assailed from one end of our land to the other as a subsidy, as a Government handout, to farmers. I wonder that any person of intelligence could fall for such rot. If the detractors must pin a blame of subsidy upon someone, then let them consider that for generation upon generation our farmers have been subsidizing the consumers of the Nation, by mining their soil, using up their capital investment, because the prices paid by consumers were not sufficient for our farm families to preserve the soil or to restore it when it was ruined.

Mr. Ezra Taft Benson, upon becoming Secretary of Agriculture, began an all-out effort to destroy ACP.

Here is the story:

1. The 1953 ACP program already had been announced and commitments made to farmers before Mr. Benson took office, so there was nothing his administration could do to curtail that year's operations except to hamper the program's administration by putting the group responsible for planning the program in a service different from the service which is responsible for administering it. This organizational monstrosity persists until this day.

2. For 1954, in presenting his budget, the President made no provision whatsoever for the agricultural conservation program. I vividly recall the reaction of the farmers of my district when they were made aware of this fact. I also recall the survey of farmer opinion made by your organization, Mr. Chairman. Not only were the results of this survey sent to me by people in my district but these figures were used in our deliberations on the floor of the House.

I have checked back on these figures and want to refresh the memory of this audience by pointing up that nearly 84 percent of the farmers wanted the ACP continued and only 16 percent of the farmers supported the administration in their efforts to reduce the program. In fact about 72 percent of the farmers reported that the program in their opinion ought to be increased more in line with the $500 million authorized in basic law, rather than reduced. Year after year, we have had telegrams read from Farm Bureau leaders in which they have advocated elimination or drastic reduction in this program. In the national survey you made of thousands of farmers 80 percent of those who said they were Farm Bureau members voted to continue ACP without a cut and 68 percent voted to increase it.

Several years ago your President was berated during our deliberations as misrepresenting farmer opinion by using biased surveys. I am sure that the surveys could not have been biased or he could not have made the statement that he would use any mailing list furnished to him and make a similar survey for comparison. In fact, my records indicate that a few years ago the Farm Bureau township directors in the State of Iowa were surveyed on the continuation of ACP, and over 85 percent voted for its continuation, while 58 percent advocated an increase. This compared wtih a vote of 95 percent favoring the program and 76 percent advocating an increase on the part of the rank-and-file farmers in that State.

Also, in the State of New York over 78 percent of the Farm Bureau members supported this program and nearly two-thirds of the Farm Bureau members wanted the appropriation increased.

It was not until the middle of March 1954 that the President submitted a revised budget for the Department and requested that we authorize a program amounting to $140 million. This was done in face of the fact that the Congress had stabilized the authorization for this program at $250 million during the recent past and despite enabling legislation which authorized Congress to appropriate $500 million for this purpose.

For its part, the Department cooperated by hamstringing the program with every conceivable gadget and restriction which the new regime could muster. All of this was calculated to make the program unpopular and unattractive to farmers. The measure of their success is attested by the fact we had to compromise in the Congress and reduce the 1954 authorization to $195 million, which was $55 million more than the President requested and $55 million less than the customary $250 million. Then, of the $195 million authorized for 1954, farmers earned only a little over $162 million. Their disgust and dismay at the program changes wrought by Mr. Benson forced many farmers to give up their conservation efforts.

3. For 1955 and 1956 the grassroots reaction against the 1954 changes was so great that the administration was forced to modify or eliminate many of the restrictions imposed in 1954. Even so, the changes were made slowly and reluctantly and only as they were forced by popular opinion. In 1956 the President requested that the authorization be decreased to $175 million. Congress paid him no heed and authorized the customary $250 million.

4. By 1957 the administration decided to adopt the ACP as its own. They made it fairly attractive, and it regained most of its popularity with farmers. They even requested the customary $250 million to finance it. Farmer participation increased.

5. As it turned out, this was only a breathing spell. The Department undertook to announce a 1958 ACP with cost shares greatly reduced and many of the most popular and needed practices eliminated. But, through the alert action of Bob Koch, in informing the Appropriations Committees what the Department was planning, the Congress took effective action to block the obstructive and dismantling changes.

6. For 1959, the story is apparently going to be the same. The President is asking us to cut the authorization for this great program exactly in half—from $250 million to $125 million. It is reasonable to expect that the Department will do its part by reducing rates and cutting out practices so as to make the program as unattractive as possible to farmers.

7. From 1954 through 1957 the opposing conservation tactics of the Department have cost the farmers of this country over $110 million and reduced our conservation efforts by twice that amount. This is shown by the fact that farmers earned during 1954–57 inclusive $113 million less than the Congress authorized.

Some of you may think these statements are too partisan. I am not attempting to become partisan in any way but I am proconservation. For more than 20 years I have served on the Agriculture Committee, and during that entire time, until last year, I served with a very distinguished and beloved statesman, Clifford Hope, of Kansas. He and I sat side by side and for more than 20 years we saw eye to eye on every major problem that came before that committee. And I know that during that entire time we were successful in our efforts to keep partisan politics out of our deliberations. And I know that during all of that time I was a good Democrat and I know that Cliff Hope was a good Republican.

While the ACP and similar programs were inaugurated by the Democratic Party I would be remiss and unfair if I did not point out to you that these conservation efforts have received the stanch support of many Republicans—including some on this platform and in this audience.

I particularly want to refer to my good friend and colleague, EARL WILSON of Indiana, who is a Republican member of the Appropriations Committee and who was the first to call to the attention of the House the crippling effect of the memorandum by Assistant Secretary of Agriculture Peterson last summer. Many of you will recall EARL'S statement at that time.

Mr. Chairman, regardless of whether a man or woman is a Republican or a Democrat, we are all aware that this assault upon the agriculture conservation program has coincided with an onslaught against the general farm program during the last 5 years.

The net result is that agriculture generally has failed to share in the prosperity of this Nation, and many of our farm families are in desperate straits.

Our farm program came into being to rescue agriculture from bankruptcy during the great depression. Its objective was parity, which the Nation had come to regard as fair and just. It was erected upon an awareness that agriculture is the only major element of our total economy that has no device, outside of the aid of Government, to pattern its production to market requirements; that farmers have virtually no bargaining power in the commerce they conduct; that agriculture, comprised of several millions of free-enterprising families, is the only major industry that does not set its prices but goes into the market place and asks: "What will you give me?"

Let us check back and make a few notes on this program.

How did farmers fair under it? For 11 consecutive years prior to 1953 the average prices paid to farmers were at or above 100 percent of parity. Farm prices now average 81 percent of parity.

Now consider the Nation's consumers. While this program has operated, American families have had available to them more and better food, for an expenditure of a smaller percentage of their total income, than in any other period of history. The average hourly wage of industrial workers will buy about twice as much food as in 1929.

What about the cost to taxpayers? The Commodity Credit Corporation supported the prices of major storable crops for 20 years prior to 1953 and, at that time, this program actually showed a 20-year profit of $13 million. For these two decades, the CCC program for all crops, including a number of perishable commodities, showed a loss of only $1,064 million and CCC investments on January 1, 1953 (inventory and loans) amounted to only $2,452 million.

During the last 5 years, CCC deficits have amounted to 4 times as much as was lost in the preceding 20 years—slightly more than $1 billion in 20 years, compared to $4 billion in the last 5 years. Meanwhile, the CCC investments in surpluses have increased threefold, from $2,452 million in 1953 to more than $7 billion as we go into 1958.

This is the story, and we cannot review it without this question:

What is the mind, what is the motive, what is the purpose of the people who are destroying the parity principle which our farmers were so long in winning and which all Americans had come to consider as fair and just?

Now, Mr. Chairman, let us turn back specifically to the agricultural conservation program.

And let me suggest here to the people in the administration who are determining policy in connection with the ACP program that they check with our Chief Executive.

In an exclusive article in the Des Moines Register by Charles Bailey last Thursday, the following practices are listed as those carried out by President Eisenhower on the three farms in Adams County, Pa., which he owns. He received payments in 1957 for carrying out ACP practices in the amount of $1,120.40. Part of those payments were for 128 tons of agricultural limestone and the rest was for fertilizer and seed. Many of the practices carried out under the supervision of Brig. Gen. Arthur Nevins (retired), the President's farm manager, are the ones which Assistant Secretary of Agriculture Peterson attempted to eliminate in his memorandum last summer.

The headlines of the article stated, "Ike Benefits in Farm Aid He Opposed," and, as Mr. Bailey said in the article, "The payments were made under the agricultural conservation program for practices which the administration has sought to eliminate from its cost-sharing program." He states further that "the administration has re-

peatedly tried to have Congress cut back the size of the ACP. Last year it tried to restrict the scope of the program to rule out payments for lime and fertilizer top dressing as a separate practice. In his budget message to Congress Monday (that was last week), the President again called for elimination of some practices in the ACP and asked Congress to cut the program for 1959 from $250 million to $125 million."

In other words President Eisenhower has been using the ACP just like a million other farmers throughout the Nation and he has been using the practices which Assistant Secretary of Agriculture Peterson, in his attacks upon the ACP, has been saying are the practices that should be eliminated.

I should think, Mr. Chairman, that a practice good for the land owned by the President would be good also on the lands worked by our many thousands of farmers.

In my opinion, one of the reasons why the present administrators are trying to eliminate this program is that they have not been listening to the views of the farmers. State after State has indicated it would like to have this program, not scuttled, but expanded.

I do not know a single State in the United States which has recommended through its democratically elected committee system that these restrictions and reductions be made. In my opinion one of the reasons for the great strength of the agricultural conservation program is the fact that it is administered at the local level by farmers elected by their neighbors.

We all expected much of the soil bank and yet, according to the last records which I have available, only 80,000 farmers participated in the conservation reserve program compared to over a million farmers in the ACP. It seems to me that if these 2 programs, the conservation reserve program and the ACP, were administered as 1 just as we administered the same joint effort back in the late thirties, there would be not only less confusion but also much wider farmer participation. It doesn't do us any good to write fancy programs here in Washington if they are not practical enough for farmers to utilize them.

Practically every State in the Nation had to curtail its ACP activities last year because of insufficient funds. Likewise, practically every State had more conservation reserve funds allocated to it than farmers would use.

Unless the administration can come forward with some new practicable proposals it seems to me that we should expand tried and proven programs like the agricultural conservation program instead of appropriating large sums of money in the name of conservation under procedures farmers have already proven they will not adopt. Expanding ACP to $500 million which is currently authorized by statute would accomplish a great deal more under the proper administration than all these new soil-bank plans.

While everyone is for conservation, if we cannot develop plans which the farmers of the Nation are willing to put into practice, we are no further toward our goal than if we had no plans. If the Department of Agriculture will listen to the democratically elected county committees and the State committees who, incidentally, Secretary Benson has appointed, I am confident we can formulate a program which will not only get our conservation job done but which will meet also with the approval of the consumers and taxpayers of the Nation.

Now, Mr. Chairman, I have presented these propositions honestly as I see them.

But, before concluding, I want especially to commend the National Agricultural Limestone Institute. By this meeting tonight, and on similar occasions in years past, you have thrown in your lot with the farmers of America. I pray that in some not too far distant day other great industries of this Nation will come to realize that their own interests are tied inextricably to the well-being of our farmers, and that they then will join us in our labors to frame national, bipartisan policies, free of politics, that will aid in the conservation of our soil and in the restoration of prosperity to those millions of families that live upon and work upon the land.

The Impact of Weather Control on the Cold War

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. CASE of South Dakota. Mr. President, Capt. Howard T. Orville, Chairman of the President's Advisory Committee on Weather Control, gave a significant address before the University Club of New York on February 8, 1958. Captain Orville spoke on the subject The Impact of Weather Control on the Cold War. I ask unanimous consent to have printed in the Appendix of the RECORD the text of Captain Orville's speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPACT OF WEATHER CONTROL ON THE COLD WAR

(By Capt. Howard T. Orville, U. S. Navy (retired))

As much as we dislike it, today we are engaged in a cold war with a nation and its satellites whose leaders are stark realists and who will stop at nothing to achieve their objective—the absolute domination of communism throughout the world. President Eisenhower, in his recent state of the Union message, stated "the threat to our safety and to the hope of a peaceful world * * * is Communist imperialism."

One way of achieving this goal is by means of a worldwide propaganda campaign to lower the stature of the United States in the eyes of the Western Powers. It may well be assumed that they are constantly searching for new sources of material in waging this campaign.

Only last week when the Army successfully fired the Explorer were we able to partially recover some prestige from the terrific loss sustained when the Russians fired two satellites into space. One is still orbiting around the earth. This experience should have taught us that we must be constantly on the alert for seeking the propaganda advantage over the Soviets.

If you will think back to September 1957 or earlier, you will recall that perhaps not one person in a million would have predicted the successful launching of a satellite that would orbit the globe for months. Fantastic, unheard of, impossible, would have been some of the remarks received.

This, then, is an experience very fresh in our minds and should make us aware of the fact that the impossible may become a reality long before the best scientific or military brains can even envisage such an eventuality. In the past we have been slow in assessing the propaganda value of scientific achievements. Let's hope that the future will see us more clairvoyant.

This brings me to the subject of the discussion today—the impact of weather control on the cold war. Few areas of science have implications so profound to all mankind as the study of the atmosphere and the phenomena which occur in it.

Perhaps it would be appropriate to define the terms "weather control." Weather control means that our knowledge of atmospheric processes has reached the level where we are able to apply manmade techniques to large scale weather patterns to start a chain reaction that will produce known results over a specific portion of the globe for a known period of time. For example, if an unfriendly nation were able to bring about the recurring destructive cold spells that have plagued Florida for the past 2 months, this would be absolute weather control.

Prior to the sputnik era the best scientific opinion was that the day of weather control was perhaps 30 to 60 years away, maybe even longer. When, in 1954, I suggested that with the expenditure of $11 billion over a period of 30 to 40 years we might achieve complete weather control, I was severely criticized by my contemporaries.

Since October 1957 there have been many statements (some far too optimistic) by scientists of world renown. Probably one of the most significant statements was made by Dr. Edward Teller before the Senate Military Preparedness Committee. He stated that he was more confident of getting to the moon than changing the weather, but the latter is a possibility. I would not be surprised if the Russians accomplished it in 5 years or failed to do it in the next 50.

What are some of the methods of achieving weather control? A number of methods have been suggested for bringing about major influences on weather or climate. To date, none of them can be called effective methods of weather control because, if applied by any nation, no one knows what would be the resulting action of such drastic intervention on our own country or that of other nations. Until we are able to predict with certainty what will happen when manmade methods are applied, weather control should not be attempted.

USE OF COLORED PIGMENTS (LAMP BLACK)

One method of controlling the weather that has often been mentioned is the large scale use of colored pigments over the polar ice surfaces. It is well known that the persistance of large icefields is due in part to the fact that ice both reflects sunlight energy and radiates away terrestial energy at even higher rate than land surfaces. If microscopic layers of colored matter were spread on the ice or in the air above it, it would alter the reflection-radiation balance, melt the ice, and change the local climate. Measures that would bring about such a change are technically and economically feasible.

WARMING CAUSED BY INCREASED CARBON DIOXIDE CONTENT

The carbon dioxide that is released to the atmosphere by industry in the burning of coal and oil and their derivatives (most of it during the last generation) may have changed the composition of the atmosphere sufficiently to bring about a general warming of the world's temperature by about 1° F. This warning represents a 2-percent increase in the carbon dioxide content of the air. Studies show that when the amount has increased up to 10 percent the icecaps will begin to melt with the resulting rise in the sea level. Coastal cities and areas such as New York and Holland would be inundated.

COOLING CAUSED BY RADIOACTIVE DUST

When the volcano Krakatao erupted in 1883 it released an amount of energy by no means exorbitant. If the dust of the eruption had continued to circle the globe at high altitude for 15 years instead of only 3 years, it would have lowered the world's temperature by 6°. Five such eruptions

would have brought another Ice Age. This temperature is only about 15° below the present world's temperature.

Dr. Teller has testified in congressional hearings that if 2,000 H-bombs were to be exploded over a period of 20 years, the dust floating around in the stratosphere would be sufficient to cause a cooling to bring on a new Ice Age. This, of course, discounts the possibility that the dust might serve as freezing nuclei.

ARTIFICIAL SATELLITES AS PLATFORMS FOR WEATHER CONTROL

Weather satellites equipped with powerful telescopes and television attachments could chart cloud movements, detect the birth of hurricanes or other severe storms, and vastly improve our surveillance of weather patterns.

Dr. Hermann Oberth, of Germany, foresees a gigantic mirror hung in space. It would focus the sun's rays as giant magnifying glass at any desired intensity and beam. The sun's rays could light entire cities or other areas safely at night. The heat of the rays might be used to prevent killing frosts over orchards, or melt Atlantic icebergs, open frozen harbors and probably bring about artificial control of the weather.

Senator LYNDON JOHNSON, of Texas, stated recently: "From space, the masters of infinity could have the power to control the earth's weather, to cause drought and flood, to change the tides and raise the level of the sea, to divert the Gulf Stream, and change temperate climates to frigid."

I have read that at least twice in the past 12 months Moscow has boasted of large public works projects that would upset the entire wind circulation pattern of the Northern Hemisphere; conducted numerous nonpublicized but still detectable experiments apparently aimed at finding ways to speed the melting of polar ice caps; and has even offered to join the United States in a project to turn the Arctic Ocean into a sort of warm water lake by melting the polar icecap.

Russia's apparent preoccupation with plans to change the climate of the Northern Hemisphere is easy to understand. The Soviets and their satellites stand to profit more, from an economic standpoint, than any other combination of nations.

The proposal to turn the now frozen Arctic Ocean into a warm-water lake came over Moscow radio just 3 days after last Christmas.

A Russian engineer, Arkady Borisovich Markin, proposed that a team of international scientists cooperate in designing a dam to redirect the waters of the Pacific Ocean to relieve the severe cold of the Northern Hemisphere. Such a dam built across the Bering Straits would be fitted with thousands of nuclear-energy-powered pumps that would pump the warmer waters from the Pacific into the colder Arctic Ocean. At other times the pumps on the Bering Straits would pump the water from the Arctic Ocean to the Pacific, canceling out the Greenland, Labrador, and other cold oceanic streams.

Just how such a plan would work is not clear to me; but if, as Markin states, the dam would raise the temperatures of such cities of New York, London, Berlin, Stockholm, and Vladivostock 11° to 14½°, then the melting of the icecaps and the release of landlocked waters would cause seacoast towns and cities to be flooded by the expected rise in the sea levels. This means that Russia might then enjoy warm-water ports and mild temperatures similar to our South Atlantic States, but at the expense of great flooding of the western nations' coastal areas.

Other great schemes for Russian public-works programs to divert the course of several of its rivers from the Arctic Ocean to the Caspian Sea are less dramatic, but might eventually upset the present weather patterns over Siberia, which, in time, would affect the weather around the Northern Hemisphere.

There are many other methods by which effective weather control may be practiced by an unfriendly nation, but they are too numerous to even mention by name.

A moments consideration of any of the methods mentioned here today should serve to convince any skeptic that weather control can have frightening and disastrous consequences if any unfriendly nation succeeds in gaining a breakthrough before we do.

This is, I think, what Dr. Teller meant when he recently stated: "The Russians can conquer us without fighting through a growing scientific and technological preponderance. The Russians may advance so fast in science and leave us so far behind that their way of doing things will be the way, and there will be nothing we can do about it. Imagine, for instance, a world in which the Russians can control weather on a big scale, where they can change the rainfall over Russia. This might very well influence the rainfall in our country in an adverse manner. What kind of world will it be where they have this new kind of control and we do not?"

Now, what courses of action can we take to get out of our present extremely vulnerable position for future Soviet propaganda attacks in the field of weather control? There are two important steps that must be taken.

First, see that Senate bill 86 is passed. Fortunately, through the vision and courage of several Members of Congress, notably Senator FRANCIS CASE, of South Dakota; Senator CLINTON ANDERSON, of New Mexico; Senator ARTHUR WATKINS, of Utah, and Senator WARREN MAGNUSON, of Washington, there is now pending in Congress a bill, S. 86, to set up a permanent research program under the National Science Foundaiton for an accelerated study in all aspects of atmospheric physics. When this bill, which was originated by Senator FRANCIS CASE, is passed and is aggressively implemented it will provide for the urgently needed program in basic and applied research.

Second, there must be an awareness and an appreciation of the valuable service that the United States Weather Bureau is performing today under most stringent circumstances. It is understaffed; much of its equipment is obsolete; research facilities are practically nonexistent; its research program is far below that which it should be during these critical times; and the prospects for getting the funds needed to correct these deficiencies are very poor. Other weather services of the Defense Department dealing primarily with military applications of weather control should be given strongest possible support.

Since weather control is an ideal tool for waging the relentless cold war against the western powers, we must not become complacent and we must not be caught as we were when Sputnik I was launched last October.

We must take seriously the truth of Vice President NIXON's statement "the Kremlin has reaffirmed its goal of world domination by nonmilitary means if possible, and by war if necessary."

Weather control has many important nonmilitary applications and just as many military uses.

America's Great Resource—Its Senior Citizens

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. WILEY. Mr. President, on many occasions I have pointed out that one of the great untapped resources of this country consists of its senior citizens. The men and women in the golden years, the elderly citizens endowed with a lifetime of experiences, of talents, abilities, and learning—these are a resource which we can ill afford to squander.

Fortunately, in all parts of our land, more and more communities are beginning to realize that they have a responsibility to the senior citizens. And what is more important, elderly folks increasingly realize that they owe a responsibility to themselves. It is a responsibility not to go on the shelf, so to speak, not to go on the sidelines, but rather to be active, creative, constructive; to acquire new interests; build a bright new chapter in their lives.

"Accentuating the positive, eliminating the negative," has become more and more of a theme for folks grappling with this problem of the 10 percent of our population in the senior citizens bracket.

Indeed, right now, there are no less than 34 million Americans aged 45 and over.

But age is not a matter of chronology. It is, as I have pointed out on the Senate floor, the composite of one's interests, one's skills, one's outlook.

Each month, there come across my desk many publications evidencing the wide-awake activity of senior citizens and their spokesmen.

I commend, in particular, the fine publication Senior Citizens, issued by the Senior Citizens of America, a nonprofit organization right here in our Nation's Capital.

So far as the grassroots interest in elderly Americans is concerned, I should like to cite now, as an illustration, a splendid 2-day conference which was held in southern Wisconsin at the start of this week.

I am more than pleased that this conference symbolizes the deep interest of the State of Wisconsin, ever forward-looking, in its elderly citizens.

In Janesville, there gathered a cross-section of some of the most outstanding experts. I congratulate them, and all those responsible for this conference.

The followthrough on this sort of program is, I am sure, going to spell tremendous increases in hope for our people.

I send to the desk now two articles published in the Monday and Tuesday issues of the Janesville Gazette, describing the

program and giving a list of some of the outstanding speakers. I ask unanimous consent that both articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CONFERENCE OF THE AGING TO BENEFIT FROM FREE SERVICES OF 48 SPEAKERS

The Conference of the Aging to be held in Janesville next Tuesday and Wednesday will be a $10,000 program but speakers who would ordinarily receive $150 or more for an address will speak here free of charge, Pat Dawson, general chairman, said today.

If weather is favorable, more than 400 are expected at the 2-day conference at which 48 speakers will be heard discussing many aspects of work with the aging. General sessions will be in the senior high school beginning at 9 a. m., Tuesday, the program covering the entire field, economic, housing, and living, education, recreation, and health and medical.

Dr. Carl Winters, pastor of the First Baptist Church, of Oak Park, Ill., will be the speaker at the banquet in Arrow Park at 6:30 p. m., Tuesday, an event for which preparations are being made for a crowd of 150 to 175 persons.

Dr. Winters has achieved a national reputation as one of America's foremost inspirational speakers and as a humorist. To his American audience of more than a quarter of a million people a year, he has just added a world audience by his recent study and lecture trip, during which he spoke to business and educational groups in Manila, Tokyo, Yokohama, Bangkok, Rangoon, Calcutta, New Delhi, Hong Kong, Cairo, Rome, Paris, and London.

Dr. Winters speaks from a broad background of human experience as former crime commissioner of Michigan, 5 years as chairman of the Skid Row Commission of Chicago, adviser on the juvenile board of Sheriff Lohman of Cook County, and as a personal counsellor.

Each year Dr. Winters delivers 30 to 36 commencement addresses to high-school and college audiences totaling more than 100,000 persons and general audiences totaling more than a quarter million persons.

At present he is in his 18th year as minister of the First Baptist Church of Oak Park. This is one of the great Baptist churches of the Northern Baptist Convention, having raised an average of $150,000 a year for all purposes each year for the past 30 years. The church plant of more than 100 rooms is one of the most modern and adequate in the Middle West. The program of the church has become increasingly strong through the years under the wise leadership of very excellent lay people working with the staff of the church.

Dr. Winters is a graduate of Franklin College with an A. B. degree in 1929. He received honorary doctor of divinity degrees from Lincoln Memorial University in 1941 and Franklin College in 1954.

The speaker is reputed to have the rare faculty of combining humor and philosophy and makes his audience laugh while making it think.

Glen Campbell, Janesville attorney, will be master of ceremonies for the banquet which will feature dinner music by Al Schoenrock, organist. Ted Eickemeyer is in charge of banquet arrangements.

The banquet is expected to be concluded before 9 p. m., as many who will attend will return to their homes over this section of the State and return to Janesville for the Wednesday sessions.

Senior citizens groups in this city, who have already contributed much to the success of the conference through sending out invitations and working in other capacities, will serve as guides, registrars and the like.

Dawson said that the panel discussions will be outstanding. Persons who will appear on them have already met at least 2 to 3 times to prepare for their parts in the conference.

Prominent speakers who will appear during the various sessions of the two-day conference are: Al Ludvigsen, Madison, special consultant to Governor Thomson; Dr. Eugene Friedman, Madison, professor of sociology at the University of Wisconsin; Tom Schuler, executive secretary of the Beloit Association of Commerce; Art Laage, Beloit, vice president of the Beloit Iron Works; Dr. Arthur Miles Madison, director of the School of Social Work at the University of Wisconsin; Dr. E. E. La Masters, Beloit, department of sociology, Beloit College; Howard Rich, Sheboygan, director of the Sheboygan department of public recreation; Louis Novick, Milwaukee, executive director of the Jewish Home for Aged, Milwaukee; G. E. Watson, Madison, superintendent of the State department of public instruction; and Charles Odegaard, Waukesha, recreation agent of Waukesha County. A total of 48 speakers will address various portions of the conference.

Committee members who have done considerable work on the conference are: Dawson, Eickemeyer, Mrs. Pearl Dawson, and Perry O'Brien, Janesville; R. Marcele Pett, Edgerton; Dr. Lucius Porter, and Robert Junig, Beloit.

STUDY OF AGING OPENS TUESDAY—TWO-DAY SESSION—AUTHORITIES IN MANY PHASES OF PROBLEM TO CONDUCT PANELS

A panel of 45 experts, among them a number of internationally known authorities, will begin arriving in Janesville tonight for a 2-day conference on problems of aging. Sessions open at 9 a. m. Tuesday in Senior High School.

Churchmen, educators, sociologists, economists, recreation, health, and employment and pension experts will be among the panelists lined up over many months by Pat Dawson, city recreation director, for appearance here. Dawson is general chairman of the conference, which is sponsored by the Rock County Board of Supervisors.

Several hundred southern Wisconsin citizens, many of them persons engaged in working with aging persons, will be in attendance at sessions which are open to the general public.

OUTSTANDING AUTHORITIES COMING

Among the internationally known persons who will lend their assistance to the conference by presenting talks or leading panels here are Dr. Eugene Friedman, professor of sociology at the University of Wisconsin; Dr. William Bolton, Chicago, director of the American Medical Association; Dr. E. E. LeMasters, Beloit College, department of sociology; Louis Novick, Milwaukee, executive director of the Jewish Homes for the Aged; J. E. TePoorten, Madison, coordinator of State schools of vocational and adult education.

Other highlight speakers will be Theda Waterman, Milwaukee, director of the central agency for the chronically ill; George Watson, superintendent of the State department of public instruction; and Al Ludvigsen, Madison, legislative consultant.

An internationally famous lecturer and social counselor will be the banquet speaker at 6:30 Tuesday evening in Arrow Park. He is Dr. Carl S. Winters, minister of the First Baptist Church of Oak Park, Ill. Banquet arrangements are under the direction of T. E. H. Eickemeyer, Janesville, representing the board of supervisors.

GENERAL SESSION IN MORNING

Dr. Friedman will set the stage or the discussion of problems of aging and caring for the aging and Ludvigsen, special consultant to Gov. Vernon Thomson, will summarize the areas of study as the conference opens in general session at 9 o'clock Tuesday morning. Those participating will be welcomed to Janesville by City Manager Joseph Lustig and Walter Lindemann, county clerk.

Five separate panels have been arranged covering economics, housing and living, education, recreation, health and medical aspects of the questions. As problems are developed by the discussions of experts Tuesday they will be recorded for further study in general discussions Wednesday.

Pensions and part-time employment are the general subjects of the economic panel, moderated by Tom Schuler, executive secretary of the Beloit Association of Commerce. Panel experts on pensions include Dr. Arthur Miles, director of the School of Social Work at the University of Wisconsin. Eugene H. Seibert, personnel director of the Parker Pen Co., Janesville; Sydney Miller, Wisconsin director of social security, Madison; Einar Hanson, Wisconsin social security director, Janesville; and Prof. David Johnson of the University of Wisconsin department of economics.

PART-TIME EMPLOMENT

Part-time employment possibilities will be discussed by William Mills, director of the State employment service, Janesville; William Angus, Madison, representing the United Steel Workers, and A. R. Haug, director of the State employment service, Beloit.

"This panel will study pensions and part-time employment as the programs are now being handled and how they might be improved for the aging," said Schuler.

A. G. Steinborn, superintendent of Rock County institutions, is chairman of the housing and living panel, which will be concerned chiefly with problems for nursing home, institutional and private home care for the aging. Participating in the discussions will be Miss Theda Waterman, Milwaukee, director of the Central Agency for Chronically Ill; C. Raymond Bowers, Madison, State Department of Public Welfare; and Mrs. Gladys Heise, Madison, State Board of Health, on nursing home and institutional care. Private home care will be discussed by Dr. E. E. LeMasters, Beloit College department of sociology; Mrs. Mary Bernikowicz, operator of Bern Haven, Kenosha, and Ruth Te Linde, Madison, director of the Visiting Nurse Service. C. Raymond Bowers, Madison, will talk on activities for adjusting to home environment.

EDUCATION AND RECREATION

The education panel will be directed by N. E. Loofboro, president of the board of vocational and adult education, Janesville. The discussion of retraining methods in this panel will be handled by Ruth Coe, coordinator of the Madison Vocational and Adult School; Vernon Swenson, State supervisor of vocational and adult education, and L. R. Morris, University of Wisconsin School of Mechanical Arts. Adult education will be discussed by Richard Oster, Beloit Vocational School; Richard Bardwell and J. E. Te Poorten, both Madison vocational and adult education experts.

Charles Odegaard, Waukesha County recreation director, is the moderator for the recreation panel. Direction of hobbies and furnishing of equipment and instruction will be explored by Mrs. Marshall Brown, Kert Bliss and Dave Nolte, Madison recreation and community center directors. Social problems in the recreation program will be studied by Howard Rich, Sheboygan, director of public recreation; Lillian Nitcher, Madison, Wisconsin Community Welfare Council, and Dave Barry, Watertown recreation director.

Research on health and medical problems will be reported in the panel directed by Dr. W. T. Clark, Janesville. With him in the discussion will be the Reverend Herbert Kimmel of the Janesville First Congregational

Church; Dr. William Bolton, Chicago, American Medical Association director; Dr. Robert Parkin, University of Wisconsin Medical School; Sally Gane, director of social service in University of Wisconsin hospitals; Louis Novick, Milwaukee, director of the Jewish Home for the Aged; and Mrs. C. E. Quinn, Beloit Community Council director.

The H-Bomb Plant

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. TALMADGE. Mr. President, the citizens of Georgia and South Carolina are proud of the contribution to our national defense being made by the H-Bomb plant located on the Savannah River near Aiken, S. C.

In its issue of February 2, 1958, the Anderson, S. C., Independent featured an excellent article about this mammoth facility entitled, "Inside the H-Bomb Plant," and written by the noted author, reporter, and commentator, Henry J. Taylor, who presently is serving this Nation as its Ambassador to Switzerland.

I am advised by the Public Printer that to print this article in the RECORD would require 2½ pages and cost $202.50. Notwithstanding that fact, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE THE H-BOMB PLANT

(This article is taken from An American Speaks His Mind, by Henry J. Taylor, just published by Doubleday & Co. Journalist and Author Taylor is known to millions of Americans for his radio broadcasts during the past 11 years. This article details his visit to America's supersecret H-bomb plant in South Carolina.)

The hydrogen-bomb plant in South Carolina is the largest construction achievement ever undertaken in the history of the world.

Thus it is the largest single achievement by free enterprise in all history. The great secret plant uses as much electricity as the entire State of Delaware, and enough water to serve the city of Philadelphia. It cost $1,400,000,000. This is nearly four times the cost of the Panama Canal. And, of course, the whole project is dedicated to the safety of the world.

Every ounce of thought, every ton of steel or brick or mortar was put there to preserve the peace—peace for mankind everywhere—by making the United States so strong that there can be no war.

How was this incredible place built? What is happening there now? What does it take to make the hydrogen bomb? How is it made? What were the incredible challenges American engineering and free enterprise had to meet?

That is my story—a story I have long hoped to be able to tell. To tell it, I was the first reporter to be shown the mysterious activities which take place in this vast, supersecret plant. It is the first such account authorized by the United States Government. And nothing will be revealed, of course, that would aid an enemy of America.

To reach the secret area I flew from New York to Augusta, Ga., and then entered the closed reservation with the Atomic Energy Commission escorts. Come inside with me now and see this incredible place.

This peace preserving project actually covers an area of 315 square miles. It stretches through 3 counties on the quiet Savannah River in South Carolina.

You are first conscious of the secrets hereabouts when you discover that every man who enters this place is photographed. Then there are the armed sentries and the squads of radio-equipped patrol cars hovering near each series of barriers, where even the plant's general manager and security chiefs, who directed me throughout, must stop for full identification at every alarm post and check point. That they had passed through the barrier a few minutes before, and been identified, made no difference.

Each building is surrounded by its own immense circuit of barbed wire and secret protection system. The wrong man might get in there; but I don't quite see how he would get out.

What brought all this on in the first place?

Our A-bomb had been a success. Nuclear fission, or the splitting of the atom, had been achieved.

As early as 1905 Einstein suggested mass and energy are two forms of same thing, reasoning that just as energy is convertible to various forms (heat, electricity) and just as mass is convertible to various forms (solids, liquids, gases), so can mass and energy be converted to each other. Energy equals mass. With fission of uranium atom in January, 1939, came proof of this, plus the possibility of setting up controlled chain reactions and harnessing the released energy for useful work. Then followed the first controlled chain reaction in 1942.

We had learned the secret of the transmutation of the elements, changing one element to another.

In a test in Bikini, 10 million tons of water were lifted to a height of 2 miles. This was equivalent to the entire tonnage of the United States wartime fleet—lifted by one A-bomb.

But as a result of the knowledge that the U. S. S. R. had exploded an A-bomb in August 1949, the demand for creation of the even more powerful H-bomb became inevitable; so inevitable, in fact, that President Eisenhower is quoted as saying to a White House visitor in 1954 that, "If the Soviets had beaten us to the hydrogen bomb, Soviet power would today be on the march in every quarter of the globe."

For the Russians were developing their hydrogen bomb, too. Make no mistake about that. In fact, at first Russia was actually ahead of us in the field. It was not until August 1954 that our country overcame certain important technical leads which the U. S. S. R. had over us in the H-bomb.

This was revealed when the top experts were surprised by the force of the first Russian H-bomb explosion.

By our own secret means, of the most miraculous kind, we actually analyzed at a great distance the Red explosion. We actually discovered that the Russians had created their first H-bomb along quite a different line than we had. We found that the Communists did not entirely follow the methods which had been given them by convicted Red atom spy Dr. Klaus Fuchs. In short, the Russians deviated—and temporarily for the better—from the American method that Fuchs stole and taught them.

Their biggest improvement over us, apparently, was in the way they triggered the H-bomb to set it off. Our secret detections showed that the Reds employed what you might call a chemical trigger instead of relying on the explosion of an atom bomb to create the incredible heat and pressure necessary to then explode an H-bomb.

Specifically, the heat and pressure necessary to obtain the fusion of two forms of heavy hydrogen, deuterium, and tritium, whose composition is the basis of one basic type of hydrogen explosion.

In our case, however, the lead to the hydrogen bomb was found when our A-bomb did generate temperatures up to 50,000,000° C. within one and one-tenth millionths of a second. Nuclear physicists then transferred their thinking to the heavens. They began to calculate how to duplicate the reactions of the stars.

For example, the nearest star, our sun, burns at some 20,000,000° C. It is 93 million miles away. It gives off energy in changing hydrogen to helium at the incredible rate of 564 million tons per second.

This is about 7 million billion times the rate at which we generate all the electric power in our Nation.

The sun is a small star, and a young star. It has not yet lived long enough to burn up much of its hydrogen. It is nearly 3,000 times hotter inside than on its surface.

Its heat is 6,000° C. on its surface and 15,000,000° in the center.

In fact, were the sun's surface as hot as its center, the heat on us would vaporize our earth in a few minutes and scorch us into oblivion.

Yet, the top temperature in the explosion on the material made in the H-bomb plant (150,000,000° C.) is 10 times as hot as the center of the sun.

Fortunately, however, this greatest heat lasts only about a ten-millionth of a second. And it is this short temperature-time factor, not the total energy released, or the size of the explosion, that scientists say determines whether the atmosphere above us or the hydrogen in the oceans will be ignited in a complete chain reaction.

Savannah River H-bomb plant experts always were convinced that the greatest heat of the bomb lasts too short a time to create an out-of-hand reaction that would race around the earth in the sky or through the oceans. The correctness of this was apparently confirmed by the atom trials under water at Bikini.

Some scientists had calculated that in other stars bigger than the sun the fusion of hydrogen isotopes generated temperatures even 10 times greater, and in much shorter time. They reasoned that an A-bomb explosion could produce a fusion reaction, if the proper materials were at hand, so that the atomic bomb could be used as a trigger for a fusion bomb.

That bomb, in turn, would consist of igniting and fusing or bringing together, under certain conditions, two of the heavier isotopes of hydrogen.

This was the timetable of events:

The decision to attempt the H-bomb was made at the White House on January 31, 1950.

But the manufacturing challenge was appalling.

The hydrogen bomb must contain materials similar to the contents of the stars, and produce temperatures 200,000,000° to 400,000,000° C.—over 10 times hotter than the sun.

Savannah River scientists told me first estimates were that such material would cost a million dollars a pound. It would have to be carried to the target under refrigeration, at the incredible temperature of 400° F. below zero. The bomb itself would weigh at least 10,000 pounds. It would not be transported aloft. Ultimately, today's feasible material was conceived in the brilliant realm of pure science. But it took what you are looking at, a plant running for 27 miles along the South Carolina side of the Savannah River, to make that product.

The first output was tested near Eniwetok Atoll in the Marshall Islands of the Pacific on November 1, 1952. That bomb was called Mike. It could not be dropped from an air-

plane. It had to be stationed in a tower on the island. But it wiped out the island (Elugelab) on which it was shot, leaving in its place a crater 175 feet deep and a mile wide, big enough to hold 14 Pentagon buildings.

Even this first H-bomb had more force than the combined weight of all bombs dropped on Germany and Japan throughout the 6 years of World War II.

In a populated region, 300 square miles would have been blanketed by this hydrogen explosion. But that is not all. In 1954 another H-bomb, by now so developed that it could be airborne, was exploded in the Pacific. It had 700 times more power than the first H-bomb.

No wonder Secretary of Defense Charles E. Wilson said at that time: "The results and the realities are actually unbelievable."

But technical production difficulties and the sheer immensity of the factory construction problem were so great no assurance could be given that such a nuclear product could be made.

However, in spite of the enormous uncertainties, E. I. du Pont de Nemours & Co.—who had built and operated the Hanford plutonium unit at Hanford, Wash.—accepted an Atomic Energy Commission letter of contract on August 1, 1950. The Du Pont Co. expressed its willingness to take on the project, including responsibility for thousands of suppliers and subcontractors, at a fixed fee of $1. And the Du Pont Co. did the whole job from beginning to end for $1.

When the Du Pont Co. engineers started looking for sites, they started looking for rivers because many millions of gallons of water a day would be needed to cool off its great atomic furnaces. But the investigation also dealt, as well, with all elements and forces of nature.

Some 114 sites were investigated. In November 1950, 3 months after the contract was let, a review committee chose an area southeast of Augusta, Ga., and south of Aiken on the quiet Savannah River. The plant site is larger than the city of Chicago and is four times the size of the entire District of Columbia.

Six villages were made into ghost towns—like Ellenton. The name still appears on the post office, yes, but not a soul remains. The red brick building among some trees is the school. Look closer and you will see that its bell in the yard is a mass of cobwebs.

Dusty houses cluster the short main street. A fresh wind bangs their doors open and shut on creaking hinges. A village pump is broken in half. There's a gray cat in the window of the town's general store, but it is the only living thing you can see. For these stand today in the heart of the secret area. In fact, in a vast building just over the hill, robots—and only robots—are at work, so deadly is the process inside it.

Quietly, 1,500 families had to be moved and resettled; 125 cemeteries, containing 5,300 graves, were evacuated and reburials made elsewhere with approval of the next of kin.

The Land Acquisition Division, United States Army Corps of Engineers, acquired the property for the Atomic Energy Commission, which owns all facilities as agent for the Government.

The Army's Corps of Engineers is the Nation's largest single buyer of many things; for example, lumber. In peacetime the corps buys between 400 and 500 million board feet. The next biggest buyer is a leading maker of prefabricated houses.

Meanwhile, du Pont's engineering work had started. It ended as a series of 2 million blueprints. In a roll of paper 24 inches wide they would stretch from Atlanta to Seattle, Wash., a top-secret engineering blueprint highway 2,000 miles long.

The dirt excavated would cover the same distance, in the form of a wall 10 feet high and 6 feet wide.

Construction activity started in February 1951—less than 3 months after selection of the site. It increased steadily to a peak which nearly equaled the number of workers who worked on the Panama Canal, 38,500 in September 1952. And a full 5,000 were technically trained.

The average age of the engineering and supervisory group that built the H-plant was only 40 years old.

Construction consumed 126,000 carloads of materials, enough for a train reaching from Atlanta to the Pennsylvania Station in New York City. The reinforced steel alone would have filled a train 30 miles long, and the variety of special alloys needed on account of corrosion problems mounted steadily as the work progressed.

Corrosion and leakage are the twin devils always to be slain in the H-plant. For in some stages uranium has the same effect on many metals as dropping a hot iron in water and letting it stay there. Corrosion simply devours it.

Lumber required could build 15,385 houses, enough to house a town of more than 46,000 people (3 to a house).

All personnel live off the secret site in communities removed from the H-plant, a total operating force, at this moment, of around 8,500 people.

Two new world safety records were established meanwhile by the du Pont Co., including work for more than 6 million exposure hours without a single lost-time injury. This is a record unparalled in the construction industry.

Many of the buildings are as heavily constructed as the battleship *Missouri*, and nearly all are windowless.

Certain of the colossal buildings are built as far down as the bedrock and it is there that you begin to get into the innards of the vast complex known as the H-bomb plant.

Some are enormous, stern, gray monsters, as high as the tallest ships, billowing skyward in tier after tier of concrete and steel, shaped unlike anything previously designed by man; and some are actually not populated by a single man above or below the ground because the process inside is so deadly.

Some have a definite, sober majesty. Others are low and rambling, with annexes and entrances that you enter as if you were coming into the yawning mouth of a giant snake.

Still other tremendous buildings, tall as the Grand Central Terminal, consist of row after row of aluminum-colored tubes, trellises, retorts, and tanks, thrown up bare, without walls, for the fumes from their strange processes would be poisonous if confined by walls and the ventilation problem impossible.

In fact, some fumes at this stage are so lethal they are carried to a tower 400 feet tall, and burned that high in the sky—an eerie, and ever-frightening sight at night, for the wild flames flick upward in a whirlpool of blazing imagery.

In this building (and at Dana, Ind.) is made the heavy water (D20)—the product which AEC Chairman Lewis L. Strauss announced at the Geneva, Switzerland, Atoms for Peace Conference will be offered to the free world for sale.

Pumping stations and power stations are everywhere around you. Most of the plant's total power needed is to move water—that incredible quantity of many millions of gallons a day, used chiefly to cool the atomic reactors, because they release such tremendous amounts of energy in the form of heat.

In its chores, this water is pushed through 85 miles of underground mains. Little is consumed. It is simply circulated and returned to the Savannah River. Overhead powerlines, in turn, weave among the buildings for about 128 miles and carry to them enough electricity to serve Dayton or Denver, morning, noon, and night.

In fact, the Atomic Energy Commission is the largest consumer of electricity, and the largest buyer of coal in the United States, long since surpassing any railroad, industrial firm, or utility.

The factory railroad within this project is 79 miles long, switching yards included. Work roads among the buildings cover 159 miles. What, then, is going on? What's being made, and how?

The process for making an H-bomb consists of four main operations: (1) Assembly of the nuclear fuel and the target materials, (2) Five enormous atomic furnaces, or reactors. (3) The so-called separations operations. (4) The manufacture of heavy water (D20), needed in the process but not used in the H-bomb.

Polished slugs of natural uranium are received from a distant processing unit. And 1 pound of this material, the size of a golf ball, has the same potential energy as enough TNT to fill the Yankee Stadium.

In fact, just 1 single pound of uranium can be converted into the staggering power of 2½ million pounds of coal.

The uranium ore itself comes from Alaska, Australia, Belgian Congo (chiefly the great Shinkolobwe Mine), Canada, South Africa, the Colorado Plateau, and several secret sources.

Perhaps it is hardly realized that although difficult to extract, uranium is relatively plentiful in the world; actually more plentiful than zinc or lead. Thorium in the earth's crust—another potential material—is, in turn, about three times as plentiful as uranium.

It comes in chunks, like lava. The uranium appears as a black streak in the lumps. In refining it out this black substance becomes orange, then brown, then green, and finally metallic colored, something like a gun barrel.

Even then, it sometimes appears to change color, depending on the light. But no, it does not glow in the dark, for none of the rays hurled out by uranium are light rays.

Its chief characteristic is its small bulk, for uranium is the heaviest element known to man.

Most of this final refining is done in the Atomic Energy Commission plant at Fernald, Ohio, 19 miles outside Cincinnati. There, in a complicated chemical process, the ore is digested in a nitric-acid solution. It is changed into a liquid. Chemical change after chemical change follows in the course of a process involving great turbulence.

It is boiled down into powdery orange oxide. What comes from Fernald's furnaces, called green salt, is chemically named uranium tetrafluoride or UF–4.

Finally, as molten uranium, it spills into molds and solidifies into ingot form. These ingots are rolled and ground and cut into the slugs you see arrive here at the H-bomb plant at Savannah River.

There a first step toward the H-bomb is to assemble the slugs scientifically inside long tubes, called fuel rods because they contain this atomic fuel. The target material they are to bombard is also assembled inside similar rods in such a way as to provide a self-sustaining chain reaction.

The methods call for applied nuclear science of the highest level and involve, of course, several of the most basic secrets of production.

Roughly speaking, materials that are to react on one another in the nuclear furnace, the reactor, to make our H-bomb, are now ready.

Let me speak first of the terrific challenge to free enterprise when it came to trying to build the reactors, the atomic furnaces. Private enterprise had to rise to the challenge. And it did so, for every day in America is a new challenge.

Previous reactors in other plants like Oak Ridge were atomic piles using graphite in the nuclear process. H-bomb materials required designing a tank-like reactor on a completely different theory.

The Du Pont Co. realized that radiation creates major problems in engineering design because the structural materials may gradually change or disintegrate.

The tank could be made of aluminum. It would be surronded by graphite and then by a concrete shield.

But, in addition, this reactor-tank would have to be filled with heavy water; the 1932 discovery of Dr. Harold G. Urey and coworkers, which won for him the Nobel prize.

This fluid is a phenomeon. It was the pathway to victory at Savannah River. It looks like plain water, but weighs more. Of the total hydrogen atoms in plain water, one atom in very 6,250 weighs twice as much as the rest of the hydrogen atoms.

Every time you use 52 gallons of water in normal, everyday living, an ounce of heavy water is present. This amounts to 1 pound in every 3 tons of plain water—if you can get it out. That is something like saying that one door knob in the Empire State building is heavier than the rest, if you can find it. This plant, unique in all the world, finds it by the hundreds of tons.

In the H-bomb process when neutrons fly out from the uranium, they have very high speeds. They are the spark for the powerful nuclear reaction. But it is necessary to slow them down before they are efficient. Savannah River scientists say they travel about 30 million miles per hour. A bridle must be put on them. If not, they bypass the atomic targets in the other rods that they are supposed to convert. For an atom is built like our solar system. It is almost all empty space. The nucleous is the only solid piece. In fact, Savannah River scientists say if you eliminated all the space in every atom in the body of a 200-pound man he would be no bigger than a particle of dust. Further, the earth without the space in its atoms would be a ball only one-half mile through.

Speaking in London, Sir Oliver Lodge expresses this another way: "Within the atom, electrons revolve around their nucleus several thousand million times a second. Each electron has as much room to move within the atom as a bee has to move in St. Paul's Cathedral."

The heavy water is used to slow down the neutrons by keeping them submerged in the strange fluid. It is called the moderator. But the quantity needed was so relatively great that another industrial supermarvel arises in the fact that thousands of tons are produced in the H-plant whereas only a small quantity existed previously throughout the world.

This was a built-in handicap. Overcoming this made possible the success of the radically new reactors. It was a bad morning for the cynics.

This brings us to the reactor buildings themselves:

These are the great, tiered, bombproof buildings built like the Missouri. There are five. They are the heart and core of the plant, buildings R, L, P, K, and C. All are alike. To the working force, they are buildings Roger, Lilly, Polly, Kitty, and Charley; such is the American penchant for nicknames even in the H-plant.

There are 5 reactors instead of 1, not to enhance the H-bomb processes but merely to multiply the output. Here, then, is a perhaps hitherto undisclosed fact: For it is incorrect to assume that once our country has made up a suitable stockpile of atomic weapons we have on hand any true and standing supply. Atomic bombs deteriorate in storage. They must be freshened, replenished, recharged, which is why there is continuous atomic-materials production, and why the output is on a permanent basis.

Thus we arrive at the next challenge to free enterprise: the instrumentation.

An atomic bomb is an uncontrolled reaction. A reactor operation is a controlled reaction. So, when loaded rods are put in the reactor, the tremendous potential energy locked up in their atoms must be released gradually.

Rods, containing a bluish-white metallic element called cadmium, are stuck in as a safety precaution, and the reactor can be completely shut down by merely pushing the control rods farther in the reactor. That's the way you stop production. But the nuclear operation itself requires controls so fantastically sensitive that human operation is impossible.

The pulse of the reaction must be recorded continuously; for just as growth in nature is silent but continuous, so the reactor is a huge, silent force that goes on continuously. Speed in electronic calculators and signal systems is imperative to monitor it, and also to set in motion the nuclear corrective measures required to compensate for the slightest changes. The Du Pont Co. process engineers had to make a kind of pragmatic judgment about much of the instrumentation: "What works?"

As one result the plant's instrumentation consists of more than 100,000 dials. Some scales weigh invisible specks 1 billion times smaller than a gram, although a gram is as light as a few blades of grass.

Other instruments clock speeds of atomic particles to one-thousandth of a millionth of a second. Miraculous pumps were built to whirl faster than the speed of sound. I looked into a microscope that measures a thickness 10,000 times smaller than an eyelash. I saw vacuum tubes so tiny that a dozen would fit in a thimble. You can see immense doors open and close themselves in perfect unison. Some of the machines weigh 250,000 pounds, yet they must operate with micrometerlike precision and, in fact, are built by watchmakers.

About 120 different skills and technologies were combined to achieve the plant's design. The Du Pont Co. placed more than 87,000 orders with 5,745 firms employing less than 500 people. Thus, as is true throughout our free-enterprise system, it required a combination of the talents and facilities of large and small business to build all this and meet the schedules of our Nation's defense program. It reflects interdependent responsibilities of big and small business in serving our free-enterprise economy, and the people of our country. Teamwork did the trick.

The reactors' products are made in batches, and the fillings of the reactors are staggered. Roger is filled and allowed to percolate. Then Polly, then Kitty, and so forth. Thus when opened they create a steady flow of the products to the next stage in the process.

This is the separations operations.

Uranium from the fuel rods has become partly converted to plutonium, and partly contaminated. Isotopes are bouncing around. Their presence is detected to an astounding degree. For example, 1 molecule of 1 of the isotopes can be discovered in a quantity of materials 10 million times its size. Were there only a teasponful of it in 5,000 tons of any carbonate, Savannah River scientists could still trace it. The teaspoonful divided among 50 million rats could be detected in any 1 rat.

The fission products, or ashes from the atomic fuel, coming out in the batches, are intensely deadly, radioactive. Now they are taken to the separation center.

Like the six ghost towns, these buildings constitute a world where nobody can live—but there is much going on nevertheless.

Robots take over. To avoid radioactive fatality, the incredibly difficult operations had to be designed to operate indefinitely without stopping day or night for maintenance and completely without human contact.

Here you see robot hands, remotely directed, so delicate in their touch that they could pluck a human hair from your head, or flick the cork out of a tiny chemical bottle (the simplest set of hands costs $8,800); or huge robot derricks; levers and electric trollies so heavily built that they move the biggest machines, inching their way through tunnels and down tracks under electronic control, as if guided by brains from another world.

Equipment maintenance and other intricate changes are made on signal by means of these weird workmen among the forest of machines. They connect or break electrical circuits, as man might do, repair leaking pipes, transfer faulty machinery, install replacements, and even flash a battery of lights, like a pinball machine, if they fumble something or smash it.

Technicians scan the operations from outside the vast building through a telescope in the wall. When I asked why the robots needed watching if they were perfect, one scientist replied: "Well, it's lonesome in there. We keep our eye on them to see that they don't go over in a corner and sulk."

Then, at intervals, any discarded machines or tools, if radioactive, are transported to a burial ground down by the river, where even the trucks that haul them are buried forever.

The atomic end products emerge separated. The uranium fuel, repurified, is returned to reprocessing into slugs, to be used again. Some plutonium has been created, useful in the A-bomb. Cobalt has been made radioactive. It will be packaged in the form of wafers, each only slightly larger than a dime, and shipped for use in the medical arts, and therapy machines, like radium.

Isotopes emerge and find their way to outside laboratories for experiments toward better agriculture, better forestry, better industry, better health—including attempts at a cure for cancer.

The poisoned material for which no use is yet known is stored underground in whole batteries of giant sunken tanks, the size of a 10-story building, awaiting a day when science will discover some utilization.

Finally, from the separations processes comes the material for the H-bomb, now purified, lethal, and ready. It is not assembled into the bomb at Savannah River. That is done elsewhere at assembly points in weapons centers, to guard the peace of the world.

Breadlines Are Growing

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Breadline Grows Bigger Here This Year; Block Long, Four Abreast at Pacific Garden Mission," written by Miller Davis, and published in the Chicago Daily News of February 17, 1958.

I ask unanimous consent also to have printed in the Appendix of the RECORD, following the article just mentioned, a letter to the editor of the Chattanooga Times.

I point out that the Chattanooga Daily Times of Saturday, February 15, reports the following:

The total picture of the unemployment situation in the Chattanooga area was a depressing one as reviewed by approximately 50 representatives of welfare and relief agencies.

The article reports, further:

There are an estimated 9,100 persons totally employed in the labor market embracing Hamilton County and Walker County, Ga.

This, Mr. President, is the Chattanooga area. I call attention to these facts and urge the Senate and the administration to take cognizance of the distress conditions which are daily growing worse.

I think it is time the Government undertook measures to safeguard our economy from what threatens to be a severe jolt.

There being no objection, the article and the letter to the editor were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of February 17, 1958]

BREADLINE GROWS BIGGER HERE THIS YEAR—BLOCK LONG, FOUR ABREAST AT PACIFIC GARDEN MISSION

(By Miller Davis)

"Yes; I ate yesterday morning," explained the 44-year-old mechanic from Pennsylvania. "I had soup, bread, and some stewed apricots."

It was 28 hours later, and the scene was a block-long breadline, the men four abreast, in front of the Pacific Garden Mission at 650 South State.

The mechanic, clean shaven and wearing a faded but freshly starched jacket, stepped back into the line of cold, shivering men.

"Don't want to lose my place," he apologized gently. "But I gotta eat. I can't hunt work unless I eat."

He said he had had a job mopping floors in a cafeteria which paid $5 for 10 hours' work. But the job faded and he spent the money for a bed in a flophouse. That was a week ago.

"My name is Harry McGruder," the mechanic added. "I'm a good mechanic—but so what?"

Richard Sullivan, 40, stood behind McGruder in the line. He stomped his feet to pound the blood back.

"I used to make $120 a week just a couple of months ago with a cartage outfit" Sullivan said. "Then things got bad in St. Paul and I came down here where you could always make a dollar."

But Sullivan said he hadn't been able to make a dollar here.

Four big cartage outfits told him, "We don't need you now; come back in a couple of weeks."

Sullivan said he had "some oatmeal and coffee yesterday morning, and they tell me we get beef stew today at the mission."

Squeezed in his hand was a small yellow ticket reading on one side: "Pacific Garden Mission. * * * Ho, everyone that thirsteth, come ye to the waters, and he that hath no money, come ye, without money and without price."—Isaiah 55: 1.

"Somebody handed me this ticket," Sullivan explained. "This is the first time in my life that I ever had to * * *."

He wiped a hand across his eyes and got back into line.

Condit Kunz, 48, a former warehouse foreman, muttered, "I'm just hungry."

"I'm not too proud to admit it," he gritted. "I have 2 cents in my pocket, after paying 70 cents for a flop last night."

Kunz carries soap and a razor in his pocket.

"I don't look like a bum when I look for work," he said.

Inside the mission, warm but desolate, Supt. Harry Saulnier was guiding the men to seats in front of a rostrum.

He led some hymns and a few prayers before they went downstairs for soup, stew, bread and butter.

"We've had a 20 percent increase in the number of men eating and sleeping here the past 2 or 3 months," the gray-haired Saulnier said.

"We have beds only for 90 men—so the rest, about 170 each night, must sleep on the floor.

"A lot of these are fine-type men, not bums, and they just can't find jobs, even menial jobs.

"You can't throw them out in the snow, somebody has to help them until the job situation gets better."

The mission is supported by voluntary funds from people whom Saulnier terms "Christians and non-Christians who can't think of people going hungry."

At the Salvation Army's Harbor Light Center, 654 West Madison, Maj. Roland Quinn, commander, said the center is feeding 400 men a night now, about 10 percent above a year ago.

"Worst since 1955," commented Quinn's assistant, Bill Red. "Usually work picks up in the middle of January—but this year it didn't."

The center is getting a lot of young men, generally the first to be dropped in a labor pinch, he added.

About 40 percent of the men coming to the center are from the Chicago area, Quinn said.

[From the Chattanooga Daily Times of February 15, 1958]

To the EDITOR OF THE CHATTANOOGA TIMES:

I wonder if anybody else is disturbed by the complacence of most people toward the poor of Chattanooga? This long drawn out cold spell has caused incredible suffering and the recession (by any other name) has added to this misery. Yet over and over I hear people dismiss any spoken sympathy with the words, "Well, they can always go to one of the local agencies, can't they?"

The harrassed and sometimes desperate local agencies are carrying a burden that is far heavier than most people realize. They are handicapped by insufficient funds, insufficient help and insufficient material. If any one has read the list of foods handed out by the agencies here, one must pause to wonder what the ultimate effect of such a diet must be. White flour or meal, white beans, skimmed milk, rice and cheese. No meat, no fruit or vegetables, no butter fat, no energy giving sweets.

This is not a criticism of the agencies. They give what they have. But it is a criticism of this rich Government with its surplus of peanuts and its frequent surpluses of eggs, butter, and of its waste and indifference. Undernourishment can cause tuberculosis—which can spread to even the most well-to-do people; it can cause death from lack of resistance and it can certainly cause crime—for who could resist stealing for his hungry children when the stores all around one display such a lavish stock of food? Starvation and frustration can cause deep psychological scars which may lead to dangerous abnormalities later.

This is not a problem which can be easily solved, but certainly its worst aspects could be alleviated. People who are even fairly comfortable are too prone to dismiss the misery of others.

It disturbs them to think of children in this town dying from hunger and exposure and lack of medical care. Yet it happens. I have been in a house right in town where there was no heat and a little 5-year-old child died of the cold and malnutrition. I know of a family of 12 children, a mother and an old grandmother who live on one floor of a frame house. The children not only haven't enough clothes to go to school but not even enough to cover them. I have been told by neighbors that even the older children wear diapers because they have nothing else. Shoes in a family like that are beyond price and food is something that one hopes for. I know a family where the mother and four children lived on the agencies' food until the little boys, 2 and 4, after having white beans with no seasoning for five consecutive meals, simply sat and looked at them and cried. There are many more. How can you use flour without lard, salt or baking powder? How can you cook beans without white meat or fat?

How can you use meal, even in mush, without something to put on it? And how can you grow into anything like a useful citizen with none of the foods that everybody knows are necessary simply to maintain the rudiments of health?

I confess that I don't know the answer. Unless the churches open soup kitchens before it is too late. The community centers do a wonderful job, but like the agencies, are financially handicapped. It seems to me that the time has returned when individual help is needed, the help of groups and of individual people who are not not subsidized by the Government.

Next Wednesday is Ash Wednesday, the beginning of a season in which most of us turn our minds more firmly toward the precepts and ways of Christ. It might be well to remember the epistle which says, "Though I speak with the tongues of men and of angels, and have not charity, I am become as a sounding brass or a tinkling cymbal * * * and though I have all faith, so that I could remove mountains, and have not charity, I am nothing * * *the greatest of these is charity."

And let those who are so content to leave their charity to the overburdened and often pitying agencies figure how they would provide coal, shoes, clothes, food, light and medicine for a family on what the agencies are able to hand out.

A TROUBLED CITIZEN.

Pay TV

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. THURMOND. Mr. President, the Asheville Citizen-Times, of Asheville, N. C., included in its edition of Sunday, February 9, 1958, a most informative discussion of pay TV, written by its able editor, the Honorable Charles K. Robinson.

I ask unanimous consent that this editorial article, entitled "Pay TV and Public Policy," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAY TV AND PUBLIC POLICY

(By Charles K. Robinson)

A lengthy debate on pay television versus free television has narrowed down to a few basic issues. Condensing the long story, the basic questions may then be considered in

the light of accepted ideas of sound public policy.

The first and most immediate question is whether Congress will permit the Federal Communications Commission to conduct tests of toll television.

FCC and the advocates of pay television insist that such tests would provide a democratic answer to the question, "Do the people want pay television?"

The opponents, including the three major networks now providing free television, correctly point out that such tests would show only that a minority, ready for new gadgets and able to pay for them, probably would go in for pay television.

The minority would also apparently go in for the good programs for which pay television could outbid free television. The consequent plight of the majority of 50 million families would just be too bad.

Hearings on the controversy have been conducted by the House Committee on Interstate and Foreign Commerce. The main issues there presented with attendant facts and logical deductions may be thus presented:

The air waves are public property. They belong to the American people, all the people.

Congress writes the rules to assure the people that all broadcasting shall be conducted with due regard for the public interest, convenience, or necessity.

Of the almost 50 million families in the United States, approximately 42 million have invested around $16 billion in television sets.

These investments were made in reasonable belief that the owners would never have to pay additional bills for television programs.

That bill—1 billion and almost 210 million dollars—is now paid by advertisers seeking and apparently finding the larger mass markets upon which the American system of industry and trade is based.

Therefore free television (commercials and all) is a part of our private enterprise system.

Whatever the system lacks of perfection, it has brought great good to a great number—a great and growing number of all sorts and conditions of men, women, and children—not to just a minority of the people.

The system is admired by our friends among the nations. It is undoubtedly secretly envied by our Communist potential enemies.

Why, then, is there a serious proposal before FCC and Congress (it belongs in Congress) to abandon free television for the toll system?

One guess is enough: huge and growing profits.

Telemeter Corp., thus far the only applicant for FCC license to operate toll television, has given a frank and really a twofold answer to the question:

We ask merely for the authority to sell, if we can, something which is now being given away.

Subscription television would initially cost the networks much money, and their minority subscribers would also pay substantially.

But Telemeter apparently finds compensatory assurance in the estimates to this effect: with only a small number of the 50 million families going into subscription television, the financial take would be around $6 billion a year.

The lure, to those able to respond, is better programs. It is only an assertion of better programs, but this much is true: with the tremendous sums flowing in from pay television, the new sponsors would siphon off from free television the best actors, the best programs, the best that more money can always buy.

This is the explanation for an otherwise somewhat puzzling statement by Columbia Broadcasting System and other networks opposing pay television. These networks recognize the fallacy in the glib argument that coexistence is possible for free and pay television. They frankly say that, if Congress authorizes toll programs, they will go over to the pay system as a matter of self-preservation.

It is unnecessary to discuss the tests further than one point. Prolonged tests, which would be necessary, would cost all concerned so much that it would be difficult at the end not to authorize pay television.

Not incidentally, pay television would be a prohibitive cost for the average family.

But no test is necessary to arrive at a plain yes or no on a clear-cut, fundamental question, the question on which the whole case for toll television must stand or fall:

Are the people's representatives in Congress willing to set up a monopoly of toll television, for the entertainment and instruction of the few able to pay, and for the exclusion of the majority not able to meet the bill?

Postal Rates

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very good editorial on the subject of postal rates, published in the Easton Express of Monday, January 27, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL RATES MUST BE RAISED

A few days ago Postmaster General Arthur Summerfield wrote in clear terms on a Senate committee's Belshazzar's wall the "Mene, Mene Tekel" of the United States postal operation. The system has in the last decade or so incurred a $6-billion deficit. True, when purists explain the operation as a service rather than a business then it does not really incur deficits, any more than other pure service responsibilities of Government can be considered as such.

But the concept of the mails as a service in the pure sense ended when the first fee was charged for delivery. The use of stamps and the cost of other services to mailers has supported part of the cost of the postal operation. It is not breaking any long-rooted principle, therefore, to raise the postal rates, and this is one method recommended by Mr. Summerfield and the administration in cutting down on the system's annual losses.

Not since 1932 has there been an increase in the first-class mailing rates, although during the 1st session of the 85th Congress the administration, backed by informed public sentiment, supported by organizations such as the National Association of Postmasters, tried to have the letter rate increased from 3 to 4 cents. In the face of this legislative reaction it may seem unrealistic for the administration now to seek a 2-cent instead of a 1-cent rate raise, but maybe the extra penny has been tacked on as a factor in bargaining with the lawmakers.

The administration also is trying to create rate reforms in other mails functions. Mail advertising—the junk mail addressed to "Boxholder," which forces the postman to stop at every home, and creates handling crises in the post offices, is an undeserved subsidy to those who use this form of advertising. And a fair share of the cost of the postal operation is not paid by some users of second- and third-class mail services, despite recent rate and other adjustments in these areas of service.

In many of the problems created by outmoded equipment and antedated personnel policies, the postal service officials could create effective reforms by following through with many of the recommendations made by the Hoover Commission. Action in this phase of the problem in fact would in some degree minimize the fiscal squeeze on the system and have a commensurate bearing on new rate considerations.

Again it must be realized that the postal operation never has been wholly a service, and it probably never will pay its own way. Both Congress and the administration must approach realistically the fact that while rates have remained relatively fixed, operational costs have moved upward at a pace generally in keeping with the rest of the national economy. The only sensible thing to do is to make the rate adjustments that are indicated—or make an official policy recognition of the need for sufficient tax appropriations to end the so-called deficits.

The Regulation of Imports by Quotas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement of Mr. O. R. Strackbein, chairman of the nationwide committee on import-export policy, as submitted to the Boggs Subcommittee on Foreign Trade Policy of the House Ways and Means Committee:

STATEMENT OF O. R. STRACKBEIN, CHAIRMAN, THE NATIONWIDE COMMITTEE ON IMPORT-EXPORT POLICY, ON THE REGULATION OF IMPORTS BY QUOTAS, SUBMITTED TO THE BOGGS SUBCOMMITTEE ON FOREIGN TRADE POLICY, OF THE HOUSE WAYS AND MEANS COMMITTEE

The tariff has been the principal means employed by the United States throughout its history for the protection of its industry from foreign competition in the home market. Until recent years the tariff was relied on almost exclusively as our instrument of protection. In more recent times import quotas have been used as a supplementary device to protect certain agricultural products.

The aim of this paper is to examine the relative merits of the tariff and the quota as means of regulating import competition.

The use of the tariff as a flexible instrument was more widespread in the past than it is today. In recent years, particularly since the signing of the General Agreement on Tariffs and Trade in 1947, the tariff as such has been made much less flexible through wider acceptance of the most-favored-nation clause and the general principle of nondiscrimination.

The United States in sharp contrast with most of the other leading trading nations has continued to rely for the most part, and with respect to industrial products, exclusively, on the tariff as its principal protective instrument. It is also faced with the fact that some of the important trading nations do not adhere as we do to the uncon-

ditional most-favored-nation clause. As a result this country lacks the flexibility enjoyed by other countries in their protective devices.

These facts, among others, have done much to bring the tariff under closer scrutiny in the United States in recent years. The tariff's failure to fit particularly serious competitive situations has been revealed as a glaring weakness as imports of one product after another have since 1948 eaten into our market at will, gaining an ever increasing share of the whole.

There may be a wide gap, for example, between the prices on the same goods coming from different countries. A given tariff rate, say one of 25 percent, might be suitable with respect to the goods coming from some countries but wholly inadequate when these goods come from other parts of the world. A rate as high as 100 percent or 200 percent might be necessary in such cases to provide the same braking power as the 25 percent rate in the other cases.

Yet any given tariff rate under the most-favored-nation clause and the principle of nondiscrimination must be applied to the same goods coming from all countries without distinction. This fact, on the other hand, has made the tariff almost useless as a protective instrument with respect to many products.

Contrary to some economic theories, high cost of goods does not necessarily arise from relative inefficiency. It may and often does arise from unequal social legislation that imposes higher cost burdens on producers in one country than those borne by their competitors in other countries. This fact often places the higher standard countries at a relative disadvantage.

Quite aside from the unequal braking power of the tariff when employed by itself, it has other deficiencies.

Specific rates, based as they are on some measurement of quantity, for example, do not respond to the changes in price levels that occur over a period of time. Exclusive of the tariff reductions made under the trade agreements program, the protective incidence of our specific duty rates has fallen as much since 1934 as prices on our imports have risen. No compensation has been provided by the United States to offset this shrinkage although other countries have in many cases raised their rates in keeping with the rise in prices.

Purely ad valorem rates, on the other hand, offer least protection precisely where and when prices of imports are low and can do the most damage. This defect has already been mentioned as arising when the same imports come respectively from lower and higher standard countries. It shows itself just as disastrously when the general price level itself has fallen and imports aggravate an already bad surplus situation. The ad valorem rate is then at its weakest.

Undoubtedly the greatest failure of the tariff, used alone, is encountered when a surplus position has developed on a broad front and a buyer's market threatens a recession or a depression.

It is on such occasions that a more flexible instrument is needed. Protection of industry and labor and of the economy as a whole from competitive imports is never more important than in times of surplus accumulation.

If under these circumstances imports remain out of control their unimpeded flow can wreck all the efforts of domestic producers to make the necessary adjustment of supply to demand. A single, fixed tariff rate is then of little or no avail. What is needed is an instrument that is responsive to the needs of the occasion. Such an instrument would serve the double purpose of protecting not only a given industry but the economy in general.

An import quota, either alone or in combination with the tariff, lends itself to the requirements of a flexible instrument.

Such a stabilizing influence and such a prop to confidence would be of immeasurable value to domestic production and employment because of its effect on planning forward commitments and expansion proposals. If the trend of imports is such that grave doubt is cast upon the future market for the domestic product, confidence cannot thrive. Planning then labors under a severe handicap. A damper falls upon plans to expand plant capacity; and outlays for development and promotion fall under a spell of fear. Such an atmosphere is essentially the atmosphere of panic, of negative behavior and eventual defeat. It is wholly contrary to the needs of an expanding economy.

A decline in exports has not nearly the panic-impelling power as an increase in imports. Control of imports should therefore give us the greater concern.

The reason is that imports much more than exports confront the domestic producer with an unknown potential for trouble that is not only unpredictable but is wholly beyond his control.

If the domestic industry is a small one, composed of a number of competing producers, a running battle with imports is almost certainly a losing engagement. The funds necessary for research and development, product improvement, promotional activity, so badly needed, will probably not be available or if on hand will be needed in the struggle itself.

The natural reaction of domestic producers, faced with an overstock of high-priced goods, when confronted with an increasing tide of imports, is to curtail production in order to reduce inventory losses and, if possible, to adjust to the new situation. This means laying off employees or putting the force on a short workweek. In any case, it means unemployment and shrinking payrolls.

The sacrifice of a domestic industry not only cannot be justified in behalf of a national policy that may itself be faulty, either in its conception or execution, but is abhorrent to a sense of justice and national self-respect. There is no clear cause-and-effect relationship, for example, between increasing imports of some product that is not essential to the national defense, and the success of any sound foreign policy. A policy that suggests such a relationship is more likely to be at fault itself.

It would be more compelling to say that any legitimate American industry is entitled to continue its existence in this country if it can supply a product that the consumer demands, at prices the consumer is ready and willing to pay and high enough to return a reasonable profit.

An import quota system should be designed, either by itself or in combination with the tariff, (1) to afford protection against undue encroachment of imports on the domestic market without introducing unnecessary rigidity into the trend of trade; (2) to introduce greater certainty into planning, scheduling and pricing in domestic production so that development of products, renewal or expansion of plant and equipment and greater employment may proceed in an atmosphere of greater confidence in the future, freed from the panic-potential of unimpeded import competition; (3) to provide for sharing of the domestic market with imports under conditions that make it possible for domestic producers to live with the type of competition involved; and (4) to assure a maximum of trade by setting up an orderly system of fair competition in place of a chaotic and disruptive operation in the name of a liberal trade policy.

By putting a ceiling on imports, either absolute or approximate, the import quota deprives import competition of its most objectionable feature, namely, the creation of uncertainty and therefore the destruction of confidence, as described above.

A tariff quota would in all instances be preferable to an absolute quota if a suitable tariff rate or combination of rates could be determined. This follows from the greater ease of administration of a tariff quota. Also a tariff quota does not close the market absolutely. Goods may still come in so long as they can surmount the limiting tariff barrier.

Objections are often raised against import quotas as a means of regulating foreign trade on the grounds that quotas are too restrictive and tend to put trade into a straitjacket.

Unquestionably import quotas could be used, as they have been, to produce precisely these effects. That fact, however, does not condemn quotas as such for the simple reason that their use need not produce such results, and indeed can be designed to avoid them.

There is no call for a general upward revision of the tariff; but there is an urgent need for supplementing the tariff with flexible quota provisions and in some instances for substituting absolute but flexible quotas for the tariff.

What is called for therefore is enabling legislation that would empower an agency of the Congress, such as the United States Tariff Commission, to impose an import quota either in combination with the tariff or separately, in accordance with guidelines set forth in the legislation.

The usual complaint that import quotas tend to stifle trade and prevent its growth could be overcome by shaping the quota system with the necessary degree of responsiveness to the needs of commerce and industry.

Economic disruption and distress attributable to import competition, in the form of unemployment, upset prices, mounting surpluses, and loss of confidence need not be regarded as a necessary and unavoidable accompaniment of foreign trade. The import quota, properly prepared legislatively and intelligently administered, could be the savior of a liberal trade policy.

Agricultural Research

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. THURMOND. Mr. President, in recent months the people of this country have become very much interested in the subject of basic and applied scientific research, as it applies to the matter of national security. Sometimes, perhaps, some of us get the idea that intensive scientific research is something new.

One example of a research program that has been continuing for a long time, and with excellent results, can be found in the field of agriculture.

There is no line of human endeavor more important than that pursued by the farmer. He produces everything we eat and almost everything we wear. He is doing it more efficiently every year because agricultural research is going forward constantly.

I ask unanimous consent that a very informative review of agricultural re-

search, entitled "Research in Agriculture Adds to Practical Uses," which appeared in the February 1958, issue of the South Carolina Farmer, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESEARCH IN AGRICULTURE ADDS TO PRACTICAL USES

Basic research is a systematic, intensive search directed toward increase of knowledge in science. It discovers the order in the universe and accounts for the happenings in our everyday environment. It establishes new laws and concepts that are often put to practical use by applied research. It dispels ignorance, and creates more ignorance.

Progress in applied research and development depends heavily on the growth and encouragement of basic research; without it, technological advance would be slowed down to a snail's pace.

The concepts, objectives, and methods of basic research and common to all science and all nationalities. Its results have universal application. Advances brought about as a result of such research in a particular area lead to totally unexpected developments in a wide range of unrelated sciences.

Creative, pioneering studies that give us new scientific laws and principles have always had a place, but not always the same emphasis, in USDA research. Emphasis on basic research is currently increasing, with more money and effort backing it up now than ever before. Basic research comprises 17 percent of USDA's total research effort at the present time, and the figure is rising.

Such research—in widely varied sciences—has already given us tremendous insight into fundamental processes and helped change our way of life.

But there's still a great deal that we need to know—things like the mysteries of chlorophyll formation; the light-sensitive trigger mechanism that regulates flowering, seed setting, and germination; the forms of radiation that profoundly affect life; the complex exents that make a hen lay an egg.

What the implications of basic discoveries like these may be are limited only by man's imagination. Unraveling these mysteries may give us entirely new approaches to our practical problems, such as feeding a population of 300 million people (expected by the year 2000) a nutritious diet resulting in greater vigor, stature, and life span. Elimination of harmful insects and plant and animal diseases could go a long way to reduce human disease. Shedding more light on synthesis of amino acids, life's main building blocks, might enable us to reproduce chemically some form of life. Bringing about mutations of living organizisms by radiation or chemical means may permit scientists to regulate heredity.

Actually, we don't even know what such work can give us because we can't accurately visualize what the future holds. Who would have dreamed 50 years ago of today's fantastic achievements, such as harnessing atomic power? A research breakthrough in agriculture might have the same kind of effect.

BASIC WORK IMPORTANT IN EARLY RESEARCH

Scientific research has been one of USDA's main functions since its inception in 1862. Much early research developed to meet emergencies. But basic research played an important role, too. It was often necessary to perform fundamental work before solving many practical problems of the day. This led to some great contributions.

The close of the 19th century, for example, found USDA scientists working on tick fever, then taking a dreadful toll of cattle. It wasn't long before researchers pinpointed protozoa-laden ticks as the carriers. Of course, this discovery got rid of tick fever. But it did something even more important. In showing that protozoa could carry disease, it laid the foundation for the new science of protozoology and opened the way for many public-health and preventive-medicine activities.

FEDERAL LAWS PROMOTE FUNDAMENTAL STUDIES

Basic research continued to gain because of a growing need of fundamental knowledge to provide a base for finding answers to more complex practical problems. This need was reflected in the passage of Federal laws providing for basic research. Among them was the Bankhead-Jones Act of 1935, which established nine regional laboratories. The act also expanded support for research in State agricultural experiment stations.

Surprisingly, basic research slowly declined after passage of the Bankhead-Jones Act, reaching a low ebb of 1947. It's not hard to see why. Funds under this act—as well as other research funds—weren't increased to keep pace with decreasing dollar value. In addition, emphasis during the war years was on applying all background knowledge on hand. Nevertheless, much significant work emerged. We now have a better understanding of such matters as nature of clays, the biology of insects, and the effects of light on plant growth.

NEW PIONEERING SCIENTISTS FOLLOW OWN LEADS

A great step forward in basic studies is the formation of pioneering research laboratories presently moving forward in ARS. These are being organized around outstanding scientists who have demonstrated a capacity for creative research. The scientists are developing their own research programs, following leads they think important. They have been relieved of administrative duties to devote all their time to basic studies.

Plans for these laboratories began to take shape in February 1957. Already set up are pioneering research laboratories for mineral nutrition of plants, plant physiology, blood antignes, insect pathology, insect physiology, seed protein, plant fibers, and microbiological chemistry. Others are being planned.

Pioneering researchers hope to provide answers to some of agriculture's most puzzling questions. Example: How can an inorganic ion move from a dilute solution in the soil into a much more concentrated plant says? By all known laws, the movement should be the other way.

The recent steady growth of basic research in USDA probably can best be shown by comparing research expenditures for fiscal years 1947 and 1957.

Research funds used by USDA in 1947 totaled $33 million. A little more than $2 million, or 6 percent went into basic research. In 1957, USDA was spending nearly $73 million for research, with over $12 million or 17 percent going into basic research. Largest share of the research appropriation went to ARS major research agency of USDA. ARS received over $54 million; over $11 million or 21 percent went into basic research.

Other USDA agencies doing basic research are the Agricultural Marketing Service and Forest Service.

Research by the State agricultural experiment stations has contributed enormously to the Nation's agricultural economy. An estimate made in 1954 indicated that approximately 23 percent of the State experiment station research funds were devoted to basic research. Research authorizations for these stations for fiscal year 1958 total $120 million, $90 million supplied by the States, $30 million by Federal grants.

Along with this growth in basic research has come a great increase in the complexity of agricultural science. Today, such fields as animal husbandry, agronomy, and horticulture include researchers in a wide variety of disciplines from atomic science to zoology.

Safeguarding America's Industries

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. BAILEY. Mr. Speaker, I wish to call the attention of my colleagues to a communication from Mr. W. A. Harris, Jr., president of the Edwin M. Knowles China Co., located at East Liverpool, Ohio, and signed by 587 of the 650 employees of the plant protesting a renewal of our present Reciprocal Trade Agreements Act which would provide for further reduction of import duties on high-grade chinaware.

Mr. Harris' letter states in detail the difficulty of American china producers in meeting the unrestricted imports of this type of ware from foreign competitors. Since this is one of the major plants of this kind, it is my thought that the Congress would not want to seriously consider a program that would close a plant of this size and eventually close out an industry which is one of America's oldest and most substantial.

His letter and the signatures follow:

THE EDWIN M. KNOWLES CHINA CO.,
Newell, W. Va., February 13, 1958.

Hon. CLEVELAND M. BAILEY,
House of Representatives,
Washington, D. C.

DEAR SIR: We are enclosing lists containing 583 signatures of employees in our plant who oppose extension of the Trade Agreements Act. This list represents over 90 percent of the people on our present payrolls and could have contained 100 percent except for illness and absence of the balance of our employees. We are sending a similar list of names to Representative WAYNE L. HAYS, since he represents a large number of the workers who live in East Liverpool, Ohio, and vicinity. The names on the list being sent to Representative HAYS are the same as the names on your list.

Ten or 12 years ago our company employed as high as 1,050 people while today our employment is approximately 650, many of whom are working only part time. We appreciate that all business throughout the country is considerably below the volume of the last several years but wish to point out that our industry has been feeling the effects of foreign competition to a greater degree each year. According to my records 14 or 15 dinnerware plants throughout the country have closed their doors in the past 4 or 5 years, and in spite of the extra volume which should be available for those of us who are still in business our volume continues to decline. We are not opposed to a reasonable amount of imported dinnerware coming into the country but we do object to continually lowering the duties which in return make our market more attractive each year to the point of throwing out of work many, many thousands of American workmen. We are not looking for an expansion of our industry in spite of the increase in population each year but would like to keep our people working and our plants operating on a reasonable basis.

We recognize your stand with reference to tariffs and hope that your good efforts will be successful in the future. Tariffs are certainly low enough now to enable foreign competition to compete favorably with the American products and no further reductions are necessary for them to increase their imports into this country. We ask that the

present tariffs be no further reduced and that quota systems be put into effect without loopholes for evasion.

Sincerely yours,

W. A. HARRIS, Jr.,
President.

As an employee of the Edwin M. Knowles China Co., of Newell, W. Va., I oppose extension of the Trade Agreements Act. Our plant is working on a radically reduced schedule and many of us are getting only part-time work. Many others are drawing workmen's compensation. At least four major United States potteries have closed during the past year and others are faced with possible early failure. The Trade Agreements Act of 1955 is largely responsible for this situation.

Congress Considers Law To Ban Smut Peddlers

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. DOWDY. Mr. Speaker, the vicious destruction of morals caused by the dissemination of vile and indecent pictures and publications is well realized by the students in our colleges and universities.

The February 14, 1958, issue of the Reveille Echo, published by the students

of Bethany Nazarene College, Bethany, Okla., carried the following editorial by its editor, Eugene McElyea, of Crockett, Tex.:

CONGRESS CONSIDERS LAW TO BAN SMUT PEDDLERS

(By Eugene M. McElyea)

Distributors of obscene and lewd literature are known to be using the United States mail quite extensively for the distribution of their filth. The filth is indiscriminately reaching the children of America. Parents are concerned about the salacious matter arriving in the mail after junior has ordered a stamp collection from some so-called legitimate business house. This has to stop.

The growing criminal tendencies of our youth and the rise in juvenile delinquency necessitates a quick riddance of the foul literature boys. Congress has been called upon to act. The moral citizenry of our Nation are demanding an end to the smut peddler, even the sophisticated ones who use fancy slick paper stock. Some smut peddlers even have some of their filth copyrighted.

Congressman JOHN DOWDY, of Texas, has introduced two bills (H. R. 2542 and H. R. 3663) which should provide an effective remedy to the smut peddlers. The first bill allows them to be prosecuted where the obscenity is received. Previously they have mailed in big cities where punishment, if they were caught, was not so severe. The second bill would levy a fine from $5,000 to $10,000 and imprison the offender for not less than 5 years.

This sounds good to everyone. A House Judiciary Subcommittee has completed hearings on the bills and action is beginning. However, recent Supreme Court decisions have hindered punishing many smut peddlers because they have claimed that to keep them from mailing was to infringe upon their freedom of speech. Is that so? It will be unless each of us acts to let Congress know that freedom of speech is not freedom to debauch the lives of the youth of America. Only by the concerted action of responsible and decent citizens can this dealership in filth be eliminated. Won't you help, please?

H. R. 8002

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an excellent editorial which appeared in a great southern newspaper, the Nashville Banner, on February 15, 1958, expressing its views on H. R. 8002 which is pending in the House.

The editorial follows:

ADOPT H. R. 8002—SAVE BILLIONS

One an appropriation is passed by Congress, the lawmakers lose both track and control of it. That is, the sums budgeted to the several agencies are not necessarily spent in toto. They may accumulate (and do) in unspent billions; even so, the agencies come back, year by year, for the new fiscal period's operating funds.

That is the major defect in governmental financing which H. R. 8002—part of the Hoover Report legislation—would correct. It is expected to be introduced finally for action late in February. It needs action, forthright and decisive, now.

Under this measure Congress would recover some of the control of the purse—in the realm of expenditures—by appropriating them on a yearly basis and checking them by yearly review.

That makes sense. Any American household or American business operated on any other basis would swiftly go broke—and the same principle of solvency applies to government operation, or should, if solvency is to be maintained.

There are multiplied billions of dollars already appropriated, particularly in the Defense Establishment, but unspent. Not that Congress thus has been hypothecating a program far into the future. It is only that the money has been provided in sums greater than the agencies could spend within the time covered by annual appropriation. And to make it even worse, Congress doesn't know how many of these unspent billions exist, or where.

Actually, as long as that is true, the lawmakers responsible for providing the wherewithal are operating in the dark.

That costs money—extra money; the taxpayer's.

It is no exaggeration to say, as does the Hoover Commission, that billions could be saved by adopting this proposal, keeping the agencies annually accountable, not only for the money appropriated in a current budget, but for money carried over from past years.

Those billions should be saved. The safety of the Nation, as a matter of strength, rests as definitely upon its economic as upon its defense status.

H. R. 8002 should be adopted.

Aid to Dependent Children for Educational Purposes

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 10, 1958

Mr. ANFUSO. Mr. Speaker, I am introducing a bill to amend title IV of the Social Security Act to authorize Federal assistance under the act to certain dependent children who are over the age of 18, just as long as they are attending school.

Title IV of the Social Security Act deals with grants by the Federal Government to the States for aid to dependent children. The purpose of this program is to encourage the care of dependent children in their own homes, or in the homes of relatives, by enabling each State to furnish financial assistance to needy children in order to help maintain family life and to afford them parental care.

According to this program, the State submits its plan for aid to dependent children. If the State program meets the specifications listed in title IV of the Social Security Act, then the Federal Government provides an amount up to certain prescribed limitations, and the State contributes the balance.

When the Social Security Act was originally enacted in 1935, a dependent child under this program was defined as a child under the age of 16. Under Public Law 880, adopted by the 84th Congress in 1956, the age maximum for dependent children was raised to 18. Thus, when such dependent child becomes 18 years of age, the Federal Government withdraws its share of the aid, regardless of the child's circumstances or conditions. Of course, the individual State may choose to retain the child on its aid rolls, and many do so.

I believe that this is a shortsighted step, certainly in such instances where a child desires to continue his education but is prevented from doing so because upon reaching his 18th birthday he finds that this assistance has been stopped. In 1954, the income-tax law was amended to provide that so long as a child, regardless of age, was a student and the parent furnished half of his support he could be counted as dependent entitled to an exemption.

Why not apply the same logic to dependent children who need aid? Why not give such children an opportunity to acquire an education? We talk about the shortage of scientists and engineers; we hear a great deal about the shortage of teachers. We seek means to eliminate these shortages at great costs. Yet, here we have needy children who desire to continue their education, but because of a quirk in the law which says that upon reaching their 18th birthday they cannot be aided we stand to lose future scientists and engineers and teachers.

For this reason, I am introducing my amendment to the Social Security Act to strike out the age limit in this program and to continue its aid to dependent children, even if they are over the age of 18, so long as they continue their education. This is a reasonable step. It is one from which the country will gain much more in the long run than the current outlay of funds to maintain this program.

Mr. Speaker, I urge the Congress to give this matter early consideration and to make the necessary change in the Social Security Act. This is a correction of the law which everyone can readily understand and which deserves general support.

Brotherhood Week

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 3, 1958

Mr. KEATING. Mr. Speaker, overnight our world has been made a neighborhood. But we have yet to make it a brotherhood.

This thought might well be the theme of Brotherhood Week, which we observe this week. This annual commemoration, sponsored by the National Conference of Christians and Jews, is dedicated to the ideal that people shall live as one family of man.

Brotherhood is an ideal we must ever keep before us. The greater the stresses

and strains around us, the more important it becomes.

Brotherhood implies responsible freedom. It implies respect for the other fellow and his rights. It implies good will toward all others of the human race.

The age in which we live has excelled in the science of communications and in technological achievement. But much is left to be desired in the field of communication between men and between nations. It is to the task of clearing those channels of understanding that we should rededicate ourselves this week.

All our efforts for military, economic, scientific, and political progress will go for naught unless we can develop an ethical concept by which men can live in peace and harmony. With that goal in mind, each of us should this week resolve to hold high the ideals of respect for people and for human rights. That is the stuff of which a peaceful tomorrow can be made.

Mr. Speaker, the observance of Brotherhood Week lasts only a week. Its real meaning should be practiced every day of the year.

The Importance of Water to Wisconsin and America

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. WILEY. Mr. President, as the snow on the ground melts in all parts of the United States which have been hit by the recent heavy snowstorm, the cycle of nature is being renewed.

For, from the melting snow, comes the water which will nurture all forms of life—plant, animal, and human life.

From that water can come great good; or, in the case of potentially swollen rivers, perhaps much harm.

These thoughts occurred to me as I read a most interesting document entitled "The Future of Water in Wisconsin."

This document was prepared by the Wisconsin Federation of Conservation Clubs.

It was presented to my State's water resources committee of the legislative council and the natural resources committee of State agencies.

The purpose of the document is to point up the conservationist's approach to the precious resource of water.

Right now, the State of Wisconsin, thanks to the wise action of its legislature, is reviewing the whole question of water-use laws.

Water use for what?

For recreation, for agriculture, for industry, for drinking, and for varied public and private needs.

Of course, Wisconsin is blessed with an abundance of surface waters. Its lakes and streams represent one of the greatest natural advantages of the State.

There is no evidence that any serious problem of ground-water reserves exists for the time being in my State, contrary to the situation which some States face, especially in the Southwest.

But there is evidence that, in view of the expanding population of my State, in view of the, at times, clashing interests of rival water users, it is most important that future water use be well planned.

I commend this State study. I hope that other States will make similar comprehensive, factual analyses in which all private and public interests may be harmonized to the greatest possible extent.

I have selected a few excerpts from this Wisconsin federation document as submitted by Mr. Les Woerpel, executive secretary for the conservation clubs of my State.

I believe that these excerpts, which have been selected for their general public service character, wholly aside from some of the specific controversies involved, will be of much interest to my colleagues. These selections point up the role of water in outdoor sports, sound watershed management, and related phases.

Coincidentally enough, the excerpts conclude with a very beautiful and eloquent prayer from our own Chaplain, Dr. Frederick Brown Harris.

I ask unanimous consent that the text of these excerpts be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the statement were ordered to be printed in the RECORD, as follows:

It is almost needless to repeat the needs of the recreational industries and hunting and fishing, camping, picnicking, swimming and boating recreations for large volumes of nonconsumptive waters for their use. Water is the key element in many kinds of recreation. It is indispensable to wildlife, which itself is valuable to recreation. With over a million fishermen and over 500,000 hunters depending on continuation and expansion of these water supplies, and willing to put money into perpetuation of their recreational resources, a prior use has been established * * *.

The recreational industry in Wisconsin rates as the third largest industry in the State. It is not completely evaluated, because only that portion which involves the selling of recreational pursuits or accommodations can be adequately included in it. Even then the Motel and Hotel Association claims that the tourist business based on recreation is around a $500 million business. The Crosley survey indicated that the resident hunters and fishermen of Wisconsin alone spent over $62 million in the pursuit of their sport. That figure does not include out-of-State hunters and fishermen, and Wisconsin normally draws the greatest number of out-of-State fishermen in the Nation in addition to a respectable number of out-of-State hunters. These moneys are spent in all types of establishments and service industries. They contribute to the financial welfare of the clothing industry, boats, tackle, guns, shells, baits, boots, swimming suits and equipment, hide tanneries, food, lodging, automobiles, gasoline, even building materials, fuel for heating and cooking, furniture, and all the rest. Hardly any industry in Wisconsin is not benefited by the recreational industry in some way or another. Economists say that every dollar brought into a community and spent creates an economic value five times the original amount spent. Would it astound you that the hotel and motel industries coupled with the hunting and fishing expenditures, including out-of-State revenues brought in by tourists, would create $3 billion worth of business in Wisconsin?

* * * * *

What would lowered rivers and streams do to this industry? It would decimate it, and in many cases it would wipe it out. A stream or river doesn't have to be completely dried up to make it useless for recreation. It only has to have its ecology changed rapidly several times, or it only has to be lowered slightly in some cases to make it worthless as a fisheries asset. * * *

WATERSHED MANAGEMENT

When we think of watershed management and watershed work we are inclined to visualize structures and practices which carry the water off of the land in the hilly sections of our State to prevent further damage, and repair past damage of heavy and quick runoff. Watershed management in the past has been aimed too much at getting the water off of the land in the quickest possible manner without material harm to that land. Actually, watershed management is much more than that.

Watershed management should include, rather than taking care of quick runoff as the primary purpose, methods of holding the water on the land for longer periods of time to allow greater utilization on the land where it falls. At the present time no other need is so great in Wisconsin as this.

While our watershed-management agencies point to the southwestern and western counties as being the locations where watershed-management work is most needed, they depreciate the need in the flatlands and plains of central and southeastern Wisconsin, as well as the in-between lands of the east and north.

While there is no question that it is the hilly country that exhibits the greatest damage from erosion, our water problems are most serious on the plains and flatlands of our State. Both problems are equally serious.

Most farms in the southern and central part of the State are arranged so as to eliminate spring thaw waters and the spring and fall accumulations of water from rains in the quickest possible time. As a result over a third of the water that falls in Wisconsin is subject to immediate runoff, giving little or no benefit to the lands on which it falls.

While there is no question that the watershed-management programs of the western and southwestern counties should be continued and increased, the State should be much more active in watershed programs in the rest of the State.

This is true because only as waters can be absorbed into the land can they be slowly released to sustain the streamflows throughout the summer and fall months. Only as they are absorbed in the land can they be percolated into the underground tables to recharge the everdiminishing supplies available from those sources. Only as they are held on the lands can they be of benefit to crops and vegetation.

* * * * *

The policies of the Federal Government in watershed work are on a sound base. The most successful operations are those that are on a cooperative basis between all of the conservation organizations of both the Federal Government and the State, because they recognize the interests of all segments of our society, and avoid the project for single purpose development. Many of the developments in watershed management are paid for by Federal subsidy or help, and they are a legitimate expenditure of Government when they are multiple purpose developments, because they protect a public interest and a public economy, both now and in the future. However, in Wisconsin most of the work of

the State has been paid for from the conservation fund, which is supplied by sale of fishing and hunting licenses. This is also a legitimate use of such funds, providing it isn't carried to too great lengths. In addition to these funds, which presently carry the biggest load of State aid in watershed projects, the State should contribute at least a like amount, and preferably double the amount contributed by sportsmen from their licenses, from the general fund.

But the responsibility of the landowner cannot, and should not, be minimized. It should be the direct responsibility of the landowner to do everything in his power to utilize as much of the average 31 inches of rainfall in Wisconsin as it is so possible for him to do.

* * * * *

I would like to end this presentation by quoting from a paper by Dr. Frederick Brown Harris, Chaplain of the United States Senate. However, I would like to point out that when he speaks of land he is referring to it as a complete entity, including land, water, and cover, as well as the human and animal occupants. He says:

"Whose land is it? It belongs to God, who only is our help and hope. And so, as the servants of the divine purpose, pledging our all to the author of liberty, the next thing to remember regarding this land of hope and glory is that it belongs to us.

"It belongs to us as trustees who temporarily possess it, who walk its soil, who cross its plains, who climb its mountains, who sail its lakes and rivers, who explore its wildernesses. We who have inherited it from those who kneeled around the cradle of the State must regard it as holy ground, whose beauty is to be reverenced, whose forests are to be guarded, whose soil is to be preserved, whose rivers are to be unpolluted, whose primitive wildernesses are to be unspoiled, and whose wildlife is to be protected. The unpardonable sin is to sacrifice our patrimony on the altar of commercialism which cares for nothing but greedy personal aggrandizement. Alas, that already disregard for what happens to the land has wrought tragic irreparable havoc. Wanton disregard of the people's rights in forests and rivers and mountain majesties has brought its tragic harvest in dustbowls, land erosion, privately channeled waterpower, desecrated park areas, and poisoned rivers. What we call our civilization, if uncurbed, will prove a creeping blight whose symbol is the bulldozer. Big trees must go down before big business. Crystal rivers must be contaminated with disgusting waste rather than to pay the cost for sewage disposal. Public lands must be exploited by devious undercover schemes for private gain. Get-rich promoters with predatory feet go forth to despoil the sanctuaries of the wilderness. Men who loudly advocate arming against foreign foes, for dollars become vandals of the very land of which they hypocritically sing, 'I love thy rocks and rills, thy woods and templed hills.' Whose land are they defiling? Yours and mine. * * *

"It belongs to those who come after us. There is a striking sentence in the Old Testament, 'The fathers have eaten sour grapes and the children's teeth have been set on edge.' That is an unforgettable way of saying that what the fathers do today will affect their children and their children's children. If we are not vividly conscious of our role as trustees of the future, then for some tempting expediency we may adopt policies in the present that will rob the generations following of the birthright it was intended should be theirs. We have no right to pilfer and misappropriate the capital of those who will take over the land when we leave it."

The Drive for the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles from the Oil and Gas Journal for February 17, 1958, revealing that the drive for the natural gas bill is by no means ended. I ask unanimous consent that a statement of mine concerning these articles also be printed in the Appendix of the RECORD as an extension of my remarks accompanying these articles.

There being no objection, the articles and statement were ordered to be printed in the RECORD, as follows:

[From the Oil and Gas Journal for February 17, 1958]

TULSA, OKLA., February 17, 1958.—The oil industry is snake bitten on the gas bill.

Tendency is to write off the Harris bill as dead after disclosure of Porter letter inviting oilmen to the $100-a-plate appreciation dinner for Representative JOSEPH MARTIN.

But this is being changed by new strategy.

Plan now is to delay action on the bill, regroup oil's shattered forces in Washington, and work harder.

There's no doubt chances of the bill have been hurt.

But still the cause may not be lost.

[From the Oil and Gas Journal of February 17, 1958]

HOW TO GET THE HARRIS BILL PASSED

On the next 2 pages of this issue is a letter the Journal is sending to every Member of Congress in support of the Harris gas bill.

For many years the Journal fought along with producers for legislation primarily in the interest of producers. We all failed to convince the public that what is good for producers is good for the Nation.

Now we say that, for the first time, here is a gas bill primarily in the public interest. We believe that this is the only basis on which legislation can be—or should be—enacted.

Prevous failures to amend the law regulating gas production were due, we believe, to disregard of the attitudes and reactions of the general public.

Producers set up the cry that "we wuz robbed." They bored the public by rehashing the injustice and illogic of the Supreme Court's reasoning in the Phillips decision.

They bemused the public by recounting the hardships imposed on producers, thus arousing more skepticism than sympathy.

They confused the public with technical treatises and statistics on the geological occurrence of gas, reserve ratios, dry-hole percentages, and cost factors.

Such arguments are effective with the relatively few who understand them. But the general public—the gas consumers and their political and journalistic spokesmen—saw previous bills simply as a special favor for producers who didn't want their prices regulated.

And, to a large extent, that's what they were. Most of the advocacy of prior bills was pitched on the hardships of producers—a subject about which the general public couldn't care less.

This new Harris bill is different. It is designed to serve the public interest better than the special interests of any division of the gas industry. Perhaps that is why many distributors still oppose it and some producers aren't enthusiastic over it.

If the industry believes, as the Journal does, that this bill is in the public interest, then the industry should promote it on that basis and on that basis alone.

The way to do this is to convince Congressmen, and others interested, that most of the old arguments both for and against previous gas bills do not apply to this one.

Last week's disclosure of political bungling need not cloud the issue permanently. It can be overcome if the industry will promptly and earnestly stress the public-interest reasons for support of the bill.

The only way out of regulatory chaos is to demonstrate that here, at last, is a bill for the long-range benefit of the consuming public.

STATEMENT BY SENATOR DOUGLAS

Last Tuesday another crude effort of a well-known leader of the oil-gas industry, with campaign contributions, to bull through the passage of legislation to remove producers' prices of natural gas from effective regulation was made public. It was then generally assumed that the Harris gas price increase bill was dead—at least for this session. Even such an astute political observer as Hon. JOSEPH W. MARTIN was reported to have expressed the view that the legislation would not pass this year.

But those who believed and believe that the Harris bill is dead, underestimate the recuperative powers of this particular legislation. It rivals the cat with nine lives.

This oil-gas industry proposal has been introduced in varying forms in different Congresses going back more than 10 years. Twice it was vetoed, once on the merits and once in the wake of arrogant lobbying efforts that created a scandal. But the stakes are high. The owners of the oil and gas reserves would have their wealth increased by 25 to 30 billion dollars if this bill were to become law. The producers' income—and the consumers' cost—would rise by an estimated $700 million annually. The temptation, the prize, is just too great to expect the giants of the oil-gas industry to give up the fight. They have not given up the fight.

This is revealed by an authoritative spokesman for the industry, the Oil and Gas Journal, which in its issue of February 17, 1958, announces that all is not lost, the Harris bill can still be passed and that a new strategy has been evolved. The plan is to delay action on the bill, regroup oil's shattered forces in Washington, and work harder.

On page 61 of the same issue of the Oil and Gas Journal, the new strategy is spelled out in some detail in an editorial. The Journal says that the industry must try to convince the Congress that the gas bill, 1958 version, is not an industry bill, not a producers' bill, not even an oil-gas bill, but a bill "primarily in the public interest." Then on pages 62 and 63 in An Open Letter to the Congress on the Harris Bill, the industry publication says: "H. R. 8525 (the Harris bill) is different from previous gas bills. The Harris-Fulbright bill—vetoed by President Eisenhower in 1956—was, frankly, a 'producers' bill.' So was the Kerr bill, vetoed by President Truman in 1950. This new bill, H. R. 8525, is not."

Certainly the new Harris bill is different. It has a new number. It has a new date. Half its name is new. It is in a new form. But, it serves the same purpose—removal of producers' prices on interstate sales from effective regulation in the public interest. The gas bill, 1958 version, is supported by

the same oil-gas producer interests that supported the vetoed bills of 1950 and 1956. The 1958 version uses the same phony standard as in the 1956 bill, "reasonable market price"—which means whatever the traffic will bear—to try to fool the public into believing that the Federal Power Commission would still have regulatory authority over producers' prices. Interestingly enough, the Oil and Gas Journal two-page Open Letter to Congress omits this key fact, describing it vaguely as a "value approach."

The Oil and Gas Journal attempts to argue that the Harris measure is not a producers', pipelines', or distributors' bill, but that it is a public interest bill. But who wrote the bill? It appears to be generally conceded that the producers, the pipelines and the distributors furnished the basic draft. Chairman Kuykendall admitted in testimony before the House Interstate and Foreign Commerce Committee that he called upon selected representatives of these three elements of the industry to assist in drafting a bill. He and others revealed that industry spokesmen on their own initiative also worked on a draft, and that there was no attempt to bring representatives of the consumers into these drafting sessions. In fact, FPC Chairman Kuykendal told the House Committee that he did not know of "sufficient consumer groups" who could have been brought in.

Of course, more than three score mayors, dozens of State utility commissioners, many governors, and a long list of consumer groups have been publicly opposing such legislation for some years. These individuals and groups representing the public's interests, the consumers, were not in on the drafting of the Harris bill, but they have stated their vigorous opposition to it. I submit that the mayors, governors, utility commissioners, and other consumer representatives are better able to tell the Congress where the public interest lies than is the oil-gas industry.

One of the most interesting aspects of the open letter that the Oil and Gas Journal has sent to all Members of Congress is that while they claim that the Harris bill is different from previous gas bills, the arguments they use to support its passage are virtually identical to those used in support of the Harris-Fulbright bill in 1955 and 1956 and the Kerr bill in 1949 and 1950. I don't blame the oil-gas forces for not having changed their arguments—the essential aim and effect of the legislation have not changed. Its principal supporters and beneficiaries remain the giants of the oil-gas industry. Its principal opponents remain the mayors, governors, public utility commissions, and public interest groups from gas-consuming areas.

The Oil and Gas Journal articles give us fair warning that the gas bill is not dead. It is just being delayed "until the fire is cooled," to use the expression of the distinguished Member of the House quoted in the Oil and Gas Journal.

The opponents of the bill, therefore, would be well advised to continue to bring the issues involved in the substance of the gas bill before the American people. I hope there will be no relaxation of the effort to educate the public and the Congress on the true demerits of the Harris bill.

The fact that political leaders and Members of Congress are aware of the improper methods used to advance the gas bill is well and good. But quite apart from those disclosures, the bill is contrary to the public interest and should be argued and defeated on the merits. The improprieties of the industry boosters of this legislation merely afford a further opportunity to bring out the true facts about the bill while public attention is focused on it.

Essentially the bill would remove effective Federal regulation of natural-gas producers' prices on interstate sales and leave the more than 24.5 million natural-gas-consuming families the captives of the producers. Because of the distribution system, competition does not operate to keep producers' prices just and reasonable. On the basis of current prices demanded in the field, consumers' costs can reasonably be expected to be $700 million more annually than they are now if the bill should pass.

No one would profit from the passage of the bill except the gas producers, and the great bulk of our natural gas is produced by a few giant oil-gas companies and a handful of large pipeline companies. These oil-gas companies are about the most profitable enterprises in America today.

I want, therefore, to congratulate the mayors, governors, and others who have been taking this issue to the people. I hope they will keep it up and not relax their efforts. Thus, they may help us to defeat this measure on its merits.

Tough Indian Problem

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. NEUBERGER. Mr. President, an excellent discussion of the vexing and difficult Klamath Indian Reservation problem appeared on the editorial page of the Oregonian of Portland for February 11, 1958, under the title "Tough Indian Problem."

The viewpoint of the Oregonian is, in substance, very similar to my own. This largest daily newspaper in Oregon favors Federal purchase, as provided in my bill, S. 2407, as "the best solution, so far as Oregon and the Indians are concerned." However, should Federal purchase not seem likely of passage in the Congress, the editorial writers of the Oregonian believe that the administration bill, S. 3051, "which would give private buyers a chance to bid first, and would commit the Government to purchase all timberlands remaining" is far preferable to permitting the present termination law to run its ruinous course. The Oregonian emphasizes, quite accurately, that the termination bill passed in 1954 by Congress and signed by the President "was premature and unrealistic."

The editorial also stresses the important and cooperative role played in this entire situation by the Oregon Legislative Interim Committee on Indian Problems.

I ask unanimous consent that this timely and informative editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOUGH INDIAN PROBLEM

The sticker in proposals for either Federal or private purchase of the Klamath Indian Reservation, with its great pine forest, is that sustained yield cutting is essential yet the returns from such cutting may not equal the interest or tax costs of carrying the forest lands if the Indians are to be paid "fair market value."

A statement favoring the NEUBERGER bill, S. 2047, for Federal purchase of the reservation was adopted by the Oregon Legislative Interim Committee on Indian Problems. State Senator Leander Quiring, Hermiston Republican, and Democratic State Chairman David Epps appeared for the Oregon committee at a United States Senate subcommittee hearing last week.

The Klamath Termination Act, which would go into effect this year and would dump an estimated 70 percent of the reservation's 4 billion board-feet of prime timber on a stagnant market, would be ruinous if not implemented. It would wreck the economy of the Klamath Basin and the pine industry; it would result in grave underpayment of the Indians seeking withdrawal as the market declined; it would not take care of a 30,000-acre marshland invaluable to wildfowl and game; and it would threaten the water supply of the basin.

The Neuberger bill proposes that Congress advance the estimated $123 million to buy the reservation, turn the marshland over to the United States Fish and Wildlife Service, and start selling timber in large units under a sustained yield cutting rule.

The Oregon interim committee cites a report of management specialists showing that the timber will sustain an allowable cut of 90 million board-feet through 1964 and 76 million feet in perpetuity thereafter. This would yield net annual revenues of about $2,250,000—or total revenues of $230 million for a cutting cycle of 100 years. However, testimony at hearings indicated an annual cut of $3 million would not be enough to pay interest on the investment.

The Interior and Agriculture Departments have put in a bill, S. 3051, which would give private buyers a chance to bid first, and would commit the Government to purchase all timberlands remaining. General opinion is that there would be few if any bidders who would have to agree to pay the full appraised realization value and follow an enforceable sustained yield management plan. The Indians would have to wait a year to find out.

In the House, Representative AL ULLMAN has introduced a bill for Federal purchase, payment to tribal members over a 20-year period at an appraised price set by tribal, State, and Federal representatives, and sustained yield.

The best solution, so far as Oregon and the Indians are concerned, will be Federal purchase. But the likelihood of Congress gagging on the cost has everyone concerned. A solution has to be found, and quickly, to prevent unchecked dumping of timber on the market beginning this year. Or if none can be found, Congress must vote to delay liquidation of the Klamath Reservation until a formula can be devised. The 1954 act was premature and unrealistic.

Lithuanian Independence

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. PHILBIN. Mr. Speaker, I am honored and proud today to join my colleagues in the House in celebrating the 40th anniversary of Lithuanian independence.

Even the Iron Curtain has been unable to dim the fervor of the Lithuanian people for independence and freedom.

I am convinced that the Lithuanian nation will continue to fight for liberty until it is won; for there is no appease-

ment in Lithuania, and its noble people will never bow under the yoke of Soviet oppression and persecution.

Nor will their compatriots and countrymen in America abate their interest or cease their efforts until sovereignty and independence is secured for this unhappy land which has been stripped of its political rights and dragged into the orbit of Communist slavery.

Lithuania has a proud and inspiring heritage, and the people of Lithuanian descent in this country are among our best citizens. I have many Lithuanian people in my district, and I am proud of their contributions. They are God fearing and liberty loving. They are honest, industrious, loyal citizens devoted to our free way of life. They have demonstrated by their actions and by exemplary loyalty that they are willing to make every sacrifice to sustain American institutions.

Such a nation and such a people is entitled, not only to our sympathy and our moral support, but to our active, effective assistance in forwarding their high aims for the recapture of their liberties and the reestablishment of their sovereignty.

Our own great Nation must make it abundantly clear to all other nations that we stand for liberation from tyranny and oppression and for self-determination and freedom of choice for all peoples to ordain and to establish their own form of government under democratic processes.

All hail to Lithuania on the anniversary of its 40th birthday. May her courageous people soon regain their precious liberties.

A Contented Farmer

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 20, 1958

Mr. CASE of South Dakota. Mr. President, in these days when so much is said about the plight of the American farmer, it is exceedingly rare and truly refreshing to have a real family farmer paint a picture of satisfaction and contentment.

Such a contented farmer is Harold E. Boe, of Ralph, S. Dak. Mr. Boe, in a letter reprinted by Editor Donald L. Cammack, of the Buffalo (S. Dak.) Times-Herald, calls himself a submarginal farmer. But he says his is the most rewarding occupation that man can inherit on the face of the earth.

Mr. Boe's letter to the editor makes a thought-provoking appraisal of the farm situation. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the EDITOR:

I am a submarginal farmer. According to economic experts and swivel-chair farm advisers I should quit the farm because, no matter what happens, I never will make a living from my chosen vocation.

The net income from the unit I operate often runs less than $1,000 annually. Yet my wife, three daughters, and myself are well fed and happy with our lot.

We never know where the next dollar is coming from and we don't care. It is enough that we have plenty of food, excellent health, and the freedom of God's great outdoors.

Twelve years ago I was discharged from the Air Force after 3½ years in the service during World War II. Returning to the only life I knew I took up some land in western South Dakota.

I started construction of a shack on the bare prairie and I moved in with my war bride before the building was completed. It was true pioneering.

MODERN CONVENIENCES

Today our home has all the modern conveniences. This includes electric lights, indoor plumbing with hot and cold water. We own a good car and a television set. My wife and daughters dress well. And we eat beter than city folks having several times our income.

Our standard of living is high, but it takes very little cash. We have beefsteaks, roasts and hamburger any meal when we desire these choice items; when the supply runs low, we butcher another beef.

Fried chicken is on the menu the year around. Milk, cream, butter, and eggs are always available in superabundance. We raise plenty of potatoes.

From a big garden my wife cans countless quarts of peas, beans, carrots, corn, and pickles. They cost us no more than the labor, seed, and the lids for the jars. When fresh fruit is in season we buy many crates of peaches, pears and plums. This is made into sauce and jam, never less than an ample supply for a full year.

BUY WINTER SUPPLIES

In the fall we buy large quantities of flour, sugar, tea and yeast in one order. They cost less this way, seldom more than $100 for the lot. These staples last us all through the winter months and into the spring and early summer.

With a supply of food on hand we have no fear of winter weather or bad roads, even though our nearest town is 32 miles away.

From the basic raw materials in stock, my wife prepares delicious meals. She bakes bread, rolls, pies and cakes. Our economical yet sumptuous living would be impossible without her. A superb cook and diligent worker, my wife is truly a wonderful woman.

This is all the more remarkable because when I married her she was a sergeant in the Australian women's army service and had never seen a loaf of homemade bread or food canned in glass jars. In civilian life she had been a buyer in a Sydney, Australia, clothing store.

LEAVE IT TO FARMERS

It makes me smile when I read about the way the swivel-chair experts worry about the farm situation. Why not leave it up to the farmers? They will get off the land into the more rewarding occupations before they starve.

Maybe many feel the way I do: That they are already in the most rewarding occupation that man can inherit on the face of the earth.

Making money is not the most rewarding thing that one can accomplish in life. The fallacy of this philosophy embraced by the majority of the people in America today is that wealth and money are the mark of success and the gain of material possessions the only ambition worth cultivating.

Nobody is to blame for the predicament agriculture is in but the farmers themselves. They keep right on producing more crops that are already in huge supply. Only greed for more land and greater wealth moved them in this manner. They are aided and abetted by a benevolent Government offering guaranteed price supports.

I do not know of any inefficient submarginal farmers creating a social problem by existing on a low-level income, complaining about their lot. It is the big operators with their mechanized efficiency who are always squawking about the price-cost squeeze.

INEFFICIENCY NEEDED

Right now what is needed is more inefficient farmers. They produce little to swell the overwhelming surplus and those I know are making a splendid living from their submarginal farms if they don't crave too many foods from tin cans and fancy packages from the shelves of a grovery store. Surely they are a harmless lot.

It was the big-scale so-called efficient farmers who caused agriculture's technical revolution to run wild and gave the swivel-chair boys such a big headache.

HAROLD E. BOE.

RALPH, S. DAK.

Text on Radioactivity in Minnesota Water

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. McCARTHY. Mr. Speaker, the President has recommended that the Congress terminate Federal grants of funds for the fighting of the pollution of our rivers and streams. This recommendation would end the program that the Congress enacted in 1956 to help the State and local governments combat the pollution of our national water resources.

This problem is one that is becoming more and more serious. The battle against water pollution has not really begun in this country, and yet the President asks the Congress to withdraw from the program. Our rivers and streams are daily becoming more and more choked and poisoned by human and industrial wastes. We must continue our efforts to purify our water supply, if this most essential natural resource is to be saved.

The Federal Government itself is directly contributing to this pollution of our water in a new way—the pollution by radioactivity resulting from the testing of nuclear bombs and other weapons. In the State of Minnesota, the Governor's committee on atomic radiation has reported that the level of radioactivity in Minnesota water after nuclear bomb tests has exceeded the limits set by the National Bureau of Standards as the provisional permissible level for drinking water.

This is pollution potentially more dangerous than any we have known. It is pollution directly caused by the acts of the Federal Government, and it is pollution that is likely to increase in the coming years as nuclear power is further developed.

The Federal responsibility to assist in the purifying of our national water supply is clear. The President is seemingly indifferent to this Federal responsibility in his request that the Congress withdraw from the antipollution battle. The Congress must not allow this failure to face a clear Federal responsibility to endanger the water supply of this country.

I include an article from the Minneapolis Star which gives the text of the report made by the governor's committee on atomic radiation:

[From the Minneapolis Star of February 12, 1958]

TEXT ON RADIOACTIVITY IN MINNESOTA WATER

(This is the text of the report made Tuesday by the governor's committee on atomic radiation. Task force members: Maurice Visscher, Ph. D., M. D., chairman; Richard S. Caldecott, Ph. D., William O. Caster, Ph. D., James F. Marvin, Ph. D., John B. Moyle, Ph. D., Sheldon C. Reed, Ph. D., and Jack Page Whisnant, M. D. Participating in discussions: Robert N. Barr, M. D., Warren R. Lawson, M. D., and Don G. Mosser, M. D.)

The governor's committee on atomic energy has received a report from its task group 6 on environmental radiation giving detailed measurements on radioactivity in air, rain, surface waters, and river waters in Minnesota. At its meeting on January 14, 1958, the committee referred these data to its task group on the biological effects of radiation for evaluation of the significance of these measurements to man and other living things. The latter group has studied the figures and related information and presents a following report which it recommends to the committee to be published as an interim report on biological significants of current levels of environmental radioactivity in Minnesota.

The data presented by task force 6 on gross levels of radioactivity in atmospheric air sampled near ground level in the State of Minnesota during 1957 do not approach levels currently considered to be significantly injurious to many or other living things.

However, the levels reported in collected rainwater, surface waters, and river waters in the State exceeded in a significant number of instances during periods following the testing of bombs and for some months thereafter, the limits set by the National Bureau of Standards as the provisional permissible levels for drinking water.

The provisional permissible level for gross radioactivity in drinking water is an estimate made by experts for the Bureau of Standards as to doses that could be tolerated without damage for several months and is itself of uncertain reliability. It could be in error in either direction. But it was intended to define the exposure level below which there was believed to be no observable effects on living organisms.

Although data on the distribution of radioactive materials in fallout from nuclear explosions are known in general, the distribution of various radioactive elements in the rainwater, surface waters, sediments and plant and animal bodies in rivers and streams in Minnesota is not known. It is therefore impossible to come to any firm conclusions as to the degree of hazard to which we, in Minnesota, have been exposed by the fallout from bomb testing in the past.

It is our unanimous opinion, however, that prudence dictates an aggressive program of acquisition of additional information of various sorts in order to be able to be warned of possible danger in the future and in order to be able, if it should unfortunately become necessary to do so, to institute effective protective measures.

The data available indicate that untreated rainwater and river water used for drinking purposes could constitute radiation hazards according to current standards. Of course, they would also constitute hazards to health by virtue of frequent bacterial contamination. Although adequate data to prove the point are not at hand, it is generally believed that conventional methods of water purification reduce considerably the content of radioactive material in contaminated water.

No samples of finished Minneapolis water tested last year showed gross radioactivity reaching the maximum permissible level. This fact should allay fears as to the current danger in the use of such water. Further, it should be noted that during November and December the gross radioactivity level in raw river and lake waters has usually ben well below the permissible level.

However, the resumption of bomb testing during the coming spring and summer can be expected to be followed by a new rise in gross radioactivity levels to values which may be higher than those reached in 1957 if similar bombs are exploded, because any new radioactivity will be added to the residual burden of earlier nuclear explosions. Consequently, one can anticipate gross radioactivity levels in Minnesota waters which may considerably exceed currently accepted permissible values.

Therefore, it seems necessary to urge very strongly that several types of study be promoted. The Minnesota State Board of Health has collected valuable information, but it requires additional money for equipment and especially additional scientific personnel, to obtain the information needed to provide the people of Minnesota with health protection in the event that environmental, especially water radioactivity, levels increase.

In order to evaluate the degree of hazard to health, it is essential to know the amount of particular elements, such strontium, cesium, iodine, cobalt, zinc and others, in Minnesota waters. It is also essential that the water supplies of all population areas be surveyed, because contamination is not uniform. It is also essential that milk from various sources be studied as to its burden of such elements as strontium 90.

This committee urges that emergency funds be supplied to the board of health, the University of Minnesota and other State agencies for such studies and further that civil-service classifications for positions necessary to obtain competent scientific personnel be arranged without delay so that this essential work can be begun promptly.

Another area in which study is required is in research into methods for reliable decontamination of water and foods, should the needs for such action arise. Such studies might be conducted in the university or industrial laboratories. A further area for study is in the province of the department of conservation.

Data at hand indicate that aquatic life, including fish, in Minnesota waters, have acquired significant amounts of radioactivity. It is essential that studies of the distribution of radioactive elements in fish and other edible forms be studied in various parts of the State.

In conclusion we wish to report that in our opinion the recent increase in environmental radiation burdens, particularly in water in Minnesota, although significant, and in the case of surface water sufficient to exceed for some months, the provisional permissible level, is not a cause for present alarm because these levels in "finished" city water have not been found to exceed the permissible value.

However, we cannot state with the degree of assurance we wish we could that there is no danger at all because we do not know among other unknowns, the amounts of particular radioactive elements which make up the total gross radioactivity.

Furthermore, because there is likely to be an increased burden due to future bomb testing and to disposal of industrial atomic wastes, it is obvious that prompt attention should be paid to the need for intensified study for future protection. The public and the State government should be alerted promptly to the urgency of this problem because it affects the future health and welfare of all of us.

Progress in South Dakota

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. BERRY. Mr. Speaker, I have asked permission to insert in the RECORD an editorial which spells the philosophy of the people of South Dakota as well as anything written for some time.

We are a State with no bonded indebtedness, yet with probably more miles of good, hard-surfaced highways per capita than any other State. Our school system is second to none. Our institutions of higher education are equal to any in the Nation with good buildings, equipment and facilities. Our taxes are reasonable, and yet our progress is rapid.

How have we done all these things without burdensome taxes? We are primarily a conservative people. We buy when we have the money to buy, we build when we have the money to build. We plan ahead, we work together, we do not waste our public funds in interest payments, we make every dollar serve as a producing dollar.

Following is a recent editorial from the Luverne (Minn.) Star-Herald:

Maybe we should organize to send some missionaries to South Dakota. Or, better yet, to try to divert some foreign-aid funds to this "backward country." How can this area endure its "low, low standards of submarginal existence"?

It's a funny thing but the South Dakotans seem to be living in blissful ignorance of the fact that they're underprivileged. Talk to the South Dakotan and he seems happy and content—he doesn't realize what he's missing. He doesn't seem to know all the frills in Government that he is getting along without.

There are so many things that are deemed absolutely essential in Minnesota that South Dakota gets along without. And the demand for more and more services is yet to come in Minnesota at the next legislative session. More workers to do more for more people at more expense to the taxpayers.

If you ever want to see an extreme contrast between a ruggedly independent State and one that embodies much of the welfare-state philosophy one only has to take a look at the difference between South Dakota and Minnesota.

It shows up in the tax bill, too. Recent figures show that a factory in South Dakota would pay about half, or less, the taxes there that the same factory would pay in Minnesota.

Northern States Power Co. did a lot of skirmishing around in pretending to hunt for a location for its atomic-energy plant. The facts are that one of the big reasons

behind the South Dakota choice, although not publicly stated, was because of the lower tax rate. Northern States Power had a fear of what future legislation might do to an already high tax rate in Minnesota.

There's nothing free in this world. The more Government services you demand the more you are going to have to pay. South Dakotans are still backward enough to think that they can make do without everything the liberals say is absolutely essential. And, strangely enough, the South Dakotan seems supremely content. He may be living in a "backward area" but it doesn't seem to bother him one bit. We can take a pretty good lesson in thrift from our neighbor to the west.

Illinois Needs Emancipation From Political Dictatorship

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include the fifth of a series of editorials by V. Y. Dallman, editor of the Illinois State Register, on problems and responsibilities of party organizations. Mr. Dallman expounds his views on the evils of a one-party system: "All of the vices and weaknesses of the one-party system are becoming more apparent—family control of political office, assumption of a vested interest by officeholders, vast unconcern for public desires, more elaborate and vaster occurrences of graft, and inability of the people to shake off the system."

The article follows:

[From the Illinois State Register of January 25, 1958]

ILLINOIS NEEDS EMANCIPATION FROM POLITICAL DICTATORSHIP

Illinois is under what amounts to a one-party system, Republican downstate: Democratic in Chicago and Cook County.

All of the vices and weaknesses of the one-party system are becoming more apparent in Illinois—family control of political office, assumption of a vested interest by officeholders, vast unconcern for public desires, more elaborate and vaster occurrences of graft, and inability of the people to shake off the system.

This is the more amazing because the economic, moral, farm and labor interest of Illinois require, by all the rules of logic, a strongly competitive two-party system, progressive legislation, and vigorous intraparty competition for positions of honor and trust.

The present situation is wholly illogical. It exists because too many elements in the upstate Democratic Party are content to maintain a statewide minority so long as they can control Chicago and Cook County. Downstate a minority group in a particular county is content so long as it can glean a few crumbs of Republican favors in return for letting Democratic affairs slide.

The power and influence of such county chairmen and others who are content to remain in the minority, who serve only as party fixtures, and who are unwilling to work in behalf of principles of the Democratic Party and its advancement, must be broken.

Such men will have to be replaced by vigorous and unselfish men of public spirit and recognized stature. They will have to be men who, on the record, are sound in character and judgment, who want to work without thought of personal gain to elevate the party to the highest level of unselfish and patriotic public service. In short, they must be the kind of men whose conduct will, in itself, erase the stigma which presently, in too many places, attaches to selfseekers in the Democratic Party.

The people of Illinois will welcome with joyous hearts and open arms a party of high ideals whose members, from the leadership down to the precinct level, are intent upon working for a better Illinois where scandals have shocked the Nation.

The slatemaking process is frequently defended on the grounds that it saves candidates the expenses of primary campaigns and permits them to concentrate their funds and efforts on general election campaigns, that it avoids party frictions and animosities, and that it produces the strongest possible candidates. Frequently, the defenders of the slate-making system point to Senator PAUL H. DOUGLAS to prove their case. However, the facts are that DOUGLAS was denied the nod in 1942 and made a whale of a primary fight, being defeated only in Cook County; and that he was slated in 1948 only after he said he would run with or without being slated.

Slatemaking does not save expenses. Instead of spending the funds in a primary, candidates who are slated are assessed a healthy sum according to the salary of the office for which they are slated. Instead of spending an a primary, they pay an assessment in return for being slated. If elected they pay with patronage and pelf.

Slatemaking does not avoid party friction and animosity: Prospective candidates and their followers who are denied the party nod swallow the insult and give on-the-surface support to the nominees. And the process keeps a subsurface volcano of discontent, frustration, and disappointment boiling. The unslated candidate is denied even the solace of defeat in a fair and open contest. If he dares to make such a contest, the cards are stacked against him from the very beginning.

It is utterly cynical for a few powers to get together, under the guise of constituting a high-minded, public-conscience committee to choose candidates, then await word from a half dozen superbosses as to whom, in their wisdom and public zeal, they are going to nominate.

This process permits all kinds of political horse swapping out of the public view, free from actual party desire or control, and invites nefarious finagling between Democratic committeemen or county chairmen and their Republican confederates.

It arrogates to a handful of men the right to tell the people of Illinois whom they shall be allowed to vote for. Their only recourse is to sit out the election. It permits the most disgusting sort of trading within the party.

Under slatemaking, politics becomes a matter of what the bosses dictate. This applies to a disgraceful degree to the Republican as well as the Democratic Party in Illinois today.

"Dear Murray," From "Sherm"

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. PRICE. Mr. Speaker, former President Truman has a way of putting things that the American people can understand.

In a few simple statements in reply to newsmen who greeted him as he alighted from a train at Union Station yesterday he summed up what the majority of Americans are today thinking of the Eisenhower administration.

One of the keenest observations of the workings of the Eisenhower administration comes in the concise statement, with which most people will agree, "that this Republican administration has the wrong attitude toward regulatory agencies."

This administration, Truman replied to reporters, is more interested in special interests.

When asked by the newsmen, who are in a good position to know, if there was a mess in Washington that needs cleaning up, Mr. Truman replied that was a Republican phrase which has come home to roost.

The symbol of the Eisenhower administration's growing political immorality could well be the "Dear Murray" letter from "Sherm."

One Percent for the Taxpayers' Money

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. MULTER. Mr. Speaker, the following article by Roscoe and William N. Fleming from the February 3, 1958, issue of the New Republic points up the ridiculous financial policies pursued by many public authorities. Bankers profit at the expense of the taxpayer:

ONE PERCENT FOR THE TAXPAYERS' MONEY

The people of most United States States get it both coming and going from tight money and high interest rates. They continuously have to pay more to borrow, either privately or for public purposes; but they are still putting many millions of dollars of inactive State funds into long-term deposits in banks, for which the latter pay low rates of interest or none at all.

In such States—and they constitute the large majority—the bankers are still riding the gravy-train even while chronically pinched State treasuries and legislatures look everywhere for more money to meet the rising cost of government, and reluctantly discuss imposing new taxes, though ignoring a source of funds right under their noses. Nationally, billions of dollars are still held by banks in such State deposits, on which they reap many millions of dollars yearly at the expense of taxpayers.

One State has revolted. In Colorado Gov. Stephen L. R. McNichols and State Treasurer Homer F. Bedford told the 142 banks holding $27 million in long-term State deposits that the money would be withdrawn as contracts expire, and loaned to the United States Government instead.

The reason:

The State is now getting only 1 percent yearly on most of this money, which it must agree to leave in the bank for a year; 1½ percent on a small fraction of it, which must be left for 2 years. Meanwhile, Federal interest rates have gone to such a height that even the Government's 91-day bills pay up to 3 percent, or even more. The new policies mean at least $500,000 more yearly for Colo-

rado, which like most States is hard pressed for more revenue.

More recently the Colorado officials have relented to the extent of saying that banks that will pay 3 percent can keep their State time deposits; but this did not satisfy the State bankers' association, which is not willing to pay more than 2 percent, but argues that the money would be more usefully employed in Colorado, than if loaned by the State to the Federal Government. So far the State officials are standing firm.

The situation in which most States get little or nothing for their time or savings deposits of many millions of dollars in banks is anachronistic. Hundreds of State subdivisions and other public agencies—cities, counties, school districts, highway departments, water departments and districts, welfare and pension departments, etc.—have worked out thrifty means of handling money they cannot spend at once, as when the proceeds of a bond issue can only be paid out to contractors over several years of a building program. Their treasurers so handle the extra money as to earn its keep, or almost so; and in some instances, when it was borrowed before recent high interest rates, a little more so.

One means of keeping such money at work is by buying the ubiquitous short-term Federal issues, including the Government's 91-day bills which enable local officials to keep their money working when idle for even 3 months. Thus such local officials make high interest rates work for taxpayers as well as against them.

Most such public agencies are allowed by law to invest their temporarily inactive money, as contrasted with the situation in many States. Where such an agency is being gypped in interest rates, it not due to law. For example, in 1955 a new three-member transit authority took over in New York City. E. Vincent Curtayne, the authority member in charge of finances and himself a banker, found that the authority had $16,125,000 in time deposits in banks which were paying only 1 percent interest. He also found an inordinately large drawing account that was producing no revenue at all. "This is ridiculous," he said to himself, and by May, 1957, had $25,396,000 in time deposits drawing 3 percent interest—or $761,895 yearly, rather than the $161,250 yearly earned by the old authority, a difference of $600,000 in favor of the taxpayers. Mr. Curtayne said that all it took was a few telephone calls.

States have found it different. Missouri was constitutionally prohibited from 1933 until 1956 from earning interest on any State deposits in banks. In the 1956 election the voters adopted a constitutional provision that made it possible for the State to charge interest.

But the bankers persuaded the legislature to adopt an enabling act that limits to 30 days the time the State might agree to leave its funds in banks—and by Federal law, interest on 30-day deposits is restricted to 1 percent yearly. The State expects eventually to put about $50 million in such deposits on which it will earn $500,000 yearly, as against nothing before; but it could earn $1.5 million or more on the same amount in Federal securities, into which some of its inactive money is going.

The Missouri situation approached the ridiculous in the autumn of 1957 when the State found no takers for $30 million of highway bonds, upon which by law it could pay no more than 3 percent interest; nor sell at less than par. So the State legislature had to meet to provide that such bonds could be sold for less than par, an effective way of raising the interest rates it would have to pay, even while lending millions of dollars of its own money at 1 percent.

Kansas had a somewhat similar experience. Like many other States it collected interest on time deposits before the depression, and from 1905 to 1938 the State earned $3.4 million for taxpayers by this means. In 1937, however, "to help the banks," the legislature forbade collecting interest on any State deposits. By 1956 the State had $78 million in time deposits in nearly 600 banks, on which it was drawing no interest at all. The legislative council, ordered by the legislature to look into the matter, reported that even at 1 percent interest, the taxpayers would have earned more than $6 million during the interim, and at 2.5 percent interest even then being earned by some States on inactive accounts, they would have earned $15.3 million.

The council recommended a law under which the State would have charged for inactive deposits one-half the interest rate on Federal issues of more than 1 year but less than 2 years' duration, thus tying the State's earnings to the money market; but even so leaving the bankers a handsome margin.

The latter, however, fielded this one deftly, too. Under the actual resulting 1957 law, the State can withdraw upon demand 20 percent of its inactive deposit in any bank, but cannot charge interest thereon. The remainder, or 80 percent, is deposited for 1 year—with a 60-day withdrawal notice—and unless the State serves notice of withdrawal, the agreement is automatically renewed each 12 months. Upon this 80 percent the State collects 1 percent; or an effective rate on the whole deposit limited to four-fifths of 1 percent. The legislature granted the State no power to withdraw this money and put it into short-term Federal securities, as originally proposed.

Kansas, as of September 30, 1957, had $70,823,780 in inactive accounts. Of this, $14,164,756 or 20 percent was drawing no interest. On the remainder, or $56,659,024, the State was earning 1 percent interest yearly, or $566,590. Kansas taxpayers are that much better off than with no interest at all, but at 3 percent on the whole amount they would be earning better than $2.1 million yearly. So Kansas bankers have retained a handsome amount of down, or more than $1.5 million yearly, with which to feather their nests.

Of course, and without saying that it now prevails in any State, the power of State treasurers or other officials to put huge sums of inactive money in banks at low interest or no interest, can lead to "sweethearting" in which State officials can do favors for banks, and receive political support or other favors in return. Such a situation prevailed in New Jersey before the Meyner administration came in to clean it up; and much "sweethearting" was disclosed by the Hodge scandals in Illinois.

In 1956 the Kansas Legislative Council queried the treasurers of all States as to State law and practice regarding inactive accounts, and disclosed an amazing variety. Some States were still forbidden by law or constitution to earn any money whatsoever on State deposits, others were earning as high as 2.5 percent. However, the bankers of most States still appear to be reaping a harvest aggregating many millions of dollars yearly from these antiquated and inflexible provisions, and will keep on doing so as long as taxpayers are kept in ignorance of their own tenderness to the banking fraternity.

Why Should We Pay To Be Brainwashed?

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. LOSER. Mr. Speaker, on February 17, 1958, the Nashville Tennessean published an editorial, Why Should We Pay To Be Brainwashed? which will be of interest to all friends of public power.

Under leave to extend my remarks in the RECORD, I am including this excellent editorial and commend it to the reading of my colleagues and the public:

[From the Nashville Tennessean of February 17, 1958]

WHY SHOULD WE PAY TO BE BRAINWASHED?

Taxpayers, and not just those in the TVA area, can be pleased by the ruling of Mr. Russell C. Harrington, Commissioner of Internal Revenue, that private power groups no longer can deduct the cost of advertising used to attack TVA.

Of all sweet subsidies that we have heard of, this takes the saccharine crown. The private power companies have reason to dislike TVA and to want it destroyed. One of the best aids to this destruction, they figured, would be a national advertising campaign, cleverly slated at the taxpayers and utilizing distortions and half-truths in an attempt to show that TVA is a massive drain, that it pays no taxes and hurts private enterprise.

The trick was to deduct this advertising outlay from taxes due the Government, and thereby, as Senator ESTES KEFAUVER remarked, charge the taxpayers and electric rate payers for their own brainwashing.

Senator KEFAUVER suspects that a cry will now be raised that the private power companies' free speech is being curbed.

Their speech, it must be admitted, was certainly free so far as they were concerned—the taxpayer footed the bill.

Stream Pollution

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. PRICE. Mr. Speaker, I received the following letter concerning the Federal Water Pollution Control Act—Public Law 660—from Buford B. Gudeon, president of the Mascoutah Sportsmen's Club in Mascoutah, Ill. Mr. Gudeon expresses the concern of millions of sports fishermen that streams will be polluted and fish destroyed unless we continue to help local communities build needed sewage-treatment plants. His letter comes as a timely warning against halting funds for the pollution-control program:

MASCOUTAH SPORTSMEN'S CLUB,
Mascoutah, Ill.

Hon. MELVIN PRICE,
United States Congressman,
House Office Building,
Washington, D. C.

YOUR HONOR: In the November issue of Sport Fishing Institute Bulletin our attention has been called to Public Law 660. (Federal Water Pollution Control Act.)

In the President's state of the Union message to Congress in January 1957, while calling for so-called partnership approach by all levels of government with private enterprise for conservation and development or renewal of natural resources, he pinpointed this important aspect. I would like to make special mention of programs for making the best uses of water rapidly becoming our most precious natural resource, just as it can be, when neglected, a destroyer of both life and wealth.

In October 1957 when asked for specific examples of Federal programs that could be dropped, the President mentioned the $50

million a year in grants to local governments to build water-pollution abatement plants. "That, I think," he remarked, "is strictly local in character and I think it belongs to local government."

Following up on this the joint committee met for the second time, on October 7 in Chicago. And there it voted specifically that the President should ask Congress in January of 1958 to discontinue the recently begun program of Federal grants to municipalities to build waste-treatment plants. Such an action apparently disregards the plain implications of the fact that Congress enacted the program under pressure from local officials. It's also inconsistent with the action of the Congress in voting large funds for it this year in the face of the strong drive for economy.

But, the polluters will have their way, if they can. Conservation and recreation interests, and the general public, will lose everything now if they fail to recognize this wolf in sheep's clothing. It's our guess that every effort will now be made to keep the administration from writing the water pollution program grants into the 1958 budget for Public Law 660.

If that happens you may have the consoling thought that about 170 million more Americans were sold down the sewer. After all, it's a well-known fact that misery loves company. You can count on it, if the new approach works. There'll be plenty of both in the future of our country.

It is with the above in mind that we ask you as our representative to fight to keep Public Law 60 in effect as it now stands. Our natural resources are ours to enjoy and ours to protect.

MASCOUTAH SPORTSMEN'S CLUB,
BUFORD B. GUDEON, *President.*

Results of the Public Opinion Poll on Current Issues Conducted Among Residents of the 20th Congressional District of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. VAN ZANDT. Mr. Speaker, through the cooperation of newspapers in my congressional district, over 2,000 residents clipped printed questionnaires from their favorite paper and returned them to me indicating their views on 15 current issues of national importance.

The tabulation which follows represents a cross section of occupations in the central Pennsylvania area and in some instances conveys the views of civic organizations, high-school classes, and service clubs. Many questionnaires were accompanied by explanatory letters either qualifying the votes on various questions or commenting on other issues of the day.

The tabulation of votes on the 15 questions is as follows:

	Yes	No
1. In view of the recent illness of President Eisenhower and the discussion that followed regarding his health, how to you feel on the subject? Please indicate whether you feel—		
He should continue in office despite his health	1,584	------
Or should he resign and let Vice President NIXON take over the Presidency	321	------
2. Do you favor increasing taxes to support expansion of our national defense, including the development of missiles, rockets, etc.?	1,126	1,143
3. Do you favor Congress approving the proposal to share our atomic secrets with friendly nations?	1,191	699
4. Should foreign aid be increased?	693	1,257
5. Do you favor conferences by the President with foreign leaders even though they would include heads of foreign nations with whom he does not always agree?	1,545	306
6. Should England discontinue trading with Communist China?	659	795
7. Do you favor admitting Red China to the United Nations?	402	1,509
8. Do you favor the sale and barter of farm surpluses to Communist nations?	816	1,066
9. Do you favor reduction of taxes before balancing the budget?	295	1,540
10. Do you favor Federal aid for schoolroom construction?	1,113	816
11. Do you favor putting the Post Office Department on a pay-as-you-go basis which would require increasing postage rates?	1,428	492
12. Do you favor federally subsidized power projects?	567	1,220
13. What do you think Congress should do about the Taft-Hartley Act?:		
Should it be repealed?	99	------
Retained or amended?	1,818	------
14. Which in your opinion represents the soundest agricultural program:		
High rigid price supports?	51	------
Flexible price supports?	945	------
No price supports?	816	------
15. Do you approve a program of Federal aid to distressed areas suffering from chronic unemployment problems?	1,293	833

Hospital and Medical Facilities Survey and Construction Program

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the State of Minnesota Department of Health relative to the hospital and medical facilities survey and construction program:

STATE OF MINNESOTA,
DEPARTMENT OF HEALTH,
Minneapolis, February 7, 1958.

Re hospital and medical facilities survey and construction (Hill-Burton) program.

DEAR SIR: One of the major recommendations made at the conference of the Surgeon General, United States Public Health Service, with the State hospital and medical facilities survey and construction authorities in Washington last November was that of extending the Hill-Burton program for at least 5 years, with full congressional appropriations as authorized—$150 million under part C and $60 million under part G.

The President's budget to Congress recommends:

1. Fifty-two million eight hundred thousand dollars for hospital and public health center construction (part C—original program, Public Law 725, 79th Cong., as amended), which is $46,200,000 less than the 1958 fiscal appropriation of $99 million; and

2. Twenty-one million dollars for medical facilities (part G, 1954 amendment, Public Law 482, 83d Cong.), which is the same as that appropriated for each of the 4 years during which the Hill-Burton amendment has been in effect but which has proved to be exceedingly inadequate when related to the total unmet needs in the categories of nursing homes, chronic-disease hospitals, rehabilitation centers, and diagnostic and treatment centers.

In this connection, we would like to present pertinent data relative to Minnesota's needs for beds in the various categories of care facilities. More detailed information is contained in the attached exhibits, as follows:

EXHIBIT I. A LONG-RANGE STUDY OF THE NEED FOR ADDITIONAL BEDS IN MINNESOTA

The annual need for beds in all categories in order to liquidate existing bed deficits, to provide for the increasing population, and to replace and remodel existing facilities as they become obsolete, as well as the annual increase in bed deficits, are shown. This deficit of 2,708 beds is occurring each year, in spite of the fact that Minnesota's average annual construction volume was $16 million during the period from 1948 through October 1957. A total expenditure of approximately $36 million would be needed each year to keep abreast of the needs. Attention is directed to item E, on page 2, the Need for Facilities for the Chronically Ill and Aging.

EXHIBIT II

This material was developed in three sections:

(a) Proposed program (Hill-Burton) for 1959 based on a similar amount as appropriated in 1958 (parts C and G).

(b) The additional projects which could be assisted in 1959 based on the authorized appropriations under parts C and G.

(c) Other eligible projects which could be assisted during the next 2 years if there were no limitations on Federal funds. A total of at least 129 projects including 67 nursing homes would be in a position to proceed if financial assistance were available. This would involve $32.5 million in Hill-Burton funds ($21.7 million in part C and $10.8 million in part G).

There is considerable discussion at the national level regarding the feasibility of long-term, low-interest loans for construction rather than grants-in-aid. In our considered opinion, loans would transfer the burden of capital expenditures from the general public to the patient who is in the least position to bear this additional cost at the time of his hospitalization.

EXHIBIT III

Summarizes the projects completed since 1948, currently under construction and in the planning stage. The Hill-Burton pro-

gram has provided an excellent stimulus and demonstration in that Minnesota's total allotments of $22,148,582 in Hill-Burton funds represent only approximately 7.4 percent of the total of $301 million involved.

There is an urgent need for continuing and expanding the Hill-Burton program on a sufficiently long-range basis (at least 5 years but preferably 10 years) to permit sound planning and projection at the local, State, and Federal levels. There is a long sequence of events and a definite time schedule which must be maintained before all of the funds are actually paid out to the sponsor of a specific project. Hill-Burton funds are not actually encumbered for a project until the eligible sponsor has been active in planning and fund-raising for 2 or more years. Most hospitals require a year or more to complete and the final payment is not made until the project has been in operation for several months. This means that our staff is involved with a high priority community for a period of at least 4 to 5 years and frequently longer before the project is finally closed out with the final payment. It should be emphasized that Minnesota has utilized all of its Hill-Burton appropriations and by transfers of the exceedingly limited allotments under the amendment (part G) has been able to initiate several extremely worthwhile projects.

One of our most critical problems is the extreme shortage of nursing home beds. Minnesota has met less than 50 percent of its need for beds of this type and more than 9,000 additional beds are needed in modern, fire-resistive facilities to meet the present demands for beds in nursing homes and homes for the aged.

The volume of correspondence received from our Minnesota delegation is indicative of the local interest and support of the Hill-Burton program. Our responses have demonstrated the administrative problems we face in allocating such limited amounts of Federal funds with the needs as they exist.

We are convinced that the people of Minnesota will strongly endorse any action you may be in a position to take toward extending the Hill-Burton program for at least 5 years and supporting the maximum appropriations as authorized in the acts, namely $150 million under part C and $60 million under part G.

Respectfully,

ROBERT N. BARR, M. D.,
Secretary and Executive Officer.

Pay TV

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. NEAL. Mr. Speaker, one of my constituents, Mr. John A. Goodno, manager of the Palace Theater in my home city of Huntington, W. Va., has suggested that the whole question of pay TV needs to be viewed from all angles, that some catalytic agent must be found who understands the techniques of movie-making, and who likewise possesses a broad understanding of the problems encountered in the production of television shows. That man, Mr. Goodno suggests, is none other than Walt Disney.

His letter follows:

PALACE AMUSEMENT CO.,
THE PALACE THEATRE,
Huntington, W. Va., February 7, 1958.

Dr. WILL E. NEAL,
Member of Congress,
Huntington, W. Va.

DEAR DR. NEAL: Thank you for your invitation to make some expression on the toll-TV question.

Feel show business is suffering from the sale of pre-1948 movies to TV and the age of the movies apparently is no viewing deterrent.

Glad to report however not all is bad in our business and at this juncture it is my feeling that you are the most uniquely placed man in Congress by virtue of the fact you are a former theater owner, a physician of marked humanistic qualities, to consider the thought I now propose.

During all this toll-TV controversy one individual stands out alone in show business as a great public benefactor. A man who has grasped both the entertainment and educational significance of both TV and movies and fused them to the benefit of all.

That man is Walt Disney.

Not only has he contributed greatly to exhibition with superior entertainment, as so currently evidenced by his Old Yeller, but he has strengthened our faith in the future and brought to the public a production rich in the tradition of American literature affording present generations an emotional experience not unlike those felt by generations past in such classics as Huckleberry Finn and Tom Sawyer.

Old Yeller has broken all our 31-year attendance records here despite unemployment problems and this scene is doubtless being duplicated throughout our country, thus both exhibition and the public being enriched.

Which leads me to this thought: In Walt Disney the American people possess a man whose multiple artistic accomplishments are so vast that no one word in the English language completely conveys this, and in England such a man would have been knighted long ago. Is it not time our Congress consider an accolade to this great American?

Sincerely yours,

JOHN A. GOODNO.

Wiretapping

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include a memorandum opinion appearing in the New York Law Journal of January 3, 1958, by one of New York's most distinguished jurists, Hon. Samuel H. Hofstadter, justice of the Supreme Court of New York:

WIRETAPPING: ILLEGALITY OF ORDERS ISSUE IN PURSUANCE OF NEW YORK STATUTE

Under the recent decision of the Supreme Court of the United States in the Benanti case, an interception of a telephone communication, in violation of section 605 of the Federal Communications Act, is unlawful even though made by a State officer acting under an order issued in pursuance of the New York statute, and the order itself is unlawful. Applications for such orders should, therefore, be denied.

"'IN THE MATTER OF INTERCEPTION OF TELEPHONE COMMUNICATIONS,' DECIDED JANUARY 2, 1958

"Hofstadter, J.: Under the decision of the United States Supreme Court in *United States* v. *Benanti* (26 U. S. Law Week, 4045), decided December 9, 1957, no wiretap order pursuant to section 813a of the Code of Criminal Procedure [1] may lawfully be issued.

"As we have no system of advisory opinions in this State and, according to our practice, applications for wiretaps are made at special term, part II, this memorandum will apprise enforcement and prosecuting officers that while I preside at special term, part II, during this month no application for a wiretap order will be honored.

"Under the decision in Benanti, orders authorizing interceptions are contrary to controlling Federal law. Its authority requires me, therefore, to deny any application for such an order. For all wiretaps, whether 'authorized' or not, in this State are now illegal. *In Matter of Interception of Telephone Communications* (207 Misc. 69) I denied an application in the exercise of discretion; any further application would have to be denied because of lack of lawful competence.

"There may be those who differ from this interpretation of the Supreme Court decision. In that event, the result of these proceedings may be the salutary one that the view expressed here can be challenged and become the subject of authoritative determination by our State appellate courts; subject, of course, to any ultimate review in the United States Supreme Court.

"Recent decisions of the Supreme Court of the United States have adumbrated the expectancy that legal safeguards will provide the needed bridge between the moral and legal law. Time and again, the gap between moral and legal law has been spanned—sometimes by the slow and painful process of the innovation of time, and sometimes by a courageous leap into the future. Such an advance has been effected by the Benanti case. In clear accents it tolls the knell of all wiretapping, including so-called legal wiretapping in our State. Following the holding in *Weiss* v. *United States* (308 U. S. 321) it flatly proclaims, in language which no one can mistake, that an interception of a telephone communication, even by a State law-enforcement officer acting under an order issued pursuant to section 813 (a), constitutes a violation of section 605 of the Federal Communications Act (47 U. S. C. 47). Its expressions are compelling—it is explicit that the warrant of the order does not make the wiretap legal; it is implicit that the order itself is unlawful.

"New York police officers, suspecting one Benanti of dealing in narcotics, obtained a wiretap order from the court. As a result of the wiretap he was arrested. It was found that he was not a dealer in narcotics but a bootlegger of whisky. He was turned over to Federal agents for prosecution. On his trial the State officers were permitted to testify to the wiretapped conversations. On appeal from his conviction the United States Court of Appeals decided, as a matter of first impression that where there is no participation by a Federal officer the Communications Act does not bar, in a Federal court, the admissibility of evidence obtained by State officers by wiretaps in violation of the act.

"The Supreme Court disagreed with this conclusion. It held unanimously that wiretapping by New York State law-enforcement officers, although authorized by the State constitution and statutes, violated Federal law and that evidence was inadmissible. The Court found no exemption for State officials in section 605 of the Federal Communications Act of 1934, which reads: 'No person not being authorized by the sender shall intercept any communication and divulge or publish the

Footnotes at end of speech.

existence, contents, substance, purport, effect, or meaning of such intercepted communication * * *.'

"Chief Justice Warren said: 'The constitution and statutes of the State of New York provide that an ex parte order authorizing a wiretap may be issued by judges of a certain rank. * * * [It is not urged] that, constitutionally speaking, Congress is without power to forbid such wiretapping even in the face of a conflicting State law * * *. Rather, the argument is that Congress has not exercised this power and that section 605, being general in its terms, should not be deemed to operate to prevent a State from authorizing wiretapping in the exercise of its legitimate police functions. However, we read the Federal Communications Act and section 605, in particular, to the contrary. The Federal Communications Act is a comprehensive scheme for the regulation of interstate communication. In order to safeguard those interests, protected under section 605, that portion of the statute pertinent to this case applies both to intrastate and to interstate communications. * * * In light of the above considerations, and keeping in mind this comprehensive scheme of interstate regulation and the public policy underlying section 605 as part of the scheme, we find that Congress, setting out a prohibition in plain terms, did not mean to allow State legislation which would contradict that section and that policy (compare *Pennsylvania* v. *Nelson* (350 U. S. 497), *Hill* v. *Florida* (325 U. S. 538), *Hines* v. *Davidowitz* (312 U. S. 52)).'

"In the Benanti case, the United States court of appeals for this circuit has said: 'Despite the warrant issued by the New York State court pursuant to New York law, we have no alternative other than to hold that by tapping the wires, intercepting the communication made by appellant and divulging at the trial what they had overheard, the New York police officers violated the Federal statute.' *Nardone* v. *U. S.* (302 U. S. 379, 308 U. S. 338); *Weiss* v. *United States* (308 U. S. 321). Section 605 of title 47, United States Code, is too explicit to warrant any other inference—and the Weiss case made its terms applicable to intrastate communications (244 Fed., 2d, 389).

"These views of the court of appeals regarding the illegality of the 'authorized' wiretap were confirmed by the Supreme Court, but its ruling of the admissibility of the fruits of the tap was overruled, the Supreme Court basing its decision on the intent of the Federal Communications Act.

"After its first pronouncement, the United States court of appeals, several months later, reiterated its views on the illegality of intrastate interceptions, saying: 'Appellant next contends that the act does not apply to the calls he intercepted, because they were intrastate in character rather than interstate or foreign. This contention is completely refuted by *Weiss* v. *U. S.* (308 U. S. 321), wherein the court said at page 327: "* * * Plainly the interdiction thus pronounced is not limited to interstate and foreign communications. And, as Congress has power, when necessary for the protection of interstate commerce, to regulate intrastate transactions, there is no constitutional requirement that the scope of the statute be limited so as to exclude intrastate communications." And at page 329: "We hold that the broad and inclusive language of the second clause of the section is not to be limited by construction so as to exclude intrastate communications"' (*United States* v. *Gris* (247 Fed., 2d 860)).

"Thus, section 605, as interpreted by controlling Federal judicial authority, renders unlawful the interception of all telephone messages within our State, even by an officer acting under an order of this court; it cannot be within the competence of this court, properly exercised, to authorized such an unlawful act—section 813 of the Code of Criminal Procedure to the contrary notwithstanding. For in case of conflict, the State law, not an otherwise unobjectionable Federal statute, must give way under the Constitution (*United States* v. *Gris, supra*).

"The supremacy clause of the United States Constitution, article VI, clause 2, provides: 'This Constitution, and the laws of the United States, which shall be made in pursuance thereof * * * shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding.' And, since *Gibbons* v. *Ogden* (9 Wheaton, 1), it has been firmly established that when Congress enacts legislation within its competence, and becomes the 'supreme law of the land' under the Constitution, State interests must yield to the paramount national concern. The law of the general Government governs. The exercise by Congress of its power is absolute—it precludes, modifies, or suspends—as the case may be—local legislation in conflict or inconsistent with Federal enactments.[2]

"In the interpretation and construction of Federal statutes, Federal judicial rulings are controlling.[3] The Supreme Court has held that the Communications Act is an 'express, absolute prohibition' against interception or divulgence of wiretapping with no qualifications—that when State officers indulge in wiretapping they are violating Federal law and subject themselves to Federal prosecution. So long, therefore, as section 605 of the Federal Communications Act remains the law, so much of section 813a of our Code of Criminal Procedure which permits interceptions, is inoperative.

"Hence, even when authorized, interceptions of telephone messages within this State are illegal. Yet, orders have been issuing and interceptions have been made. As Benanti and Gris now make it painfully clear, the orders so issuing out of the courts to 'authorize' interceptions, have been void because contrary to law.

"These decisions require that we now cease and desist, for it cannot be lawful to authorize what is an illegal act. It is more and worse than a mere futility—for if the police officer violates the Federal statute by tapping wires notwithstanding a warrant issued out of this court pursuant to New York law—if that act be illegal—those who set the act in motion have condoned if not instigated illegally. Clearly a judge may not lawfully set the wheels in motion toward the illegality by signing an order—the warrant itself partakes of the breach, willful or inadvertent, of the Federal law. Such breach may not find sanction in the orders of courts charged with the support of the law of the land and with enforcing that law.

---

[1] So far as here material, sec. 813-a of the Code of Criminal Procedure (enacted under art. I, sec. 12 of the State Constitution) reads: 'An ex parte order for the interception * * * of * * * telephonic communications may be issued by any justice of the Supreme Court * * * when there is reasonable ground to believe the evidence of crime may be thus obtained * * *.' Any reference in this memorandum to this section applies only to telephone interceptions.

[2] *Commonwealth of Pennsylvania* v. *Nelson* restated the rules for determining whether a Federal statute may be supplemented by a State enactment, where, as here, Congress has not stated specifically that its legislation fully occupied a field in which the States would otherwise be free to legislate. The touchstones for decision, said the Supreme Court, were: First, that the scheme of Federal regulation was so pervasive as to make reasonable the inference that Congress left no room for the States to supplement it. Second, that the Federal statute touched a field in which the Federal interest was so dominant that the Federal system must be assumed to preclude enforcement of State laws on the same subject. Third, that enforcement of the State statute would present a serious danger of conflict with the Federal program.

[3] *Sadowski* v. *L. I. RR.* (292 N. Y., 448, 453), *Brown* v. *Remembrance* (279 App. Div., 410, 412, aff'd 304 N. Y., 909), *Ruggiero* v. *Liberty Mutual Ins. Co.* (272 App. Div., 1027, aff'd 298 N. Y., 775), see also *Bailey* v. *Central Vermont R'y* (319 U. S., 350, 352), *Chicago, Milwaukee & St. Paul R'y* v. *Cooper* (271 U. S., 472, 474), *Jacobs* v. *Reading Co.* (130 Fed., 2d, 612, 614), *Albert Pick & Co.* v. *Wilson* (19 Fed., 2d, 18, 19). It is implicit in the cases constituting prevailing authority that authoritative Federal decisions even when not those of the Supreme Court, govern; it has been rendered explicit, too (see especially *Ruggiero* v. *Liberty Mutual Ins. Co., supra*)."

They Want a Charter

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the National Tribune-The Stars and Stripes of February 20, 1958:

THEY WANT A CHARTER

The Veterans of World War I of the United States of America, an organization devoted to the needs of the men who served between 1917–19, and including those who served in Russia after the November 11, 1918 armistice, has been growing by leaps and bounds.

Thousands of veterans of World War I are flocking to this group, having reached the conclusion that here is one group which gives its time and thought and energy to their comrades of the First World War.

These elderly veterans are not giving up their affiliation with older veterans' organizations, such as the Veterans of Foreign Wars or the American Legion, but they feel, at last, that here is an outfit they can join, knowing that this new but fast-growing veterans' group has as their first concern the men who fought with them in this country's first attempt to prove itself against the world.

What does this new organization seek? It asks for pensions for their aged and elderly comrades who are no longer able to care for themselves. This is a laudable effort and their leaders have been authorized to lessen their demands if some relief can be granted to their needy comrades of more than 40 years ago.

But much more, they are aking Congress to grant them a congressional charter which would put them on a par with other major veterans' organizations in acknowledgment by the Veterans' Administration of their growing prestige, and granting them the right to appear before boards of the Veterans' Administration in the prosecution of veterans' claims.

Here is a right which has been given to a number of veterans' and other groups, and rightly so, but which, up to the present time has been denied to this distinctive organization, greater by far in numbers and service than any other groups which have already been given this recognition by Congress.

The thought has been put forward that when the AMVETS were given a congressional charter this would be the last one that would be authorized for any veteran group.

Times change and there has arisen in our country the Veterans of World War I of the U. S. A. which represents a vast number of our veterans—a group growing by leaps and bounds each year.

We are reminded of a story told of the French Academy many years ago. It appears that the academy was limited in number and until one member died no other could be admitted.

There appeared on the horizon a gifted figure, one whom the academy would have liked to welcome as a member. Unfortunately, the rules were strict and there was no room for this individual, no matter how well the academy would have accepted him.

To honor this person the academy decided to hold a dinner in his honor. The feasting over, the president of the academy arose, spoke in glowing terms of their guest's ability and expressed the regrets of the academy because they could not accept him.

It so happened that, on the festive table, there were bouquets of roses. The honored guest, rising to accept the plaudits of his academy friends, plucked a soft petal from a rose in the bouquet nearest to him. He then filled a water glass until it was brimming over—until not another drop could be added without being spilled on the tablecloth. He then took the rose petal and placed it on the brimming glass. The rose petal floated on the water and not a drop of water was spilled. "You see, gentlemen," he said, "no matter how full the glass is, there is always room for one more."

The academy members understood and immediately accepted him as a member, changing their rules to meet the changing times and the recognition which was his due.

So, let the Congress of the United States recognize the changing times and the recognition due this worthy organization of Veterans of World War I and realize that the addition of this new flower will not detract but add to the list of those who have been granted congressional charters. It is their due.

Youngsters Who Behave

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. FARBSTEIN. Mr. Speaker, much has been said, and a great deal more has been written in the newspapers in recent months, concerning juvenile delinquency, and the failure of modern teen-agers to live up to the standards of polite society. Very litle is ever said about those youngsters who behave as we would like to see our coming generation behave, and who, in my opinion, are in the overwhelming majority. Therefore, when the following letter was sent voluntarily to the principal of one of the parochial schools in my district, I felt it essential to bring it to the attention of all concerned so that the adverse publicity presently appearing in the newspapers about a small segment of New York students might be offset and all of the New York's students might not be judged by the slight minority:

YOUTH AID, INC.
New York, N. Y., January 30, 1958.

The PRINCIPAL,
Beth Jacob School,
New York, N. Y.

DEAR SIR: I would like to share with you a most pleasant experience. I have in the past 2 years done much traveling in the subway at the times when our school children are using public transportation. Like most people I deplore their manners in such places; they compare so unfavorably with the manners of the children of most other places in the civilized world. I teach in the public high schools and do appreciate the psychology of our teen-agers. I am dismayed, however, to find that my own classes seem totally uninformed on their obligation to give up their seats to elderly persons in the subway or on buses.

It was my good fortune today to see 2 girls rise with very gracious dignity and give their seats to 2 elderly women standing near them. This brought them next to me and I congratulated them on their good manners. The girls assured me that everyone in their school had good manners and would act properly in the subway or other public places.

You are to be congratulated on the training which produces results like this. The youngsters were proud to give me the name of their school but wanted no personal recognition of what they regarded as proper conduct. I hope that the Beth Jacob School will enjoy growth and influence for many, many years and will continue to give us young people as fine as the two girls I met today.

Sincerely,

ADELAIDE MCGLOIN.

National Invention Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following suggestion for a National Invention Day. I received this letter, which is dated February 11, 1958, from Jack J. Lande, general counsel of the Invention Industry Association:

INVENTION INDUSTRY ASSOCIATION,
Los Angeles, Calif., February 11, 1958.

DEAR MR. MULTER: Ingenuity manifested in invention is our country's greatest single natural resource and has made the United States the world's most plentiful nation. No other American asset has so directly affected our social, economic, and political life as has invention.

As a nation, the United States of America has been remiss in officially expressing its national appreciation to invention. Accordingly, we propose that the Nation annually, through the Congress and the White House, acknowledge its gratitude to American ingenuity and inventors by resolution and proclamation to set aside 1 day a year as a legal holiday.

Abraham Lincoln was the first and only President to ever receive a patent. Lincoln's birthday is not a legal holiday; therefore, we suggest his birthday, February 12, as the ideal date for National Invention Day. Since February 12, 1959, will be the 150th anniversary of the birth of Lincoln, it seems proper and fitting that the United States of America proclaim National Invention Day on that date.

Your active participation in achieving this objective will be gratefully appreciated by every man, woman, and child in America.

Sincerely yours,

JACK J. LANDE,
General Counsel.

When the Farmer's Throat Is Cut, So Is Your Own

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. METCALF. Mr. Speaker, among those who have had enough of the campaign being waged against American farmers, not only by the national community of business and industry but also by the administration, is Publisher Edward L. Fike of the Lewistown (Mont.) Daily News.

He says so in the following editorial from the issue of February 16:

WHEN THE FARMER'S THROAT IS CUT, SO IS YOUR OWN

Thumbing through a magazine the other day we noticed a very intriguing advertisement sponsored by the machine tool firm, Warner & Swasey, of Cleveland, Ohio.

"Who is this generous uncle who pays all the bills?" asked the ad which then went on to lament among other things that Uncle Sam is "going to keep farmers prosperous by having them do less work."

Here, out in the open, is an example of the unceasing campaign being waged against America's farmers and ranchers by the national community of business and industry.

The firm of Warner & Swasey, as most other great industrial firms, will quickly defend the questionable practice wherein the Federal Government grants huge subsidies to industry through quick tax writeoffs in defense contracts. And, these industries which reap quick millions from Government contracts seem to be the very ones which squeal loudest over any assistance extended to the struggling farmer.

Well, as Queen Victoria once said, "We are not amused."

We don't pretend to offer a solution to so complex a thing as the national farm problem, which defies the best brains in Government and agriculture. We do know this: If the farmer is not prosperous there can be no sustained national prosperity. Much of the current recession finds its impetus in our depressed farm situation even as the great depression of the 1930's was rooted in unsolved agricultural crisis. Even though our farmers compose a minority—only 21 million Americans now live on the farms—it follows as night the day that the Nation cannot be half prosperous and half depressed. High industrial wages and booming business do not last very long when the farmers are in depression.

Consider this:

Prices received by farmers have gone down 20 percent since 1951.

Farmer operating costs have gone up 15 percent since 1951.

Weekly factory wage rates have gone up 23 percent since 1951. Per capita farm income is now only about half the urban income rate.

The plain fact is that food in this country absorbs a smaller proportion of the consumer's spendable dollar than anywhere else in the whole world. (Eight minutes of United States labor will purchase a quart of

milk while in France it requires 16 minutes and in Soviet Russia, that workers' paradise, it takes 42 minutes.)

Farmers, in short, have been and still are subsidizing the consumers of America. And, because farmers are scattered and unorganized and because they are by nature individualistic, they are at the mercy of vast market conditions over which they have no control.

In this situation we find in Ezra Taft Benson a Secretary of Agriculture who is well intentioned but confused and who appears to be hostile to the very segment of the Nation which he is supposed to represent and serve.

Let us bring this matter home.

Secretary Benson has announced his intention to cut the price support for wheat in 1958 by 22 cents per bushel. According to ASC figures, this means that Fergus County ranchers will lose $651,868. This is easy to see. Our wheat allotment for 1958 is 157,635 acres which are expected to produce a normal yield of 18.8 bushels per acre. If we multiply acres by expected yield by the anticipated 22 cents reduction in the support we have our loss.

Judith Basin County with a wheat allotment this year of 81,041 acres and an expected yield of 17.4 bushels will lose $310,-224.

The wheat producing countries of central Montana alone can expect to lose upwards of $2 million this year because Secretary Benson has arbitrarily decided to cut wheat support by 22 cents.

There isn't a businessman on main street in any community in central Montana, and most of all in Lewistown, who will not feel this pinch. There is hardly a person living in central Montana who will not be adversely affected by Secretary Benson's decree.

It is well and good for sophisticated industrialists and businessmen to theorize against the farmer but farm prices and the farm-support program benefit far more than the depressed farmer.

In Montana and in many another State, the price of wheat is the economic lifeblood.

Last month President Eisenhower sent a message to Congress urging that farm price supports be reduced to 60 percent. This was a complete violation of his promises made during his campaign. For example, at Brookings, S. Dak., on October 4, 1952, General Eisenhower promised:

"The Republican Party is pledged to the sustaining of the 90 percent of parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guaranty in the price supports of 90."

Whereas Secretary Benson now advocates an end of the family farm, Mr. Eisenhower in Columbia, S. C., on September 30, 1952, said:

"I am for programs to put a firm foundation under farm prosperity and to strengthen the family farm as the mainstay of our agricultural production."

Now this may seem just another case in which we are all for Government economy until the shoe pinches our own foot. But there is more involved here than Government economy. We must keep our agriculture healthy if it is to feed and clothe our Nation, not to mention our hungry allies. Our farmers who hold the soil in trust for posterity—for the feeding of future generations—must share in American strength and prosperity. And, our farmers and those of us who depend on farm prosperity, are entitled to enjoy the same benefit from the fruits of our labors as other segments of the national economy.

The National Guard

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks, I submit for publication in the RECORD a revealing excerpt from the National Guardsman for February 1958. It reflects the very real and justifiable concern of National Guard officials concerning the announced intention of the administration and the Defense Department to reduce Guard strength by 40,000 in the coming fiscal year. This is the second successive year during which cuts have been taken in the National Guard program, reducing it in numerical strength over that period by nearly 17¼ percent.

Maj. Gen. William H. Harrison, Jr., president of the National Guard Association of the United States, has expressed his deep concern lest our existing forces be so weakened as to jeopardize our national security while the emphasis is being placed on development of weapons systems which are still very much in the experimental stage and far from operational. It is sound for us to continue modernizing and converting our ground units to the pentomic structure or any other form that may be required to meet changing technology. But there is certainly nothing in the picture to indicate that it is safe to cut down our strength, either in the Active Army or in its Reserves.

In addition to the reduction of 40,000 in actual strength, the proposed budget would permit only 22,000 new guardsmen to undergo training under the 6-months program established by the Reserve Forces Act. Guard officials believe that a bare minimum of 55,000 is needed to compensate for normal losses.

We are all aware, I think, of the need to prepare ourselves for the grim possibility of nuclear warfare. Yet the distinct probability exists, as the tragic history of the Korean conflict must constantly remind us, that if war comes, its form will, likelier than not, be that of a peripheral, brush-fire war, a conflict of attrition. Since it is my firm conviction that the American people will never want to begin a nuclear war, I believe it essential for us to maintain sufficient conventional military strength to repulse conventional aggression when and if it should occur. Traditionally, the National Guard has been our insurance against unexpected attack. It was our insurance in World War I, in World War II, in Korea.

It seems to me that permitting this insurance to lapse because we bear a graver but unlikelier form of disaster is as foolish as discarding a simple life insurance policy in favor of one protecting exclusively against death by drowning.

The excerpt from the National Guardsman follows:

In a letter to adjutants general and guard commanders, General Harrison advised that the President's proposed budget includes only enough funds to support an enrolled strength in the Army guard of 360,000. There were 435,000 officers and men last May and, in accordance with the Memorandum of Understanding which came out of last year's Army-guard controversy, the number has been dropping to 400,000. There had been indications that that figure would stand up for a couple of years at least. But the new development means that we would drop another 40,000—a total loss of 75,000 trained, participating volunteers within a matter of months.

Though the details of the troop basis revision were kept under wraps, a little arithmetic with some known facts indicated a pretty clear picture. The active Army is taking a four-division cut, amounting to 20 percent of its divisions. It also has been indicated that the same ratio would be applied to the guard. That would mean 5 or 6 divisions. Carrying that same ratio over to the nondivisional units, and applying the cut to an aggregate of 5,500 divisional and nondivisional units, 20 by 5,500 indicates a projected loss of at least 1,100 companies, batteries, detachments, etc. Actually, the number could go much higher, inasmuch as in many instances the units left to us are supposed to be maintained at higher strength levels (about 65 percent) than they now are permitted, so as to be able to conduct unit training.

"This is not a reduction of paper units or units carried in a nebulous plan for some future activation, but rather a massive removal of existing organizations, units in operation, units with personnel, equipment, facilities and units with a historical background and tradition," General Harrison told commanders.

If anyone has worked out a formula for choosing how the cuts are to be worked out, he hasn't made it known. But elementary knowledge points the way to some possible approaches to picking divisions, for example, to be dropped. General Harrison listed these as:

1. One from each Army area, to be selected by the Army commander;
2. The six armored divisions;
3. The divisions which are considered to be least effective;
4. The lowest strength divisions;
5. One division from each State having two divisions;
6. Those divisions split between two or more States;
7. Those divisions without World War II history; or
8. A combination of the first 7 methods.

"On what basis the accompanying slash of nondivisional units might be accomplished is purely in the realm of conjecture," he wrote. "If such a massive reduction in personnel and units takes place, every unit in every State and Territory will be affected, because the units remaining in the troop basis will have to be redistributed among the States." One example might be a State having one division, and no spare parts outfits: its division is picked for elimination; the State might be given, from neighboring States, parts of their divisions, or some of their nondivisional outfits.

"While we are aware of the necessity of a reorganization of the Army National Guard to conform to the pentomic concept," General Harrison advised, "and have previously concurred therein, we are firmly of the opinion that—

"1. The present strength should remain at a minimum of 400,000;

"2. The existing 27 divisions should be retained;

"3. Necessary modification of the troop structure should be accomplished by reorganization, redesignation or conversion of existing divisional and nondivisional units."

National Wool Act Extension

EXTENSION OF REMARKS
OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. DIXON. Mr. Speaker, one of the few agricultural programs which receives almost universal acclaim is the wool program. The House Agriculture Committee held hearings last week on my own and other bills to extend the National Wool Act. Not one person testified against the extension. All segments of the wool production, distribution, and processing industry want the program to continue. I believe it is urgent that Congress pass this extension, and I am here reproducing the excellent testimony of Marvin L. McLain, Assistant Secretary of Agriculture:

NATIONAL WOOL ACT EXTENSION

(By Marvin L. McLain)

I am happy to appear before your committee on behalf of the Department of Agriculture to recommend extension of the National Wool Act of 1954. This program was developed 4 years ago by the wool growers, the executive branch and the Congress as a measure to meet the special problems of our domestic wool industry.

With wool, we are dealing with an agricultural commodity in which our country is deficient in production. The cost and problems in producing wool are such that the production of wool even with price support through loans and purchases at the maximum level authorized declined over 40 percent following the beginning of World War II. Furthermore, in supporting wool prices through loans and purchases, domestic wool accumulated in the hands of the Government while imported wools supplied an increasing share of our requirements.

In his special message to Congress on agriculture 4 years ago, President Eisenhower recommended legislation for promoting the development of a sound and prosperous domestic wool industry as a measure of national security and in the promotion of the general economic welfare. We are producing only about one-third of our normal peacetime requirements. The foreign wool upon which we must rely to supplement our domestic production requires shipping over sealanes from 5,000 to 8,000 miles.

REASONS FOR DECLINE IN DOMESTIC PRODUCTION

Over the years, domestic woolgrowers have been faced with one uncertainty after another in the market outlook for their product. The tariff on wool was reduced in 1948 under the Trade Agreements Act. The protection afforded by the tariff has been further reduced by the rise in the general level of prices and costs. The tariff today provides protection equivalent to only approximately 20 percent of the price received by growers compared with 77 percent in 1930.

Woolgrowers have been facing increasing costs of labor, equipment, and supplies. They have been caught in the squeeze between higher costs on the one hand and relatively less protection from imports of foreign wool on the other. Specialized labor is of major importance in sheep ranching, especially in the western range areas. There has been a scarcity of competent labor and wage rates have increased more than any other major item of expense. Wool production became less attractive as an enterprise during a period when national income was rising to record levels and production of agricultural commodities already in surplus was on the increase.

The number of sheep shorn in the United States has declined from 49 million head producing 388 million pounds of wool in 1942 to 26 million head producing 226 million pounds in 1957. Yet our range and feed resources best utilized by sheep will carry a higher level of production.

Our situation with wool is a special one, like sugar. Wool and sugar are the two major agricultural commodities in which the United States is deficient in production. Both face heavy import competition with serious complications. Legislation and programs for commodities which are produced in surplus in this country just do not fit the problems with which we are confronted in the case of wool and sugar.

PLAN DEVELOPED AFTER FULL STUDY OF SITUATION

The plan of price assistance under the National Wool Act of 1954 was developed after considerable study and with the advice and counsel of all segments of the industry. Raising the tariff as a solution would be contrary to our aims for expanding foreign trade, particularly with our friends in the Southern Hemisphere. Also, achieving higher prices for wool by increasing the tariff, would adversely affect the competitive position of wool with other fibers. As mentioned, price support through loans was not maintaining domestic production and was getting the Government more and more in the wool merchandising business while losing markets for domestic wool.

Under the National Wool Act of 1954:

1. An annual production of 300 million pounds of shorn wool—about one-third more than we are now producing—is to be encouraged as a measure for our national security and promotion of the general economic welfare.

2. An incentive price is established to encourage this larger production.

3. The price will be obtained by means of payments to growers to bring their income from wool up to the incentive level, rather than by raising prices in the free market.

4. A portion of the duties collected on imports of wool and wool manufactures is appropriated to finance the payments.

5. Section 708 of the act provides a self-help feature whereby woolgrowers can work together more effectively in developing and financing advertising and promotion programs to improve the demand for the industry's products and thereby increase the prices received in the free market.

HOW PAYMENTS ARE MADE FOR SHORN WOOL

The incentive price has been set at 62 cents for each of the marketing years under the program to date. Growers sell their wool in normal marketing channels. After the year is over, and the average price received for wool sold during the marketing year is known, payments are made to bring the national average price received by all growers up to the incentive level.

The payments are made at one percentage rate—the percentage required to bring the national average price for wool sold in the free market up to the incentive level. This one rate is applied to the net sales proceeds received by each grower to determine the amount of his incentive payment. By making the payments on a percentage basis, growers are encouraged to improve the quality and marketing of their wool to obtain the best price possible because the higher the price the individual grower gets in the free market, the greater his payment.

The support for pulled wool is provided to maintain normal marketing practices; that is, prevent unusual shearing prior to marketing just to get the payment on shorn wool. This is being handled by making payments on all sales of unshorn lambs irrespective of whether they are sold for replacement, feeding or slaughter. Then if the new owner sells the lambs without shearing them, his payment will be adjusted downward by the amount due on the weight of the lambs purchased. Likewise, if he shears the lambs and sells the wool, his wool payment will be adjusted downward by this same amount. In this way, the original producer and the later feeder-or breeder-owner share in the payments.

Payments are made only to bona fide producers. To qualify for a payment, the applicant must have owned the sheep or lambs from which the wool was shorn or the unshorn lambs sold for at least 30 days.

The National Wool Act of 1954 provides for the support of mohair by payments similar as for shorn wool. The support price for mohair has been set at 70 cents for each marketing year. This price is near the minimum of the range authorized by the act with the incentive price for shorn wool at 62 cents. Production of mohair has been on the increase since 1952.

WOOL PRICES LOWER FIRST 2 YEARS THAN ANTICIPATED

The payments on wool under the program the first 2 years were greater than anticipated when 62 cents was first established as the incentive level. This resulted from a greater than expected decline in the price received for shorn wool in the free market. Part of the price decline may have been the cost of getting back to a free market after several years of support at fixed prices. Also, the CCC-owned wool accumulated from the previous price support loan programs was a bearish factor. These stocks totaling over 150 million pounds at the beginning of the incentive payment program were finally eliminated last month as a depressing influence on the market.

The average prices received by growers declined from around 50 cents in early 1955 to a low of about 38 cents in January 1956. We were optimistic about the recovery to 56.4 cents by June last year. However, that has been tempered by a softening of prices since. In mid-December the average was 46.4 cents and 45.2 cents in mid-January.

WOOL SITUATION

The decline since June was primarily due to lower prices in the world market. Curtailed buying by Japan and uncertainty of demand prospects in the United Kingdom and France have been depressing factors in the world market. At the opening auctions in Australia in late August and early September, prices were about 10 percent below their peaks last May. They declined further and by early January were 25 percent below last May. They are now down near the lows of 1955. Since the middle of January, wool prices in the British Dominion markets have firmed up and have shown a little rise.

As to our own situation, United States mill consumption of apparel wool has been running about 17 percent below a year earlier. In contrast, consumption of man-made fibers is up over 8 percent. The higher wool prices last winter and spring may not have been as advantageous to the industry as many thought they were.

RATES OF PAYMENT

As a result of the decline in shorn wool prices during the 1955 marketing year, the national average for the year was 42.8 cents. With the incentive level at 62 cents, that meant incentive payments at the rate of 44.9 percent. The average price received by growers in the market during the 1956 marketing year was 44.3 cents and the rate of payment 40 percent. For the 1957 marketing year to date, the average prices by months have ranged from 56.4 to 45.2 cents which indicate that the rate of payments for the current year may be from 15 percent to 20 percent of the price received in the market.

Prices received for mohair the first 2 years were above the 70-cent support level and no payments were required. The price for the 1957 year is reported at 88 cents so no payments on mohair will be required this year. However, with the recent softening of prices, payments may be required the fourth year.

FUNDS AVAILABLE FOR PAYMENTS

Under the act, the total payments are limited to 70 percent of the specific duties collected on imports of wool and wool manufactures from January 1, 1953. In this way, the payments for price assistance on wool are related to the duties collected under the protective tariff.

By the beginning of the first year of the incentive program, these amounts totaled about $68 million and thus provided a backlog of funds available for payments in years when the duties are not sufficient to cover the required payments. Payments totaled approximately $58 million the first year and around $53 million the second. Current duty collections available for payments amounted to about $31 million during the first year and $28 million the second. Thus the payments for the first 2 years exceeded current collections available for payments by about $52 million and reduced the backlog by that much.

With the general decline in wool prices in the world markets since last May, it appears that the backlog available for payments may be completely exhausted by the end of the fourth year. This is based on the assumption that the average price received by growers in the free market holds around 48 cents. Each 1 cent the national average price received for wool fails to equal the incentive price means $3 million in payments.

The price situation both in this country and abroad after the extension of the National Wool Act will determine whether the 70 percent of specific-duty collections on imports of wool and wool manufactures will be sufficient to maintain the incentive price for shorn wool at a truly incentive level over the years ahead.

TRENDS IN SHORN WOOL PRODUCTION

With regard to the progress being made toward increased production of wool in accord with the intent of the act, sheep numbers and wool production continue at low levels. The net decline in wool production in the last few years has been primarily due to reductions in sheep numbers in Texas and several of the Western States where severe drought conditions prevailed. Shorn wool production in 1957 was greater than a year earlier in 23 of the 35 native sheep States and in Arizona and South Dakota of the 13 western sheep States.

About 70 percent of our total production, of course, is in the 13 Western States, where range conditions and cattle prices influence sheep numbers. Furthermore, due to the nature of the enterprise, year-to-year increases in wool production can be expected to be only gradual, even under most favorable conditions.

ADVERTISING AND SALES PROMOTION UNDER SECTION 708

Section 708 of the National Wool Act of 1954 provides a method for growers to organize and conduct advertising and sales promotion programs for the industry's products and the financing of such programs by deductions from their payments. It thus permits growers to use their own money in efforts to increase the demand for and the returns from lamb and wool in the free market and thereby reduce the amount of payments from the Government to accomplish the objectives of the act.

Soon after passage of the act, growers and grower groups organized the American Sheep Producers Council to conduct advertising and sales promotion programs for lamb and wool. Growers, in a referendum held in 1955, approved deductions of not to exceed 1 cent a pound from incentive payments on shorn wool and not to exceed 5 cents per hundredweight from the payments on unshorn lambs for financing the advertising and sales promotion programs. Intensive programs of advertising and sales promotion for both lamb and wool are underway. So far the Secretary has approved the deductions from the payments for each of the three marketing years, 1955, 1956, and 1957. These deductions will be sufficient to finance the promotion and market development activities of the council for 3 years and provide a reserve sufficient to carry the program for a fourth year.

Upon extension of the National Wool Act, it is planned that the Secretary will hold another referendum to determine the continued willingness of growers to use a portion of their payments to conduct advertising and sales promotion of their products.

RESEARCH AND OTHER ACTIONS TO AID INDUSTRY

The Department has been giving increased attention to programs which will help the industry improve its production and marketing efficiency and thereby lessen the need for price assistance. Research and other action programs dealing with disease control, improvement of production and marketing practices, conservation measures to increase the carrying capacity of both public and private grazing lands and greater efficiency in processing and adapting the industry's products to consumer preferences all are contributing to the achievement of our objective.

EXTENSION OF NATIONAL WOOL ACT RECOMMENDED

The 1958 marketing year, beginning April 1, will be the fourth and last year for incentive payments under the existing legislation. The National Wool Act of 1954 limits such support to marketings during the period April 1, 1955, through March 31, 1959.

Your committee placed a termination date in the bill it reported to the House. The committee stated that this was not to be construed as meaning that they felt the wool program should be of a temporary character. They said that, on the contrary, they hoped and believed that the program would provide a relatively permanent solution to our wool problems, but since the program is new and different from any tried before, it would be well to review its operation and effect after a time and make such improvements and changes as experience might indicate.

We believe that the incentive-payment program under the National Wool Act is proving to be a sound solution to the special problem of wool. As I mentioned, in the case of wool we are on a net import basis. The program is providing the needed price assistance to our domestic woolgrowers without: (a) Adversely affecting foreign trade; (b) adversely affecting the competitive position of wool with imported wool and other fibers and (c) having the Government in the wool-merchandising business.

The program is restoring initiative and confidence in the industry. The tariff, designed to protect the industry, is also providing the financial assistance needed to meet increasing costs and competition from foreign imports. Reports coming to us indicate increased interest is being shown in sheep production as forage and range conditions permit. Due to the longtime nature of the enterprise, it is obvious that a continuing program is essential to retain the gains already made and give growers the confidence needed for them to proceed with their plans for increasing wool production. Early extension of the act is, therefore, recommended.

Educational Problems Facing the Nation

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 20, 1958

Mr. NEUBERGER. Mr. President, two articles from the Pendleton (Oreg.) East Oregonian of February 11, 1958, offer informed opinion on education. The editor, J. W. Forrester, Jr., a member of the Oregon State Board of Higher Education, recommends for further consideration, by people seriously interested in the future of education, the 5-point program of the American Council on Education. Oregon Newspaperman Paul Harvey, of the Associated Press, whose byline from the State capital, Salem, appears in several Oregon dailies, has reported the experience-based opinions expressed by the Oregon State superintendent of schools, Dr. Rex Putnam.

Because these articles reveal the thinking and observations of two important voices in this field, I ask unanimous consent to have them printed in the Appendix of the CONGRESSIONAL RECORD. The editorial bears the title, "This Is the Big Problem," and Mr. Harvey's column the title "Dr. Putnam Thinks Much of Criticism Unjustified."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

THIS IS THE BIG PROBLEM

Almost everybody thinks he sees something wrong with the educational system in this country and he has a remedy for it. That's good. It's good to take a look frequently at everything we are doing. It's good to ask ourselves why we do certain things and why we don't do others. If the questions are answered honestly the asker is sure to be benefited.

We are not acquainted with anybody in education who would be willing to say that everything that is being done from kindergarten through college is right; that certain things that are being done could not be discarded and that there is not a need to do more. We haven't come upon any educator who is carrying a chip on his shoulder in the face of all the criticism the public schools have been subjected to since the launching of Russia's sputnik.

But there is a growing number of educators who think it is time, now that most of the criticism has been thoroughly aired and recorded, to separate the wheat from the chaff. They think it is time to decide exactly what should be done. And they suggest that there are some organizations well qualified to make the final decisions.

One of these is the American Council on Education. We are sure that anyone who knows the makeup and work of the council will agree that it is eminently qualified to make decisions.

The council has in recent days published a paper on Higher Education and National Affairs. It has approval of many organizations that have been studying the problems discussed by the council.

The council prefaces its proposed program of Federal action to strengthen higher education in the service of the Nation with this observation: "Unwise imitation of Russian education could be as disastrous for the

United States as imitation of our eduactional system would certainly be for the ruling clique in the Kremlin. The fundamental problem facing the American people is how to improve and strengthen our educational structure, not to remake it in blind admiration for the Russian model."

The council presents a five-point program: (1) The Federal Government can and should assist in increasing the supply of qualified college teachers; (2) the Federal Government can and should provide financial assistance to approve institutions of higher learning for the expansion of facilities; (3) the Federal Government can and should assist in removing financial barriers to higher education for qualified students; (4) the Federal Government can and should modify existing Federal programs affecting higher education in order that they may no longer constitute financial drains on the resources of colleges and universities; (5) a permanent council of educational advisors to the President of the United States should be established.

This writer's somewhat limited study of the problems of higher education has convinced him that the problem which demands solution before all others is teacher supply—where and how to get enough qualified teachers to properly educate all those who will have the abilities and desire to attend institutions of higher education.

We have no fears that the necessary money will be found to build college classrooms and dormitories. But we are constantly troubled by the thought that enough qualified teachers will not be found to do the high-level job that absolutely must be done in our institutions of higher education.

In view of this, we think it well to look at what the American Council on Education has to say on that subject:

"A recent survey by the National Education Association indicates that shortages of qualified college teachers now exist in nearly all areas, and it is evident that as enrollment rises, such shortages will be more acute unless remedial action is taken. This problem is the key log in the jam. It is obviously unwise to urge more students to demand advanced instruction in mathematics, science, engineering, or any other subject, if there will be no qualified persons to teach them. The central need is to increase, immediately and dramatically, the output of the graduate schools offering doctor of philosophy degrees, and to develop, during the graduate program, the interest of the students in continuing academic careers after receiving their degrees.

"Secretary Folsom, among others, has suggested that unused capacity for this purpose exists. He has stated that 'there are in the United States today some 162 institutions which award the doctorate degree. But a mere 10 of them award 36 percent of the Nation's doctorates. About 110 of these institutions award less than 20 percent of such degrees annually.' Valuable as they are, present national fellowship programs, both governmental and nongovernmental, by awarding fellowships to individual students and permitting freedom of choice as to the graduate schools attended, encourage even greater concentration of enrollment in a few schools.

"A. It is therefore recommended that the Federal Government establish a system of grants to graduate schools offering the doctor of philosophy degree for the purpose of increasing their output by.

"1. Offering fellowships to students now in residence to relieve them of outside nonacademic employment, which it is known many of them are forced to undertake, and thus help them to complete degree requirements in less time, or allow them to participate in teaching assignments without excessive financial hardship, and

"2. Offering fellowships to prospective graduate students in academic areas where the instructional capacity of the institution is not being used to the fullest possible extent. These fellowships should be graduated in amount to take account of the financial needs of these students.

"It is proposed that the dean of each graduate school initiate for each subsequent fiscal year and that the president submit, on behalf of his institution, a proposed plan for the above purposes, indicating the total sum that could be effectively used and the academic areas in which the graduate students receiving benefits would study.

"Since the purpose of this plan would be to establish and maintain a reasonable balance of qualified faculty members in all disciplines, the Federal agency charged with the administration of the program would have the responsibility for adapting the program from time to time to demonstrated differences in the degrees of shortage in various areas. For example, the survey by the National Education Association previously cited, which enumerated teaching positions in colleges and universities for which funds had been budgeted but for which no satisfactory applicants had been found in 1955–56 and 1956–57, indicated that at the moment there are 3 times as many vacancies in engineering as in education, 5 times as many in the physical sciences as in English, and nearly twice as many in mathematics as in the social sciences. These ratos will presumably change from year to year and will suggest desirable modifications in the future allocation of funds and the manner of their employment."

Dr. Putnam Thinks Much of Criticism Unjustified

(By Paul Harvey)

SALEM.—Dr. Rex Putnam, Oregon's superintendent of public instruction for the past 20 years, isn't bothered by the current wave of criticism of the public schools.

He has just completed a research project which, he says, proves that ever since 1845, there have been waves of criticism of how the schools are run. These waves occur about once each generation.

And, he adds, the same things are being said now that were said 100 years ago.

He cites some needs

Dr. Putnam feels that definite improvements can be made. He specifically cites a need for better cooperation between the parents and teachers, and better guidance for high-school pupils.

Hundreds of teachers have been working for 2 years on a project whereby everything that is being taught in the schools is being reevaluated. This project will be completed in about a year.

But, Dr. Putnam says, some people in every adult generation believe their children are receiving an education which is inferior to that given to the adults. Dr. Putnam disagrees sharply.

Most schools offer them

Since the start of the sputnik era, the schools have been blamed for America's apparent failure to keep up with the Russians.

While most high schools offer science and mathematics courses, the problem is getting the pupils to take them.

Dr. Putnam says high schools have pretty good guidance programs under which teachers try to influence the brighter pupils to take these courses. But, he adds, such guidance is almost worthless unless the parents support the teachers.

Dr. Putnam's department does not have much real authority over the schools. The real bosses are the school boards of each district. His department can guide and suggest, but that's all. And he doesn't favor having more authority for his department.

"We must keep local autonomy," he says "in order to maintain the sanctity of the individual. If we lose it, we'll be like Russia, and will be sunk.

"We get many letters from people asking us to come in and straighten out their school districts. We can't do that, and even the governor or the President of the United States couldn't. And it's a good thing.

"Some people say our schools aren't as good as those in Europe. If that's true why is there a constant stream of European educators, as well as from other continents, coming here to study Oregon's school system? Right now, eight of them are here."

They could be improved

Without reflecting upon those teachers who have emergency certificates because they don't have the educational requirements, Dr. Putnam thinks teachers could be improved.

"We can get better teachers if we pay them better," he says.

"They should be paid enough so the promising college graduates will choose teaching as a career.

"Teachers don't have enough prestige. The public attitude toward them often is not good. Yet the job they do is extremely important."

It should be expanded

He admires the school principals and administrators, saying "I'll match them against executives in any field as to downright ability and efficiency."

He thinks the program to speed up the education of gifted children should be expanded greatly. It's just getting started.

"Education," he says, "is a cooperative situation between the parents and teachers. If the parents aren't much interested in what their child takes or does in school, chances are that the child won't care, either. Almost all teachers encourage parents to visit school. But not many parents do."

Lowering Retirement Age Will Solve Unemployment Crisis

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. FINO. Mr. Speaker, I have today introduced a bill which, in my opinion, will solve the serious and dangerous unemployment crisis that has hit this country.

This tragic unemployment problem which continues to worsen each week should and must be tackled now before it develops into a depression from which we will be unable to recover without having caused incalculable human suffering and a severe blow to our American economy and standard of living.

Mr. Speaker, my bill would amend the Social Security Act by authorizing the President to lower the retirement age for men and women to 60 during periods of acute unemployment. As you know, under the present law the retirement age is 65 for men and 62 for women.

With 4½ million unemployed and with all signs pointing to an even higher figure, the President and the Congress have the unshirking responsibility of taking immediate and affirmative action toward not only preventing any further increase

in unemployment but restoring full employment.

A recent survey of Government figures shows that the largest group of unemployed men and women are those between the ages of 25 and 45 and the number of men and women in the 60–65 age bracket covered by social security is over 4 million persons.

The purpose of my bill is to alleviate conditions during periods of acute unemployment by offering an incentive to older workers to retire in order to make room for younger people in the employment market.

This proposal would not lower the retirement age automatically or permanently but would give the President discretion, within certain limits, to determine under what circumstances he would invoke the provisions of this legislation. The limits set by the bill are that the President must first determine that a condition of acute unemployment exists generally throughout the United States which there is little likelihood of abating within a foreseeable period of time. The reduction in the retirement age would last only as long as the President determines that such unemployment exists.

I believe that my proposal would be beneficial during the present economic crisis in two ways. In addition to opening up job opportunities for about 4 million younger unemployed workers, it would provide earlier retirement for elderly people who want to quit work but cannot because of the present age restrictions.

We must recognize the enormity of this problem now if we are to keep our American economy strong and healthy.

Case Institute of Technology

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. MINSHALL. Mr. Speaker, at this moment, when America is concerned as never before with the quality of its engineering and scientific education, I would like to pay tribute to a Cleveland institution that has been a dynamic force in engineering education for more than three-quarters of a century. Case Institute of Technology, a privately supported school of engineering, science, and management, has recently more than redoubled its efforts to provide the trained leadership this Nation demands. The dramatic story of the progress of Case is told by T. Keith Glennan, in a recently issued report summarizing his 10 years as fourth president of Case Institute of Technology. This report gives definite proof that his institution has had the foresight to recognize our need for quality in preparing for the challenge of the future. Under Dr. Glennan, Case Institute has made progress at a rate unparalleled in the history of American technical education. It has become, in the past decade, one of the outstanding engineering schools in the entire Nation, pioneering in such fields as operations research, management development, nuclear physics, and aerodynamics.

Fortunately, the contributions of Case and Dr. Glennan are not only recognized in Cleveland, but in an increasing broad area across the Nation. An editorial in the Cleveland Press, headed "Ten Exciting, Useful Years," said:

By any yardstick, the growth of Case Institute of Technology in the past 10 years has been spectacular. The physical plant has doubled. The faculty has expanded from 132 to 189 and, by the academic measure of degrees and other honors, has also increased immeasurably in distinction. The financial resources of the school have been tremendously strengthened and faculty salaries have been raised by half. Case has, as well, substantially increased its student body, thus responding ably to the immense pressure for more and better engineers. This report is brimming with detail, but it is notably silent on what is unquestionably the main reason for the progress it describes. That reason is Glennan himself. He has projected Case into the front rank of engineering schools, and the exciting forward thrust which has carried it upward shows no signs of faltering.

The Cleveland Plain Dealer had this to say, editorially:

Case Institute of Technology has been taking giant strides, and President T. Keith Glennan provides informative and impressive reading in his current report in which he summarizes his 10 years at the helm. For the future of Case, President Glennan notes the need for other buildings (a $6.5 million campaign is in progress) and still more buildings after 1960, as its part in the extensive University City—the circle master plan announced 3 months ago.

In all of this progress—future as well as past—money must be mixed with brains. That Case has a tremendous array of intellectual leaders from Dr. Glennan on, is amply proved day after day in classrooms and labs. That it must be generously supported with gifts from business and individuals must be remembered and repeated. The reason our material progress is at the level we enjoy, and the reason we can hope to see that level elevated is that Case and schools like it have functioned as free institutions guided by dedicated men.

Another excellent summary appeared in the editorial columns of the Cleveland News. It said, in part:

The fine vision and progress of Case Institute of Technology over the last 10 years has been, in a sense, anticipatory: the school is now geared to meet the great industrial and scientific challenge which confronts the Nation. Case Tech has enlarged its stature and influence tremendously. Behind this promotional enterprise and revision of curriculums are the drive, foresight, and personality of Case's fourth president, Dr. T. Keith Glennan, its astute board of trustees, and a vitalized alumni.

Cleveland is proud of Case and its scholarship and the guiding genius of Dr. Glennan. Its direction is clearly toward an even larger future.

These quotations are an indication that the American people are not only aware of the continuing and increasing importance of education, but that in institutions like Case and its president, we have had the educational leaders who early set themselves to work to assume their responsibilities to this Nation.

Equalizing Federal Benefits for World War I Veterans

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. FINO. Mr. Speaker, I would like to invite the attention of the House to H. R. 5011, a bill I introduced on February 19, 1957. This bill proposes to grant a pension of $100 per month to all honorally discharged veterans of World War I who have attained the age of 60 years.

The veterans of World War I have come to be known as the forgotten men among those categories of veterans for whom the Federal Government provides benefits. The fact that these men have been forgotten becomes clearly evident when the benefits to which they are entitled are compared to the benefits made available for Spanish-American War, World War II, and Korean conflict veterans.

Let us glance, for a moment, at some of the differences which Congress has established. The veterans of Chateau Thierry, Belleau Wood, and their comrades have been given adequate reason to conclude that their country has passed them by.

Spanish-American War veterans are not only eligible for more liberal provisions, but the requirements for qualifying for these benefits are considerably less exacting. Any survivor of the Spanish War who has reached 62 years of age, or who is 10 percent or more permanently disabled through non-service-connected causes, is entitled to $101.50 per month provided he served 90 days and received a discharge other than dishonorable. The age requirement is obviously meaningless since the war was concluded 57 years ago. The payment under similar conditions for men with a minimum service of 70 days is $67.73 per month. Should the condition of the veteran require the regular aid and attendance of another person, the payment in the case of the 90-day-or-more veteran is $135.35 per month, while for the 70-day service it is $88.04.

World War I veterans presently receive no pension on the basis of their age, nor as a result of partial disability for non-service-incurred causes. Disability must be permanent and complete before any eligibility for pension is legally established.

The veterans of World War II and the Korean conflict also fared much better than World War I personnel. World War I servicemen had nothing to compare with the GI bill of rights—the Servicemen's Readjustment Act of 1944—with its broad and valuable provisions covering both World War II and Korean veterans. Only after World War II were such impressive provisions established by Congress as the special allowances for vocational rehabilitation and education at all levels, credit for wartime military service under social security, guaranties

for GI loans for homes, farms, and businesses, preferences in the purchase or rental of houses, and the availability of readjustment allowances for those unemployed.

The discrepancy with respect to the World War I veteran appears all the more ironical when we consider several other major challenges which these men were called upon to meet. Survivors of the First World War were the only veterans who were required successively to endure a violent war which caused them to be exposed to the ravages of poison gas, and which forced them to fight in the mud and filth of trench warfare. Both of these unusual and drastic wartime conditions served to undermine the health of thousands upon thousands of unfortunate soldiers.

Shortly after these men resumed civilian pursutis, they were again forced to surmount a tremendous hurdle—the greatest upheaval our national economy has ever experienced. The great depression which began with the severe stock market crash of 1929 served immeasurably in helping to cast so many World War I veterans into the lot of the "lost generation."

Let us not overlook the fact that the veterans of World War I are rapidly becoming old men. It has been reported that they are dying at the rate of 90,000 per year. The survivors are finding it increasingly difficult and almost impossible to compete in the exacting labor market. Under present legislation, moreover, relatively few numbers are able to obtain pensions or compensation. We cannot long continue to ignore the desperate plight of these deserving veterans. We must soon make the crucial and inevitable decision through the adoption of favorable legislation. I urge you to take the decisive step today.

Second-Class Postal Subsidies Must Be Limited

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, the Senate Post Office and Civil Service Committee is currently holding hearings on postal-rate legislation passed by the House last year. This bill contains my amendment, adopted by the House, to limit annual second-class postal subsidies to $100,000 per individual publisher.

As I pointed out during the debate on the postal-rate bill last year, 10 leading magazines in the United States received subsidies amounting to more than $32 million. At the same time, these 10 magazines were receiving advertising revenues amounting to almost $400 million for the year, while profits in the publishing industry reached unprecedented high levels.

The big magazine publishers, as might be expected, are making strenuous efforts to kill the subsidy-limitation amendment. In the course of their campaign they are resorting to misleading, if not deliberately inaccurate, statements. The leading front in this fight is the Magazine Publishers' Association, the trade group for some 100 members who publish 375 magazines of all types, having a combined per issue circulation of 165 million copies.

Yesterday the MPA sent to Members of Congress a booklet entitled "Postal Primer," a statement of the magazine industry's position on postal policy and rates. Of course, Mr. Speaker, they have every right to petition Congress in behalf of the self-interest of their members. However, we must recognize the tremendous financial stake this organization has in the postal rate bill, and more particularly in the Rhodes amendment. We must therefore be careful in taking at face value the statements they make.

For example, page 1 of the MPA booklet attempts to show the dire financial consequences to a number of publishers if second-class postage rates were increased. In a footnote the following statement is made:

> In 1965, 35 publishers of 124 magazines reporting to MPA averaged 2.7 percent profit after taxes. Dollar profits were $21,218,000; second-class postage expenditures were $31,353,000.

These figures, Mr. Speaker, are grossly misleading. They represent only about one-third of the members of the MPA and it is obvious that the largest publishers have been excluded, since the 1956 net profits after taxes of only 4 leading publishers amounted to $32 million.

Why should the American taxpayers continue to subsidize the magazine publishers who are engaged in a profitmaking enterprise, and who can well afford to pay their fair share of the costs of handling and delivering their magazines through the mails?

Second-class postal subsidies have cost the taxpayers over $2.5 billion during the past 11 years. What could have been done with this amount of money to benefit all the people of our Nation? We could have provided a twelve-fold increase in our current research programs for cancer, heart disease, mental illness, and other crippling and killing diseases. Or we could have provided enough school classrooms to meet the critical shortages throughout the Nation. Or we could have increased the Hill-Burton hospital construction program by two and a half times and provided several hundred thousand additional beds in our VA hospitals.

Mr. Speaker, last week Mr. Robert MacNeal, president of the Curtis Publishing Co., testified before the Senate committee that my amendment to the postal rate bill would cost his company $22 million a year more postage to mail the 320 million copies of their 2 major publications, Saturday Evening Post and Ladies' Home Journal.

In a statement to the House committee last year he said that the proposed 4 annual 15-percent rate increases would add $11 million to his company's postage bill. Thus by his own statement, Mr. MacNeal admits that the Curtis Publishing Co. is receiving a staggering annual subsidy of more than $11 million on just 2 magazines.

The most recent Post Office Department estimate shows that their annual losses in handling these 2 magazines was $6,087,000 for Saturday Evening Post and $1,917,000 for Ladies' Home Journal, or a total of $8,004,000. It is therefore clear that the oft-criticized cost analysis methods of the Department in figuring second-class mail subsidies are actually on the conservative side. Curtis is actually receiving more than $11 million a year subsidy on these 2 magazines, instead of the $8 million previously estimated by the Post Office Department. Advertising revenues on these 2 magazines last year amounted to more than $117 million.

Mr. Speaker, the principle of limiting second-class postal subsidies is of great importance to all citizens. Throughout our history, subsidies have been curtailed or eliminated entirely when they were no longer required. Many airlines are now off subsidy payments. Last year Congress enacted a law reducing subsidies to industries through the 5-year tax write-off device. A limitation was placed on acreage reserve and conservation reserve payments to farmers participating in the soil-bank program. The magazine publishing industry is no marginal, shoestring operation. It is a growing, prosperous, profitmaking business which does not need, nor deserve special postal subsidies at the expense of the American taxpayers.

Contrary to statements made by those seeking to retain this gigantic handout to magazine publishers, my subsidy-limiting amendment is considered administratively workable and enforceable by the Post Office Department. This assurance was given to me personally by the Postmaster General and was repeated to a nationwide television audience over Ed Murrow's See It Now report on the Post Office Department last October.

Mr. Speaker, I am hopeful that the Congress will resist the tremendous pressures being exerted by the magazine publisher's lobby and vote to retain the principle of limiting second-class postal subsidies in any postal rate legislation acted upon this year.

Wall Street Jitters

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the New Republic of December 23, 1957. The article points out the instability of our financial markets and suggests possible remedial action:

WALL STREET JITTERS

"It was an Eisenhower market again this week," the AP Financial Roundup on Sunday, December 1, began. "The President's health was by far the dominating factor in Wall Street. On Tuesday came the news of Eisenhower's illness and it was one of the year's sharpest breaks. Overnight news of the President's progress was enough to send stocks bouncing back vigorously in a surprising recovery." Why should our financial markets, at this stage of their maturity, be subject to such whimsies? In part, it is because our stock-exchange system is archaic.

United States stock exchanges are auction markets, and therefore free markets in the true sense of the term. Each stock issue is allotted a special locale on the exchange floor where the agents for buyers and sellers are required to go to make their transactions. For each major stock there are 1 to 3 licensed dealers or specialists who, in consideration for their licenses, are supposed to minimize fluctuation of prices of stocks in which they deal.

Why, then, when ileitis or coronary occlusions occur, do not the specialists prevent wild gyrations in the market? Largely because they are not adequately capitalized, experts say. When small stockholders, frightened in times of crisis, rush into the market to sell, the specialists should be able to absorb most of the offerings until the large buyers have time to come in with their orders. Exchange members say frankly that today most specialists do not have the money to do this.

The result is that small investors get hurt in the squeeze and the public loses confidence in stocks as a long-term stable investment.

The Securities and Exchange Commission could do something about this. The simplest and most effective move would be to raise the capital requirement for licensed specialists. The exchange objected when this was first proposed in the early thirties. (The specialists constitute a majority on the board of the exchange; they want the privileges of their position without the obligation to keep order.) The SEC might also require the exchanges to supervise the movement of stocks more closely and intervene to defer quotations temporarily when crises occur.

Certainly some new shock absorbers are needed.

Why 5 Years?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 20, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three articles:

[From the Washington Post of February 1, 1958]

WHY 5 YEARS?

The Trade Agreements Act should of course be permanent law. The President's request for a 5-year extension of the act beyond its present expiration date on June 30 would nonetheless give the reciprocal trade agreements program the longest fixed lease on life that it has ever enjoyed. The protectionist bloc seems to recognize that it cannot kill the act, but by requiring renewal every year or two, this bloc has been able to inhibit the full operation of the law and to abet the frequent torpedoing of its objectives in unwarranted escape clause proceedings. If a longer extension would tend to relieve the administration of the law from some of these pressures, it would be a tremendous gain.

But, as the President observed, one truly pressing reason for a longer extension of the act than has been customary is a thoroughly pragmatic one, which even the opponents of freer trade (if they will concede that it is not feasible to return to congressional tariff-writing) ought to understand. Apart from the no less valid arguments in trade relations with other countries, the compelling fact is that in the next several years, the European common market will begin functioning. With its projected common tariff against the rest of the world, the market will be a powerful force in world trade. Unless the United States has a solid and assured basis for negotiating reciprocal arrangements with the European bloc, this Nation's export-import situation could be seriously disadvantaged and with it the entire domestic economy. The longer extension is thus a matter of prime national importance which Congress must somehow be brought to understand.

[From the Wall Street Journal of December 17, 1957]

THE WEAPON OF TRADE

Trade not aid never got far beyond the slogan stage. It is time for the United States to put some real meaning into both sides of the idea.

Part of the growing Soviet challenge is subversion of economically backward countries. We have seen it in Egypt and Syria in the Middle East; we are seeing it, on a somewhat different pattern, in Indonesia in the Far East. It could happen in Burma, India, and elsewhere, and the point does not need laboring that the loss of the Middle and Far East to communism would be serious for the West.

The response of the United States to this challenge consists of military aid in some cases, propaganda and economic aid generally. The military aid is largely irrelevant to the problem of subversion, the propaganda is largely ineffective, and the economic aid is largely useless.

Economic aid, which is the principal weapon against subversion, not only does not prevent nations from falling into economic chaos, it also helps turn them Socialist, which helps prepare them for communism.

If, however, the United States were to practice the free trade it preaches, a quite different set of circumstances would ensue. It would give a lot of these nations what they really need to help them industrialize—and that is markets not handouts. Instead of charity it would give them firm and respectable economic ties to the United States. Since world trade is still largely a private undertaking, it would kindle their capitalism instead of socialism.

Naturally the protectionists have some things to say about any such proposal, not to mention some influence in Washington. Basically they say that free trade would wreck some domestic industries and dislocate the economy generally. Perhaps it would But there is one key point that should be noted about protectionism.

Tariffs, quotas, and other trade-restricting devices are inverted subsidies paid by the American consumer in higher prices. They do not serve the economy as a whole but only particular industries in it. In the long run it is a question whether they serve even those industries.

For protectionism protects, among other things, those who can't compete. Just as farm subsidies keep the inefficient farmer on the farm he would long since have left for other employment in the absence of the subsidies, so protectionist regulations keep the inefficient business in a business it would otherwise long since have got out of. Thus protectionism is stultifying for the economy as a whole.

Still, as a practical political matter it would be impossible to tear down the walls of protectionism overnight, and the administration wisely does not suggest anything so extreme. The question, though, is whether the administration goes far enough.

It wants authority to cut tariffs by 25 percent over the next 5 years, with a maximum reduction of 10 percent in any 1 year. This seems reasonable, but is it enough to forge economic bonds with the nations the West is in danger of losing? Moreover, the program is silent on import quotas, which are often more effective barriers to trade than tariffs.

We do not contend that a genuinely liberal United States trade policy would save any other nation from communism, though it would obviously help. But we do say there can be no logical quarrel with the following propositions:

Even if there were no threat of Communist subversion, a liberal trade policy is the only kind of policy the United States should have because it benefits the consumers, spurs long-term economic growth and conforms to the spirit of a free economy.

Since, in adidtion, the Communist threat exists in newly aggravated forms, a liberal trade policy is a weapon we had better start testing before much more time, and many more countries, are lost.

And unless we test it, our talk of saving the Middle and Far East with Government economic aid and Government propaganda will be talking through our hats.

[From the Oregonian of January 1, 1958]

HOLE IN TRADE POLICY

Advocates of a liberal foreign trade policy, an important element in America's approach to its allies, are expressing concern over escape-clause provisions in the administration's reciprocal trade program announced in mid-December.

In a joint statement issued by the Departments of State and Commerce, it was revealed that the Executive will seek from Congress a 5-year extension of presidential authority to adjust tariff rates on a reciprocal basis. So far so good. But the announcement also disclosed a significant relaxation in the official attitude on the escape clause, which permits the Tariff Commission to recommend and the President to approve increases in particular tariffs as a safeguard to certain domestic industries.

The present reciprocal trade law permits such increases to a maximum of 50 percent above the rates of July 1, 1945. The new proposal would change the base date to July 1, 1934, when tariff rates were generally much higher.

"European dissatisfaction with American trade policies," writes Brendan M. Jones in the New York Times, "has been concerned mainly with uncertainties arising from escape-clause actions. The basis for invoking the clause to oppose imports has been steadily broadened under protectionist pressure. This has made for marked instability in a field where long-term development is essential." He points out that the common-market grouping of six western European nations, which becomes effective January 1, will make more necessary than ever a freer, rather than a more protective, trade policy. Free trade supporters, he adds, may actually oppose the administration's free trade program because of the escape-clause change.

President Eisenhower has rejected the bulk of escape-clause petitions under the current law, but he has approved increases in tariffs on such important imports as watches and bicycles.

There are no longer clear-cut party lines on the tariff issue. Congressional Democrats have grown more protectionist minded as

the South has grown in industrial activity. And many Republicans in the North have been influenced by the dependence on world markets by such vast enterprises as the automobile and appliance manufacturers. In the last Senate struggle on the reciprocal trade program, in 1955, Oregon's Democratic Senator RICHARD L. NEUBERGER went down the line for the Eisenhower program, whereas his colleague, Senator WAYNE L. MORSE, opposed it at some points, although he voted for the final bill. All Pacific coast Senators, Democrats and Republicans, joined in the favorable action on the 3-year act.

The division is by economic rather than partisan interest. Oregon berry and nut growers have determinedly opposed trade concessions, which have weakened their domestic markets. But Oregon's wheatgrowers depend, in good measure, on foreign trade. Should the former gain their ends, the latter would certainly suffer.

An escape clause is an essential part of the reciprocal trade program, as a safeguard against real hardship. But it could be the destruction of the program itself if overdone. Reciprocity is by definition a process of give and take. Those who fancy they are required to give too much must come to understand that reciprocal trade negotiations are an essential economic tool serving the overall interest of the United States and its allies—an overriding interest even for those whose industries give in the form of tariff concessions.

Kansas Wheat

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 20, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I should like to call attention to an exceptionally interesting and comprehensive article which appeared in the Hutchinson (Kans.) News of February 11, 1958. The item not only answers the question "Is Kansas losing out to the rest of the Nation in wheat production?" it also presents a clear-cut picture of the operation of the country's wheat production program.

The article follows:

KANSAS HAS BEEN HOLDING ITS OWN IN WHEAT ACREAGE

(By Don Kendall)

Is Kansas losing out to the rest of the Nation in wheat production?

There are arguments on both sides. Certain States in recent years have grown wheat where previously none was raised.

Counties in parts of Kansas have lost acreage and others have gained.

The 15-acre wheat farmer of the East has been a thorn in the sides of Wheat Belt producers and Congressmen.

Let's take a look at the situation (a favorite remark of politicians as well as farm writers).

ALLOTMENT THE SAME

In 1939 the Department of Agriculture set the national wheat allotment at 55 million acres—just what it is today.

Any decrease in a State's acreage results in increases for one or more others, and vice versa.

Since 1939, using the 1958 allotment figures, Kansas has decreased 3.9 percent. In 1939 the State was allowed 11,067,349 acres, compared to 10,638,208 acres this year.

Consider how the 1958 allotment was computed. First, the national allotment of 55 million acres was distributed among the States, and the State allotment to the counties.

Basis for this was the average wheat acreage in each State and county for the 10-year period 1947 through 1956.

ADJUSTMENTS MADE

Adjustments were made for abnormal weather, war crop credit, diversion of crops under previous allotment programs, and for trends in seedings in accordance with provisions of law.

Out of the Kansas allotment of 10,638,208 acres, the State keeps a reserve for farms missed in the allocations, corrections, and appeals of one-tenth of 1 percent or 10,639 acres.

The State agricultural stabilization and conservation office, which administers the program, also keeps in reserve the same amount for "new farms" which come in for allotments for the first time.

The remainder of the acreage was apportioned to each county on the previously described basis of wheat grown 1947 through 1956.

Two other steps come in at this phase. In addition to the 10-year acreage average, a period of wheat planting from 1952 through 1956 was also computed in each county.

These two periods of acreage were averaged. The result was the preliminary "county base average."

Total of the 1958 county base averages was 16,021,387 acres. A "scaling factor" was obtained by dividing the State allotment available for apportionment to counties by the total of the county base averages.

It takes some long, long division to do this or else a mighty fast slide rule. But the answer was 0.6626725.

What all this gobbledegook means is this: The average 1958 county wheat allotment was about 66.27 percent of the county base acreage.

In 77 counties for 1958 the allotments were slightly higher than in 1957. They were slightly lower in 27 and exactly the same in 1 county.

Similar procedures exist in other commercial wheat States. The Department of Agriculture says a "commercial" State is one having more than 25,000 acres of wheat—less than one-tenth of Ford County's allotment.

SMALLEST DECLINE

Let's look at some of the States which have decreased allotments since 1939. It should be noted that Kansas, with 3.9 percent, has experienced the smallest decline.

Maine has had the biggest cut percentagewise. But 1939 allotment was only 4,387 acres and declined 65.4 percent to 1,519 acres. Many a grower in western Kansas has a larger plot.

Of States having more than a million allotted acres, Minnesota has been reduced the most—48.6 percent—from 1,418,702 in 1939 to 729,866 acres now.

North Dakota, which outproduced Kansas in 1957, has been cut 11.9 percent in 21 years from 8,300,000 acres to 7,309,992.

Missouri dropped 25.3 percent from 1,705,277 acres in 1939 to 1,273,623 in 1958.

Two other comparatively big wheat States cut were South Dakota and Ohio, with 7.1 and 6.1 percent reductions, respectively.

In all, 24 States were reduced in allotments since 1939 and 24 gained.

Some of the gains, percentagewise, appear to be absurd. Mississippi, for example, has had a 21,867 percent increase.

In 1939, Mississippi had an allotment of 74 acres. For 1958, this Cotton Belt State has 16,256 acres—still not commercial.

Alabama went up 390 percent from 4,734 acres to 23,240 in 21 years. Five States had no wheat allotment in 1939.

They were Louisiana, now with 6,302 acres; Florida, 3,383; Massachusetts, 702; Connecticut, 587; and Rhode Island, 539.

OKLAHOMA GAINS

Oklahoma has undergone a 1,075,681-acre increase since 1939 for a plus 28.4 percent.

Colorado, also in the hard winter wheat business, has boomed allotment by 105.9 percent or a net increase from 1,314,022 acres in 1939 to 2,704,917 acres now.

What has happened in Colorado?

Remember how the Department of Agriculture figures, State and county base average, was computed?

After World War II, many thousands of acres of Colorado high plains farmland was broken out and sown to wheat.

There are other factors such as mentioned in the description of computing base averages, but it was this plow movement which mainly increased Colorado's wheat allotment.

Much the same thing happened in Wallace County and in Oklahoma. Here is a table showing changes in allotments of 10 western Kansas counties, principally in the northwest:

County	1939 (acres)	1942 (acres)	1955 (acres)	1958 (acres)	Percent of 1939
Cheyenne	96,846	115,125	116,907	120,227	124.1
Rawlins	166,403	161,923	127,653	128,274	77.1
Sheridan	157,248	153,061	127,032	122,604	78.0
Sherman	139,432	140,974	162,458	157,034	112.6
Thomas	240,685	224,785	191,263	196,486	81.6
Greeley	111,600	105,539	142,665	143,085	128.2
Lane	157,754	148,125	116,260	118,585	75.2
Logan	77,165	75,650	119,698	111,884	145.0
Ness	235,900	217,303	195,022	197,431	83.7
Wallace	34,553	33,739	89,916	84,227	243.8

The substantial decrease in allotments for Lane, Ness, and other counties on the eastern edge of the principal summer fallow area is due in part to the increased adoption of summer fallowing during this base period.

Much of the area didn't have extensive summer fallow practices prior to World War II. As it caught hold fewer acres of wheat were planted each year and the base average went down.

This doesn't mean that these counties produced less wheat, because in most cases summer fallow improved production and made up for less acreage.

How does western Kansas stack up with the rest of the State in percentage of allotments?

In the 31-county area including Clark County straight north, the region had 38.7 percent of State allotment in 1943; 40.1 percent in 1951; 39.8 in 1954; the same for 1955; 39.2 in 1956; 39.3 in 1957, and 39.2 percent in 1958.

Central Kansas from Clark County through Sumner and north, including Sedgwick, Harvey, Marion, etc., has averaged from 48.6 percent of the State allotment in 1943 to 49.1 percent in 1958.

LITTLE IN EAST

The much-lambasted area of eastern Kansas may not be so guilty of encroaching on wheat as many persons believe.

In 1943, the remainder of the State, including 39 eastern counties, had 12.7 percent of the allotment.

The lowest was 11.5 percent in years 1954 through 1956. For 1958, eastern Kansas has 11.7 percent of the total Kansas allotment of more than 10 million acres.

Nationally, the wheat picture is similar to a leaky jug setting in a washtub.

The jug still contains most of the water but some is dribbling out. Most anyone would admit that the jug is the more efficient drinking utensil.

But the tub will still contain what is dribbling out.

That is what has happened to wheat. States like Mississippi, Florida, and Massachusetts are the inefficient tub catching the lifeblood of the Great Plains.

An Editor Studies the Carl Rowan Series on Small Communities in Light of His Own Area's Problems

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 3, 1958

Mrs. KNUTSON. Mr. Speaker, under unanimous consent, I ask permission to insert in the RECORD, together with chapters 9 and 10 of the Carl Rowan serial in the Minneapolis Morning Tribune, the implications of Mr. Rowan's conclusions on small communities for the Thief River Falls, Minn., area as discussed by the editor of the Thief River Falls Times:

[From the Thief River Falls Times of February 10, 1958]

GROW OR DIE

In an interesting series of articles on rural and small-town problems, Carl Rowan of the Minneapolis Tribune concludes that small towns "must grow or die." Not all will agree with this conclusion, and, of course, it is only partially true. The articles serve the good purpose, however, of calling attention to a trend that already has made much progress and which will continue to change the social and economic relations in the farming areas of the State.

In defying his small town Rowan used the population figure of 3,000, and it probably is true in general that communities of less than 3,000 population are confronted with more difficult problems than communities that are larger. But whether it is a city of three or five or fifteen thousand, his conclusion is equally applicable. In this sense ours are all small towns.

In considering the probability that we either must grow or die we must keep in mind that our growth or decline will always be in some measure influenced by the progress of the area we serve. Small towns may be highly competitive to each other, and all grow in an area that is productive and prosperous.

Here in the large agricultural area in which Thief River Falls has a trade interest, the city has an interest in common with many other small towns in the overall development. And at the present time there is a very urgent need for a better understanding among all of us of this fact.

Applying the Rowan conclusion to our agricultural community, we now are in a serious decline, and unles we reverse the trend we soon will be in a critical condition.

[From the Minneapolis Morning Tribune of February 12, 1958]

GROW OR DIE—THE ROLE OF LABOR UNIONS IN SMALL-TOWN MINNESOTA

(Ninth in a series)

(By Carl T. Rowan)

You are listening in, by tape recorder, as a few business leaders are discussing the plight of their small town's salaried employees.

"DOCTOR. What is the basic minimum a hired employee with an average family should get in this town in order to hold his own without going into debt?"

"GROCER. I'd say $90 or $95."

"DOCTOR. And no one is getting that?

"GROCER. No one I've heard about."

"YOUNG MAN (taking over father's business). Fellow working for us gets $75 and I don't think he's lacking anything. Just bought a new house, which may be why he owes you, doctor, and only pays you $5 every now and then. But his family's not lacking anything."

"GROCER. Maybe I misunderstood. You can exist on less than $90, but you can't live. He doesn't drive a new car—well, at $75 a week somebody in that family is lacking something."

"YOUNG MAN. But he bowls once a week, which is quite an expense."

There is general laughter as someone mumbles teasingly, "Well aren't you the whip cracker."

"RETIRED BUSINESSMAN. I live fairly conservatively but I don't get by on $100 a week."

"HATCHERY OWNER. And the way you live. If you don't get by on $100 a week, what about these guys working for $75?"

The scene shifts to a small home a few blocks away. The wife of a hired employee is speaking:

"What this town needs is a good labor organizer. The men could do it themselves if they'd get together. It's the laboring man's fault. They just won't get together. It has to be all of them, not just 1 or 2."

Leaving these two sessions (I heard similar ones in many towns) one might conclude quickly that small-town Minnesota is ripe for a campaign by labor unions.

It isn't necessarily so.

For one reason, even the most complaining employees murmur in resignation that "you can't get blood out of a turnip." Many concede that, as things stand, their employers cannot pay more.

Other employees say, as did one man, "When I can afford the gas, I drive by the boss' summer lake home, just to keep reminding myself he's no pauper."

Although my travels in these small towns overtaken by a changing social revolution convinced me that the economic squeeze is severe and the immediate outlook is not rosy, I also learned that—to paraphrase an old spiritual—everybody talking 'bout the poorhouse ain't going there.

One operator of a business which has been extremely profitable over the last decade told me, "Anybody wanting to shed any tears can weep for poor guys like me. My profits are down to where I'll be lucky to make 2 percent on my money this year.

"I could get more than that on it by putting it in a savings account."

A bit of checking revealed that this man pays himself and his wife sizable salaries before he figures the firm's percentage of profit.

Townspeople add that his initial investment was less than half what he pays his wife per year.

State records show he violated the State wage minimum and paid back wages to 2 employees in 1956.

Yet, no one can doubt that many small-town businesses are operating on the thinnest of margins and that any substantial jump in labor costs would mean bankruptcy.

There is spirited debate on the matter, though.

"What right has anybody got to say he is justified in taking another man's sweat, with little reward, because that's the only way he can keep his business going?" says one rural resident. "He ought to get out of business."

"But that would only mean the further collapse of this town," argues the marginal businessman. "There are five families eating off my little place. Maybe they're not eating the best, but they're eating. I say a marginal business is better than none."

Whether marginal or fantastically prosperous, businessmen in Minnesota's small towns all seem to fear nothing more than organized labor.

Their feelings were expressed pretty well by a store owner in one town whose employees recently voted against a union. The store owner admits he struggled desperately to keep the union out.

"I fought because I'm not set up to cope with a union dictating terms," he explained. "I don't think I'm anti-union, but I am afraid of them politically.

"Look at that Hoffa. A few years more and he'd have been running this country.

"Yet," he reflected, "I wouldn't be surprised to see every store in this town unionized in 5 years."

An automobile dealer agreed that the prospect was unpalatable. "You can live with these unions, but it's not comfortable," he said.

"They keep the small businessman dangling on a string," he continued. "A man works harder and runs his business a bit better so he can make a bit more and the union is waiting to take it away from him at the next bargaining table."

"Well, in this town we woke up to the fact we were inviting unions in with the wages we were paying," interrupted a clothing store owner. "So we got together. Now people have stopped trying to figure out how little they can pay for how much work. We want to pay as much as possible for as little labor as is reasonable."

"Many employees who complained loudest in these towns also hold misgivings about organized labor. They wish for a solution to the economic problems of their towns—but a solution short of unionization.)

Leonard George, a raspy-voiced organizer for Local 909, Teamsters Joint Council 34, says the change of heart among businessmen just isn't that great—either in the town just referred to, or anywhere in Pipestone, Luverne, Jackson, Tracy, or Worthington—the places we know about.

"Worthington is very anti-union because of the farmers," says George, whose office is there. "Why farmers are antiunion I haven't figured out, but we just can't seem to get our story across to them.

"We had a dreadful battle 2 years ago while organizing drivers of the Nobles County Co-op. The farmers fought us tooth and nail, but we won fair and square."

George figures the co-op drivers average $450 a year more income since they were unionized; co-op officials say it isn't so, that some drivers may even have less take-home pay.

George thinks it "abominable" that in a big places like Worthington restaurants can pay $12 to $20 a week to waitresses (those I talked to get more—$25 for a 54-hour week) and make 'em divide tips with the kitchen help.

"Men store clerks average $50 a week, the women average $27.50," he continued.

He says Worthington mechanics are greatly interested in a union but nobody's come in to organize 'em.

George says he has organized two business places in Tracy.

"Now the fear of the Lord is in those business people," he chuckled, "and they have boosted pay a nickel or dime an hour, hoping to keep the union out. Same thing in Pipestone."

He admits that teamster power in the area arises mainly from the fact that the relatively large Campbell Soups plant in Worthington is organized on an agency shop basis. The great majority of workers are union members, but even those who aren't must pay $4 a month dues.

"You have no idea what I go through in this town arguing with the chamber of commerce and these businessmen," he said.

I asked if his opposition wasn't a bit more widespread than that—if there weren't some workers who felt the teamsters were a bit tainted.

"Oh, we get razzed some on Hoffa's troubles," he said, "but they know that in these rural areas we're independent of Hoffa.

"They also know we're not trying to get a metropolitan wage—just a living wage."

"Honestly," I asked, "do you think many of them can pay more now?"

"Not at the present time, with this tight-money situation," George conceded, "but they could have given a living wage in the past. They didn't."

[From the Minneapolis Morning Tribune of February 13, 1958]

GROW OR DIE—BRAHAM: THE TOWN THAT REFUSED TO DIE

(Tenth in a series)

(By Carl T. Rowan)

BRAHAM, MINN.—This is one little town that refused to die.

By every ordinary economic measurement, Braham should be withering away.

The land is only so-so quality in terms of productivity per farm.

In recent years farmer after farmer has decided he no longer can make a living on the 40- 80- and 120-acre tracts so common in this area.

More recently, the dairy industry, which for years has been the backbone of the economy in this area, has been having its troubles.

Braham is not a county-seat town, nor is it on the main line of any railroad—two major advantages for any small town in the race for survival.

What should have been even more lethal is Braham's location—right in the center of a triangle formed by three thriving county-seat towns.

Cambridge, Mora and Pine City all are well within 20 miles of Braham, providing trade competition that always has been a major problem of this community of 800.

Still, Braham grows. The town's businessmen report that for the last several years each year has brought higher volumes of business at better profits than the preceding year.

The community has a prosperous hospital at a time when towns twice as large haven't even a clinic and are convinced that they cannot support one.

Braham has 2 doctors and a dentist, yet many larger communities are struggling vainly to get or keep 1 doctor.

There is considerable evidence that Braham retains a much larger percentage of its high-school graduates than do similar towns that I visited.

Braham is the home of the State's largest (and the Nation's 12th largest) REA co-op.

Braham, the "doomed" little farm town of yesteryear, today can count on an annual industrial payroll of almost a million dollars—dollars to provide stability against agriculture's fickle trends.

"Braham is growing because of a tremendous bootstrap-lifting job," says James W. Clark, State commissioner of business development.

"The people there recognized very early that the only means by which a small town can preserve itself is to provide employment for a substantial number of people who would not get jobs in a strictly agricultural economy," he adds.

Clark calls Braham a wonderful example of what small towns can do if the people in those towns really want to see their communities grow.

"You look at those businesses in Braham and you know that ordinarily nobody would name Braham as the place to locate them," Clark says.

Why, then, did Braham get these businesses?

Clark points to a jolly, joke-telling Norwegian named Oscar Olson, the town's banker, as the man whose leadership proved that our small towns need not become meek victims of an agricultural revolution.

"What this State needs is more bankers like Oscar Olson," Clark asserts.

In a nearby town, a businessman speculated that "Braham is lucky as the devil, primarily because it doesn't have a bunch of retired farmers living there like some towns do."

The businessman added, "Nothing saps the spirit of a small town or robs it of aggressiveness like having a block of conservative, money-scared people who are opposed to change or anything else that might cost a tax dollar."

Businessmen at Braham concede that a large group of retired people, worried about how they will live on a fixed income, can be a handicap to a small town, but they insist Braham's strength is positive, that basically it is the degree to which Braham businessmen cooperate.

"Nothing can kill a small town faster than a feud," says George Olson, the banker's son. "We have managed to avoid having those bitter little cliques grow up here."

I saw the significance of this point in many towns. In some cases, communities actually have lost businesses because warring cliques could agree on nothing.

The extent of cooperation in Braham is indicated by what seems a very simple agreement—that it was foolish for virtually every business in town to have its own batch of calendars printed.

Now, rather than deluge community residents with dozens of different calendars, the town's businessmen got together and had one calendar made on which the names of all the town's businesses appear.

Braham is winning its uphill fight against the revolution in rural life because Braham residents saw the writing on the wall early—in 1936, when highway 65 was rerouted around the town.

This alone could have been a fatal blow.

Oscar Olson was convinced Braham ought not do what a large number of Minnesota towns are doing today: pretend nothing is very wrong, that time will solve all these economic problems, that "we'll just wait till the first tinge of a depression hits and the people will come running back to the small town because they know they can eat here," or, as one businessman's wife put it, "I don't worry because I know a war or something always comes along."

Braham businessmen refused to trust their future to fate, so they created an organization called Braham Builders, Inc., to help finance and create projects that would provide more employment and make our town a better place in which to live.

They started with the assumption that without people the town would have nothing. So they built a theater in the hope that it would bring nearby farm families to Braham and keep Braham's teenagers out of the surrounding county seat towns.

In 1939, when a co-op group called the East Central Electric Association was looking for a home, Braham Builders constructed a building. This association has become the Nation's 12th largest.

Out of this East Central venture the rural powerplant at Elk River was organized, with Oscar Olson's bank making the first loan of $20,000.

This plant now supplies power for several cooperatives and is scheduled to become the Nation's first experimental Federal atomic powerplant.

Next, the businessmen got farmers to cooperate in building a small locker and meat-packing plant.

Braham businessmen smile these days when members of almost 900 farm families who rent these food lockers make their weekly visits to town. The businessmen know that a man coming to town to visit his locker probably will fill his car with gasoline, buy groceries, and even a new dress for the wife.

In 1946 the businessmen and farmers took over the Braham community hospital. They have operated it so efficiently that in 1955 a $90,000 addition was paid for from net profits and a grant of $10,300 from the Ford Foundation.

The hospital alone provides employment for 31 people.

Olson is praised as a banker because he believes that "banks should lend money, not be check-cashing institutions"—this reference to the fact that some banks in this State make a great share of their profits by taking the commission on checks cashed.

People in the area say that if a business deal appears to be a good one, Oscar Olson's bank will lend the money—and that nobody asks whether the man seeking the loan is "on Olson's blacklist" or is his close friend.

"Oscar believes a banker hurts a town when he starts letting his little idiosyncracies dominate his lending policy," one businessman in the area said.

Perhaps it was this attitude that led Olson to make a move which turned out to be a really big one for Braham.

After hearing the story of a man who during the depression had lost his farm and virtually lost his little Isanti County firm where he manufactured horse-drawn potato diggers, Olson nursed the man along with financing and helped him redeem his farm.

The man moved to Grandy, Minn., and continued manufacturing potato diggers and chains. In 1951 Braham Builders financed a building and the man moved his business—Dahlman Manufacturing Co.—to Braham.

With new, experienced men in control, business increased rapidly. A few years ago the sales organization, Dual Manufacturing and Sales Co., moved from St. Paul to Braham.

Last year this firm did $1½ million worth of business. It is the Nation's largest manufacturer of potato harvesting equipment. About 110 people are employed there, more than half of them ex-farmers, or part-time farmers, who might long ago have moved to other areas had this employment not been available.

The businessmen who based their future on cooperation and on what Braham builders might accomplish have been repaid in many ways. Since 1936 not a businessman has lost a dollar in Braham investments. In fact, each has been paid 4 percent interest on what he invested.

Beyond that, they have seen the whole economic level and the morale of Braham residents raised by their activities.

In several communities of much larger size State wage-and-hour investigators have found firms paying as little as 35 cents an hour.

In one community in our best farming area an investigator went down the main street and quickly found 17 businesses violating the minimum-wage provisions.

The last State investigator to visit Braham did not report a single wage violation.

Employees at Dahlman work a 40-hour week at $1.65 to $2.90 an hour. They get time and a half for overtime, 2 weeks' paid vacation, health and accident and life insurance, sick leave, and an annual Christmas party. Other Braham firms have raised their pay levels to keep them in line with the new economic standard, although a few businessmen admit they did so with initial reluctance.

Braham waitresses are being paid almost twice as much an hour as are waitresses in some Minnesota communities.

"The merchants here find that they have to pay good people well to keep them, to compete with industry, and to compete with other towns," Oscar Olson said. "The sooner the merchants in any small town face up to this fact of life the better their chances of survival."

Can other Minnesota towns do what Braham has done? Absolutely yes, says Clark.

Walter Paulson, president of Dahlman, says that if the people in these towns wish to succeed they can never afford to forget what Braham found to be the key word—cooperation.

"We talked to Oscar Olson and these people here, and we knew we'd get cooperation in this town," Paulson said. "Without that, you can be sure we'd have gone someplace else."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Yarborough, Proxmire, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, ———, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 6920 32d St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.

Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Burton. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Service Rendered by the Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, February 21, 1958

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared relative to service rendered by disabled American veterans.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR POTTER

As a life member of the DAV, I was impressed by the following statements in the editorial in the January 30, 1958, issue of its official publication:

"We also say adios to the DAV semimonthly and its 37 years of service to the DAV and to America's disabled veterans and bid welcome and success to the DAV Monthly and its 1958 news policy. Our paper is being changed to 12 issues a year in place of the 22 of the past for several reasons, including economy."

Particularly significant were the expressions "its 37 years of service to the DAV and to America's disabled veterans" and "for several reasons, including economy." Why should economy need to be a primary reason for such change, in view of its long period of service since its formation in 1920, which has so substantially benefited all of America's compensated disabled veterans—some 2 million—and their dependents.

All social-minded and patriotic Americans should be concerned about any diminishment of the DAV rehabilitation service program, as repeatedly emphasized by various Congressmen in their statements in the CONGRESSIONAL RECORD, as follows:

"Americans who help to provide security for America's disabled defenders thereby help to provide security for America." (Senator Homer T. Bone, of Washington, July 17, 1941.)

"Helping disabled veterans to help themselves and getting the help of the Nation for those who need help—a big dividend-paying investment in real Americanism—is the self-appointed task of the DAV." (Representative Andrew Edmiston, of West Virginia, September 24, 1942.)

"Seeing to it that America's disabled war veterans are adequately provided for is a big investment in the future patriotism of our youth. Providing adequately for the Nation's defenders is an investment in patriotism which brings huge dividend returns to every community, to every State, and to our country." (Representative Raymond S. Springer, of Indiana, May 27, 1943.)

"By promoting and providing for the welfare of America's disabled defenders and their dependents we thereby help to promote, protect, and preserve America and its democratic institutions. (Representative THOMAS E. MARTIN, of Iowa, July 7, 1943.)

"It is significant to remember, I believe, that an important factor in our all-out war efforts is for America adequately to provide for its present defenders, and their dependents, as well as for its disabled defenders and their dependents." (Representative OVERTON BROOKS, of Louisiana, December 14, 1943.)

"The determination of the DAV to see to it that America's disabled veterans are adequately provided for should be supported as a public investment in the future patriotism of our youth, and is practical patriotism which brings huge humanitarian and financial dividends to every community, to every State, and to our country." (Representative Walter G. Andrews, of New York, May 9, 1944.)

"It is definitely in the interest of all Americans that the fight for justice must be made for those who have sacrificed their youth and a part of their bodies or their health in our country's most hazardous occupation, its military and naval services during time of war." (Representative Joe Starnes, of Alabama, June 23, 1944.)

"Active servicemen, discharged veterans, and the dependents of veterans, have the privilege of requesting needed advice and assistance from the service officers of the several congressionally chartered service organizations: The Disabled American Veterans—referred to as the DAV—which is composed exclusively of American citizens who have been either wounded, gassed, injured, or disabled while serving honorably in the Armed Forces of the United States, or of some country allied with it, during time of war." (Representative JOHN LESINSKI, of Michigan, June 23, 1944.)

"Only through the active suport of civic, business, and social leaders can the DAV realize the full success of its human and economic reconstruction program on behalf of our disabled ex-servicemen." (Senator ALEXANDER WILEY, of Wisconsin, July 2, 1945.)

"Americans who have sacrificed their bodies or their health to preserve the American way of living, deserve richly an opportunity for themselves to live a normal American life." (Senator Edwin C. Johnson, of Colorado, November 6, 1945.)

"The welfare of America's disabled defenders is inevitably linked with our country's future welfare and security, because our country's potential future war veterans will naturally be impressed by the fact that our Nation enables its disabled war veterans to become useful civilians." (Representative CHARLES E. BENNETT, of Florida, May 29, 1956.)

"Mr. Speaker, Americans who are grateful for the sacrifices of America's disabled defenders, of parts of their bodies or of their health, will generously support the vitally important service program sponsored by the Disabled American Veterans Service Foundation and so effectively operated by the congressionally chartered 36-year-old (now 38) Disabled American Veterans—DAV." (Representative LAURENCE CURTIS, of Massachusetts, July 27, 1956.)

Very heartily do I concur with all of such statements. Because America's possible future war veterans will naturally be impressed if our country does not permit its disabled defenders to become mere forgotten heroes, but enables them to become self-sustaining tax-paying civilians, the future welfare and security of our country is inevitably linked up with the welfare of its disabled war veterans and their dependents.

Chartered by special act of Congress, the DAV was formed in 1920, to extend free expert, personalized rehabilitation assistance to, for, and by America's disabled defenders—to help them to help themselves.

Governmental benefits for handicapped war veterans are not automatically awarded. More claims have been denied than granted by the United States Veterans' Administration. Expert advice from an experienced service officer, who knows what is required, under many complicated laws, to justify favorable decision by the VA, is sorely needed by the average disabled veteran as to his claims for service connection, disability compensation, hospitalization, medical treatment, prosthetic appliances, vocational training, etc. Scores of thousands of disillusioned, disabled veterans are thus assisted each year in the proper preparation and presentation of their worthy claims for various governmental benefits—legally available only under certain conditions.

Because it must act as judge and jury, in effect, in deciding whether evidence submitted is sufficient proof of entitlement, the United States Veterans' Administration recognizes that the accredited service officers of service organizations can, and do, thus perform a very valuable service, and therefore furnishes office space, and the authority to look through official claim folders.

Because the DAV has less than 200,000 dues-paying members—less than 10 percent among the some 2 million American war veterans in receipt of monthly disability compensation checks—it has been enabled to maintain its nationwide setup of full-time service officers only by reason of the support of social-minded Americans. Very helpful have been their donations, in response to their receipt of miniature automobile license tags, which have enabled the DAV to return about 100,000 sets of lost keys each year to their owners.

Unfortunately, because the DAV has not received enough of such donations, its nationwide staff of full-time national service officers has been gradually reduced from 450, the high figure in 1948, to about 150 at the present time.

The DAV deserves and needs more generous donations to enable it to extend much needed personalized services to many more scores of thousands of discouraged disabled veterans, including those who receive medical treatment in the some 170 hospitals of the United States Veterans' Administration—most of whom have not yet established the service connections of their disabilities.

The DAV itself owns and operates its Ident-O-Tag project at its national headquarters at 5555 Ridge Avenue, Cincinnati, Ohio, mostly with handicapped veterans, their wives, widows, and other handicapped Americans, directly under DAV National Adjutant Vivian D. Corbly. A wounded veteran of World War II, Paul E. Frederick, Jr., of Cincinnati, is the present national commander.

DAV national service officers serve under its national director of claims, Cicero F. Hogan. Located in DAV national service headquarters at 1701 18th Street NW., Washington, D. C., he also has a large staff of expert service officers to assist claimants as to their appeals to the central office of the Veterans' Administration.

Also located there are the assistant national director of claims, Chester Cash; the DAV national legislative director, Maj. Omer W. Clark, former Deputy Administrator of Veterans' Affairs; his able and affable assistant, Elmer Freudenberger, also a former VA official; and John W. Burris, the DAV's national director of employment and national civil-service officer.

Although all DAV national service officers are grossly underpaid, they continue to serve because of their devotion to the welfare of less fortunate war veterans who have sacrificed a part of their bodies or their health, to protect our American way of living. The

DAV has, unfortunately, needed to practice economy, at their expense—and now further economy with its national publication—in order to be able, with limited funds, to continue to serve as many war-handicapped veterans and their dependents as possible.

Such gradual decrease in the number of its full-time service officers has occurred notwithstanding the fact that, during the last 10 years, it has received appropriations aggregating $3,240,000 from its incorporated trustees, the Disabled American Veterans Service Foundation, 631 Pennsylvania Avenue NW., Washington, D. C.

The depleted reserves of the DAV Service Foundation can again be built up by more considerate supporters by their designations in insurance policies, assignments of certificates of stocks and bonds, bequests in wills, irrevocable trusts—which can reduce their taxes and increase their own future incomes—and by the establishment of perpetual rehabilitation funds in multiples of $100—spontaneously started by some concerned disabled veterans in Montana recently—as to which only the interest earnings are available for appropriation to the DAV for its use in maintaining service offices in the State of origin thereof.

Ranging from $100 to $1,000, so far, each perpetual rehabilitation fund is listed on a memorial honor roll in the order in which received, with the name and State of location of each benefactor. Such benefactors include disabled veterans, DAV departments, chapters, and auxiliary units, and an increasing number of patriotic Americans.

An updated memorial honor roll of perpetual rehabilitation funds will be included in each DAV annual report to the United States Congress, which is then printed as a House document by the United States Government Printing Office.

More and more social-minded Americans can thus perpetuate their concern for America's disabled defenders. Such reserve funds can thus gradually accrue, so as to assure future DAV ability to continue to maintain much needed rehabilitation service in each State.

Incidentally, the DAC Service Foundation is governed by 13 trustees, all prominent in and outside the DAV, including a Congressman; a retired Air Force general; a banker; a judge; a New York City police supervisor; a personnel expert for a large oil company; 3 lawyers; a general construction contractor; an undertaker; a national service officer; and a general insurance agent, John L. Golob, of Hibbing, Minn., who is the president and chairman. Five of them are DAV past national commanders, and another past national commander is its executive secretary.

Donations to the DAV Service Foundation—toward support of its sponsored service program, as operated on a nationwide basis by the congressionally chartered DAV—constitute investments in the future security of America which will bring huge dividend returns to many more distressed and disabled war veterans and their dependents, to their communities and their States, and to our country.

Save the Soil

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. THYE. Mr. President, there appeared in the St. Paul Pioneer Press of February 18, 1958, an article written by Alfred D. Stedman entitled "Save the Soil Is Theme at Meet of Conservation Men in Mill City."

I fully concur with the statements of the article, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVE THE SOIL IS THEME AT MEET OF CONSERVATION MEN IN MILL CITY

(By Alfred D. Stedman)

In Minneapolis perhaps the greatest conservation conclave since the Teddy Roosevelt-Gifford Pinchot days has a worry that would have flabbergasted those two daddies of the American conservation movement.

Occasion is the 12th convention of the National Association of Soil Conservation Districts. Opening Monday to continue through Thursday, it jammed the Hotel Leamington with American men and women having one thing in common. They believe this Nation's future prosperity if not her survival, depends on her conservation of soil, waters, forests, and outdoor values.

The worry is strange but real. It is that the billions of dollars now pouring out of the United States Agriculture Department in the name of agriculture may be spent—some say frittered away—without preventing those natural resources from "going down the drain."

The story wasn't to be found in any one speech. It wasn't formulated in any single resolution brought before the resolutions committee. But it stalked like a ghost everywhere. It cropped up in every other speech, in corridor conversations, and in about one out of every three or four recommendations coming in from States.

THE WORRY

The story of the worry is this: That the two-thirds of a billion to be spent this year by the annual or acreage reserve part of the Federal soil bank program, that the $100 million or so more going into the longer range or conservation reserve part of that program, that the 3 billions or so a year going for losses on Federal farm price supports, the quarter billion more or less going for what are called agricultural conservation payments—that all these and other Federal spending in agriculture's name will leave undone the one job that they see as overshadowing all others. That's the job of saving these national resources, especially the soil, to feed the American people forever.

All agreed in public and in private that a glorious job of building the foundations has been done. One foundation is the soil conservation districts and the cooperating State and Federal programs. In 11 years, 90 percent of the Nation's farm and ranch lands has been organized into soil conservation districts, mostly following county lines. In these districts, each farmer gets help of a soil technician when one is available in drawing a conservation farming plan for his farm. This plan shows how to contour and plow and crop the land and how to protect it with terraces, grassed waterways, dams, and tree plantings so that terrific waste of soil by wind and water erosion will be stopped.

Another foundation is the Federal small watersheds act. This expands the farm planning to cover a small watershed. It purports to offer communities Federal help in getting an engineering plan providing dams and works to stop erosion in a creek valley. It aims to hold runoff on the headlands, not letting them loose to rage through fields and turn into destructive floods. It is called upstream flood control.

But the worry stalking the soil conservation convention is the hard time being encountered in getting action on these farm-by-farm and watershed-by-watershed kinds of permanent protection of resources. Billions for farm subsidies but pittances for lasting conservation. That's the trouble.

As yet only about one-third of the Nation's and Minnesota's croplands are effectively protected by conservation plans. There's no money at all in the new Federal budget for staffing new soil conservation districts to be organized this year, so said Nolen J. Fuqua, president, in his annual report.

Nearly 2½ million farmers and ranchers still need to develop basic conservation plans for their farms. Three-fourths of the soil conservation districts reported serious shortages of conservation scientists and technicians. Many had only half enough help. Two-thirds said that woodland conservation is being neglected.

FUNDS CUT

The funds for ACP payments that, though at times misspent, are still rated high as practical help toward conservation have been halved, Fuqua said.

And the small watershed program, described as grand, is flooded with applications, but has had a budget cut of $11,500,000 or 45 percent, Fuqua said. Reports from the districts said they need Federal help on 12,000 small watersheds.

But Federal action on them lags in Washington. Hundreds are waiting for approval and funds. The Mill Creek watershed project near La Crosse, Wis., for instance, has been pending in Washington a year without action.

Meanwhile, Minnesota alone counted its soil destruction at more than $100 million in last year's floods alone. And a flood on Mill Creek in 1951 washed out the village of Boaz, laid waste many fields, and drowned 5 people.

Southern Great Plains Soil and Water Conservation Research

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. YARBOROUGH. Mr. President, the Association of Texas Soil Conservation Districts, Inc., has adopted a resolution favoring the establishment of a soil and water conservation research laboratory in the Southern Great Plains. I wish to go on record in support of the resolution. Recent surveys indicate that approximately 11 million acres of Texas croplands have been badly damaged by drought and floods, and that many additional thousands of acres of both cropland and livestock land have lost at least 25 percent of their topsoil. This presents a serious problem in Texas, a State which has large areas of good, but often shallow, topsoil.

Texans have always been presented with two basic problems, when it comes to soil conservation. In the beginning, our State soil resources were so great that early settlers got in the habit of soil exploitation. Second, when it became obvious that there was a vital need for soil conservation, Texans were slow to realize that much of our land was better adapted to livestock production than to raising crops.

The organization which took the lead in the vital job of teaching and practicing soil conservation was the Association of Texas Soil Conservation Districts. Since our soil conservation programs in Texas have been constantly improved over a period of three decades, the money expended has been repaid many times in economic returns.

To further improve the important job of soil and water conservation, the Association of Texas Soil Conservation Districts is pressing for the founding, in the Southern Great Plains area, of a laboratory to conduct badly needed research projects. A copy of the association's resolution was recently sent me by Mr. W. C. Howard, president of the organization. I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION BY ASSOCIATION OF TEXAS SOIL CONSERVATION DISTRICTS, INC., ON A SOIL AND WATER CONSERVATION RESEARCH LABORATORY IN THE SOUTHERN GREAT PLAINS

Whereas the conservation of soil and water resources for future generations and the efficient use and management of these resources for present needs is a major objective of the Association of Texas Soil Conservation Districts; and

Whereas the Great Plains region includes 98 Texas counties and is beset with a wide variety of soil and water conservation problems as recognized by the United States Congress in authorizing the Great Plains conservation program; and

Whereas the Association of Texas Soil Conservation Districts recognize a very great need for an intensified research program on the soil and water conservation problems in the Southern Plains in order that the Great Plains conservation program be of maximum benefit to the Nation: Therefore be it

Resolved, That the Association of Texas Soil Conservation District go on record as favoring a major soil and water conservation research laboratory for the Southern Great Plains, and urge the United States Congress to appropriate funds for such a soil and water conservation research facility; furthermore be it

Resolved, That a copy of this resolution be given to each Member of the Texas delegation in the United States Congress, a copy be sent to the president of the National Association of Soil Conservation Districts, a copy be sent to the Secretary of the United States Department of Agriculture, and a copy be sent to the administrator of the Agricultural Research Service, United States Department of Agriculture.

Statehood for Alaska

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. NEUBERGER. Mr. President, because the Senate is soon scheduled to debate the entire question of statehood for Alaska, I ask unanimous consent to have printed in the Appendix of the RECORD an effective article on this great question entitled "Colonialism at Home." The article appeared in the January 1958 issue of the Progressive magazine. The author of the article is thoroughly qualified to discuss this issue because he is Ernest Gruening, who served as Governor of Alaska from 1939 until 1953, the longest such tenure in Alaska's eventful history as a Territory of the United States.

Ernest Gruening today, by election of the people of Alaska, is 1 of the 2 Tennessee-plan Senators from Alaska, working with all his might and main in our National Capital in behalf of statehood for Alaska. I support his efforts.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLONIALISM AT HOME

(By Ernest Gruening)

Ninety-one years ago, on March 30, 1867, the United States acquired Alaska from Russia and pledged that "The inhabitants of the Territory * * * shall be admitted to the enjoyment of all the rights, advantages, and immunities of citizens of the United States."

To date that pledge has been honored in the breach. Alaskans are making an all-out effort to validate it. Having failed to secure statehood in the 12 years since they voted for it in a referendum provided by their 1945 Territorial legislature, they adopted a vigorous course of action.

The 1955 legislature passed an act providing for a constitutional convention to draw up a constitution for the State of Alaska, and appropriating $300,000 for that purpose. Fifty-five delegates met for 75 days at the University of Alaska and drafted a document which political scientists declare to be at least the equal of any other State charter. The people of Alaska ratified it at an election in April 1956. At the same time they approved an ordinance authorizing the election of two United States Senators and a Representative to go to Washington to knock at the door of Congress for admission. In so doing they followed well-established, but not widely known, precedents made early in our Nation's history. Tennessee began the practice in 1796, followed in chronological order by Michigan, Iowa, California, Minnesota, Oregon, and Kansas.

The 1st session of the 85th Congress has held hearings and has reported similar Senate and House bills favorably. The test will come in the first few months of 1958 when Congress reconvenes.

The desire of Alaskans for the full citizenship promised them is akin to that felt in the 35 States admitted to the Union since the original 13. Their need for statehood, they believe, is at least as imperative as that which motivated their predecessors. Alaskans can present a list of grievances beginning 91 years ago, and little abated to date, which they sum up in the contemporarily challenging word "colonialism."

The ask which confronts the three "Alaska-Tennessee Plan" emissaries, who have been at work since their election in October 1956, is to convince the members of Congress of the justice and soundness of Alaska's cause. Their evidence is far too extensive to treat adequately in this article, but a few examples may suffice.

The United States originally established no government in Alaska, which was merely made a customs district. While 4 administrations and 8 Congresses came and went it was not possible in Alaska to acquire a square foot of land, stake a claim, transfer or deed property, get married, punish crime. In 1884 Congress passed an Organic Act which proved unworkable and was the object of unremitting protest by five successive presidentially appointed governors. Only at the turn of the century, in response to the outcries of some thousands of gold rushers—still voters in their home districts—Congress began to act. However, most of its Alaska legislation, based on lack of knowledge, was unsatisfactory. Alaskans since 1881 had been actively asking for a delegate in Congress, such as other territories had had, to represent them. Congress delayed this gift till 1906. By then Alaskans were seeking the minimum of self-government afforded all other territories—a legislature—but did not achieve it until 1912.

The Organic Act of 1912, granted only after 45 years of flagrant neglect, was a vast improvement over its worthless predecessor but was notable chiefly for the things it forbade Alaskans to do. It prohibited the territory from passing any basic land legislation, thus impeding settlement and foreshadowing a continuing near-totality of public domain. It forbade the creation of counties. It provided that only a Federal judiciary could dispense justice, at the same time making no provision for salaries to its lower court judges who to this day must subsist on the fees they can collect from the public—incomes insufficient for a livelihood for five-sixths of them. It maintained the management and regulation of the fisheries and wildlife under Federal control. For the following 45 years efforts to liberalize the act have failed.

The fishing interests of the west coast, endowed by the Treasury Department for the first 40 years of United States rule with a monopoly of the rich Pribilof Islands fur-seal fishery, early began also to exploit the Pacific salmon, for many years the Nation's most valuable fishery resources. Despite the protests of Alaska's voteless Delegate, James Wickersham, they were able to write continuing Federal control of the fisheries into the new act, although they lost out in their effort to prevent the Territory from taxing the industry's product, canned salmon.

Throughout Alaska's history under the United States, this powerful absentee industry, through its lobbyists in Washington and Juneau, has gone far to control the political and economic life of the Territory. Opposing any increase in Alaska's autonomy (and highly successful in that endeavor to date), resisting essential conservation measures while giving them public lipservice, it has managed to dominate in varying degree the successive regulatory agenices—in Treasury, Commerce, and Interior—regardless of whether the administration was Republican or Democratic.

During his first 3 years President Eisenhower found it necessary to declare Alaska's fishing villages disaster areas, wrought not by "acts of God" but by acts of men. The pack has dwindled from a high of 8,454,948 cases to 2,938,662 cases in 1957. The victims are the Alaska fishermen and the inhabitants of the coastal communities long dependent on the salmon economy. The owners, who have retired their original investment many times, can get by with a small pack at higher prices.

Alaskans attribute the depletion to the fishtrap, a structure anchored in the path of the salmon returning from the sea to spawn in the rivers and lakes, which catches large quantities of fish—too large for conservation. The fishtrap has been abolished in the other Pacific salmon areas—British Columbia, Washington, Oregon—where local control has managed to obviate depletion of the same resource. For 45 years, Alaskans, through unceasing legislative memorials, by bills repeatedly introduced by their Delegates, and by popular referenda, have requested the abolition of fishtraps and the transfer of the fisheries to Territorial management. Statehood would automatically transfer the fisheries and be followed by abolition of the traps. Hence the canned salmon industry's opposition.

To this opposition is added the resistance of certain transportation interests. In 1920 Congress passed the Maritime Act of 1920.

The act provided the interchangeable use of domestic and foreign carriers—foreign meaning principally Canadian—for transporting freight across the continent and over the oceans beyond. But in the heart of the act were inserted the words "excluding Alaska." Their effect was to deny Alaskans the use of nearer and less costly Canadian ports and compel all shipments by way of Seattle. Budding Alaskan industries could not support the higher costs and were compelled to shut down, while others have been prevented from starting. Alaska was thereby burdened with the highest maritime freight costs in the world.

Statehood would eliminate this grave injustice and is, therefore, not favored by those in the United States who have benefited from the 38-year-old status quo, which Alaska's voteless Delegates have vainly sought to repeal session after session. The shipping lobby is too powerful.

The financial burden placed on Alaska in maritime transportation has been greatly augmented by discrimination in railroad tariffs. During the past half century, American railways have developed import-export tariffs for overseas freight, which are substantially lower than those on domestic shipments. The areas around the Pacific eligible for them now include all those except Alaska and western Canada (to which no maritime traffic goes from the States). This means that any Alaskan consignment to or from Seattle, Alaska's port of entry and exit, to or from any point in the States, pays a higher rate than if destined for or coming from any other area in the Pacific, including Australia, Asia, South America. For example, household appliances shipped from Iowa to the Orient pay on that part of the haul between the point of origin and Seattle $1.58 per hundred pounds. If destined for any point in Alaska, the identical service costs $3.80, or well over twice as much. Of all Pacific areas, foreign or domestic, Alaska alone is penalized.

Other discriminations of similar origin afflict Alaska, including many in the field of highway aid. Altogether, these indefensibly inequitable practices by the mother country have added greatly to the high cost of living in Alaska. They are manmade and made in the United States of America.

Alaskans hope for relief through the American principle of government by consent of the governed. Both party platforms pledge "immediate statehood." Public opinion supports statehood overwhelmingly. The last Gallup poll, taken in June 1957, shows a 9-to-1 favorable vote. Virtually every important national organization—business, labor, patriotic, service, fraternal—has endorsed statehood for Alaska.

Whence, then, comes the opposition apart from the special interests mentioned above? What are the negative allegations and what are the answers to them?

1. The recurring argument, found in nearly all previous debates on other States' admission, is that it would be unfair to the more populous States to give Alaska's 225,000 people two Senators.

Had this view prevailed ours would still be a Nation of 13 States. Actually Alaska has more population than two-thirds of the 35 States at the time of their admission. Moreover, if admitted, Alaska would not remain a State small in population. Released from its throttling restrictions, it is certain to become an American equivalent of Scandinavia.

2. Alaska cannot afford statehood.

This argument was also cited against other Territories prior to admission and was always disproved by events. Alaska has been operating all the public services found in the States except those Congress has prohibited. Alaska has far more resources and potential revenues than many States.

3. Partisanship. Some Republicans oppose Alaska's admission because they feel it is likely to send Democrats to Congress.

The answer is that the issue should be above partisanship. Actually, however, Alaska would be a swing State. In the past 40 years its legislative elections have been followed by the same result recorded partywise in congressional elections. Alaska has been an unfailing political barometer, in electing Republicans and Democrats.

4. Some southern Democrats oppose Alaska's admission on the ground that it would weaken the South's bloc in Senate votes on cloture.

While it is not possible to predict what position Alaska's future Senators might take on national issues, Alaskans feel that such opposition is carrying regional problems too far afield, and certainly does not justify blocking the promised and long overdue extension of the democratic process to other Americans. Also, Alaska's long subjection to central government control is likely to make its Senators State's righters on many issues.

5. Noncontiguity. Some Members of Congress voice opposition to admitting an area not touching the 48 States.

In this rapidly shrinking world, Alaska is nearer the national capital in travel time—the current measure of distance—than were many States at the time of their admission. There is also the instantaneous communication of the radio telephone.

Positive arguments for Alaskan statehood are numerous. The national economy would be strengthened. New frontiers of opportunity would be opened. Our Nation cannot afford to maintain colonialism at home while preaching against it abroad. Materially and spiritually it would strengthen our position in the world to permit Alaska to fulfill its logical destiny. That destiny is to become not merely a bulwark of defense for the hemisphere, but a shining example of what free men can accomplish in those high latitudes, long ignored by most Americans, in contrast to the adjacent Soviet police state.

All that Alaskans—and the great majority of Americans who support the cause of Alaskan statehood—are asking is that the United States apply to Alaska the most basic of American principles, that of government by consent of the governed.

World Day of Prayer

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 21, 1958

Mr. WILEY. Mr. President, it has been my pleasure on many occasions to point out the value of prayer in solving personal, national, and international problems.

Today, February 21, Christians in more than 25,000 communities of the United States and in more than 140 other countries throughout the world are participating in World Day of Prayer observance.

By this means they are seeking divine guidance and inspiration. They are seeking to make themselves better instruments for the divine will.

I send to the desk the text of an article published in the Milwaukee Journal of February 13, describing the sponsorship of the United Church Women of the World Day of Prayer observance. I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD DAY OF PRAYER SCHEDULED FOR FEBRUARY 21—PEACE, BLESSINGS FOR ALL MANKIND IS AIM OF SERVICES THAT WILL FOLLOW THE SUN

World Day of Prayer services sponsored by the United Church Women of the Milwaukee area will be held in several churches February 21. The central services will be at 10:30 a. m. and 1:30 p. m. at Grand Avenue Congregational Church, 2133 West Wisconsin Avenue. The Reverend E. N. Vergis, rector of Annunciation Greek Orthodox Church, will speak at both of those services. Offerings will be taken for mission work, and a skit on mission work is scheduled for the afternoon program. The service of the evening United Church Women's group will be at 8 p. m. at Lake Park Lutheran Church, 2647 North Stowell Avenue.

WILL FOLLOW THE SUN

Christians in more than 25,000 United States communities and in more than 140 other countries will participate in the World Day of Prayer observance.

Prayers will be offered for peace and blessings for all mankind.

An unbroken chain of prayer will follow the sun. The international vigil will start on Tonga in the Friendly Islands of the South Pacific. Queen Salote will lead her people in prayer at sunrise.

The chain will end at sunset at St. Lawrence Island in the Bering Sea off Alaska.

OTHER SERVICES SLATED

Other World Day of Prayer services scheduled in the Milwaukee area are: First Congregational Church of South Milwaukee, 1111 North Chicago Avenue; Emanuel Evangelical and Reformed Church, 10627 West Forest Home Avenue, Hales Corners; Bay Shore Lutheran, 1200 East Hampton Road, Whitefish Bay, all at 1:30 p. m.; First Lutheran Church, 1530 South 74th Street, West Allis, 7:45 p. m.; Oak Creek Community Evangelical United Brethren, 8675 South 13th Street, 7:30 p. m.; and Calvary Memorial Evangelical and Reformed, 4515 North Lovers Lane Road, Wauwatosa, 2 p. m.

Also, World Day of Prayer services will be held at 7:30 a. m., February 24, at Goodwill Industries workshop, 2102 West Pierce Street, and at 6 p. m., February 21, at the Milwaukee Protestant Home for the Aged, 2449 North Downer Avenue.

"Bread of Life" will be the theme of the United Church Women's observance throughout the world. The worship service has been prepared by women of Australia.

American Automobile Association Supports Senator Kuchel's Proposal for Billboard Control

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, February 21, 1958

Mr. KUCHEL. Mr. President, a few weeks ago I introduced a measure to encourage the States to control outdoor advertising along the Interstate Highway

System. This proposal is entirely the result of research and study by my staff and me, with excellent technical assistance by the staff of the Bureau of Public Roads.

I have been delighted and encouraged to learn that the American Automobile Association has announced its vigorous support of my bill. This is the first time this association has endorsed any Federal bill or proposal in this field.

Mr. President, I ask unanimous consent that 2 news releases of the American Automobile Association and 2 letters which I have received from 2 automobile clubs in California be printed in the Appendix of the RECORD.

There being no objection, the releases and letters were ordered to be printed in the RECORD, as follows:

AMERICAN AUTOMOBILE ASSOCIATION SUPPORTS KUCHEL BILL TO CONTROL ADS ON INTERSTATE ROADS

WASHINGTON, D. C., February 4.—Vigorous support for the bill introduced in the Senate on February 3 by Senator THOMAS H. KUCHEL, Republican, of California, to encourage State action for the control of outdoor advertising along the National System of Interstate and Defense Highways was voiced by the American Automobile Association today.

Harry I. Kirk, of Chicago, president of the AAA, said: "We believe the motorists of America are strongly opposed to having their interstate routes walled in by billboards, and will support the approach to the problem recommended by Senator KUCHEL which is to give the States a 1 percent bonus in addition to regular interstate funds when States cooperate by passing reasonable and just legislation to control advertising signs adjacent to the interstate routes. Such legislation would carry forward the recommendation made by President Eisenhower in his budget message to the Congress in which he called for prompt enactment of legislation to control advertising on the Interstate System."

AMERICAN AUTOMOBILE ASSOCIATION MEMO OF FEBRUARY 6, 1958

NEW COURSE FOR ROADSIDE PROTECTION

Proponents of roadside protection are rallying their forces around a new approach to roadside protection incorporated in a bill recently introduced by Senator THOMAS H. KUCHEL, Republican, California.

The American Automobile Association, a longtime foe of blight resulting from uncontrolled roadside development, promptly threw vigorous support behind the measure.

In brief, the Kuchel bill establishes a national policy under which the Federal Government will encourage and assist the States to control outdoor advertising along the National System of Interstate and Defense Highways outside of incorporated municipalities. Certain types of signs are specifically exempted. Each State entering into an agreement with the Federal Government to carry out this national policy would get a bonus in the form of a 1 percent increase in the Federal share of the cost of building interstate projects. In the light of revised estimates of the cost of bulding the 41,000-mile system, the rural portion will probably result in Federal expenditure of $18 billion or more. Thus, it can be conservatively estimated that over the lifespan of the highway program the Kuchel bill carries a $180 million reward for States which cooperate in protecting the roadsides of the Interstate System.

Meanwhile, the AAA points out that outdoor advertising interests which protested to Congress last year that control of advertising along the roadsides should be left to the States, are already bitterly opposing State action in this area. In Virginia, for example, a bill which would regulate commercial advertising within 500 feet of the interstate highways in Virginia, is now being fought strenuously by outdoor advertising interests claiming that such restrictions would cripple the tourist industry of the State.

Outdoor advertising interests in the State have circulated literature to property owners threatening all kinds of dire results if the legislature acts to protect the interstate routes. This, they suggest, is but a step on the road toward legislating what color a man may paint his house.

"The experience in Virginia," said Harry I. Kirk, president of the AAA, "shows clearly that outdoor advertising interests will fight regulation of any kind at any level of government. They will battle against control, whether it be a little 'snipe' sign along a country road or a barn-sized panel along the Interstate System.

"There has been much talk of codes and voluntary cooperation. But the bald fact is that when the chips are down the outdoor advertisers oppose any restraint on their erection of signs wherever they please. Highway users, who are paying for the roads, feel that the time has come to face this problem squarely and to enact just and proper laws to protect highway roadsides. In the words of the Kuchel bill, such action would 'promote the safety, convenience, and enjoyment of public travel'."

(NOTE.—A copy of the letter to Virginia property owners mentioned above is attached for your information; we believe you will find more than usual interest in both the points of view expressed and the tactics used:)

JANUARY 31, 1958.

DEAR PROPERTY OWNER: This letter is being sent to you by the sign company that rents space from you for one or more signs on your land.

The General Assembly of Virginia is considering a law which would prohibit you from leasing space, on your own property, for advertising signs along the Interstate Highway System.

Your land may not be along the Interstate Highway System now but it very well may be in the future. Also, the people back of this law would like to see signs prohibited along all highways in Virginia.

Who wants to cut off your income by stopping you from renting space for signs? Not businessmen, not farmers, not motor courts, not hotels, not the general public. Who then? A very small group of people, mostly ladies' garden clubs and city people, who are not interested in your income but who are interested only in beautifying the highways at your expense.

The members of these garden clubs and other similar clubs have written or talked with every member of both houses of the general assembly. They have done such a good job that a great many members of the general assembly think that the rest of the people in the State feel the same way as this small group of ladies. This is absolutely not true and can be proven.

What can you do about it?

The best thing is to see your delegate and State senator and tell him how you feel. But there isn't time for this unless you can see him immediately.

The next best thing is to write a letter but that takes time which you may not be able to spare. So we are enclosing a printed postal card for you to mail today to your State senator and one to mail to your State delegate.

Important:

1. Be sure to sign the card with your name and address.

2. On the address side be sure to add the name of your State senator and your State delegate to the postal card. His address in Richmond has been printed on the card.

3. If you don't know the name of your State senator and your State delegate, look for your district on the enclosed list of senators and delegates. Be sure to send a card to both your senator and your delegate.

If the law can tell you that you can't rent your own land for advertising signs or use it for any other legitimate purpose, what will be next? Your barns or outbuildings which someone may not think are beautiful? Your house, the color of which may not suit someone's idea of beauty?

It is your land and your money. Act now to protect your rights.

VIRGINIA HIGHWAY ADVERTISING ASSOCIATION.

AUTOMOBILE CLUB OF SOUTHERN CALIFORNIA,
Los Angeles, Calif., February 10, 1958.

Senator THOMAS H. KUCHEL,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KUCHEL: May we congratulate you upon your introduction of S. 3218 to encourage the control and improvement of areas adjacent to the national system of interstate and defense highways.

We believe that your approach to this problem is the one most feasible of accomplishment, and that the objectives are most desirable.

Allen Davis and I join in extending to you our best regards.

Sincerely yours,

NORMAN P. THOMPSON,
Executive Vice President.

CALIFORNIA STATE AUTOMOBILE ASSOCIATION,
San Francisco, Calif., February 10, 1958.

Senator THOMAS KUCHEL,
Senate Office Building,
Washington, D. C.

DEAR TOM: I have read with interest S. 3218 authored by you and dealing with the problem of unrestricted display of outdoor advertising signs along the rural portions of the Interstate and Defense Highway System. Your new proposal is a much sounder approach to the problem at hand than to seek direct Federal control over matters which, historically, have always been the responsibility of the several States.

The American Automobile Association, whose policies, as you know, the California State Automobile Association has not always followed, recently revised its policy statement on roadside protection to urge State and local governments to take appropriate action to protect roadsides from unrestricted advertising displays and uncontrolled commercial development.

This policy is entirely in accord with our own views and your bill, S. 3218, would appear to be a most effective way of encouraging the States to assume their responsibility in this field.

Our compliments to you, and my personal good wishes.

Sincerely,

EDWIN S. MOORE,
Executive Vice President.

Bless the Soil Savers

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, February 21, 1958

Mr. THYE. Mr. President, an editorial which appeared in the Minne-

apolis Star of February 18, 1958, is entitled "Bless the Soil Savers." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLESS THE SOIL SAVERS

Minneapolis is host this week to one of the most helpful and even-tempered groups in existence—the National Association of Soil Conservation Districts. When some farmer organizations meet the hall is filled with denunciation, argument and politics. Not so with the NASCD. The delegates are cooperative, polite and efficient.

They would like the Government to devote more funds to their work, for the movement needs technical direction for the growing number of districts. But the people who belong to soil districts assume most of the burdens themselves.

In 20 years the movement has embraced 2,775 districts, 1,750,000 farmer cooperators, a billion and a half acres. When the crusade started, attention was focused on the individual field and farm. They still are important.

But now whole watersheds (the area drained by a stream) are being protected from drought, flood, and erosion. And the individual farmer conservationist is just about as interested in the program for his area, his State and the Nation as he is in the rehabilitation of his own farm.

In his presidential speech Monday, Nolan Faqua, of Oklahoma compared the volunteer efforts of soil district supervisors to that of Red Cross workers. The analogy is fitting, and it's pleasant to have these good folks in town.

Politics Rides Over Postal Service

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. HUMPHREY. Mr. President, it is not often that a Republican newspaper takes the administration to task for partisanship in the civil service.

For that reason, I wish to call the attention of my colleagues to an editorial from the Des Moines Tribune, of Des Moines, Iowa. This editorial is entitled "Politics Rides Over Postal Service."

This involves a case which should be looked into carefully by our Senate Committee on Post Office and Civil Service.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS RIDES OVER POSTAL SERVICE

Edith Johnson's experience proves that civil service offers no real protection for a postmaster who doesn't belong to the right political party.

Miss Johnson was discharged as postmaster of Des Moines last September. The charges, which seemed trivial and possibly trumped up, were denied orally by Miss Johnson. She sought a hearing on them before the Federal Civil Service Commission. Now she has been informed by the Chairman of the Civil Service Board of Appeals and Review that she cannot have a hearing.

Civil service officials presumably have followed the letter of the law in Miss Johnson's case. Miss Johnson was entitled to a hearing, under the regulations, only if the procedures followed in removing her were not fair or legal. She wasn't entitled to a hearing to determine the truth or falsity of the charges. (She would have been entitled to such a hearing only if she were a veteran.)

Under such circumstances, civil service is no protection to a Democratic postmaster serving in a Republican administration. Miss Johnson was a Democratic political appointee when she got the job in 1940, but she has been under civil service, after passing the required examination, since 1941. Her case was handled as a civil service matter.

So, if other cases are handled as Miss Johnson's case has been, no civil service employees in the postal department are assured of a hearing on the merit of charges against them. The Civil Service Commission—now composed of three Eisenhower appointees—can refuse to grant such a hearing, as it has refused to do for Miss Johnson.

This violates traditional American standards of fairness. Employees should have the opportunity to attempt to refute the charges brought against them. If the charges against them are trivial or manufactured, the employee should not be deprived of a job.

One other method of appeal has been open to Miss Johnson, that of taking the case before the Postmaster General. Miss Johnson did write a letter to the Postmaster General but she didn't get a hearing.

The postal department says she wasn't discharged for political reasons. It maintains that she didn't cooperate with the assistant postmaster and some other postal officials and did not carry out some recommendations promptly. She denies the truth of these charges and maintains her dismissal was due solely to politics.

The refusal to grant a hearing on the merit of the charges indicates to us that Miss Johnson has been forced out of her job for partisan reasons. The least that should be done, to protect all civil service employees, is to have a hearing on the validity of the charges against her.

The Cobbler and the Archbishop

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. POTTER. Mr. President, on behalf of the Senator from Connecticut [Mr. PURTELL], who had to leave the city to return to his State, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Cobbler and the Archbishop," which was published in Parade magazine for February 16, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COBBLER AND THE ARCHBISHOP

(By Jack Harrison Pollack)

NEW BRITAIN, CONN.—This is the story of a kindly Jewish cobbler and an alert young Irish boy who grew into a great priest of the Catholic church—and of their warm and touching friendship that bridged two generations and two religious faiths.

Here in New Britain, where the two once lived on opposite sides of Lawlor Street, they still tell the story, speaking familiarly of "old Sam" and his young friend. Old Sam Greenberg is dead now, but his friend still lives, archbishop of one of the greatest sees in America, and he still holds their friendship dear.

So dear, he said recently, that he has a real horror of capitalizing on it. So, in keeping with his wishes, the modest archbishop will not be named; in this story, he will be called Jack, although his real name is more distinctly Irish than that. But in this town nearly everybody knows who he is, and so do many of his million-member flock.

The story of old Sam and young Jack needs no names. The important thing is the spirit of brotherhood that pervades it. It is particularly fitting this week, when Christians and Jews join hands to mark Brotherhood Week.

The story really begins in Kiev, Russia, more than a half century ago, where lived a young cobbler named Samuel Greenberg. When the czarist government began slaughtering Jews, he set out for America.

Alone, he came to Hartford. Carrying a battered satchel, he walked 10 miles to New Britain and opened a shoe store in a poor neighborhood. Occasionally, he sold a pair of shoes, but mostly he repaired old ones. If his neighbors couldn't afford to pay, Sam would mend their shoes free. Whenever he heard that a child couldn't attend school because of not having shoes, he promptly gave the youngster a pair.

"But we'll end up in the poorhouse," protested his young bride Sonya.

"I found heaven in America," smiled Sam. "It's more important, wife, to live a good life here than just to become rich."

Sam, who was then childless, took a fatherly interest in all the youngsters in the neighborhood. When ever they committed a boyish prank—such as tipping over a thirsty passerby's pail of beer and running away—they could always hide in Sam's store. Sam never squealed on them.

HELP FOR A FATHERLESS BOY

But some of the children were unkind. They teased Sam because of his poor English, because he kept the sabbath on Saturday, and went to the synagogue.

Among the neighborhood boys was 12-year-old Jack, who lived across the street from Sam with his widowed mother and brother. Jack didn't see Sam, or anyone else, as an objec of ridicule. He deeply respected the simple cobbler. A thoughtful lad, he was impressed by Sam's philosophy that there was more to this life than living by bread alone. Jack's gasworker father had died when he was young, and Jack soon became very fond of the simple shoemaker.

One day Sam said to Jack's mother. "Open a grocery store downstairs and, with God's help, you'll make a few pennies to send Jack to school." The plucky woman did so, and her store soon prospered.

Sam grew to love Jack as a son. "The boy has something special." Sam confided to Sonya. "Jack isn't like other kids."

For one thing, he was more versatile. He was an excellent student, a nimble baseball player (he could run 100 yards in 10 seconds) and quick with his fists, if need be. One day he used them o a bully who slandered Sam.

Sam and Jack had long talks while Sam worked. They discussed their respective religions and Sam's youthful dream of becoming a rabbi.

"Education is the greatest thing in the world." Sam used to tell Jack. "You can lose money, but you can never lose your education." Many evenings when he returned to his cobler's bench, Sam saw Jack studying by lamp across the street.

Jack grew deeply religious. When he was an altar boy at St. Mary's Church here, he

told Sam that he wanted to enter the priesthood." "You'll make a wonderful priest Jack," Sam encouraged him. "The world needs people like you to do God's work."

After graduating from St. Thomas Seminary in Hartford at 17, Jack sailed to France to study theology. Recalled to this country at the start of World War I, he later completed his training at St. Bernard's Seminary, Rochester, N. Y., and in 1916, he was ordained at Hartford.

"Jack, you're now a priest," Sam joyously greeted him. "My dream is starting to come true."

The young priest's first assignment was as an assistant pastor in a nearby town, and, in 1919, he was called to an important office in the Hartford diocese. For 15 years, he served there. During that period, he regularly visited his mother in New Britain. And each time, he dropped in to see his old friend Sam. Together the educated Catholic priest and the unschooled Jewish cobbler discussed the state of the universe.

Sam closely followed his friend's career with fatherly pride. In the thirties, Jack was consecrated bishop of another New England diocese. He was the youngest bishop in the United States. Sam frequently visited him in his new city.

Meanwhile, during the depression, idealistic Sam lost his shoestore. But he paid all his bills and decided to spend all his time doing God's work. He organized a Hebrew free loan society which lent money without interest to needy persons of all faiths.

Almost single handed, Sam launched dozens of local projects, ranging from a Golden Age Club for elderly folks to a Christmas toy collection for children. Despite his patched pants and soiled ties, he was made a welfare commissioner, a park-board member, an adviser to mayors. He himself was dubbed Mayor of Hartford Avenue. Hundreds came to him with troubles. "People didn't talk to Socrates as they did to Sam Greenberg," a Hartford editor recently recalled.

ELEVATION OF A BISHOP

One day, Sam breathlessly read in the newspaper that his friend the bishop was being considered as archbishop in one of America's most historic cities. Sam, the Jewish student of Catholic history, was delighted. "I've always told Jack that that was the place for him," he exclaimed to Sonya.

Soon afterward, following World War II, Sam's dream came true: his friend the bishop had been elevated to archbishop. "I'm so happy," Sam cried, tears salting his eyes. "We never had a son, Sonya, but I couldn't feel any closer to one than I do to Jack."

Sam was sick in bed when arrangements were being made to install—during Brotherhood Week—his Jack as archbishop. Then one morning invitations arrived for him and Sonya to attend the installation ceremony. Arrangements also were made for railroad tickets. Sam jumped out of bed. "I'm not sick any more," he said. "I can't miss seeing Jack made archbishop."

Sam didn't realize that only a few of the archbishop's many friends and relatives could be invited. The basilica seated merely 800 persons, and hundreds of prominant Catholic churchmen and laymen had to be accommodated. There hardly seemed room for Sam and Sonya, who also were of a different faith.

But at the railroad station a priest met and drove them to the cathedral. Promptly they were ushered into a pew reserved especially for them. The cathedral brimmed with dignitaries of church and state, including archbishops, bishops, governors, senators, and mayors.

Most of all, though, Sam was awestruck by the breathtaking scene of medieval splendor. He had read many of Jack's books on church history, but he never had dreamed that the consecration of an archbishop was such an impressive ritual. Overhead was a baldachin, a canopy of jeweled metal with a white dove suspended in the center. Behind the throne hung the red cardinal's hat of one of the archibishop's predecessors. The altar sparkled like a jewel.

The ceremony began—a ceremony that was hallowed in antiquity when America still was a wilderness. After the colorful procession of churchmen, a century-old bell tolled overhead as the organ and choir rang out Ecce Sacerdos Magnus (Behold the Great Priest). The new archbishop was led to his marble throne after a young priest read, first in Latin and then in English, the papal decree of appointment. From the apostolic delegate to the United States the new archbishop received the symbol of his office, a golden crosier—a long staff hooked at one end like a shepherd's crook.

"HOW ARE YOU, SAM?"

After his elevation, the archbishop walked slowly down the aisle blessing clergy and laymen. A quarter of the way down, he caught the eye of a familiar face. Handing his crosier to a nearby priest, he left the procession of church dignitaries.

Approaching the pew of a little old man, he leaned forward, placed his hand on the man's arm, and amid the stilled silence said simply, gratefully, "Hello, Sam. How are you?" Sam was too dumbfounded to answer.

The new archbishop then rejoined the procession, greeting no one else by name.

Sam Greenberg's stunned face was flushed. His lips trembled, his heartbeat quickened, his entire body blazed with joy. In those glowing minutes, he felt more than rewarded for any good he had ever tried to do.

"Hot tears from God fell from my eyes," he said later. "It was the greatest moment of my life."

That evening, Sam and Sonya were escorted to a dinner receiption for the archbishop. There, amid the Catholic festivities, they learned that a kosher meal had been specially prepared for them. The archbishop invited them to remain as his guests for a week, but they could stay only 2 days.

This week, the archbishop celebrates the 10th anniversary of that day. The humble cobbler who helped to shape his character will not be there, for recently Sam Greenberg died. But one of the happiest memories he took to his grave for his true bond of brotherhood with another humble yet noble man, with a heart very like his own.

Euthusiastic Reaction to Senator Wiley's Special Report to Wisconsin Students

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 21, 1958

Mr. WILEY. Mr. President, America must have better-trained, better-educated youngsters. This is the unanimous opinion voiced throughout the land.

America's educational system, its library system, are challenged as never before in our history to help equip youngsters for the complex problems of this space age.

Better training in science, better training in the liberal arts and the humanities—these have become musts if this Republic is to endure.

In order to do my part to help stimulate youngsters' thinking about their future careers, I have been happy to send out a special two-page report. It is addressed directly to high school and junior high school students of my State.

I am more than pleased to say that the response to this report has been perfectly wonderful.

Literally thousands of copies have been requested and distributed to interested teen-agers.

School principals, superintendents, librarians, guidance, and personnel officers of schools, parents, and others, have written in, stating how much they appreciated the report.

I mention this now not from a personal standpoint of taking any particular credit.

Rather I mention it because this report, or any comparable report sent out by other Members of the Congress, will help to fill a great need.

The youngsters of this land are ready, willing, and eager to receive such reports, and to respond to this challenge.

It is up to us to give them the wherewithal to do so.

The youngsters of America are not lazy. They are not indifferent to the needs of this country.

If we, their teachers, their parents and grandparents, stimulate our children, if we inspire them, if we give them helpful advice, then the youngsters will respond adequately.

Let us not criticize the teen-agers, let us help them.

I send to the desk now two items. The first is the actual text of my report on careers to the youngsters.

The second is a series of excerpts from a few of the many Wisconsinites who have responded so graciously to this report.

I may say that all of these messages from library and school officials are spontaneous; none were solicited; all of them are appreciated.

I ask unanimous consent that both items be printed in the Appendix of the RECORD.

There being no objection, the letters and excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY'S SPECIAL LETTER TO WISCONSIN STUDENTS ABOUT CHOOSING THE RIGHT JOB SO AS TO SERVE AMERICA AND YOURSELF

Someday, one of you reading this very letter, may be United States Senator from Wisconsin.

One of you may be in our House of Representatives. One of you may have succeeded Gov. Vernon Thomson, as chief executive of our State in Madison.

Perhaps others among you will include a future mayor of your hometown, a member of the State legislature from your area. Others of you may be in the executive branch of our Government in Washington or be leaders in our Armed Forces.

There are, among you, also, future scientists, lawyers, doctors, nurses, engineers, and every other calling known to man.

The purpose of this letter is to urge you to achieve the best that is within you by making the most of your education.

You have almost unlimited opportunities in this wonderful country of ours.

You are growing up in a great State. Some day, it may look to you—I mean you—as one of its finest citizens.

But, whether you personally become famous or not, a whole lifetime of opportunity and growth lies before you.

You can bring untold happiness to yourself, your mother and father, to other members of your family, to your teachers, and your friends.

"DISCOVER YOURSELF" AND USE YOUR TALENT

How? By doing the most important two things that anyone of us can do in this world: "Discover yourself" and then "do the very best with what you discover."

You, personally, have hidden talents and abilities which you have probably only begun to explore. In the years up ahead, there is probably some particular job, some profession, which you can perform better than almost any other kind of skill.

Your goal should be to find that type of work—the highest type—for which you are best suited. (Not the easiest type of work, nor even the best paying, but the kind that will give you the most satisfaction and that will utilize the best that is within you.)

Far more important than simply making a living, is to make a whole life. In other words, develop your appreciation of the good things of life. All around you and me there are constructive things going on. There is goodness and honestry, purity and beauty, wholesome pleasures, and constructive activities. Participate in them and contribute to them.

Remember this, too: These days, as you know, your country urgently needs able citizens more than ever before.

We are in a tough, technical race with Soviet Russia. Victory in this race depends on you.

YOUR RUSSIAN COMPETITORS

On the other side of the world, there are youngsters, very much like you, studying in the Soviet school system. Those youngsters work very hard at school and after school. Many of them are studying science. When they grow up, they will help determine whether their country, Russia, is ahead of our country; not only in military affairs, but in civilian science, in industry, agriculture, and every other pursuit.

It is up to you to compete successfully with them.

But unlike them, you are going to have to compete—not being ordered to do so, but by your own self-determination and patriotism.

You are infinitely freer than a Soviet youngster. You have far more voluntary choices.

But you should use your freedom wisely. Please don't fritter it away. For example, don't just take easy courses, or read easy books, because they are snaps. Don't just try for passing grades.

Remember that the harder you work, the harder you study, the more you will tend to learn. And the greater will be the dividends to yourselves and to your country.

TWO FREE PRICELISTS OF JOB PUBLICATIONS

I want to mention now that your Federal Government has made available a number of publications which may help you to find your way in life. Two of these publications are free. They may be obtained by writing to my home office: 119½ Bridge Street, Chippewa Falls, Wis. Here they are:

1. Occupations—Professions and Job Descriptions. (An 11-page list issued by the Government Printing Office. It sets forth scores of booklets about different types of professions. Most of these booklets can then be obtained by sending 5 cents each to the Government Printing Office, or, sometimes 10 cents or 25 cents.)

2. Occupational Outlook. (A 2-page leaflet also published by the Government Printing Office. It lists publications also available for 5 cents, 10 cents, or so. Each describes the actual job outlook for jobs ranging from architects to diesel mechanics, draftsmen, lawyers, librarians, and others.)

3. Here is a third—available for a dime. How To Get and Hold the Right Job. (A splendid 19-page publication issued by the United States Employment Service. This can be purchased directly from the Superintendent of Documents, United States Government Printing Office, Washington, D. C.)

SEEK SOUND ADVICE

Even better help that is provided in these publications can come to you from person-to-person talks with people whose judgment you should respect. In this library, where you pick up this letter, is your friend—your librarian, who can be a most helpful aid to you. Your library itself represents an invaluable accumulation of the experience and the wisdom of vast numbers of people over a long period of time.

Your teachers can provide excellent counsel for you. Teachers have been wonderful sources of inspiration for most of us. Naturally, your parents, who know you so well, may give you the personal kind of guidance which almost no one else can possibly match.

Don't hesitate to consult with your clergyman, too. He can see in you, and in life, itself, very important things which might otherwise miss the attention of others.

Great opportunity lies before you. For your own good, for the good of those who love you and whom you love and respect, plan to make the most of your life.

Remember, however, that there are very few things that are worthwhile which don't require work—hard work, and lots of it. Many good things don't come easily. They come from long preparation, from devotion, from sacrifice.

That is why I hope you will work hard in your studies, so as to make the most of yourselves. I have faith in you.

One of you is going to occupy my job some day. One of you in our State may even be in the White House as the No. 1 citizen of our land. Why not?

There is no limit to the good you can accomplish if you set your mind to it and if you pick the right path.

Good luck, and let me hear from you.

Sincerely yours,

ALEXANDER WILEY.

GRASSROOTS REACTIONS TO SENATOR WILEY'S REPORT TO TEEN-AGERS ON SELECTING THE RIGHT CAREER

Thank you so much for your inspiring special letter for students. Please send 500 copies for distribution to all our students. (The Arrowhead High School, Hartland, Wis.)

Thank you so much for the wonderful letter you wrote to Wisconsin students. We greatly appreciate it. (Westboro Public School, Westboro, Wis.)

Will you kindly send 35 copies of your letter to Wisconsin students? I think it is very worthwhile and would like to place one in the hands of each of my social studies students. (Amberg, Wis.)

I have just completed reading your special letter to Wisconsin students concerning their choosing the right job. I am very much impressed by this letter and would like at least 50 more copies. (De Pere public schools, De Pere, Wis.)

Thank you for your letter about choosing the right job. May we have about 60 more copies? Our guidance leader is much impressed with your letter. (Durand High School, Durand, Wis.)

Thank you for your special letter to Wisconsin students. If possible, I would like enough copies so that each of our juniors and seniors may have one. (Tomorrow River Schools, Amherst, Wis.)

I shall be very happy to distribute copies of your wonderful letter of advice to students. It is most important today that we awaken our students to the seriousness of the business at hand. (Unity School District, Balsam Lake, Wis.)

After reading your special letter to Wisconsin students and the sound advice it contains, our librarian and I feel that it will be of great benefit to our students. It contains much the same advice that we constantly try to put across to our students, but coming from you it will carry the added prestige of your high office and they will perhaps be more attentive to it. I am sure it will be very helpful. Thank you for your generous interest. (Coleman public schools, Coleman, Wis.)

We would be especially pleased to have additional copies of your special letter to Wisconsin students. And thank you so much; we feel it to be very worthwhile and who knows what spark it may kindle. (Matheson Memorial Library, Elkhorn, Wis.)

Your special letter to Wisconsin students interested me because of its excellent guidance point of view. (Menasha High School, Menasha, Wis.)

We feel this letter is extremely helpful to us in working with our ninth-grade pupils in helping them to plan for the future. (Lincoln ninth-grade advisers, Lincoln Junior High School, Beloit, Wis.)

Please send us 50 letters of special letter to Wisconsin students for our senior class. (Cornell, Wis.)

An Editor Warns of the Dangers to the National Economy Inherent in the Farm Depression

---

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 3, 1958

Mrs. KNUTSON. Mr. Speaker, the Bemidji Daily Pioneer, Bemidji, Minn., has reprinted an editorial from the Wadena Pioneer-Journal which points out that widely publicized, but misleading, figures on the farm subsidy programs have prevented general understanding of the extent and the danger of the present farm depression. Under unanimous consent, I include in the RECORD this thoughtful editorial with its stark warning to other segments of our economy and to the administration:

NOT AS IT SEEMS

Cost of the farm program has been widely publicized which, in effect, creates the impression that the farmer is receiving the entire proceeds of the money expended. In all fairness it should be pointed out that this is not true, that substantial portions of all appropriated money goes to large segments of labor employed in handling farm crops for which support prices are provided.

A recent issue of the Land O'Lakes News points out that while $806 million was paid to farmers for the commodity support program $600 million was paid to private industry for storing and transporting these commodities.

It is self-evident that the national economy is largely sustained through agricultural prosperity. For proof of that assertion we need only cite the depression of the thirties when farmers were broke and wholesale foreclosures of farm mortgages were a common occurrance; 17-cent butterfat and 15-cent corn made it impossible for farmers to survive and a Government bank holiday was in-

voked while the administration sought means of alleviating the situation.

Despite the loud clamoring of the politicians, farmers today are generally in good economic condition and it seems the better part of wisdom to continue the support program until such a time as some practical method can be devised by Government agencies to remedy the situation.

Subsidies have been paid for years to private industry such as the railroads, airlines, shipping, etc. All this has been accepted as a necessity. During the era of recent prosperity, however, criticism has been directed solely at the farm program despite the fact that the farmer was at the bottom rung of the economic ladder while all other segments of industry and labor were enjoying the greatest era of prosperity in their history.

Now labor is again demanding higher wages and shorter hours, airlines are pleading for higher rates and the railroads have painted a gloomy picture of operating losses and asking for an opportunity to work themselves out of the economic straightjacket that now seems to threaten bankruptcy.

All this simply means higher prices for everything the farmer has to buy and one of the surest methods of plunging the country into another depression is to deprive agriculture of a fair return for what it has to sell. War demands stimulated increased production and it becomes therefore, Government responsibility to provide a solution for the situation of its own making.

Proposed Tax Revisions Threaten Mutual Savings Banks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the effect of a tax bill now pending in the House. The following article by Earl B. Schwulst appeared in the February issue of the Savings Bank Depositor.

Mr. Schwulst is president, board chairman, and a trustee of the Bowery Savings Bank; a director of the Savings Banks Trust Co.; a trustee of the Teachers Insurance and Annuity Association of America, a faculty member of the Graduate School of Banking at Rutgers University, and a trustee of Barnard College. Among the posts he has held are special assistant to the board of directors of the Reconstruction Finance Corporation, Director of the Commodity Credit Corporation, president of the RFC Mortgage Company, president of the Savings Banks Association of the State of New York, president of the National Association of Mutual Savings Banks, and president of the Greater New York Fund.

The article written by this distinguished banker follows:

PROPOSED TAX REVISIONS UNFAIR TO 10,000,000 NEW YORK DEPOSITORS—FAIL TO RECOGNIZE BASIC DIFFERENCE BETWEEN THE TYPES OF INSTITUTIONS

(By Earl B. Schwulst, president, the Bowery Savings Bank)

The commercial banks in their quest for what they call equable taxation bring to mind the busy executive with a headache. He complained to his doctor:

"I'd feel better and do better if my competitors had my headache too."

In effect, what the commercial banks are seeking is a headache for the savings banks, in the form of a changed tax law that would impair the functions and threaten the future of the mutual savings banks of New York State.

NO HEADACHE RELIEF

And these tax law alterations, sought by the commercial banks, would not relieve their headache by bringing needed corrections in the tax law as they apply to commercial banks.

This is a matter of concern, not only to the banking industry at large, but also to every person who saves a dollar.

It is of immediate and special concern to the more than 10 million depositors of New York State's mutual savings banks whose deposits total more than $18 billion.

For this is the very time when our growing national economy calls for constant capital formation; in short, new savings.

Industrial expansion, consumer lending, and the construction of new homes must all be financed by the savings of the people. To injure the vital part played by the savings banks in carrying out their historic function would work a disservice on the people of the State and the Nation itself.

Under the present Federal income tax law, a savings institution may make tax-free additions to its reserve for bad debts until its surplus (including such reserve) reaches a level of 12 percent of deposits. Under the so-called Curtis bill, sponsored by Representative Thomas B. Curtis, Republican of Missouri, the present 12-percent limit would be reduced to only 5 percent.

Further, the Curtis bill, which is supported by the New York State Bankers Association, would require savings banks to pay taxes on dividends over 3 percent of withdrawable accounts.

WOULD INJURE SAVERS

Now the New York State Bankers Association wants the Curtis bill amended to permit the savings institutions (including the savings and loan associations) to distribute tax free only the percentage of interest on savings deposits allowed commercial banks by the Federal Reserve Board.

Before examining the very likely results of such suggested tax law revision, we should note three salient points regarding this charge of alleged Federal income tax discrimination favoring the savings banks, as compared with commercial banks with savings deposits. The Savings Banks Association of the State of New York believes that this charge is made:

1. Without benefit of an analysis of exactly how the Internal Revenue Code applies the income tax to the savings banks.

2. Without consideration of the very fundamental differences between the purposes and organization of the two types of banking institutions.

3. Without knowledge of the fact that many savings banks actually are taxable under the code.

It should be noted that so far a relatively small tax has been paid by savings banks. This is principally because of allowable deductions against income, notably the taking of bond losses and the payment of increasing amounts and proportions of earnings to depositors. But, it should also be noted, commercial banks are permitted the same deductions.

It is true that a savings bank may use its taxable income, after expenses, for the payment of interest to depositors and the taking of bond losses, to an extent to which a commercial bank could not, and still pay dividends to its stockholders and the resulting taxes.

THE BASIC DIFFERENCE

But this is a difference that arises, not from tax discrimination, but from the fact that one institution has stockholders and the other does not.

The commercial bank keeps its interest rate to savings account depositors at a minimum so that dividends to stockholders may be kept at a maximum.

Indeed, when a commercial bank finds that the accommodation of savings deposits does not result in commensurate profits for the stockholders, it does not hesitate to discourage further savings accounts by drastically reducing or ceasing the payment of interest.

Because savings banks have no stockholders, their earnings after expenses are used exclusively to pay interest to their depositors and for addition to surplus and reserves for the protection of present and future depositors.

WHAT WOULD HAPPEN

How would this proposed tax revision affect New York State's savings banks and their 10 million depositors?

It would cut by more than one-half the amount of earnings that could be placed by the savings banks in their reserves for the protection of their depositors.

Further, the savings bank, which is mutually owned and thus has no stockholders, lacks the commercial bank's power to raise capital by selling new stock issues.

PROTECTION FOR SAVERS

The only way the savings bank can gain additional capital funds to provide the utmost in safety to its depositors, present and future, is to retain a proper percentage of its earnings.

The commercial bank, however, has both this source of capital funds and the power to gain additional funds by selling new stock issues (funds, incidentally, which are tax free to it).

The Federal income tax provisions which allow the tax-free accumulation of a bad debt reserve until surplus (including such reserve) equals 12 percent of deposits, recognize this basic difference between a mutual savings bank and a stockholder-owned commercial bank.

EVERYONE SHOULD KNOW

What is vitally important today is that this basic difference be abundantly recognized by every man and woman who saves, by every family that owns a savings bank-financed home, indeed by every person concerned with the future progress of the State and the Nation.

What the British Think of Us

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. FASCELL. Mr. Speaker, I have recently read a very interesting report by Doris and Edward L. Bernays, What the British Think of Us, a study of British hostility to America and Americans and its motivation, containing recommendations for improving Anglo-American relations.

Last year, I visited England with a committee of Congress. Even during the very short time we were there, I encountered sufficient evidence which permits me to concur in the basic conclusion of the authors of this study, which is that there is much hostility against the United States in Great Britain.

To better accomplish the objectives of the free world, it is obviously imperative

that the peoples and the governments of two major countries act constructively to eliminate any misconceptions or misunderstandings about each other.

Accordingly, I call my colleagues' attention to this very fine study and submit for their consideration the authors' interpretation of what they found and the recommendations which they made.

Edward L. Bernays has been a professor of public relations at New York University and the University of Hawaii and has delivered lectures at Yale, Harvard, Princeton, and other universities on public relations. He is the author of Crystallizing Public Opinion, Propaganda, Public Relations, Speak Up for Democracy, and Take Your Place at the Peace Table, and editor of the Engineering of Consent. His international experience includes service in World War I with the Committee on Public Information here and in Paris. Since then he has advised many departments of the United States Government. He has served as counsel on public relations to outstanding American organizations since 1919. He is chairman of the National Committee for an Adequate Overseas United States Information Program.

Mrs. Bernays is a former member of the New York Tribune staff. She is the author of A Wife Is Many Women and the partner of Mr. Bernays in counsel on public relations at 26 East 64th Street, New York City.

The report follows:

WHAT THE BRITISH THINK OF US

INTERPRETATION

Our survey showed there is much hostility against the United States in Great Britain. We cannot pin it down in decimal points quantitatively or qualitatively, but the undisputed fact is that there is enough of it to cause us concern about the future.

Some authorities believe present British feelings of hostility to the United States are transitory and illusory. We believe they are unduly optimistic. But whether they are or not, realistic approach to the problem dictates we should not depend solely on the hope that the grand alliance is permanent and indestructible and therefore nothing need be done to safeguard or strengthen it.

Recent years have seen altogether too many examples of propaganda infiltration and violent swings to the right or left among publics and their leaders, previously thought reliable and stable. Even transitory hostility may be exploited effectively to our disadvantage by our enemies.

In the light of conditions, everything possible should be done to get Americans and British to see and act on the mutual need for Anglo-American interdependence. We recognize the great importance of top echelon activity, such as the visits to the United States of the Queen and her consort and the recent conferences here of Prime Minister Macmillan and President Eisenhower. But such symbolic activities must be implemented further by a program to bring about real understanding by each other of the people of Great Britain and of the United States. Only thus can we insure the strength and continuity of what is done at top levels.

Understanding is brought about by communicating. There are many ways of communicating. Archibald MacLeish has put it well in his introduction to McMurry's and Lee's The Cultural Approach:

"Whether governments like it or not, people will communicate directly with each other through the innumerable channels of print, of radio, of trade, of travel, of goods, of songs, of scientific achievements, of architecture, of agricultural practices, of business methods, of works of art. What is important to all governments—and even more important to the people of the world who hope for peace—is that the nature of the communication should be such that understanding and not misunderstanding will result; that comprehension and not prejudice or hatred will be disseminated throughout the world."

Political, economic, military, and diplomatic decisions made between our two countries depend for their effectiveness on public opinion. Fortunately, despite basic psychological, economic, and political reasons for disaffection, strong factors function in favor of understanding between us. We share a cultural heritage and traditions, a common language. We were allies in World Wars I and II. The British identify themselves with English-speaking people through the world, although this community of feeling may often not be as firmly based as we think it is. The common language emphasizes the differences, as well as similarities between the two countries. English is common to our two countries as a language, but not always as a semantic value. Many thoughtful Britons among group leaders, opinion molders, and the general public constitute a hard core of sympathizers with the United States. They worry about the present ill feeling and would like to help remedy the situation.

Foreign Secretary Selwyn Lloyd, in his talk before the Conservative Party conference at Brighton on October 10, said: "I believe my main task as Foreign Secretary is to build up Anglo-American friendship on a basis of confidence and respect, as a real partnership."

Over and over again personal contacts of our own have confirmed this point of view.

An Irishman in London wrote emphatically that it has never before "been so vitally important * * * that the two nations should be bound together by the strongest possible ties of friendship." And he adds that if they are not bound together and we do not cement a friendship and understanding "all that we hold dear may be engulfed by the new barbarianism."

A telephone worker wrote: "* * * to present America and its way of life to the British people is of paramount importance."

Any program to supplement political, military, and economic policy demands that certain basic truths be taken into consideration. The task is difficult. A considered approach is essential in dealing with the problem. Facts must be faced.

1. Customary information methods used in an effort to penetrate British mass media with material favorable to the United States are not enough. Publication of such material in the majority of cases runs counter to the predisposition of those who control the media. Most of the press lords conceive it to be in their interest to build circulation by sensational news and by catering to what they believe is the public's anti-Americanism.

2. It is difficult to achieve penetration on TV and radio for the same reasons.

3. The need in Great Britain, therefore, is to convert those in control of the media and the top level leadership in general to a recognition that British and Americans have common goals and that our mutual interests demand our working together. There must be pro-American leadership on the part of those who dominate British culture in order to create a new climate of opinion in Great Britain. Only through such constructive leadership can information favorable to the United States be broadly projected and accepted. How to accomplish this conversion is the problem.

4. Social scientists have found that information by itself is no persuader. People evade and avoid it if they are unwilling to accept it. Therefore, one must start at a higher level than that of information.

5. Dealing directly with today's antagonisms and conflicting interests is difficult and usually impossible. By stressing common goals, hopes for the future and other areas of agreement, we can make broad acceptance, understanding, and cooperation possible.

The recommendations we make in the following pages are no substitute for the basic economic, military and political elements that enter into the relationship between Great Britain and the United States.

But whatever these factors are, our relationship can be improved by constructive efforts to increase the understanding between the two people.

RECOMMENDATIONS

We recommend that immediate steps to improve the attitudes of the British toward the United States be taken by the United States Government, the British Government, the British and American Governments jointly and through voluntary activities of citizens in both countries.

A comprehensive program to improve attitudes of Americans toward the British is also essential, but this memorandum restricts itself to one side of the double problem.

1. United States Government activities

(A) New Emphasis for USIA

The process of communication and persuasion has been studied intensively by social scientists in the past few generations. We are convinced, therefore, that certain recommendations are in order to make the most effective use of the proven findings of the social scientists. We recommend, therefore, that:

1. The USIA reorient its policies and emphasis and expand personnel and activities.

2. The Agency modify certain basic assumptions about communications and persuasion which shape its present policies and activities so that they will conform with findings of the social scientists. For example, the present assumption that facts in themselves are necessarily accepted as evidence is not in accord with social science knowledge.

3. Research should be undertaken to prove or disprove all other assumptions now being acted upon, but which have not been scientifically validated.

4. Basic assumptions should be applied uniformly. (This should not in any way vitiate dealing with local situations in conformity with local conditions.)

5. Focus emphasis on personal contact with British officials and private individuals, group leaders and opinion moulders who influence public attitudes, to convince them that our goals are the same and that therefore we must understand each other and work together.

6. Assign to this function top flight Americans capable of discussing Anglo-American relations with Britishers who guide public attitudes. These United States representatives should be given titles that give due emphasis to the importance of their functions.

7. USIA continue efforts to disseminate news, opinions and fact in whatever the form, in spite of the barriers erected by media against unsensational and pro-American material.

Communications media in Britain do not provide sufficient data, opinion or background to give the British a true picture of America and its aims. But the present ineffectiveness of efforts to secure a hearing before the British public through mass media will be changed when men of influence in Britain realize that there can be no solid Anglo-American cooperation without mutual understanding of our common goals.

Statesmanlike attitude of English leaders on all levels will undoubtedly open the way in the mass media for publicizing of truthful and favorable material about America.

8. USIA representatives should demonstrate to British leaders that England needs most of all to know intimate facts about the private daily life of ordinary Americans as distinct from lurid tales about juvenile delinquents, Hollywood scandals, gangsters, and other deviations. The USIA should continue to supply information about day-to-day habits of people with whom English people can identify themselves.

(B) Spending Power of United States Personnel in England

Make an immediate study to establish a sound policy relative to the spending power of military and civilian United States personnel in England. Examine the differential between British and American salaries. Decide whether the advantages or disadvantages of high salaries should be the guiding consideration in determining policy. Higher spending causes friction and jealousy in the English, who feel they can't compete for girl's favor or purchase products, and bitterness among Americans who are overcharged by some merchants and landlords. On the other hand, this extra spending is a favorable force for the British economy.

Investigate the soundness of limiting money of American personnel for use in England and holding the remainder of their salary in America.

(C) Orientation of United States Personnel

Our Government's services and civilian departments should give more orientation on English customs and habits to Americans going on missions to England. Help in understanding the life, culture, history, government, economy, and ways of life in England should continue during their stay in that country.

A United States interdepartmental committee should pool resources and experience of all Government agencies and departments in plans of orientation. It should enlist services of sociologists, anthropologists, psychiatrists and social psychologists.

(D) Overseas Personnel

Civilian Government employees who will have personal contact with Englishmen should be selected with particular reference to their adaptability, their ability to appreciate British customs.

The advantages of continuity of service should modify systems of rotation, and men should not be transferred just when they have become acclimated and useful in England. Personnel returned to the United States from time to time should be reassigned to their English post.

Civilian employees should be encouraged to participate in English daily community life. Attention should be given to the friendship potential of members of the immediate family and other dependents of American personnel. Many of them may be useful in building better relations.

(E) Tourists and Tourism

A national commission on tourism should be established by our Government to stimulate travel from Britain to America and from America to Britain. Private travel agencies, transportation companies, allied industries, educational and civic oganizations should be recruited to assist work of the commission. This commission would increase peoples-to-peoples contacts by employing methods of advertising and promotion usually carried on by national tourist commissions of other countries. It should also give tourists informative pamphlets on British manners and customs similar to some now distributed by a few private organizations.

(F) Student and Leader Exchange Visits

The United States should increase student exchanges by providing greater numbers of scholarships for British and American students. To derive the greatest benefit from student exchanges, selection procedures should ensure that qualified students participate. Intensive orientation courses should be provided in the customs and folkways of the prospective host countries, England or America. Sponsors and host institutions should aid in finding satisfactory living quarters and facilitating social contacts to minimize loneliness and feelings of insecurity.

(G) Books and Magazines

The United States should ratify without delay the Florence Convention, often called International Agreement on the Importation of Educational, Scientific and Cultural Materials, by removing tariffs on books and by making foreign exchange available to libraries and educational institutions for purchase of books abroad.

The United States and Great Britain should lower the international book postal rate from 12½ cents to 6¼ cents a pound, a step which has been taken by most other major publishing nations.

Weight limit for printed matter should be raised, costs should be reduced and efficiency improved.

We recommend United States conversations with the British Government to relax circulation restrictions on American magazines and newspapers in Great Britain.

2. What can the British Government do?

We recommend that the British Government consider having its central office of information play a dynamic role in correcting distorted and untrue information about the United States disseminated in England. We further recommend that the British Government evaluate their textbooks and other educational publications for factual accuracy about the United States.

3. British and American Governments jointly

We strongly recommend British and American governmental communications cooperation through their information services. The British Information Services, the General Office of Information and the USIA should work closely together to correct distortions or untruths about the United States that are detrimental to the grand alliance.

British and American information services in other countries should work together in a united front to ensure that the truths about both countries will defeat untruths and misconceptions.

We recommend that the British and American Governments cooperate to orientate American civilian and military personnel. Lending its own personnel for this educational program would be helpful.

4. British and American voluntary activities

American and British individuals and groups in the United States and Great Britain should cooperate in a dynamic program of activities to improve understanding between British and Americans. Here are some examples of methods:

(A) Joint British-American conferences, like that held by the American and British Bar Associations in London last summer, should be multiplied. Such opposite number meetings of people in the same vocation at every level of social, economic, cultural, and political life would broaden areas of agreement and decrease areas of disagreement. Scientists, policemen, farmers, publishers, teachers, artists, artisans, meeting their colleagues in England, would understand each other and stimulate broad British-American friendship and interest in common problems and aims.

It has been found that meetings of people with common vocational interest tend to establish an immediate rapport.

(B) American businesses with interests in Britain should indoctrinate their representatives and employees in England on British customs and encourage active participation in British life.

Private industry on both sides of the Atlantic should stagger vacation schedules so that travel across the Atlantic may be made in off seasons.

(C) Leaders in the communications fields in both countries should form a Joint British-American Committee for Common Understanding. Leading editors, publishers, publicists, opinion molders, and communication experts will give professional direction in disseminating fact and point of view in both countries.

The work would include publicizing similarities of Americans and British, bringing prejudice and antipathy to light, and so help to dissipate them, publicizing achievements of Britishers in the United States and of Americans in England, and exclaiming to the British the differences between American and British cultures.

This group should deflate lies and false rumors present on both sides of the water.

Such activity would increase mutual understanding and appreciation. The committee would emphasize Anglo-American relationships and focus public attention on future goals.

(D) British-American voluntary organizations in England should encourage showing of films that portray the ordinary American against the background of his daily life of work and play.

Voluntary groups should urge schools and colleges in Great Britain to expand study of the United States.

Timing Is Important on Tax Reduction

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 17, 1958

Mr. PRICE. Mr. Speaker, I would like to call to the attention of my colleagues in the House some very sound advice contained in an editorial in the St. Louis Post-Dispatch of Wednesday, February 19, on the importance of timing in the consideration of a suggested tax cut to counter the present recession.

Of particular interest in the editorial is a reference to an idea generated by a vice president of the Ford Motor Co., Mr. Theodore Yutema. Mr. Yutema proposed a suspension of witholding for 10 percent of the year. If Mr. Yutema suggests merely putting off withholding to a later date, then he would be likely to contribute to the recession by getting the consumer deeper into debt.

However, carry this idea a step further and make it a complete forgiveness of withholding for 10 percent of the year or 20 percent and we would have a real, immediate shot in the arm for our economy which would pull us through the recession as effectively as the expiration of the 10 percent Korean war tax did the job in 1954.

The forgiveness of withholding in this manner would be the quickest way to work out a tax reduction should it be found necessary to counter the recession by bolstering consumer buying.

The Post-Dispatch editorial follows:

If It Were Done

Undoubtedly the administration is right in saying that this is not the time to counter the recession by cutting taxes. But if it heeds the lessons of 1953–54, it will keep an open mind and be ready to move in that direction the moment circumstances so suggest. Good timing will be of the essence.

As in 1954, the key to the Nation's ability to snap out of this recession is consumer buying. The unemployment we are now experiencing has been brought about by a decline in capital investment for new plant and equipment, reinforced by a rapid decline in inventories. Should these forces now be compounded by a serious drop in consumer demand, the country could be in real trouble. If consumer buying resists the trend instead of magnifying it, we can hope to be out of the woods by summer.

It was just such a resurgence of consumer demand that put the skids under the 1954 recession. Administration leaders will find useful instruction in reviewing the circumstances and most particularly the timing.

By March 1954, unemployment had reached 5.8 percent of the labor force—a greater proportion than is out of work now—yet consumers went on buying at an expanded rate and signs of recovery soon set in. Why did consumers behave in this way? Unquestionably, because on January 1, 1954, they had received a 10 percent tax cut. The Korea emergency increase of 10 percent in personal income taxes had been due to expire on that date, and the Eisenhower administration during the previous September had taken the politically unavoidable step of announcing that the expiration would be allowed to take effect.

The important thing to remember is that it was not a prospective but a real, tangible, in-hand tax cut that gave consumer demand the decisive stimulus. Should a similar stimulus prove necessary 3 or 4 months from now, it may not be enough to promise a tax cut in 1959 or to start planning public works that cannot make a significant contribution to purchasing power for 2 or 3 years. An instantly effective injection of purchasing power could make all the difference. And the required dose might well be smaller if administered in the time than if too long delayed.

One of the most interesting ideas for quick action of this sort has been suggested by Theodore Yntema, a Ford vice president, who says that if Congress decrees a moratorium on tax withholding, "the depression will vanish like the mist under the sun." As we understand him, Mr. Yntema is proposing that if Congress should decide to cut taxes 10 percent the reduction, instead of being dribbled out over a long period should be made instantly effective by suspending withholding for 10 percent of the year, or about 5 weeks.

The time may come when emergency action like this must be considered. If taxes have to be cut to sustain consumer demand, they should be cut in the most massively effective way. In Macbeth's words, "if it were done when 'tis done, then 'twere well it were done quickly."

Reciprocal Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 6, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Washington Post of February 19, 1958]

Sinclair Weeks: Protectionist

Secretary of Commerce Weeks has put the reciprocal trade agreements program into just the right perspective by pointing out that it is, itself, a powerful instrument of protection for American business and for American political interests abroad. Too long the opponents of freer trade have beguiled Congress and the public with the notion that only they had at heart the defense of this countrys business, that only they were interested in protecting the American standard of living from dilution through foreign trade.

Mr. Weeks, appealing for an extension of the Trade Agreements Act, appropriately preempted the semantics of the protectionist bloc by showing how a retreat from a policy of reciprocal easing of trade barriers would jeopardize millions of jobs and American exports worth billions to this Nation's economy. Last year these exports totaled nearly $20 billion—greater than the value of all consumer automobile purchases, or of all nonfarm housing construction, or of all consumer purchases of furniture and household equipment. Although imports have been rising, they lag behind exports by a wide margin.

Altogether, some 7 percent of the American working force—about 4½ million workers—derives its livelihood from foreign trade. The high tariff protectionists, in their zeal to insulate a few industries from competition—competition of the sort which these same groups generally insist upon in the domestic economy—would deny to the foreign purchasers of American exports the means to pay for them. They would thus imperil a major segment of this country's industry and restrict the economy's opportunities for growth.

Mr. Weeks, by his own admission, is no doctrinaire free trader. But, as his Department has entered into increasing responsibilities for the administration and development of the trade-agreements program, he has evidently come to see that this country's own long-range security is interwoven with the economic growth of the free world. With good reason, he points to the growing trade of the Soviet Union in areas like South America, where this country's trade policy has tended to be dictated more and more by domestic interests unwilling to meet the challenge of competition. If the Soviet Union did not exist, a broad conception of American self-interest still would demand the steady promotion or world trade. With Moscow very much in the trade and aid picture, this interest takes on a newly critical aspect. Congress can best serve this truly protectionist interest by extending the Trade Agreements Act for 5 years, as the President proposes.

[From the New Orleans (La.) Item of February 19, 1958]

Silent, Idle Ships

"What we need is a sputnik in the foreign economic field."

These words were used by a Congressman to express his concern over the lack of interest and understanding by his constituents toward foreign aid and the need for reciprocal trade.

The lawmaker would not let his name be used—he is already being pressured by protectionists back home.

But if the Soviet Union has not used any device to dramatize its gains in foreign trade it doesn't mean it hasn't moved ahead. Russian trade with Western countries has greatly increased in the past year—perhaps as much as 30 percent.

Let's take a look at United States figures. The first half of last year, United States exports were at a postwar high—at a rate of $5.7 billion a quarter. By the end of the year, the rate was down to $4.9 billion a quarter—and decreasing.

There's another man concerned over lack of interest by the public in foreign trade. He is Richard W. Freeman, president of International House in New Orleans. He is thoroughly alarmed over opposition in Congress to the extension of our Reciprocal Trade Agreements Act.

In a recent speech he said:

"* * * All that the United States has worked for for more than a generation in liberalizing of trade throughout the world is about to be lost * * * we are about to hand the Soviet Union another cheap and greatly significant victory in the cold war.

"Our people, generally speaking, do not know that we export 34 percent of our earth grading machinery, 23 percent of our sewing machines, 14 percent of our typewriters, 17 percent of our printing machinery, 16 percent of our trucks and buses, 8 percent of our refrigerators, 35 percent of our complete civilian aircraft output, and 13 percent of our agricultural machinery.

"More than a quarter of our entire production of cotton, tobacco, and wheat is exported, and I need not tell you what would happen to southern economy if we lost those great cotton and tobacco exports. Yet protectionism is gaining strength rapidly in the South; it is a selfish, blind, unreasoning protectionism which would help a few and hurt hundreds of thousands, but it exists.

"* * * Between three and four million five hundred thousand Americans owe their jobs to goods and services going into export; yet not more than 100,000 jobs would be vitally affected if we went over completely to free trade, with no tariff barriers whatever.

"Foreign trade averages about 5 percent of our gross national economy, but the corresponding figure for Holland is 40 percent, for West Germany 15 percent, for Great Britain 18 percent, for Italy 12 percent, and Japan about 15 percent."

And, here are the words of another man, revealing a specific example of how Russia is sending her economic tentacles into the Western Hemisphere. In a cablegram just last week:

"Regret to advise that Russia has won her first important victory against United States in economic race in Latin America by signing trade treaties with Argentina in Moscow last week and by marvelous display of her products at Industrial Fair in Buenos Aires recently opened."

These were the words of American businessman, John A. Hastings, president of the Transportation Research Corp., in a message to his friend, Senator Homer Capehart, Indiana, Republican.

Hastings had more to say in his cablegram about the Industrial Fair:

"* * * Over 1 million people so far attended exhibition and all were deeply impressed as I was by Russia's excellent exhibits."

While a million Argentinians are being impressed by Russian machine exhibits, what is happening to one of our closest allies in Europe, Britain?

These words were written by John Allan May, correspondent for the Christian Science Monitor in London. They were published February 3.

"If you go down any of the great estuaries of Britain these days—the Clyde, London River, the Severn, Falmouth—you will see the moorings filled with silent, idle ships. Their lines stretch away and fade eventually as shadows in the rain and mist.

"Right now there are more tramp ships and tankers laid up in the ports of this island of ships than ever since the jobless 1930's.

"Falling freight rates and lack of trade are blamed for this state of affairs. * * *

"Here is the way the situation appears to Britain:

"* * * Economics beats space travel in continuing importance. And the major economic problem that the West has yet to overcome is that of combining a steady price level with expanding trade."

"We are about to hand the Soviet Union another cheap and greatly significant victory. * * *"

"Regret to advise that Russia has won her first important victory against United States in economic trade in Latin America. * * *"

"* * * Moorings filled with silent, idle ships."

These are words Members of Congress should weigh as they consider extension of this Nation's Reciprocal Trade Agreements Act.

[From the American Farm Bureau Federation Newsletter of February 17, 1958]

WHY WE NEED THE RECIPROCAL TRADE AGREEMENT PROGRAM—TRADE AGREEMENTS HAVE 24-YEAR HISTORY

The Reciprocal Trade Agreements Act was first passed by Congress in 1934. It has continued uninterrupted for 24 years.

The act has been extended 10 times. The most recent extension expires on June 30, 1958. The administration has requested a 5-year extension with several amendments.

Since the outset, Farm Bureau support has been a significant factor in the passage of reciprocal trade agreements bills.

The material in this series of articles is designed to provide pertinent information on (1) the background and history of this legislation; (2) the proposal of the administration to extend it; and (3) its importance to American agriculture.

The Constitution of the United States empowers the Congress to lay and collect taxes, duties, imports, and excises; and to regulate commerce with foreign nations.

Tariffs were originally imposed in this country as a means of raising revenue. The Tariff Act of 1789 instituted duties which then provided 90 percent of our Government revenue. In the years before 1860, tariffs were generally low and applied to few commodities.

Between 1860 and World War I the tariff became primarily a protective device for the new industries that were coming into being in the United States.

After World War I, due to an apparent desire to make the United States self-sufficient regardless of the efficiency with which the Nation's needs could be produced, tariff rates began to rise at a rapid rate. This culminated in the Smoot-Hawley Act of 1930.

This act set the highest tariff rates in the country's history. Rates applied to some 500 commodity classifications and provisions were enacted so that new articles would also have duty imposed upon them based on similitude to known articles.

In the post-World War I period, when duties began to rise and tariffs were expanded, our total exports dropped from $5.2 billion annually (during the years 1919–23) to a low of $1.4 billion (in fiscal year 1932–33). Correspondingly, United States imports declined from around $3.7 billion to $1.1 billion.

The Reciprocal Trade Agreements Act of 1934 delegated to the President for a 3-year period the power to conclude agreements with other nations without specific congressional approval. It limited his power to reduce tariffs to 50 percent of existing duties as of January 1, 1934.

Congress extended this authority in 1937, 1940, and 1943 without significant amendments.

In 1945 Congress extended the program for 3 years and gave the President the additional authority to lower rates by 50 percent of the existing duties as of January 1, 1945. Thus, any item which had been reduced by 50 percent in the period 1934–45 was subject to another possible reduction of 50 percent (or a 75 percent reduction in all) in return for concessions from other countries.

In the first 12 years (1935–47) of the reciprocal trade program, the United States concluded trade agreements with 29 countries. Exports rose in value from $2 billion in 1935 to $14 billion in 1947. Over $11 billion of that trade was with countries with whom the United States had agreements under the Trade Act.

Of the great increase in exports, the largest portion was to countries which had given concessions to the United States. For example, of the $20 million of pork products exported in 1939, over $15 million entered the other country under concessions which had been gained under the Reciprocal Trade Agreements Act. The same was true of other items—such as lard, dairy products, barley, corn, rice, wheat, and a long list of fruits.

This was also true of tobacco and raw cotton. And substantial concessions were made to the United States and its exports of refrigerators, radios, iron and steel products, paints, and tractors, and other agricultural machinery.

In 1948 the trade agreements program began to encounter opposition. Protectionist measures were presented to Congress with increasing frequency.

In that year Congress voted to extend the act for only 1 year. At the same time, the so-called peril-point provision was introduced.

This provision required that, before any agreements were entered into, the Tariff Commission should report to the President as to the limit to which such modifications might be extended without causing or threatening serious injury to domestic industries producing like, or directly competitive articles.

In 1949 Congress repealed the 1948 extension with its peril-point provisions and extended the original act for another 2 years.

But in 1951 not only was the peril-point clause restored, but a tight escape clause was added.

A less stringent escape clause had been in effect since 1943 when the Executive agreed to include it in all future trade agreements. In 1947 there was an Executive order to that effect. Under it, the United States or a foreign country could break an agreement which seriously injured a domestic industry in either country.

The new escape clause—which operates today—allows a domestic industry to apply to the Tariff Commission for a finding that it has been seriously injured. If such a finding is made the President is authorized, though not required, to take action.

There was a short-lived revival of optimism among the advocates of the trade program with the appointment by the President of the Randall Commission in 1953.

The act was extended for only 1 year at that time to allow the Randall Commission to study the question of trade and tariffs.

After exhaustive study the Commission presented a weakened version of the act. The President then asked for a 3-year extension. But the administration finally agreed to accept just a 1-year extension. Moreover, a provision exempting defense industries from tariff reductions was passed.

In 1955 Congress acceded to the administration's request for a 3-year renewal. However, the extension bill further tightened both the peril point and escape clause provisions.

As a substitute for amendments to limit imports of specific commodities, an amendment was accepted which authorized the President—at his discretion—to limit imports of any product entering the United States in such volume as "to threaten or impair the mutual security." The amendment provided for initial advice in such a case by the Director of the Office of Defense Mobilization, and, if the President agreed, a subsequent investigation.

It is this 10th (1955) extension of the Trade Agreements Act that expires on June 30 of this year.

Since 1945 the United States has entered into four multilateral trade negotiations. Negotiations which were bilateral have become multilateral.

Today the principal instrumentality for making the trade agreements authority effective is no longer a series of bilateral trade agreements but a single multilateral mechanism, the General Agreement on Tariffs and Trade—better known as GATT.

GATT began with negotiations among 18 countries 10 years ago. It has now grown to include 37 nations.

Farm Bureau feels that GATT should be an important element in our foreign economic policy.

Section 22 of the Agricultural Adjustment Act provides that when the President determines that imports are materially interfering with—or are practically certain to materially interfere with—any domestic agricultural program operated by USDA, he shall impose such additional fees or import quotas as he determines are necessary to prevent this interference.

It was first enacted in 1935, reenacted in 1937, and amended in 1940 to authorize the President to impose fees up to 50 percent ad valorem when necessary.

It was in 1940 that two important features were added to section 22: (1) Section 32 programs including export subsidy programs were brought under the act; and (2) it was made clear that section 22 could be invoked not only when imports were being imported but also when they were practically certain to be imported.

In 1948 Congress expanded section 22 to include any loan, purchase, or other program undertaken by USDA.

When the General Agreements on Tariffs and Trade was made effective in 1948, there was a conflict with section 22, since GATT permitted import quotas only in conjunction with restrictions on domestic production or market supply. Therefore, section 22 was amended in that year to conform to GATT.

However, section 22 was again amended in 1951, giving it priority over any trade agreement. Since that time the contracting parties of GATT have granted a waiver to the United States so that the import restrictions required by section 22 are not considered as being in violation of GATT.

Another protection provided United States agriculture against excessive agricultural imports is the tariff quota, provided by section 350 of the Tariff Act of 1930. In a number of instances, the United States has limited the application of a reduced duty on an agricultural commodity to a specific volume of imports. This is a method of limiting the increase in imports resulting from a duty concession.

For example, the tariff rate on the first 200,000 head of cattle (under 200 pounds) is 1.5 cents per pound. The duty on all cattle over this quota is 2.5 cents per pound. At the present time tariff quotas are in effect for the following agricultural commodities: cattle; whole milk, fresh or sour; cream, fresh or sour; butter; walnuts; certified seed potatoes and table stock potatoes.

In 1951, section 104 was added to the Defense Production Act. The objective—as stated by proponents of this legislation—was to prevent imports from interfering with USDA programs for dairy products, fats and oils, peanuts, and rice. Without public hearings, it left the restriction of these commodities to the discretion of the Secretary of Agriculture. It tied the essential security interests of the United States directly to restrictions of imports. In 1953 this section was repealed in favor of action under section 22. Farm Bureau opposed section 104 and favored the transfer to section 22.

Dedication of $2.5 Million Post Office, St. Petersburg, Fla., Is Symbolic of What Can Be Done Under the President's Proposed Extended Lease Program for Post Office Construction, and Lack of Wisdom in Permitting Lease-Purchase Expire Last Year—Address by Deputy Postmaster General E. O. Sessions at Dedication

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. CRAMER. Mr. Speaker, at the dedication of the new $2.5 million post office, mail handling facility at St. Petersburg, Fla., a challenge was offered to Congress by Deputy Postmaster General E. O. Sessions on February 15, 1958—a challenge to go forward with the President's announced $2 billion post-office construction program—and a challenge to enact much needed and overdue equitably distributed postal rate increase legislation in an effort to put the Post Office Department on a business-like pay-as-you-go basis.

The magnificent 167,000 square-foot modern facility, which includes four drive-in windows, stands as a monument to the partnership of the Federal Government with private enterprise in serving the best interests of the people—in making much needed Federal facilities available on the local level. There is no excuse, to my way of thinking, why adequate, modern facilities should not be made available throughout the country—the Post Office being the closest and most frequent contact by the people with their Federal Government—and being our greatest communication medium.

This building was built under the extended lease program, the very type of program the President is asking Congress to authorize—$1.5 billion of the $2 billion to be provided by private capital. Thus, without actual appropriations for public works in this field, private enterprise could make available hundreds of local post offices on a lease basis. It is most unfortunate that last session of Congress permitted the lease-purchase program to lapse, particularly when such a public building program could have already helped in staving off an extended letdown in our economy if it had been permitted to go forward without threat of expiring. It is my hope that the lease-purchase program will be reinstated and that the President's $2 billion construction program will be approved. Congress must also face up to the problem of trying to put the Post Office Department on a sound business basis by providing for reasonable, well-distributed revenue increases.

I commend "General" Sessions remarks to the Members of the House for consideration:

Mr. Chairman, Congressman CRAMER, colleagues from the postal service, and friends, I would like to begin my remarks with a simple statement of fact: I consider it an honor and a privilege to be here among you today.

My only regret is that Postmaster General Arthur E. Summerfield, himself, could not be with us at this memorable event, marking the dedication of the St. Petersburg Post Office. He asked that I extend to each of you here, and particularly the many members of the postal family, his personal greetings and congratulations. I am also happy to see with us today Mr. Norman R. Abrams, formerly our Assistant Postmaster General in charge of the Bureau of Operations.

A dedication such as this symbolizes the aims and the purposes of this postal administration: To give the American people the kind of modern, efficient mail service they should have.

This new St. Petersburg Post Office is radically different from the traditional and monumental edifices which have served as post offices in the past. It is modern in concept and clean in line. It is also designed not only for the efficient handling of your mail, but to be a good place for our employees to work, and for our patrons' comfort and convenience.

This post office will be an important factor in the everyday life of every citizen in the community. It will be a pleasant place for you to do business in and it will be a pleasant place for our employees to work.

Just imagine how effective we could be in giving the people of this country a truly modern postal service if modern and efficient facilities such as this were the rule rather than the exception.

For reasons beyond our control we have been faced with the problem of attempting to handle a fantastic and perennially increasing growth in our mail volume without any appreciable expansion or modernization of the facilities in which we must handle the mail.

There has been no new Government-owned post office built with Federal funds since 1938—and since that time our mail volume has grown by more than 100 percent.

St. Petersburg should realize the rate of postal growth more than the citizens in most other communities. In 1938 your revenues in this post office came to $439,000. Last year they amounted to two and a third million dollars—an increase of 540 percent in 20 years. Since postal receipts are a pretty accurate barometer of postal volume, you can see how crowded your old post-office facilities must have been—and under what crowded conditions our employees had to work to serve you.

You know, it is fashionable among unthinking persons to say unkind things about the postal service.

The postal service, on the one hand, is something that everyone takes for granted. On the other hand, no one is ever really satisfied with it.

But, if the average person saw the conditions under which most of our postmasters and supervisors and employees must work to keep the mail moving under an ever-increasing volume, I think he would be extremely thankful for the dedication and the tireless ingenuity of the 500,000 fine American citizens who make up our work force.

The annual growth in our mail volume is staggering and it accelerates every year.

We anticipate an overall volume for this fiscal year of 61 billion pieces of mail—more than all the rest of the free world put together.

That would mean an increase of about 3 billion pieces over last year.

The amount of that expected increase alone, 3 billion pieces in 1 year, is equivalent to the entire mail volume of Holland. It amounts to one-third the mail volume of France and one-sixth the mail volume of England.

A large percentage of our post offices were built in this country 50 years ago, and with the volume growing so swiftly, it is obvious that we cannot long continue to give truly 20th century service out of inadequate 19th century facilities. We simply must modernize our postal plants all over the country, just as we have here in St. Petersburg.

I would like to point out also that the Post Office is forbidden under existing law to plow back any part of its revenues into a modernization program, as would be the case in any other normal business operation.

We don't get the use of our revenues at all—they are turned over directly to the Treasury. We live under congressional appropriations under fiscal limitations set by the amounts of money voted by Congress for us to spend.

During the past 4 years the Post Office Department has gained valuable experience from its leasing program whereby about 2,000 new postal buildings have been built to our specifications by private investors and leased to the Department.

These postal buildings pay local taxes, are sound investments for their owners, eliminate the need for Government capital, and insofar as the taxpayer is concerned, they are economical, in that they are more efficient for modern mail-handling methods.

The new buildings erected to date have been leased at less cost per foot than older, less satisfactory space.

During this same period of time, the Post Office Department has had a research and engineering program underway whereby modern mechanical mail-handling equipment has been developed to the stage it can now be introduced in new postal facilities.

The only capital investment made by the Government under these conditions is for mail-handling equipment and vehicles for these new buildings.

The balance of the funds, probably up to eighty percent of the total, comes from private investors.

The Post Office Department today is losing about $700 million a year, primarily because we are forced to charge postage rates that are ridiculously low.

Postage rates on your first-class letters are the same today as they were in 1932—and, since that time our costs have increased about 108 percent. Furthermore, considering the decrease in the purchasing power of the dollar, a letter taking a 3-cent stamp in 1932 would cost 6 cents today.

Any business on earth which attempted to operate by charging 1932 prices and paying 1958 costs would go bankrupt—and the Post Office is no exception.

No one in this administration has ever claimed that the Post Office should make money. We perform some public services which have little or nothing to do with the postal service itself—and the cost of these services should be borne by the taxpayer and not by the actual users of the mail.

But the cost of these public services has been grotesquely exaggerated by the opponents of any increase at all in postage rates. It is relatively minor in respect to the overall postal deficit; about $30 million in contrast to a $700 million deficit.

The fact is that, if one excludes these public service items from our postal costs, then the Post Office traditionally was run on a break-even basis from its very inception up until 1947—and in the years since the war skyrocketing costs and static postage rates have combined to bring about a nearly $6 billion combined deficit for those years.

Here is another point to remember. First-class mail—the ordinary letters you write—has traditionally paid about 40 percent more than its cost. It is the preferred service and should pay more than its cost.

But today—because of rising costs and static rates—first-class mail—for the first

time in history—brings in less money in revenues than it costs us to handle it.

So, the postal deficit has nothing sacred or traditional about it. It has no historical significance. It is purely and simply a post-World War II inflationary phenomenon.

The United States is the only major nation in the world with a substantial postal deficit.

And, despite the fact that we pay, by far, the highest wages of any country, and are faced with the highest transportation costs—we charge the lowest postage rates of any major country in the world.

The reason I mention all this is quite simple. Right at this moment the Post Office Committee of the Senate is considering a bill to increase postage rates.

The bill passed the House of Representatives last year—and I want to pay special tribute today to the efforts of your own fine Congressman, WILLIAM CRAMER, in supporting our policies over the years. BILL CRAMER has done a terrific job representing you in Washington—and has done a terrific job in supporting the policies of President Dwight D. Eisenhower. You should be proud of him.

The rate bill which is so vital to the future welfare of the postal service is closer to passage now than it has been at any time during the last 5 years.

President Eisenhower, as you know, has asked the Congress to raise postage rates even higher—to 4 cents for local letters and 5 cents for out-of-town letters.

Last Tuesday night he outlined a $2 billion modernization program for the postal facilities of the Nation.

The Government's share of this program—about $875 million in 5 years—would come from applying that extra penny in the nickel out-of-town letter rate to modernization purposes. The remainder—approximately $1.5 billion—would be supplied by private capital, which would provide and lease real estate and buildings according to our specifications.

This program—which depends upon a 4-cent local and a 5-cent out-of-town postage rate bill being passed—could revolutionize our postal service and keep it the most modern in the world for the next two decades.

This administration of your postal service will never be satisfied until we can guarantee next-day delivery of your letters between any two cities in the United States.

Although we have made progress—considerable progress in speeding up the mails—we are still a long way from that goal. We shall never reach that goal unless we can modernize our postal facilities and install modern automatic devices which will move the mail through post offices much more quickly than it is moved today.

We have developed, with the help of the electronics industry and the United States Bureau of Standards, a series of mail-handling devices, some of which are unique in that they represent entirely new art in the field of handling mail. For instance, we are now putting together in the Washington post office a culling machine which is capable of sorting letters from all the other types of mail that comes into our post offices. This machine culls out large envelopes, assorted packages, and even such items as hotel keys, and delivers separately letter-size mail which is then available to go into an automatic facing and canceling machine which we will have operating no later than this June. This machine will take the culled letter-size mail and face it; that is, turn it so it can be made ready for canceling, and cancel it at the rate of 30,000 letters per hour.

We also have developed a unique sorting machine which will take the canceled letters and present them to an operator who will read the address and punch a key on a keyboard which will then drop the letter in a slot corresponding to its destination. This first machine will sort letters to 300 destinations and we have under development a more sophisticated sorting device which will sort to 1,000 destinations.

In addition to these automatic devices, we have other equipment such as the Mail-Flo system which transports the letters mechanically through various operations rather than having to place them in hampers and push them around the floor by hand.

These devices will be of enormous benefit when they are placed not only in our huge gateway post offices but also in hundreds of medium-size post offices throughout the United States.

As I say—the postage rate bill—which is so important to the modernization of the postal service—is now being considered by the Senate Post Office Committee. We hope it will soon be considered by the Senate as a whole. If you agree that the United States mail service should become truly modern and efficient—even if it would cost you 5 cents a piece for out-of-town letters—I think your two United States Senators would appreciate having the benefit of your thinking. Every good public servant is grateful for receiving the opinions of his constituents as a guide to his decisions. Now is the time to let yourself be heard on this matter of tremendous public importance.

I would like to leave this thought with you before I conclude.

All over the world this Nation is looked to—with admiration or with envy, as the case may be—as the center and the ultimate rampart of personal and political liberty.

And one of the principal symbols and manifestations of that liberty is our postal system—the most vital and most personal system of communications ever devised by the mind of man.

Consider this for just a moment. Freedom and a free and uncensored postal system always go hand in hand. They must exist together. Neither one can exist without the other.

That is why the postal system, such as we know it, is always freedom's first creation and tyranny's first target.

Over half the world's surface today, men and women, created in God's image and intended by Him to be free—are denied any part of this freedom of communications which we take so much for granted. A word of criticism about the regime in power—if written in a letter—could place both the sender and the intended receiver between 12 gleaming muzzles and a wall.

Is it too much then to ask that this manifestation of freedom—our postal system—in this, the strongest and wealthiest Nation in the world, should be so efficient that it is the paragon of all postal systems everywhere, the envy of freemen and the despair of despots?

This is a matter that is almost entirely out of the hands of the postal administration. It is in the hands of the people of this country through our representatives in Washington.

We are hopefully awaiting the answer.

We know that people of this country want the strongest military defense and the hardest hitting military offense that money and brains can supply.

We also feel certain that they want the finest postal system in the world.

And we feel sure in our hearts that if the people know that a stronger defense and a truly modern postal service will cost them a 5-cent stamp, they will be more than willing to pay the price.

And with this thought in mind it gives me great pleasure to declare this truly modern St. Petersburg post office officially open for business.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the Cleveland (Ohio) Slovak News entitled "Newest News From Slovakia":

NEWEST NEWS FROM SLOVAKIA

(The following was the text of a radio address on the Slovak Hour, station WERE, on January 26, in Cleveland, Ohio, by Rev. Father Andrew Pier, O. S. B., managing editor of the Slovak News:)

Latest reports from the Slovak capital city of Bratislava indicate that despite the ironclad rule of the Czechoslovak Communist Party during the past decade in which it flooded Slovakia with thousands of Czech Communist officials, the country has experienced a strong resurgence of nationalism recently. At a meeting on January 9 and 10 in Slovakia's capital, the Slovak Communist Party, headed significantly enough by a Czech politician, Karel Bacilek, the latter complained that "bourgeois nationalism has become extremely effective in Slovakia in connection with the economic reorganization." He charged that the Slovak film industry, press, radio, and television, as well as the central administration, have become honey-combed with what he calls "former capitalists kulaks and former officials of the Slovak fascist state"(meaning the Slovak Republic which was established before World War II, and dissolved by the postwar Czechoslovak-Communist regime).

Bacilek's recommendation for a unified correlation for the entire Czechoslovak state was accompanied by denouncing Slovak separatism, that is, the aspirations of 4 million Slovaks to have their own free independent democratic state, as a movement supported by foreign reactionaries. In well-informed circles Bacilek's charges not only reveal the failure of the Czechoslovak repression of the Slovaks but prepare the way for another purge of unreliable elements (namely, the few remaining Slovaks in the Slovak regional government). The first to go in an immediate shakeup was Stefan Sebesta, Deputy Premier, who was replaced by Jan Stencl. A communique from the central committee of 61 of the Slovak Communist Party states that Sebesta has been dropped from membership and is accused of bourgeois (middle class) nationalist deviations.

Not content with the religious and political domination of Slovakia, the Prague-directed Communists who gradually liquidated Slovak Communists like Husak and Novomesky, are now determined to purge even the small group of minor native officials in their homeland. The drive to crush Slovak opposition to the postwar regime today, after more than a decade of rule by terror, repression, liquidation, imprisonment, and persecution of people because of religious and political beliefs, is manifestly an admission of the failure of the Czechoslovak regime to destroy the Slovak nation's will to resistance in Czechoslovakia. In a public statement Bacilek, who is the Secretary of the Slovak Communist Party, declared that the struggle against bourgeois ideologies and nationalism, as well as revisionist tendencies, will be intensified. Moreover, the economic

exploitation of the Slovaks and their lands is indicated in Bacilek's words that there is an economic decentralization in Slovakia—and since all Slovak officials in the administration are charged with being tools of foreign reactionaries they must be removed, according to the all-powerful party secretary who gets his orders from Prague. Another series of arrests, trials and conviction are foregone conclusions in Slovakia. And another chapter of injustice, persecution and man's inhumanity to man will be written on the indelible pages of history.

The New York Times and St. Louis Post-Dispatch carried several interesting articles on these latest developments in mid-January. Thanks to Mr. John Sedlacek of East St. Louis, Ill., for sending several of these invaluable newspaper clippings to me. They are a welcome addition to our Slovak Institute Historical Archives in Cleveland.

This, then, is the picture of Slovakia in our times. A country of 4 million freedom-loving people who declared their national independence before World War II, maintained it during the war only to have it snatched away from them by the so-called liberators. Slovakia is still suffering under the Red cloud of tyranny of the Czechoslovak Communists who came to power after the war.

The new policy of repression is official. The reports have been confirmed by all the international news agencies during the past week.

In view of these developments, the situation calls for a complete reorientation of the outlook of the free world. We must no longer allow ourselves to be hoodwinked and befuddled by erstwhile allies whom we befriended and aided in their hour of trial, for they have sold out freedom, democracy and human rights because of self-interest and expendiency. Instead, we must help those small nations that have kept the faith despite prolonged oppression. Among these is the Slovak nation that has endured 13 years of suffering for its faith in freedom and freedom of religion. Any nation that has been tried by the fire of persecution and has remained firm in its resistance to the forces of evil deserves our admiration and support. Such is the Slovak nation from which we proudly trace our ancestry. We have always cherished our heritage for which so many Slovaks suffered and died not only in centuries in the dim past but in our own times. We hope and pray that Slovakia will soon see the rebirth of its lost freedom.

Letter From Family Farmer Illustrates Danger to National Economy Inherent in Present Farm Depression

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 3, 1958

Mrs. KNUTSON. Mr. Speaker, in another place in this RECORD there is reprinted an editorial which gives clear warning of the prairie-fire character and danger of the present farm depression. A letter has come to me which directly and clearly illustrates the editorial's point. Under unanimous consent, I include in the RECORD the letter from Mr. Walter Maack, a farmer of Fergus Falls, Minn.:

FERGUS FALLS, MINN.,
February 17, 1958.

DEAR COYA: Thanks for sending me a copy of the hearings of Subcommittee on Family Farms held at Fergus Falls. I did not get to testify, so would like to let you know some of the problems since then.

Four of us brothers started farming all in Otter Tail County. I stayed on the farm, the rest sought employment other places. Two went in the iron mines and the other one in the airplane factory. The two that went to the mines have been unemployed for sometime and the other one says the contract for building planes ran out in June. So how can we that do what our Secretary of Agriculture recommends survive?

By the way, we all own our farm or have bought them.

Making this brief, if you would like more information on this please feel free to ask for it.

Thank you again.

WALTER MAACK.

You can use this letter for helping farm legislation if it will help any.

The Nickel May Regain Power Via Post Office Coup

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 10, 1958

Mr. CRAMER. Mr. Speaker, I have long enjoyed the column, presented daily in many of the papers in the country, written by Robert Ruark. In the item he has written appearing in the Miami Herald, which I have included here for the RECORD, I find that his very fine sense of humor has been used to bring several important points in regard to the present postal dilemma into sharp focus. I am pleased to include this article for the information of the Members:

NICKEL MAY REGAIN POWER VIA POST OFFICE COUP

I can see no quarrel with Ike's idea of the 5-cent stamp for intercity letters, if only for the reason that it would bring the nickel back to common usage and perhaps restore a little of its badly tarnished dignity.

Pennies, even from heaven, don't mean anything any more. Tacking a couple of extra coppers on the stamp act would hurt nobody severely, and it would give the Government another 700 million bucks to waste on false friends abroad.

It is time the nickel came back to view. I remember well when it had dignity and strength in the market.

Two nickels made a dime, and a dime would buy you two hamburgers or a thick milkshake.

But about all a dime will buy you today is a phone call.

I foresaw possibly the world's end when the phone people upped the price of speech from 5 cents to 10 and was moved, in collaboration late one night with an itinerant musician named Joe Hushkim, to write a song called The Fickle Nickel Blues.

This song aroused widespread disinterest, even from the rippling right hand of Master Bushkin, but it was a sad, sad song, and poignantly indicative of the mood of the century.

The only really appreciative audience to this threat to Gershwin was Bernard M. Baruch, who had been preaching the ills of inflation for some years, and he reckoned that if our ditty did not comprise pure art, it sure as hell put the finger on what ailed the country.

But if I am paying this wistful currency, 5 cents, for a mere stamp, I want a little more action out of the Post Office Department for my dough.

I want Saturday afternoon and Sunday delivery, for instance. Telephones work on Sunday. The telegraph works on Sunday, and certainly the letter is as much a valid means of communication as phones and wires.

Instead of handing another bundle to some ingrate of a foreign neighbor who will promptly ask for more or threaten to turn to the Communists, I would like to see the United States post office spend the extra loot on streamlining itself and bring itself up from the days when post meant a guy galloping along on a horse with a letter in his teeth.

You cannot knock the airmail, which has to fight weather conditions.

I wager I can send a letter faster from London or Paris or Barcelona to New York than you get an ordinary letter from Brooklyn to Manhattan.

There must be some sort of possible reform in mail handling, and this extra dough ought to be devoted to it.

Speaking seriously, I think we have always paid too little for a service more necessary than speech, and there is no real reason why people who use the mails should not pay more.

The Virtues of Debate and a Free Press

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 4, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the able Washington correspondent of the New York Post, William V. Shannon, wrote the other day that—

It is one of the paradoxes of our political system that the House of Representatives often has good debates but nobody pays any attention, while the Senate rarely has debates in any real sense but the press and the public pay much closer attention to its proceedings.

Within the past year a perceptive journalist has written that the House is not "carrying its weight" and is in danger of becoming a rubber stamp for the Executive, while another veteran Washington reporter has termed the Senate "the one touch of genius in the American political system."

Now it is evident, as the gentleman from Arizona [Mr. UDALL] observed in a major article in the New York Times magazine of January 12, 1958, that—

Cubits are added to the stature of the Senate by the ease with which some of its Members catch the public eye. Although Senators speak for entire States and deserve greater attention than Representatives, their reputations frequently loom larger than life as a result of preferment accorded them by newsmen. A striking example of this type of upstaging occurred in 1955 when a policy statement issued by 20 of my colleagues got footnote treatment in the press; and a Senator, to our chagrin, made the front pages a week later by advancing the same ideas.

The situation has not changed one iota as far as this uneven treatment by the press is concerned. On Monday, January 27, 1958, a number of my colleagues and I engaged in a debate on foreign policy. The New York Times, which last

year compared the House unfavorably with the Senate, failed to carry a line about this House debate. A week later, however, the New York Times carried a front-page account of a speech on foreign policy and disarmament by one of the ablest of contemporary Senators.

Mr. Shannon's comment on the virtues of debate is so important that I include it here for the information of my colleagues and I invite comment upon it. I also include a letter and two editorials which I think will be of interest:

[From the New York Post of February 9, 1958]

THE VIRTUES OF DEBATE

(By William V. Shannon)

It is one of the paradoxes of our political system that the House of Representatives often has good debates but nobody pays any attention, while the Senate rarely has debates in any real sense but the press and the public pay much closer attention to its proceedings. The difference between the debate on foreign affairs in the House on January 27 and the speech of Senator HUMPHREY, (Democrat, of Minnesota), in the Senate this past Tuesday underscores this paradox.

A good debate is one in which the participants direct their remarks to one another (not to the press gallery, the folks back home, or the universe), "mix it up" with some spontaneity (not simply read a prepared speech), meet the intellectual issue in dispute, and develop some rewarding information and ideas through give-and-take.

By these standards, the House had a debate; the Senate had a production.

HUMPHREY, the chairman of the Senate Disarmament Subcommitte, had prepared an interesting and carefully developed address on disarmament and its wider ramifications for our entire foreign policy. This is a coptroversial subject worth everybody's attention, but throughout Tuesday afternoon the Republican side of the Senate was empty. Individual Democrats drifted in from time to time, but their questions and interjections did not constitute a debate. It was a genteel colloquy hedged around with the swollen courtesies in which the Senate delights ("I am pleased to congratulate the very able and very distinguished Senator * * *").

HUMPHREY, however, like most Senators, was trying to speak not to his colleagues but to the Nation. He succeeded. His speech made the front page of Wednesday's Times, a paper which had not carried a line about the House debate of the week before. (Your correspondent writes from a glass house: he wrote a news account of HUMPHREY's speech and did not cover the House debate.)

Representative BENTLEY, (Republican, of Michigan), opened the debate in the House. He had 60 minutes of time, in which he delivered a lusty defense of Secretary Dulles, pointedly and properly raised the issue of whether Dean Acheson was speaking for the Democratic Party in his recent statements. He generously yielded time to colleagues on both sides of the aisle for questions and comments. BENTLEY said nothing earthshaking, but if President Eisenhower is going to insist upon keeping Dulles in office, then some Republican Congressmen ought to defend that decision. BENTLEY saw his partisan duty and did it.

Representative REUSS, the thoughtful second-term Democrat Congressman from Milwaukee, then received 60 minutes to answer for the Democrats. REUSS is one of the more active of the 20 or more "Young Turks" on the Democratic side in the House.

It is both significant and unfortunate that these younger men, most of them first- and second-termers, come generally from the marginal districts, not the safe seats. This means waiting to obtain power through seniority is rather unpromising for them. The very intellectual qualities that make them useful Members stir them to impatience with the House. (Does anybody rally care what I do here? Is anybody listening?) This impatience prompts them to make often suicidal bids for seats in the Senate; and so, either through defeat for the House in national landslides like 1946 and 1952 or through the risks of senatorial ambition, they are often lost to national politics.

REUSS' remarks serve to remind us that some members of the Democratic Party in Congress do try to keep intellectually fresh and alive on great foreign policy issues.

He recalled that in March 1955 he and 16 other House Democrats proposed the neutralization and demilitarization of a unified Germany and of the Russian satellites once they are freed. Again, in December 1956, after the horrof of Hungary, 12 members of this group wrote General Eisenhower suggesting, among other points, the following:

"Creation of a demilitarized area without the capacity to make aggressive war for 1,000 miles from the Rhine to Russia's historic boundaries, and with demilitarization and the security of the area guaranteed by the East and West."

The signers of this proposal were REUSS, ADDONIZIO (New Jersey), RODINO (New Jersey), RHODES (Pennsylvania), MACDONALD (Massachusetts), ASHLEY (Ohio), BOYLE (Illinois), DINGELL (Michigan), MCCARTHY (Minnesota), SISK (California), and ROOSEVELT (California).

Speaking for himself, REUSS renewed his plea for military disengagement in Europe.

Whatever the flaws in his argument, REUSS and the colleagues who joined him in that little-noticed debate in the House a fortnight ago performed a public service. They helped to keep alive the tradition, if such it can be called, of party debate, critical responsible concern and openmindedness on foreign affairs.

As REUSS observed, "if Mr. Kennan were a member from Pennsylvania, as he might have been, and Mr. Acheson a representative of the District of Columbia in this body—and who would be a better one when home rule for the District comes true?—the marvelous vehicle of debate would, I am sure, with all of us participating, narrow the differences between them, and between us and each of them, and produce a stream of new ideas that no one person had in the beginning. Because we debate, we have an advantage. We should do more of it."

The Congressman may be overly optimistic about the stream of new ideas likely to flow from debate, but there is no doubt that the House—and the Senate, too—should do more of it. Debate is one way to induce thinking, and only thinking can save us.

NATIONAL COUNCIL OF THE
CHURCHES OF CHRIST IN THE
UNITED STATES OF AMERICA,
New York, N. Y., February 11, 1958.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives Office Building,
Washington, D. C.

MY DEAR MR. THOMPSON: Thank you for calling to my personal attention your participation in the foreign-policy debate on Monday, January 27, as recorded in the CONGRESSIONAL RECORD which you sent to me, with your speech on pages 948–950. While we do have the CONGRESSIONAL RECORD read for us, I have taken the time to give my personal attention to this interesting debate.

I was encouraged by the general direction of the debate on both sides of the aisle. Your statement is a crisp, orderly presentation of some of the important issues and principles which are strategic for decisions which must be made at this time. I find considerable agreement between some of the principles which you have set forth and some of those which the churches represented in the national council have advocated.

I was interested in your other points of participation in the debate as well, and the way in which you put certain of your points about the necessary support for the reciprocal-trade program and other constructive policies.

I was interested in the parallels between some of your thinking and some of that which we have been doing in our department in these weeks. I have written an editorial for our publication, the Outlook, of which I am sending you a copy under separate cover. In the editorial, from a nonpartisan perspective, I attempted to make some of the same points which I discover you making in this debate—such as the need for more imagination and more demanding programs which will elicit the kind of response which I believe the people of our Nation will make to inspired leadership.

Again, may I express my appreciation to you for calling to my attention this particular debate and your significant part in it. I am inclined to agree with the remarks of your colleague, Mr. UDALL, that it was a most useful occasion when Members of the House could engage so early in the session in such serious debate on foreign policy, and that these are some of the House's finest moments.

Sincerely yours,

KENNETH L. MAXWELL,
Executive Director, Department of International Affairs.

[From the Outlook, National Council of Churches of Christ in the United States of America, February 1958]

BILLIONS FOR DEFENSE; BUT HOW MUCH FOR PEACE?

Two tasks face us as a Nation now, said the President in his state of the Union message: One, "to insure our safety through strength." The other? "We could make no more tragic mistake than merely to concentrate on military strength. For if we did only this, the future would hold nothing for the world but an age of terror. * * * And so our second task is to do the constructive work of building a genuine peace. We must never become so preoccupied with our desire for military strength that we neglect those areas of economic development, trade, diplomacy, education, ideas, and principles where the foundations of real peace must be laid."

In his call to "wage total peace," the Chief Executive specified action items which he called "imperative": mutual aid, mutual trade, science cooperation, education, and research, disarmament, persistent negotiations, and other works of peace.

He declared that such actions demand two things of the American people: "sacrifice and of high degree of understanding."

But when the administration budget for 1959 went to the Congress, within a week, where was the call to "sacrifice," the understanding" of the revolutionary nature of this period of history?

For the military task—for defense—some increase was proposed. But for the "constructive work of * * * peace"—for mutual aid and cooperation in international affairs through 1959 budget expenditures—the President actually requested less than last year.

The tragedy of this timid response in the new nuclear-space era is clearly seen in the statistics: For defense—over $45 billion. For international aid and cooperation—about $1.3 billion. Amounts for education, science, information services, and other works of peace, to say nothing of other strategic domestic programs, are also correspondingly small. It should be kept clear that, while this budget is the biggest peacetime budget in dollars, it is not so in proportion to population, buying power, or gross national product.

But why should Christians be concerned about such mercenary measures as budgets? Budgets can be a symbol of relative values. Jesus declared of men, what can also in this case be true of nations: "Where your treasure is, there will your heart be also."

Where is the heart, the sense of values of the people of the United States? Does it center on military preparedness almost to the exclusion of other concerns for other peoples of the world?

Representatives of the churches at the general assembly of the National Council of Churches, addressing themselves to the present crisis, called for balanced concern for the whole range of problems confronting us.

They declared that "the present crisis with its dangers and opportunities, while partially military and scientific, is of broader and deeper nature. It is also educational, political, psychological, economic, diplomatic, and cultural. Even more fundamentally, it is moral and spiritual." They urged: redoubled efforts for reduction and regulation of armaments toward the goal of world disarmament in the framework of the United Nations; more science, "primarily to promote human well-being and values"; more emphasis on education, and in the humanities as well as the sciences; recognition of the basic needs of the newly developing areas of the world; making maximum use of the United Nations and strengthening coalitions in accord with the U. N.'s purposes in responsibilities for economic, political, and social well-being of people. They called for new United States initiative in constructive economic, political, diplomatic and ideological policies and programs.

In separate action on international aid and trade the general assembly declared: "As Christians we feel compelled to give our special support to the further development of foreign economic policies of the United States which will reflect our interest in man's welfare in other countries as well as in our own. We believe that constructive policies of international aid and trade are essential to the creation of conditions of peace with justice and freedom."

The policy statement supported the principle of the Reciprocal Trade Agreements with the hope that this program will be extended for at least another 5 years without weakening amendments. It also endorsed United States participation in necessary international machinery such as is planned for in the proposed Organization for Trade Cooperation. It also asked for measures to assist areas, industries, and people adversely affected by efforts for the larger good.

On mutual aid, they declared: "Both private and public aid, in the form of technical cooperation and capital is indispensable."

In summary, they said: "This assembly advocates balanced, expanding programs of international aid and trade."

The churches have taken such actions and others in these crucial weeks. They have hoped that officials in our Government, both in the administration and in Congress would take new power initiatives in constructive actions for developing the conditions of justice and peace.

Now have come the administration's proposals for so relatively little for the works of peace. What then should the churches do? The churches have a three-fold responsibility: to support as fully as possible the admittedly limited administration proposals, where they are in keeping with their principles. To encourage possible new initiatives in Congress. To judge society, including Government, which means not simply condemning, but evaluating proposals and performance and setting prophetic goals toward which Government can move.

The churches have a prophetic responsibility for suggesting that magnitudes of economic and technical aid should be multiplied to be more commensurate with military expenditures. Possible objections raised about such expenditures in a period of economic decline actually point to an argument for more mutual aid, because more than 75 percent of expenditures for mutual aid find their way directly into the United States economy in payments for goods and services.

The churches have a prophetic responsibility for suggesting that motivation is also crucial in what our country seeks to do in mutual aid and other works of peace. An obvious reason for stepping up such programs is the effort to restrain and reduce Communist influence in the world. However, anticommunism alone is not sufficient motivation for adequate United States international undertakings. Even if there were no Soviet Communist threat in the world, our Nation would have major responsibilities toward the rest of mankind.

In an interdependent world of revolution with hundreds of millions of people in scores of nations seeking bread, health, dignity, and freedom, the United States must be more responsive to these aspirations. Policies and programs must be developed to help meet them.

Both in our own national self-interest and in our responsibility to the human race in an interdependent, revolutionary, nuclear-space era, the United States must take massive new initiatives. As one of the wealthiest, most powerful nations on earth, our Nation should develop economic, political, and ideological programs which will help the peoples of the world to help themselves in meeting basic human needs and aspirations.

The call of the new president of the National Council of Churches in his inaugural address for massive reconciliation and works of peace has struck a responsive chord among hosts of people from coast to coast. Now, with Government making only such limited proposals, and primarily military ones, for meeting the present crisis at the threshold of the nuclear-space era, will other church leaders and ministers and laymen across our land speak out to those in government and to public opinion, expressing real leadership by the people demanding much more imaginative and extensive programs in the things that make for peace?

TIME FOR MORE CHRISTIAN INITIATIVE

How will the church respond to the challenge of the nuclear-space age?

We are crossing the threshold into an era of fearful and awesome proportions. Old defenses have become obsolete. The new concept, we are told, is active defense—stopping war before it starts.

But there's another side to the picture. Apparently the vast majority of all people everywhere want peace; not arms control, but peace. They are growing insistent about it. If everyone everywhere knew this, it might make a difference. Peace can be waged as well as war.

Moscow has successfully seized the initiative in the launching of earth satellites. But in an all-out "peace offensive" the initiative can only be taken by those whose concept of the brotherhood of man is derived from a humble recognition of the fatherhood of God.

Perhaps it was for just such a time as this that there came into being a National Council of Churches in 1950 to provide machinery for effective cooperation. It can be used for whatever the situation may demand, if enough Christians are disposed to make use of it. This is a day in which neither nation nor denomination can hope to stand alone, and in which the strong must help the weak. It is a day for the churches to resolve to do nothing separately that can be done better together.

It may be that the critically important potential of radio and television will make these mass mediums the catalysts to unite the churches on a course of action geared to the world situation. The cost of using them effectively comes high. It forces a consideration of how this use shall be related to all other means of furthering the churches' objectives, and what new strategy it demands of the church locally, and of the individual Christian.

Many communions—Methodists, Presbyterians, Baptists, Lutherans—have been giving consideration to what may be involved in using these mediums to meet the challenge of the hour. So have the national council's major departments and its broadcasting and film commission. The radio-TV leaders of councils of churches have formed a Council Broadcasters' Fellowship and are cooperating in a nationwide study of the religious use of radio and television in the major cities. The national council's general assembly approved a study commission on the role of radio, television, and films in religion. Conversations are being carried on at the station and network levels, and between the faiths, on the function and importance of religion in the broadcast schedule. Bold new experimentation, aimed at making the broadcasts themselves more potent and at involving the church locally in an active partnership, is in process. Very special attention is being given to the program needs of children and youth. Negotiations are afoot for better broadcast hours—when the "faithful" can see and hear what they are being asked to support and to promote. Electronic improvements are not far off that may revolutionize American television by making programs available in all parts of the country at the same clock hour.

Much of this is on the agenda of the broadcasting and film commission at its mid-February meeting in New York City. In a very real sense "all the past is prelude." Like the Israelites, who were given the promised land "to go in and possess it," we too are the people of a promise. We, too, have a part in its fulfillment: the all-out exercise of our Christian initiative.

Need for Improving the Condition of Older Persons

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. CRAMER. Mr. Speaker, press comments regarding the innumerable bills introduced into the Congress dealing with older persons has been infrequent.

A number of articles have, however, appeared during the past month in the Vintage Years, a syndicated newspaper column for senior citizens. They are written by R. O. Beckman, a recognized authority in the field of aging, and executive director of the Senior Service Foundation, a nonprofit corporation in behalf of older persons. Its headquarters are in Miami, Fla., although it has national objectives.

I commend to interested persons the following comments from the Vintage Years column which have recently appeared in the Newark (N. J.) News and other newspapers:

[From the Newark (N. J.) Evening News]

THE VINTAGE YEARS: WHY CONGRESSMEN GROW OLD—FIVE HUNDRED BILLS ON AGED CONFRONT CURRENT SESSION

(By R. O. Beckman)

Your Congressmen deserve your tolerant sympathy, and perhaps your pity and prayers.

Not only are they expected to support more expenditures for defense and to anticipate boosts in taxes and the national debt but they will be faced with a thousand other difficult decisions—all in an election year. Among the demands that cannot be overlooked are those of senior citizens existing on fixed and inadequate incomes in a day of inflation. In this area alone your Congressman is being asked to consider more than 500 bills affecting older persons.

It looks as though Congress will have to teach all of us that we cannot have our cake and eat it too, if we want to preserve our freedom in the world and also keep our older generation from starving.

Bernard Baruch says that western democracy will be defeated unless it is willing to make necessary sacrifices through self-discipline and thrift. More taxes mean tightening our belts, curtailing private expenditures, and getting our money's worth for what we spend in Washington and at home.

Economists make it clear that the growth of our basic resources can provide for the nonworking aged at an increasingly generous level.

Among the bills before Congress are 13 for establishment of a special unit in the Department of Health, Education, and Welfare in behalf of seniors and 11 for temporary study commissions to suggest more suitable answers to questions of old age and security. Six bills propose a flat benefit national pension program, including the Townsend plan. Health insurance is involved in 23 bills.

EDUCATION PROPOSAL

Others call for adult education, recreation, and housing, and affect income tax provisions. The largest number propose various changes in the coverage, benefits, beneficiaries, retirement or eligibility age, and earnings restrictions of the Old Age and Survivors' Insurance Act. Numerous changes also are proposed in the Railroad Retirement Act.

The more important bills in the field of the aging which may reach the floor of Congress instead of gathering dust in committees will be reviewed in a subsequent column. In the face of pressure for action in so many other areas, our senior team will be lucky to gain a few yards in the 1958 congressional scrimmage.

There will be support, however, from a number of sources. Organized labor is stepping up its drive for health protection. Labor Secretary James P. Mitchell is a staunch friend of those in the second half of life. He may be expected to exert himself to expand employment for older workers and to help prevent raids on senior benefits.

Senior citizens' clubs, which are blossoming widely, are not organized for lobbying but will be able to express themselves on proposed legislation. The clamor of the Townsend Clubs will help keep the pot boiling.

Lastly, but of prime importance, is the large number of Members of Congress who have taken the trouble to inform themselves of the predicament of a substantial part of our older population.

[From the Fort Lauderdale Daily News of January 13, 1958]

THE VINTAGE YEARS

(By R. O. Beckman)

"For age is opportunity no less
Than youth, though in another dress."

Soaring costs of medical care, of vital concern to the country's elder population, ought to command the serious attention of Congress also, despite the urgency of international problems.

A 78-percent rise in our annual expenditures for health care during the past decade is reported by Edwin S. Hewitt & Associates, consultants on employee-benefit plans. More than $12 billion was spent last year.

Inflation accounts for 40 percent of the increase; population growth for 21 percent, and increased use of medical services and facilities for the remainder. Medical service costs are reported to have increased nearly twice as much as the general cost of living.

Several million elderly retired persons live in constant fear of illness that may deplete their precious life's savings or force them to apply for public assistance.

Here's an example: an elderly man, stricken with a heart attack and other complications, was kept alive with an oxygen tent and many other services for 6 weeks although physicians had practically given him up.

When he died, bills for $5,000 were presented to his indigent widow. Since a county hospital was involved, the State had a lien on her home.

VITAL PROBLEM

Public and private welfare agencies are seeking frantically to cope with the rising medical needs of their clients. Longer life has swelled the ranks of the over-75 population most prone to illness. Emergency measures for medical care often cost more than is necessary and do not necessarily provide the best solution.

Many of the aged infirm in hospitals and institutions could remain happier and healthier, at less expense, if permitted to stay in their own homes with temporary assistance from visiting nurses and homemakers. The cost of institutional care for indigent oldsters adds to the taxes of younger wage earners.

About 70 percent of the entire population is covered by voluntary health insurance but less than half of the persons over 65 have such protection. Older persons are ineligible for most regular hospital and surgical insurance despite extravagant claims made by companies that are going all out to sell such policies.

The Blue Cross plan continues to renew policies for members after 65 but other companies scale down the benefits and may cancel policies with increasing age. Blue Cross claims more than 50 million subscribers but it is reported that rates are being boosted substantially in some States.

Only the well-to-do can afford to be ill these days. A census survey shows that nearly 40 percent of older couples with income of less than $3,000 a year receive no medical service compared with 25 percent of those with $10,000 incomes.

This appears to be largely because of the costs involved. Oldsters on old age assistance or limited social security benefits are hardest hit; there are few hospitals where service can be paid for in proportion to the patient's income.

Some relief was sought 2 years ago when President Eisenhower endorsed a proposal to have the Government coinsure or guarantee health insurance issued by reputable companies. Congress now has before it a number of bills proposing more extensive plans for health care.

From the viewpoint of the Nation's economy, the American Medical Association cannot be censured for its opposition to socialized medicine as exemplified in H. R. 3764, introduced by Representative DINGELL (Democrat, Michigan).

This national insurance act provides every kind of medical, dental, nursing, and auxiliary service free of charge to any individual. The Federal Government is expected to wave a magic wand and provide the billions of dollars that will be needed to pay for all of our doctor bills.

A more reasonable plan for medical service is that proposed by other House bills, of which H. R. 9467 by Representative FORAND (Democrat, Rhode Island) has the broadest scope. It provides 60 days of hospital service or 120 days of nursing home care for OASI beneficiaries. It thus broadens the base of the Social Security Act to furnish medical care as well as cash benefits.

[From the Camden (N. J.) Courier-Post]

THE VINTAGE YEARS: SENIOR CITIZENS HOLD IMPORTANT VOTE BLOC

(By R. O. Beckman)

Among the hallmarks that make the United States Congress an assembly of distinction is the statistic that 72 percent of its Members are over age 50. More than half of the Senators and nearly a third of the Representatives are, in fact, over 60. Some 57 Members of both Houses are 70 or more.

These figures raise the question of their effect upon the vote for legislation in behalf of older persons. The wisdom and experience that come with age normally supply better understanding of the socioeconomic difficulties faced in later life. Kindly and tolerant consideration of social security and old-age measures, more or less influenced by an election year, may therefore be expected of legislative timber that had been well seasoned.

Three obstacles must be surmounted, however, in order to improve the status of hundreds of thousands of older persons leading lives of quiet desperation.

FLASHBACK TO 1930'S

The first is the tendency to subordinate all other legislation to measures relating to national defense. The second is the trend toward economy in other expenditures.

Budget proposals already cut welfare and labor funds by 6 percent. It is unthinkable that Congress should withhold adequate funds for improvement to the social-security structure and in public health at a time of inflation, when standards of living for many retired persons are as low as they were during the depression of the thirties. That would revise Marie Antoinette's dictum: "Let them eat cake." The pump needs to be primed, not shut off.

The final point affecting the hopes of 15 million congressional constituents over age 65 is the difficulty of getting bills out of committee onto the floor where they can be voted on. Such action could be furthered if nonpartisan groups of senior Congressmen were to meet in caucus to decide on which measures should be put to a vote. Such a selection will be difficult.

WHICH COMES FIRST

A number of readers, including representatives of welfare agencies, have asked: Just what legislation should I encourage my Congressmen to support? Correspondence with authorities well versed as to the needs indicates that the following measures may be appropriate for consideration:

1. Proper recognition of the needs of an aging population by establishing in the Department of Health, Education, and Welfare, a bureau of older persons to plan, coordinate, and demonstrate necessary activities in this field. A typical proposal along this line is the Hill-Kennedy bill.

2. Extension of the security program to provide hospital and surgical benefits to OASI and old-age beneficiaries and cope with inflated costs of health care. The Forand bill (H. R. 9467) meets most of this need.

3. Removal of the limitation on the amount of outside income a social security beneficiary may earn. The St. George bill (H. R. 7141) is desirable.

BENEFIT BOOST PROPOSED

4. Increases in the payments available under the social security law, as proposed in a score of bills before Congress, also deserve consideration in view of the rise in living costs.

5. Provision for a national mortgage corporation to further the construction of housing for elderly persons, S. 1694, by Senator CLARK calls for this.

The foregoing measures, in order of relative importance, seem to be those on which realistic but conservative students of the issues at stake are likely to agree.

THE VINTAGE YEARS—REPRESENTATIVE ST. GEORGE HEADS FIGHT FOR OLD FOLKS

(By R. O. Beckman)

"For age is opportunity no less
Than youth, though in another dress."

St. George, according to the legend, slew the ferocious dragon and became England's patron saint. During the middle ages, English knights invoked his name in their battle cry as they assaulted the enemy.

Millions of Americans aged 65 or more now have another St. George dedicated to slaying one of the dragons that threatens their security. The Congressional Directory lists this 20th century champion as KATHARINE PRICE COLLIER ST. GEORGE. She represents 4 New York counties just north of the Jersey State line. The directory does not give her age, but says she was a member of the town board of Tuxedo Park for 15 years and a Member of Congress for 11, so you see she may have reason to be interested in middle-aged and older people.

IS DAR MEMBER

Representative ST. GEORGE is a member of a number of civic organizations and of the Daughters of the American Revolution. She comes from the same Hudson River country as State Senator Thomas Desmond, who has done more than anyone to advance State legislation in behalf of seniors.

This Congresswoman has raised the banner to wipe out restrictions in the social security law which cancel your benefits if you earn more than $1,200 a year. "I have a real grudge against Uncle Sam," says she. "He has forced 7½ million Americans into a below-par living bracket and held them imprisoned there."

"The Government urges business to hire older persons and then holds a club over the heads of those lucky enough to get a job. A man can draw social security if he makes $100,000 a year from investments—or the horse races—but not if he tries to earn a living by the sweat of his brow. We send money all over the world for foreign aid, yet ignore oldsters right under our nose who are trying to help themselves."

INTRODUCES BILL

Mrs. ST. GEORGE recently introduced H. R. 7141 to remove the ceiling from earned incomes. Opponents of the bill claim it will add a million names to the social-security rolls and cost an added $2 million a year. They do not mention that much of this would be offset by increased prosperity and income taxes from many who are not now working because of the fear of losing their benefits. The present $1,200 limit practically eliminates jobs for beneficiaries paying from $1,200 to $3,500. For example, the husband of a couple now receiving $162 a month has to earn at least 50 percent more than that to attain the average income of younger workers and improve his marginal living standard.

This forthright Congresswoman urges you to prod your elected Representatives to act. Congress has now adjourned to mend its fences back home and may be open to persuasion. If you believe the present restrictions unjust, you can send a letter to your Representative and your Senators telling them why, from your own experience, you think H. R. 7141 should be enacted.

HALTED CUTS

Another man to whom seniors are indebted is Representative JOHN E. FOGARTY, of Rhode Island. Almost singlehanded, he halted cuts in the United States Labor Department's budget last summer in such a way that they would not be at the expense of the older worker employment program.

Many older persons in need of work will doubtless rally to the banner of ST. GEORGE. A law which limits the constructive effort of individuals is a bad one and should be repealed.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Yarborough, Proxmire, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, ———, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 6920 32d St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

Appendix

History of Parliamentary Reporting in the United States, by Theodore F. Shuey

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. MARTIN of Pennsylvania. Mr. President, the older Members of the Senate will recall Mr. Theodore F. Shuey, who was Official Reporter of Debates of the Senate for 65 years, until his death in 1933.

Born in Virginia, he studied shorthand when he was 14 years of age, and went to college in Ohio. His college career was interrupted by his enlistment in the Pennsylvania reserves, and his service in the Union Army during the Civil War until the end of hostilities.

Sometime during his service in the Senate he wrote a brief history of parliamentary reporting in the United States, and it will be of interest to those interested in congressional proceedings, and to students generally. I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

HISTORY OF PARLIAMENTARY REPORTING, BY THEODORE F. SHUEY, OFFICIAL REPORTER OF DEBATES, UNITED STATES SENATE, 1868–1933

Very few speeches made in the Continental Congress were reported. Rev. John Witherspoon reported a number of his own, made between 1776 and 1782, and these are of immense value because of his interest in finances and the public credit. Dr. Witherspoon had been called from Scotland to the presidency of Princeton College in 1768, and he was of great assistance to the Colonies.

Although merely a compilation, Elliot's debates merit first mention because of their supreme importance. Jonathan Elliot was born in England in 1784, and coming to New York at 18, he was employed in a printing office. In 1810, when the war for South American independence broke out, he joined the forces of General Miranda and fought for the liberation of New Granada (Colombia) from Spain. He was wounded and captured, but in 1813 got back to the United States. His great work, Debates, Resolutions, and Proceedings on the Adoption of the Federal Constitution, in Massachusetts, Connecticut, New Hampshire, Pennsylvania, Maryland, New York, Virginia, North Carolina, and South Carolina, with the Journal and Debates of the Federal Convention, held at Philadelphia from May 14 to September 17, 1787, was published at Washington in four volumes, 1827–30, to which he added in 1845 the Madison papers, being that statesman's report of the debates in the Federal Convention. It appears that Elliot and his son settled in Washington and became extensive printers of Government and other publications.

David Robertson, of Petersburg, Va., made a stenographic report of the proceedings of the Virginia convention on the adoption of the Constitution. There is no reason to believe that there was a scarcity of reporters in New York, Philadelphia, or elsewhere, and the quantity of verbatim and near-verbatim reporting they did in that early day is quite striking.

When we come to the congressional debates and proceedings, we have the following:

Annals of Congress, 1789 to 1824, 42 volumes, including Lloyd's Congressional Register;

Register of Debates by Gales and Seaton, 1824 to 1837, 32 volumes;

Congressional Globe, by Blair and Rives, established in 1830, began publishing the debates in 1833, continued until 1873, 113 volumes; and

CONGRESSIONAL RECORD, by the Public Printer, from 1873 to the present.

Until the session of 1851–52, the Senate reports were published at the cost of the Globe proprietors. Before that date, the House had made a transfer of the per-column payment to that establishment. A daily Globe column was estimated at 1,600 words. The proprietors were paid $7.50 a column, of which the reporters received $4. The chief profit of the proprietors lay in the bound volumes furnished to Congress.

Until 1794, the Senate sat with closed doors and no report was made of its proceedings.

In the 2d session of the 1st Congress, January 15, 1790, a debate took place in the House on restoring the shorthand writers to the privileges of the floor, they having been relegated to the gallery at the preceding session. The sentiment in favor of the restoration appeared to be unanimous. Mr. Lloyd and Mr. Fenno were mentioned as the shorthand writers affected, but it was intimated that the privilege might be granted to others. In this debate, the shorthand writers, as they were uniformly styled, were commended for the accuracy of their reports.

Joseph Gales, Sr., was a Sheffield bookseller and printer. When a bookseller, he was attracted by a volume of Gurney's Stenography, and learned the art. Because of liberal sentiments, the publication of Thomas Paine's Tracts, etc., he fled to Germany in 1792 to escape prosecution. Three years later he arrived in Philadelphia, and was at first employed as a compositor by Dunlap & Claypoole, proprietors of the Daily Advertiser. Callender, the reporter of congressional proceedings for this paper, was dismissed, owing to blunders and other irregularities, and Gales was installed in the place vacant.

A recurrence of yellow fever, and the persuasion of influential politicians, led Gales to remove to Raleigh, N. C., in 1799, and become proprietor of the Register there. Here his son, Joseph Gales, Jr., perfected himself in his father's arts of printing and stenography, and attended the State university.

The first number of the National Intelligencer, established at Washington by Samuel Harrison Smith, was issued October 31, 1800. In 1807, Gales, senior, brought his son to Washington and offered his services to Smith. Two years later Smith took young Gales into joint proprietorship, and August 31, 1810, Joseph Gales, Jr., became sole proprietor.

Until he had the assistance of Mr. Gales, Mr. Smith was the only reporter on the Intelligencer. Gales, senior, returned to Raleigh and continued to publish the Register. In 1809 his daughter Sarah was married to William Winston Seaton, a young Scotchman who had made good on the paper owned by his wife's father. In 1812, Joseph Gales, Jr., made his brother-in-law a partner in the National Intelligencer. For 10 years after this association they reported the congressional debates without assistance, occupying seats beside the Vice President and Speaker, respectively. In 1822, Gales and Seaton employed an assistant reporter at $1,000 a session.

Gales reported Webster's reply to Hayne in 1830 and, that it might appear the following morning, dictated it to his wife, who wrote it in longhand. Gales had a beautiful home in a northeastern suburb of Washington, which he named Eckington, after the village of his ancestors near Sheffield. He was elected mayor of the city in 1827, as was Mr. Seaton in 1840, a position of great honor and dignity before the formation of the District Territorial Government in 1871.

Mr. Gales, the pioneer parliamentary reporter in Washington, died in 1860, having been connected with the National Intelligencer for more than 50 years.

We have now reached an important date in the political history of the country, the election of Andrew Jackson to the Presidency in 1828. The National Intelligencer was a Whig journal. When Jackson became President, he sought the establishment of a Democratic organ, and we pass from Gales and Seaton, shorthand writers, to Blair and Rives, employers of shorthand writers.

Francis Preston Blair was born in Virginia in 1791, and John Cook Rives was born in the same State in 1795. It chanced that both were taken to Kentucky at a very early age. Blair was a graduate of Transylvania University and became a journalist. He wrote for the Frankfort Argus a series of articles against nullification which attracted the attention of President Jackson, by whom he was invited to come to Washington. Rives had accepted a position under the Government in 1824 and was already there. The two founded the Globe in 1830, and in 1833 the Globe began publishing the congressional debates.

As time went on Blair severely criticized the southern Democratic leaders, charging them with designs to destroy the Union, etc., so that when Polk became President, in 1845, Blair's interest in the Globe terminated. The President offered him the mission to Spain, but he retired to his country estate at Silver Spring, near Washington, and became one of the founders of the Republican Party. Rives was sole owner of the Globe from 1845 until his death in 1864, when the Globe passed into the hands of his sons and a business manager as the firm of Rives & Bailey.

It was John C. Rives who erected the Globe Building, which stands on Pennsylvania Avenue between Third Street and John Marshall Place, and in which the debates of Congress were printed until the establishment of the CONGRESSIONAL RECORD in 1873. On the top floor of this building there were rooms fitted up for the reporters of debates, to which they would repair after the close of the daily session. The Globe appeared at noon, and, being in the ordinary newspaper style, it was frequently encumbered with many supplements. At the end of a Congress it sometimes fell 2 weeks behind. In

those days the bound volumes far outranked the daily publication in importance.

Richard Sutton, an English parliamentary reporter, sat in the gallery of the House of Commons with Charles Dickens and, coming to New York in 1838, was associated with the elder Bennett in the establishment of the New York Herald. It was his great ambition to found a corps of shorthand reporters, and he saw this possibility brightened by Isaac Pitman's invention of phonography. He abandoned his Gurney system and took up the study of phonetic shorthand.

In the 1840's, Professor Hart began teaching Pitman's phonography in the Philadelphia High School. One of his pupils, Dennis F. Murphy, born in 1834, became an adept in the art. Oliver Dyer, teacher and lecturer, employed young Murphy as a demonstrator of the new shorthand on a blackboard. Mr. Sutton saw this prodigy and made of him the strongest link in the corps which he formed and which began reporting the proceedings of the Senate for the Globe the first Monday of December 1848. Young Murphy took notes of the entire proceedings and corrected the transcript of the other reporters. These either wrote out their own notes or employed longhand amanuenses. As the Washington dinner hour was then 3 p. m., and the Globe did not appear until noon the following day, a session of 3 hours being regarded as a long one, the task was not extremely difficult.

A few years later, James J., the second Murphy brother, graduated from the Philadelphia High School and, becoming an expert reporter, assumed a prominent place on the corps.

About this time the House created the position of stenographers to committees. Mr. Sutton is my authority for the statement that Mr. Rives had this done in order to get rid of an incompetent reporter, who had a pull with certain members, and that two committee stenographers were appointed that the incompetency might be in a measure concealed. At any rate, the competent stenographer wrote Gurney's shorthand, and the incompetent one Pitman's, which goes to prove, if proof were needed, that after all, mentality, or the lack of it, may outweigh the merits of the system.

In quoting Mr. Sutton, I should state that he was a man of strong likes and dislikes, particularly the latter. He had a quarrel with the proprietor of the Globe which resulted in the Senate reporters obtained protection under the wing of the Committee on Printing, a practice now firmly established.

John J. McIlhone was another Philadelphia High School boy, who continued to be a House reporter until his death in 1891, when he was succeeded by the late Fred Irland.

Edward Vincent Murphy, who completed the celebrated trio of brothers, was born in 1843, and fresh from the Philadelphia High School, joined the Senate corps in 1860.

Theodore F. Shuey, the son of a Virginia farmer, learned shorthand at 14 and 15 as taught in the textbooks of Benny Pitman and Andrew J. Graham. After a somewhat varied career as a college boy in Ohio, a soldier in the Union Army, and a newspaper reporter in his native State, he came to Washington in December 1868, and was employed by Mr. Sutton.

March 4, 1869, Mr. Sutton retired and a contract for the Senate reporting was given to his principal assistant, Dennis F. Murphy.

In 1873, when the publication of the debates was transferred to the Government Printing Office, the reporters of the two Houses were in a position to state just what they wanted, and to get it. The 5 independent House reporters decided that they would be appointed by the Speaker at a salary of $5,000, and be removable for cause. Dennis F. Murphy made a contract with the Committee on Printing to do the Senate reporting for $25,000 a year, and this was ratified by a resolution of the Senate passed unanimously.

In December 1874, James J. Murphy died and his place was filled by Mr. Shuey.

In March 1896, Dennis F. Murphy died, and the Senate, on the report of the Committee on Printing, unanimously gave the reporting to Theodore F. Shuey and Edward V. Murphy. The latter died in July 1919, and his son, James W. Murphy, was given his father's place on a like report unanimously ratified by the Senate.

The 6 House reporters now receive $6,000 yearly, and the lump sum, equivalent to that paid to the House, is given for the Senate reporting.

In Defense of States Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. TALMADGE. Mr. President, on February 18, 1958, members of the General Assembly of Georgia had the privilege of hearing an address before a joint session by Hon. Louis C. Wyman, attorney general of the State of New Hampshire, and former president of the National Association of Attorneys General. His address was one of the most forceful presentations on the destruction of States rights through the usurpation of legislative authority by the United States Supreme Court I have ever read. In order that every Member of the Senate might have the opportunity to get the benefit of the conclusions of this noted authority on constitutional law, I ask unanimous consent, Mr. President, to have highlighting excerpts from his address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

No matter the precise phrase there is little doubt but what that great instrument through which Americans have devised perhaps the most satisfactory method of community living under a government of law and not of men, is being tortured out of all rational historical proportion by decision after decision of the United States Supreme Court which ascribe less and less meaning and importance to the 10th amendment and greater and greater scope to interpretation of the general powers delegated to the Federal Government. These decisions in their cumulative aspect seek by judicial fiat to encourage a philosophy of government patently contrary to that contemplated by George Washington and the great figures of our early constitutional period. Implicit in the rationale of recent decisions are certain basic assumptions concerning what is best for the American way of life, in reality judicial legislation which amends the Constitution to a point of usurping what has always heretofore been considered the proper function of the constitutional convention in our pattern of government. * * *

Much of what the United States Supreme Court has decided lately has been claimed to be in the protection of the individual. The Court has swung so far in this direction as to overly protect a motley collection of criminals, Communists, fellow-travelers, at the expense of an equally important obligation to protect some 170 million of law-abiding citizens and their local self-government. The principle of the rightful reserved powers of the States, properly preserved in a Federal-State partnership, has until now and will remain tomorrow the chief adhesive of our Union. This is not to say that there cannot be situations in which a State may by its actions deny the protection of the Federal Constitution to United States citizens within its borders. There have been instances of this since the commencement of our judicial system. * * * There will be instances in future days. For the determination of such controversies the Supreme Court is necessary and proper. Yet the delicate balance between the States and the Federal Government, and between individual citizens and both governments, depends for its preservation upon the reasonable application of the law by the executive branch and its reasonable interpretation by the judiciary.

Perhaps the most grievous invasion of States' rights in this decade has been the decision of the Supreme Court in *Commonwealth of Pennsylvania* v. *Steve Nelson*. Here a majority of the Court not only invoked the highly suspect doctrine of supersession by implication in holding that Congress intended to preempt State sedition laws, but interpreted the Constitution to permit to the Federal Government the authority to take away from the States their reserved right to make criminal acts within their borders seeking overthrow of the Government of the United States by force and violence.

I have always believed it to be elemental that an act of sedition against the United States Government is an act of sedition against Georgia or New Hampshire, or any other State in the Union.

Subversion designed to overthrow the Federal Government by force and violence is in itself an immediate threat to the safety and constitutional security of each of the States. * * *

The relationship between possible public disturbances and subversive advocacy among loyal citizenry is plain. That some States may see fit to be tougher on subversives than others is their own business. The Constitution does not authorize the Federal Government in, line, clause, or by indirection to take away from the States their fundamental reserved police power to so legislate in their own self-defense.

Since this decision in the field of national security, several other decisions of the Supreme Court have repeatedly disregarded the public record of Communist subversion both in this country and in many other countries around the world. * * *

In the teeth of all these distressing international developments, a majority of the Supreme Court of the United States has equated Communist activity in this country with lawful politics. It has strongly intimated if not held that at least as far as good moral character is concerned, membership in the Communist Party is apparently considered a mere matter of political association privileged under the first amendment. It has told the State bar association in California that in its view there is no reasonable doubt about the good moral character of an applicant for admission to the bar who refused to tell the bar examiners whether he was at that time a member of the Communist Party. It has told the bar examiners in New Mexico that contrary to their judgment and decision, it is denial of due process for them to refuse membership in the bar to an applicant who had a record of previous membership in the Communist Party and of several previous criminal arrests. It has rebuked Illinois in her internal rules of appellate procedure. It has denied to Nebraska the right to protect her citizens from the absolutism that is compulsory unionism.

It has prevented Michigan from ousting two local officials charged with crime. It has so restricted the period of detention

and circumstances attendant upon a confession as to make it infinitely more difficult to maintain effective law enforcement. It has so extended the concept of navigable waters as to invade what has always heretofore been considered the prerogative of the States in that field.

It has denied to the Legislature of the State of New Hampshire the power to investigate to determine whether the actual content of a compulsory lecture at a State-supported institution included subversive activity.

It has greatly interfered with the internal operations of the Federal Bureau of Investigation by requiring that FBI reports from a witness called in a criminal prosecution be made available carte blanche to defense counsel. And this last in a case in which even defense counsel only sought to have the reports screened by the Federal judge involved. In the light of the fact that the FBI does not have the subpena power, such a decision makes it most unlikely that informants of crime will be willing to expose alibis or make accusations of serious crime against gangsters and racketeers and dangerous criminals, for the simple reason that if Johnny Dio is going to see the reports made to the FBI, which include names, places, and other information, before Johnny is convicted and confined, the possibility of recrimination one would think too plain to miss.

In all of these ways the Supreme Court has not only deprecated the States interests in their own survival but has emasculated the 10th amendment. In practically none of these decisions was it necessary to go to the lengths to which the decisions have gone to reach the conclusions apparently desired. * * *

No matter the choice of words or the rationale of individual members of the majority, it is plain that the elements of partnership in State and Federal Government in the investigation of subversive activities and in many other fields ranging from North to South and from East to West, have by judicial decision been sharply limited if not destroyed. * * *

When we stop to realize that not only has the High Court emasculated our statutory law in the security field, but has also sanctioned protection of the dark corners of individual association with persons disloyal to America and made infinitely more difficult if not impossible the taking of sworn testimony relating to subversive activity in the United States, one wonders why? The Court appears to have suggested to America and to the world that in this land Communists and communism may not in fact be something which they have proven to be in every other place in the world. This is an amazing phenomenon that probably cannot be explained by a claim that the authors of such decisions are out of touch with reality. * * *

My friends, it is now State responsibility—in Georgia, in New Hampshire, in California, and in every State in the Union—to act together to stem this continued flow of power to Washington. I am not speaking of economic functions of government. In this field the President has appointed an important committee of governors to explore what the States can responsibly undertake in transfer from Washington. This committee, of which Governor Dwinell of New Hampshire is cochairman, has an authority that is primarily economic in scope yet it has a vital mission because unless the States are willing to undertake the responsibility of administering functions which are now administered by the Federal Government, there can be no restoration of such powers to the States. This important national committee is a sign of the good faith of the President in his promise to return to the States those functions they are willing and able to accept.

But committees and commissions, boards and agencies, are not the answer to repeated interpretations of the Supreme Court which by the process of judicial legislation ever narrows the influence and authority of the States.

While the process of constitutional amendment is available, it is also most unlikely, subjected to pragmatic test. Senator THURMOND of South Carolina has offered a resolution (S. J. Res. 145) to create a commission of Federal and State jurisdiction. This is a salutary move and it should be implemented at the earliest opportunity. By insuring fair representation on such a commission, if Congress pays serious attention to its recommendations when its work is done, there may result that recognition of an aroused public opinion that in some manner or other we must impress upon a majority of the Supreme Court.

If this is not done and if decisions such as these continue, I can see only tragedy ahead within these United States, because cooperation between the States and the Federal Government is a two-way street. If the Federal Government wants cooperation from the States, then the Federal judiciary should permit extension of real cooperation to the States, for the proof of any pudding is in its eating. If bar associations of the highest courts of the several States do not wish to qualify certain members as officers of their courts, the Supreme Court should not force them to do so. By assuming the ultimate question in review of such cases, the High Court has arrogated to itself the twin functions of judge and jury in passing upon the protestations of sunlit innocence from such applicants. Perhaps the local bar examiners did not believe them.

Finally, with your permission, I would like to address myself briefly to problems of public education. In spite of the militancy of the radical National Association for the Advancement of Colored People and the venomous bile of the Communist-dominated Civil Rights Congress, from both of which the South has suffered massive injunctions, many responsible citizens all over the country remain convinced that the normal function of control of public education is best preserved by the people of local action. This conviction has been the cornerstone of arguments of those who oppose Federal aid to education, in fear of ultimate Federal influence upon the texbook and the adolescent mind. The States, through their elected representatives in the Congress of the United States, have never legislated to require racially integrated schools.

Interpretation of the requirement of equal protection of the laws to force upon the people of a State a Federal social precept contrary to their settled social mores is a radical change from precedent and custom. Unanimity of decision makes it neither more convincing nor more acceptable to the South.

There is not time today to discuss the legal niceties of the use of paratroops and bayonets at Little Rock. As a matter of fact it is of no particular importance as to whether executive action at Little Rock was technically lawful or unlawful.

Hailed as a measure in protection of the rights of minorities, it in fact was probably the greatest insult to a State government that has ever transpired since our Constitution was adopted. * * *

It is reasonably certain that bayonets and force are not the answer to human problems of bigotry and racial tension. I find the incident at Little Rock especially unfortunate because conservatives were commencing to find bonds across party lines between North and South. This progress in gaining the support of people in the South, for governmental policies helping business and personal freedom, which are better for America than anything offered from other sources, has now been largely undone by what happened in Arkansas. It is also especially unfortunate because while intelligent Americans, even with stars in their eyes, are convinced that we cannot compromise our moral principles; being intelligent, they must recognize that neither can we be blind to commonsense application of personal values which are bound to encounter a great resistance to judicial or executive orders to jump into a melting pot—which has until now made America famous because of its free and voluntary qualities. This element of compulsion in haste has worsened race relations in the United States. It has worsened the reputation of the United States in those vast areas of the world where colored people constitute a substantial majority. This is a greater tragedy for its lack of necessity.

This Nation is composed of many languages, many races, many creeds living together under a document which permits a good deal of give and take. The very flexibility of the Federal Constitution has insured it continued strength against stresses and strains which in other lands have seen as many as 17 governments fall in 2 years. This document simply must not continue to be interpreted in such a manner as to throw out of kilter the great divider between the powers of the States and the Federal Government—the 10th amendment. The course of historical development of our United States must be turned from a direction of Federal paternalism to one of enlightened cooperation between sovereign States and the Federal Government—each working in its own sphere, with recognized division of authority and responsibility, in a spirit of partnership and not adversity.

Judge Matthes to Federal Appeals Bench

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an editorial which appeared in the St. Louis Globe-Democrat on Wednesday, February 19, 1958, Judge Matthes to Federal Appeals Bench:

JUDGE MATTHES TO FEDERAL APPEALS BENCH

President Eisenhower has made a commendable appointment in his nomination of Judge Marion C. Matthes of the St. Louis Court of Appeals to become a United States judge for the eighth circuit. The choice merits prompt ratification by the United States Senate.

The career of Judge Matthes shows a wide background in public service and a sound record on the St. Louis appeals bench. There is every reason he will prove an excellent selection to fill the vacancy on the eighth circuit court, created by elevation of Judge Charles E. Whittaker to the United States Supreme Bench.

This newspaper had urged the naming of United States District Judge Roy W. Harper to the Federal circuit post. Aside from individual bench records, which are good in both cases, the majority of reasons offered to support Judge Harper's candidacy are also realized in naming Judge Matthes. A Missourian of ability has been named so the State will have representation on this court. Judge Matthes is relatively young, respected in his profession, already proven a highly competent member of the judiciary.

All success to him in his new career.

Biography of James Harold Wallis

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. MARTIN of Iowa. Mr. President, death came last month to one of the most eminent sons of the great State of Iowa, James Harold Wallis. During a lifetime extending over more than 70 years, he brought credit to the State and to himself as a journalist, a public servant and a writer. I ask unanimous consent to have printed in the Appendix of the RECORD a biography of James Harold Wallis written for the Yale Alumni magazine by his one-time roommate and lifelong friend, John Robert Waller.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

BIOGRAPHY OF JAMES HAROLD WALLIS

(Written for the Yale Alumni magazine by John Robert Waller, Yale, 1905, LAW)

(Born at Dubuque, Iowa, January 23, 1885. Died at Scarsdale, N. Y., January 13, 1958.)

The Wallis and Waller families of Iowa have been friends for more than a century. Our fathers were roommates at Epworth Seminary, near Dubuque, and it was my good fortune to room with Harold Wallis our first year at Yale in 1902. We attended high school together in Dubuque. He was class valedictorian and prominent in athletics and other school activities. At Yale, he was class poet, editor of the "Lit" and Courant, and a member of Phi Beta Kappa, Zeta Psi, and Elihu Club. After receiving his Yale degree, in 1906, he engaged in the study of law at the University of Chicago, but decided not to follow that profession.

James H. Wallis was active in the civic and business life of Dubuque, in which he served as alderman and mayor pro tempore, from 1912 to 1917, and worked diligently for the betterment of his native city. He was one of the organizers of the Allison-Henderson Memorial Association in memory of Senator Allison and Speaker Henderson, and assisted in the Taft Presidential campaigns. He also served on the Organizing Committee of the International Bank of Washington, D. C., now presided over by Maj. Gen. George Olmsted, of Des Moines and Washington.

J. H. Wallis served as editor of the Times-Journal until 1919, when he organized the Dubuque Daily News over which he presided until called to public service with the American Relief in Belgium, and later as Special Assistant to Herbert Hoover in Washington. Under date of February 4, 1958, ex-President Hoover writes: "I knew Mr. Wallis well. He was able, conscientious, and a very promising young man. I encouraged him to strike out on his own." In behalf of his Government, Harold Wallis prepared the first daily summary of world events with analyses of editorial opinions. His devotion to literary pursuits took him from Washington to New York in 1927, when he moved to Scarsdale where he resided until the time of his death. In addition to numerous magazine articles, he was the author of 3 volumes of verse and 14 widely read novels and mystery stories, some of which were adapted to motion pictures. He is survived by his widow, 2 children, and 4 grandchildren, as well as 2 brothers and their families in Dubuque.

Always considerate of others, J. H. Wallis had a friendly nature, with exemplary traits of modesty, kindliness, and generosity. Possessing leadership and seriousness of purpose, he was highly regarded for his unusual qualities of mind and heart. Among his distinctive characteristics were a keen sense of humor and quick wit. He joined heartily in mirth and laughter. A man of innate refinement, he was highly respected and added dignity to any gathering he attended. He was intensely loyal to his friends, but an uncompromising foe of greed and injustice. Measured by his years and many activities, he had reached full maturity; measured by accomplishments and duty done, he was ready for death's coming, but for those who knew him best, his passing could not have been too long delayed. He leaves a noble heritage to his family.

Grand Prairie Rotary Proposed Legislation

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. YARBOROUGH. Mr. President, what this country needs is not a good 5-cent cigar. The Grand Prairie Rotary Club, of Grand Prairie, Tex., says what this country really needs is the following:

Six-lane highways across the Nation; rivers stocked with 4-pound bass; sewer systems that won't back up; a 20-percent cut in taxes; large pensions for mothers-in-law; and a law forcing backseat drivers to be licensed.

When I first heard of this legislative program, I was reluctant to introduce it because I felt it embodied the promises made by this administration prior to the last election. But I finally decided to go ahead and put it in the RECORD because time has shown that most of those promises have fallen by the wayside, anyhow.

Mr. President, I ask unanimous consent to have a portion of the January 17, 1958, edition of Rotary Breeze, the Grand Prairie, Tex., Rotary Club publication edited by Joe Grimland, printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WELCOME TO ROTARY GRAND PRAIRIE, SENATOR YARBOROUGH

We are indeed happy to have the honor of a real live Senator in our midst. Since each State has only two and with one of them making the cover of Life this week and the other in Grand Prairie, we are sure they are appearing in the best places. Just to make you feel at home we would like for you to know the seating arrangement of our club. The conservative Democrats sit along the north wall, the liberals along the south wall, and the independents are at the back. There will be a few more noisy members at the back but please pay no attention to them—they are just Aggies looking for a coach. As for our needs you will find them very meager—a 6-lane highway and a couple of rivers dammed up and stocked with nothing but 4-pound bass; a sewer system that won't back up; a 20-percent cut in taxes; and a law forcing backseat drivers to be licensed; and a large pension for mothers-in-law so they can live by themselves. While you're at it you may as well investigate A. and M. and get them straightened out with a new warden—er-r-r; that is—coach. We're just kidding, Senator, we're real downright proud and happy you could come.

Misleading TV Advertising

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. PROXMIRE. Mr. President, all of us are aware of the tremendous influence television has on the minds of the American people today. It is extremely important that no unfair advantage be taken of the confidence many of our people put in what they see on TV.

The Madison Capital Times, a newspaper famous for its hard-hitting crusades in the public interest, has published a thoughtful editorial calling attention to the common practice of some TV advertisers of making use of the white-coat symbol of the medical man to sell patent medicines. The editorial suggests that some doctors themselves have been taken in by the advertisers.

I ask unanimous consent, Mr. President, that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICAL JOURNAL HITS AT MEDICAL QUACKERY IN TV ADS

The New England Journal of Medicine, one of the most distinguished publications of its kind in the Nation, recently commented that doctors themselves are being sold on the medical quackery in TV commercials.

Surely, if there is anyone who needs to be convinced of the power of TV propaganda this should do it. When the members of the medical profession itself can be sold on a quack remedy by a smooth-voiced announcer dressed up in a doctor's white jacket, it demonstrates how dangerous TV can be when used irresponsibly.

The Journal made its comment in connection with a scientific experiment that proved that it is not true that a buffered aspirin can pound its way out of the stomach quicker than an un-buffered one. But, said the Journal, many members of the medical profession have been sold by high pressure advertising:

Protests are growing throughout the Nation at the quackery and deceit in many of the TV commercials. It is particularly offensive to have an expert only in voice control put on a white coat and advise people that if they don't take a certain pill they will become the victims of stomach acids strong enough to eat a hole in a handkerchief.

Recent events in Washington have demonstrated the tremendous influence TV interests have in Government today. It is precisely because of this influence that they have been able to get by with the kind of patent medicine advertising one sees on TV any day of the week.

It might not be a bad idea, if Congress ever does get around to a genuine investigation of the regulatory agencies, to inquire of the Federal Trade Commission why it allows this gigantic snake oil show to continue.

Surely, the public has a right to demand that in exchange for the legal monopoly of the public domain it has turned over to the TV interests we get something better than a return to the days of cowboys and Indians and the old medicine show.

The Cost of Operation Little Rock

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. RUSSELL. Mr. President, I ask unanimous consent that an editorial entitled "Invasion's High Cost," which appeared in the issue of Thursday, February 13, of the Commercial Appeal, a newspaper published in Memphis, Tenn., be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INVASION'S HIGH COST

As of January 31, Operation Little Rock had cost the taxpayers $4,237,996 according to Army Secretary Brucker. The operation began in September last and there is no indication when it will end—if ever.

Army costs at integrated Central High School through January 31, amounted to $3,802,282. The Air Force has estimated that its part in the invasion amounted to an additional $435,712.

Above and beyond normal unit maintenance costs, the Army paid out $177,823 for expenses incurred by the 101st Airborne Division in putting on an exhibition of unnecessary toughness.

According to Secretary Brucker's figures, federalization of the Arkansas National Guard cost $3,624,461, including $3,197,364 for pay and allowances, $186,678 for operation, maintenance and other expenses, $132,833 for clothing, and $107,586 for subsistence.

The $435,712 cost incurred by the Air Force was mostly pay and allowances for members of the federalized Arkansas Air National Guard. The purpose of mobilizing that branch baffles imagination.

The dollar cost is only part of the picture. Hardships have been imposed on families through the absence from home of the guardsman breadwinner, there have been dislocations in agriculture and industry because of the mobilization, civilian promotion systems have been upset and probably some of the guardsmen have lost their jobs. Time alone will tell the extent of that cost.

Without going into the merits of the integration controversy or the extent to which law and order had broken down in Little Rock—if at all—it can be said that the figures revealed by Secretary Brucker are those of the dollar cost of an outright Federal invasion of a State's sovereign rights.

As this invasion continues it has far reaching implications as well as known and hidden economic costs and exactly nothing is being accomplished. Persons in position to know regard the potentials of the existing situation as explosive with each new incident emphasizing the negative aspects of the whole sorry business.

Nothing better illustrates the ridiculousness of this experiment in Federal interference than the fact that 9 children have been kept in school for a little over 4 months in a hostile atmosphere inimical to academic progress at a cost of $4,237,996.

The total 1957–58 school budget for the city of Little Rock is only $5,222,297.

The continuance of the Central High situation on a cost basis alone is completely irrational, extravagant and unjustified. On the whole, it does the cause of sound education a gross disservice and serves only the purposes of agitators and extremists on both sides of the integration problem.

Responsibility for maintenance of order in Central High should have been restored to local authorities long ago.

Articles From Portland Oregonian on Fisheries Skimmer Device for Protection of Migratory Fish Runs

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. NEUBERGER. Mr. President, one of the principal domestic issues confronting this session of Congress is how to provide for hydroelectric development on our great rivers of the Pacific Northwest without doing irreparable damage to migratory fish runs. This question has been brought to the Senate floor by the action of the Federal Power Commission in recommending construction of the Nez Perce Dam, which would would blockade the great Salmon River spawning grounds of Idaho.

One of the main hopes of those who believe that dams and fish can be reconciled is the so-called skimmer device, which is designed to prevent downstream bound fingerling fish from being pulverized by turbines or by the overflow of spillways.

Two informative and pertinent articles on the skimmer process appeared in the Portland Oregonian of February 17 and 18, 1958, under the byline of Herbert Lundy, editor of the editorial page of that daily newspaper in my home State. Mr. Lundy is known not only as an editorial writer, but also as a prominent sportsman and naturalist.

Because the Senate Committee on Interstate and Foreign Commerce will soon hold hearings on my bill, S. 3185, to give the United States Fish and Wildlife Service some jurisdiction over FPC licenses on rivers inhabited by fisheries, I I believe many Senators will be interested in reading the two articles by Mr. Lundy, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MAJOR TESTS OF FISH SKIMMER DUE SOON
(By Herbert Lundy)

The skimmer you keep hearing about is not a hat but a complicated plan, with many variations, to get small migratory salmon and steelhead over high dams on their downstream progress to the sea. If they don't get to the ocean, they don't grow to be adults; they don't return to the graveled streambeds of their birth to produce more little fish, as is the habit of the Pacific Ocean's salmonoid species. The hope is that skimmer devices will prevent most of the downstream migrants from being chewed into fishburger pieces by turbines, deflated like broken balloons by pressure, or killed in the drop from spillways.

If it works, the skimmer will be a great help in the long fight to save salmon and steelhead runs for our own and future generations of commercial and sports fishermen. Fishery biologists generally think it will work—for some dams. But none knows how efficiently it will work. In other words, the fish losses could range from small to major.

The fishery agencies, State and Federal, with cooperation of dam builders, have learned how to get adult salmon upstream over dams in the Columbia system, with minimum losses. And steelhead can go anywhere salmon can go, and some places salmon can't.

Upstream passage by improved ladders or fishways—stairstep or vertical slot passageways through which water flows—is practical up to 100 feet in dam height. For higher dams, adult fish can be guided into traps, lifted into tank trucks and transported to the river above the dams to continue their spawning runs.

The downstream passage problem is another matter. And the heart of this problem is to find means to gather the tiny fish, to collect them from the breadth and depth of the river, so that they can be conveyed without harm to the water below the dam.

Because they have not solved this problem, those who believe it important to preserve the anadromous fishery resource have fought doggedly in recent years to buy time; to delay high dams in critical fish areas until it can be learned if high dams and fish ever can be compatible.

In the earlier years of settling the Northwest, salmon and trout migrations from the sea were blocked entirely out of scores of native streams by dams. These dams, plus mining pollution, destroyed about 75 percent of the fish producing waters of the Columbia River system. It is the remnant remaining which conservationists are fighting to save, and to increase if possible.

The prospects are brighter now than they ever have been that the salmon and steelhead can be saved and can be expanded in numbers, in spite of the increasing hazards inherent in dams, pollution, the explosion of predator fish population in impoundments and polluted waters, and the increased demands for food fish and sports fish. The skimmer is only a single phase of the campaign, but an important one.

The skimmer will be given a trial at two dams this year—at Portland General Electric Co.'s Pelton Dam on the Deschutes River in Oregon, and at Idaho Power Co.'s Brownlee Dam in the Middle Snake River which forms the Idaho-Oregon border. By counting devices—weight of fish and water, electronic checkers, or otherwise—some idea may be gained within a year about the probable success or failure of the skimmers. But the acid test, based on the return of adult salmon, will not be known for 4, 5 or more years. A minimum of 10 years will be necessary to be reasonably sure of the results. But this is a moratorium not likely to be achieved, in view of public demands for hydroelectric power and flood control.

It may be expected that shortly after the Pelton skimmer goes into service this spring, and the Brownlee skimmer this fall, the public will be fed a propaganda barrage (from waiting high-dam builders) about the millions of fingerlings being collected and transported safely over these structures.

Although conditions of dam heights, forebay drawdowns, and water temperatures, volumes and rates of flow may be vastly different than for Pelton and Brownlee, it

is as certain as night and day that the mere installation of skimmers there will be used for such immediate promotion of such gigantic dams as Nez Perce. In fact, the Federal Power Commission already has been misled on the subject.

But the possibility exists that the skimmer—which resulted from the desperation of fishery agencies and their decision to try by all means not to abandon any more spawning areas—may become a useful tool.

Instead of killing more fish with experiments, the United States Government could try out the skimmer on a major scale, first, at Grand Coulee Dam and Chief Joseph Dams. Grand Coulee, a total barrier to upstream and downstream migration, closed off thousands of miles of the upper Columbia system and destroyed all runs of chinook and blueback salmon and steelhead trout. It is not beyond hope that much of this natural fish production empire could be restored. No fish would be lost in the trial.

WILL SKIMMER WORK? NO ONE KNOWS

(By Herbert Lundy)

About 15,000 fall Chinook salmon and 1,200 steelhead were trapped and trucked around the Brownlee Dam construction job in the Snake River in September, October, and November. At least as many spring Chinook, probably more, went through uncounted while a coffer dam was washed out by floodwaters in the spring. The progeny of these 35,000 or more Chinook and steelhead will begin their migrations to the ocean next year. The spawn of the previous migrations will be starting out soooner.

The partial year of trucking adult fish around Brownlee disclosed to fishery men that there was an unexpectedly large and valuable spawning run of salmon up the Snake above the Salmon and Imnaha Rivers. The fish management people want to save and enhance this run. Their hopes will be pinned on the operation of a Rube Goldberg device for collecting and transporting fingerling migrants which has come to be known as a skimmer.

The name skimmer is roughly derived from the principle on which it is based. This is that many young salmon and steelhead working downstream for their youth-to-adult life in the sea follow the shorelines in big bodies of water; that most others, though traveling in midstream do not sound below about 100 feet. Hence the concept of a device to skim the small fish from near-surface areas of an impoundment, before they can be destroyed by blades of turbines or dashed to death over the spillways of a high dam.

The $3,500,000 skimmer layout will be approximately 1 mile above Brownlee Dam. It will be almost 2,000 feet long, extending from shore to shore. The fish barrier will be a steel wire-mesh net. The center and major portion will be of heavy material, 120 feet in vertical depth; the wings adjacent to the shorelines will be of a lighter material, adjustable so that they will continue to seal the underwater embankment as the reservoir fluctuates with its 101-foot drawdown.

The net barrier will be strung on cables, chief suspension being on the bottom cable anchored near the wings. The top cable will be floated on metal pontoons. The cables and the 120-foot deep net will go up and down as the surface of the impondment fluctuates. The theory is that most of the small migrants will not swim down deep enough to go under the net.

Built into the net will be three collector boxes, one at each side of the river in the wings, on the upstream side; one in the middle of the net. Pumps will draw water through these boxes at a volume of 100 second-feet each; the jets of water being directed upstream and to the side along the net, to form an additional attraction to the fingerlings.

In the boxes, the small salmon and steelhead will be automatically sorted for size by a grader system employing chutes and slots, similar to that in use in hatcheries. This system will direct the fish groups into holding boxes, live boxes, in angler's terminology.

At this point, if all goes well, the young fish will have been collected. From the holding compartments they will be directed through valves into an 8-inch pipe in which a current of water will convey them by tank trucks. The trucks would haul the small fish about 15 miles, for release into the Snake River below the Oxbow Dam site.

The skimmer complex of nets, locks, pumps, valves, and pipes designed to gather the small migrants and conduct them around the dam would be protected from drifting logs and ice floes by a trash boom 8-feet deep and spanning the river upstream.

Two principal hazards to this mechanical means of collecting small fish would be net failure and possibility that many fish will sound and go under the net.

A simpler skimmer device than that awaiting approval by the Federal Power Commission for Brownlee Dam is the one already approved and being installed in the Deschutes River for Pelton Dam. The penstocks at Pelton will be deeply submerged, at about 130 feet, and no net barrier will be tried there. The forebay is to have a maximum fluctuation of only 7 feet.

The fish ladder leading from below the reregulating dam to a natural bay above the concrete-arch Pelton Dam will provide upstream access to adult salmon and steelhead. On the theory that the small, downstream migrants will prefer not to sound below 100 feet, and that those coming down the western shore will make their way across the face of the dam to the artificial outlet on the eastern shore, a collection box there will be stationary.

The fish will be gathered in an outlet which will use 200 second-feet of water—but return 194 feet of it to the forebay—and conveyed in a pipe carrying 6 second-feet of water through the dam. This pipe will shoot the little fish into the fish ladder and they will go down that to the river below the reregulating dam.

The Skimmer device at Pelton is to go into service when the forebay is filled this spring, at Brownlee in the fall. These will be the first tests of a system worked out cooperatively by fishery and dam engineers in an effort to solve one of the major conflicts in the Northwest.

But a word of warning: If these skimmers work as well as they look on paper, they will not answer all the problems of dam passage. There is, for example, the timelag involved in salmon reaching their spawning beds. At Nez Perce site, there would be an adult-salmon problem, as well. Salmon trucked around the dam would have to be put back in the Snake River below the mouth of the Salmon River, since no one would know if they were bound for the upper Salmon, upper Snake, or Imnaha Rivers. But water impounded in the forebay would be a mixture of Salmon, Snake, and Imnaha waters. Could the fish find their way to their home streams? No one knows.

Why Postal Pay Must Be Raised

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. PROXMIRE. Mr. President, it is often easy, in talking about pay raises or anything else, to get involved in consideration of millions of dollars and lose sight of the individual human beings and their problems that really are the heart of the matter.

Recently I received a letter which brings sharply into focus what a pay raise for postal employees means to those individual human beings. This letter encloses a copy of the resignation of a rural mail carrier who quit to take a job which offered him "a substantial wage increase over what I am now earning." The job is washing rugs in a Madison business establishment.

I ask unanimous consent, Mr. President, that these letters be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MIDDLETON, WIS., *January 27, 1958.*

Senator WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I am enclosing a copy of a letter sent to our local postmaster within the last week. It bears out our often expressed contention that, unless the pay scale of postal employees is raised, there will be no employees. This man knows several routes, and is an asset to the service, yet he is leaving because he can do better elsewhere. The man of today wants money in his pocket now to meet expenses, not promises of a pension or other things in the future.

When S. 27 comes up on the Senate floor, I am sure you, as a member of the committee, will vote down any amendments that are not committee amendments, and will fight to keep the $240 cost-of-living bonus in the bill. Those of the classified employees who complain of this section would find that classifieds of skill comparable to clerk and carrier work would be in a higher classified grade, while postal employees are in level 4 by order of the Postmaster General.

It is very gratifying to have a Wisconsin Senator on the Post Office and Civil Service Committee.

I wish you the utmost success in all your efforts.

Sincerely,

CHARLES H. EASTON.

MADISON, WIS., *January 20, 1958.*

POSTMASTER,
Madison, Wis.

DEAR SIR: I wish to submit my resignation from the postal service, effective February 8, 1958.

The reason for my resignation is the job offer I recently received has a substantial wage increase over what I am now earning. And I feel I need this increase in order to live comfortably.

Respectfully,

KENNETH COX,
Regular Substitute Carrier, No. 188.

Poll on Pay Television

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. THURMOND. Mr. President, recently, Mr. Bob Brock, the television editor of the Dallas Times-Herald, of

Dallas, Tex., conducted a poll among readers of that newspaper on the subject of pay television.

Because the subject is one of particular interest to the Senate at this time, I wish to have the telegram from Mr. Brock to me, in reporting the results of his poll, printed in the Appendix of the RECORD.

The telegram reads as follows:

DALLAS, TEX.

Senator J. STROM THURMOND,
The United States Senate.

HON. STROM THURMOND: As television editor of the Dallas Times-Herald, I have been conducting a poll among readers as to how they feel about the question of pay versus free television. The reactions of my readers have been unbelievable: 200 to 1 against any form of toll television. As the question of whether pay television should be given a trial nears a showdown, I would like to place at your disposal my entire mail on the subject. I believe the views of my readers mirror the sentiment of the Nation's televiewers as a whole.

BOB BROCK,
TV Editor, the Dallas Times-Herald.

Middle Eastern Economic Development

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. HUMPHREY. Mr. President, as a participant in the recent Middle East Institute held in Washington on January 31–February 1, 1958, I was particularly impressed with some of the proposals made for Middle Eastern regional economic development. My colleagues know that I have been publicly committed to this kind of approach for some time. In my report on the Middle East and Southern Europe filed with the Senate Committee on Foreign Relations in June 1957 I devoted some time to the proposal of the Middle East Development Agency.

In this connection, I was interested to note an editorial entitled "For Mideast Self-Help," published in the Christian Science Monitor for Saturday, February 8, 1958. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR MIDEAST SELF-HELP

Much as the Arabic nations of the Middle East need American aid, they have resources with which to finance a great deal of their own development. It is encouraging, therefore, that Dr. Ali Amini, Ambassador from Iran to the United States, should have proposed at a recent conference in Washington some pooling of oil incomes by Middle Eastern states for that purpose.

This pooling is necessary because the petroleum deposits which comprise the chief material wealth of that region are not distributed through all the Arabic States. Most are concentrated in the tiny shiekdom of Kuwait, in Saudi Arabia, Iran, and to a less extent Iraq and Bahrein. This leaves Syria, Lebanon, Jordan, and Egypt as areas without substantial oil revenues unless from pipeline or canal transit fees.

At the Middle East Institute Conference Dr. A. J. Meyer of Harvard University remarked that Syria has negotiated a development loan from the Soviet Union at 2½ percent interest, while the Shiek of Kuwait has invested a roughly similar amount in the London money market at the same rate.

If there were simply the financial mechanisms for transferring investment capital from one Middle Eastern country to another many needs might be met. Since the recent Ankara Conference of the Baghdad Pact powers the United States is contributing to a telephonic network among Middle Eastern capital cities which will enable them to communicate directly with one another. For some time it has been proposed that the United Nations should sponsor a regional development organization which would make plans for water and land use, transportation, and new industries in the Mideast.

The United States could well request a place for such a project on the U. N. agenda. Its formation would assist the Arabic nations on a broader scale to do what Iraq has done to harness petroleum revenues to the upbuilding of the land. In that country 70 percent of the government's income is being spent on public works, including irrigation, agriculture, highways, industry, and housing.

Trip Around World by May Craig, Star Reporter, Portland Sunday Telegram

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that an editorial from the Portland Sunday Telegram of February 16, entitled "A Reporter in Orbit" which discusses May Craig's current trip around the world, together with an excellent column by May Craig from the same paper on conditions in Iran, may be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

A REPORTER IN ORBIT

Star Reporter May Craig is flying around the world in somewhat less time than the 80 days it took the storied Phileas Fogg to traverse the circumference of the globe via balloon, boat, elephant, rickshaw, train, and assorted craft and vehicles. But she is witnessing more events, talking with more ambassadors and heads of state, and imparting more knowledge to the folks back home than Phileas and good friend Passepartout ever dreamed possible.

The column on this page finds her in Teheran, just emerged from the Middle East and heading into the subcontinent of India and Burma, thence to southeast Asia. We commend her daily columns to Telegram and Press Herald readers as a means toward greater understanding of the problems of the world.

IRANIANS EAGER FOR IMPROVEMENT
(By May Craig)

Iran is Moslem country but not Arabian and the people do not like to be lumped with Arabs. They belong to the Baghdad Pact, which has just been meeting in Ankara, Turkey. Iraq is the only Arab country in the pact and Egypt objects to Iraq being in, but people in Iraq say they will stay in the pact. The people in the pact want the United States to join but there is no indication we will, though we belong to many of the committees including the new military committee. The people of Iran, which is the ancient Persia, are Indo-European. Thirty years ago the Shah made Iran the official name of the country. The language is still properly called Persian.

The Iranians are against communism, but they do not want to provoke the the Soviet Union, with which they have a 1,000 miles of border.

This country is 2½ times as large as Texas. It has enormous resources of minerals, water, land. The leaders have an ambitious plan for development. They get lots of money for their oil, and can plan development, though their oil revenues went down to zero during the Suez oil crisis, when Syria cut the oil lines and the canal was blocked. Teheran lies on a flat plain, surrounded by mountains—beautiful, with the snow on them, with no snow in the city. It snowed in the city while we have been here, but it did not stay, though the mountains were newly white.

As in most of these old countries, there are open gutters and they overflowed with rain and melting snow, and flooded the streets so some were impassable.

To get from Europe to Asia, one must pass through Iran, and so there have been wars for thousands of years over this area. The people are proud of their ancient history, their culture. We went to the Palace of the Rose Garden, entirely lined with mirrors, cut into small shapes and made into patterns. There is the Peacock Throne, incredibly beautiful, with colored enamels and precious stones. If the Shah is crowned it will be here—but he told us that he will not have a formal, expensive coronation while many of his people are so poor. He has reigned for 16 years, often tempestuously—once he fled and came back after the rebellion was quelled.

He is a handsome, young man and loves his people. He gave all his own land to peasants, but the other big landlords do not. They squeeze the last penny out of the miserable villagers. Often they are absentee landlords and never visit the villages. This is the sort of thing that opens the door to communism. The Communists appeal to the poor people—in Russia they killed off the rich landlords and took the land for the state and the peasants didn't get any of it. But Communist promises appeal to helpless, hopeless people.

The Shah is for the people, but so far he has not dared to oppose the rich, entrenched interests which are only for themselves. The Shah and some of those around him want to spend the oil money to raise the standard of living for the people—who need it. Go into the streets of Teheran, away from the hotels and the palaces and the new government buildings and you see the most utter poverty and filth and hunger. To lift them will take a long time, much direction and money and a new psychology.

Most interesting official we met was Abol Hassan Ebtehaj, managing director of plan organization, who speaks excellent English, has tremendous energy, has been much in the United States and at the United Nations. He attended the International Conference on Private Enterprise in San Francisco, last October. He has here, helping him with his water power development, on their immense rivers, David Lilienthal and Gordon Clapp, who planned and helped to develop and administer our TVA.

Ebtehaj knows the waterpower of our country better than most of us do. He could cite by figure, the cost of water and thermal power production in the United States. Their plans were delayed by the oil crisis

when the revenue failed. They also plan roads, hospitals, schools, plants to produce paper, cement, and chemicals. They employ the best consultants of Europe. They want American know-how and want American technicians. They get some money from the World Bank, and point 4. They have a budget deficit at the moment, and want United States money. We don't want to provide it, for a budget deficit; we want to lend it for development. We think they make too big a budget, want to double salaries and take on more people—and that they should not expect to shift their budget deficit to the backs of the American taxpayer. But we have real friends here, mutual interests and defense problems. It is well that we hold them in the democratic alliances and raising the standard of living is one of the best ways to do it. They promise that private capital will be safe here from nationalization and expropriation. They tell us proudly they want loans—that gifts are humiliating.

Law of the Land

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. THURMOND. Mr. President, in the February 21, 1958, issue of the Nashville Banner of Nashville, Tenn., there appears an editorial entitled "Law of the Land?" in which a basic principle of constitutional government is pointed out in striking fashion. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nashville (Tenn.) Banner of February 21, 1958]

LAW OF THE LAND? WHO MAKES THE LAW OF THE LAND?

How is it made? By judicial interpretation, or by congressional enactment?

These are valid and challenging questions just now; and they need competent answer before recklessness under pressure's wild momentum—and without the brakes of sudy and reason—carries the country to the point of no return.

Actually, the Constitution is—originally—the law of the land. It hasn't been amended in any of the particulars today distorted into invasion of basic rights. Nor has Congress officially forfeited the rights of exclusive legislative powers. Where the Supreme Court encroaches upon that domain, Congress can act to redress the grievance of invasion.

For example: In June, 1950, the Supreme Court reversed the judicial rulings of a century—which under present theory had been the law of the land—to divest coastal States of their tidelands rights. It held on that date that the Federal Government has paramount rights to the tidelands.

Supposedly then that became the law of the land. And every subordinate court would be expected to deal accordingly with any case before it.

Congress did not accept that. Congress was of the opinion that the issue was one for legislative determination. A little under 3 years later, Congress did act on the question, and overwhelmingly. It enacted a law restoring tidelands title to the States, to the extent of their historic boundaries.

Only Congress can deal adequately and authoritatively with the present issues, insofar as Federal responsibility is concerned.

It has that obligation—primarily to assert just where the lines of authority fall; and they fall exactly where the Constitution drew them. Otherwise the "law of the land" is a nebulous instrument, subject to capricious change without benefit of legality—an item of confusion, abuse, and danger.

Leading Industries of Massachusetts

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD 3 articles which appeared recently in the Boston Daily Globe which describe 3 leading industries of Massachusetts—fishing, precision instruments, and textile machinery.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MASSACHUSETTS SETS THE PACE—PRECISION INSTRUMENTS REVEAL STATE'S SKILLS

(By Harry Stanton)

There are many first-class reasons for Massachusetts' high standing in the production of a wide range of precision instruments.

First is the fact that this State is rich in facilities for research and experimentation. Highly educated specialists with profound knowledge of the techniques of measuring, analyzing, and recording abound and are in frequent and easy contact with each other. Massachusetts has an unequaled supply of men with the know-how.

Precision instruments require close tolerance workmanship and Massachusetts also is plentifully supplied with highly skilled craftsmen and technicians. The labor force for this kind of work is exceptionally competent.

NEWTON FIRM'S SPECTROGRAPHS

Although this State's location at the far northeastern corner of the Nation is a handicap in establishment of industries requiring quantities of heavy raw materials the transportation problem is a minor one in the instrument field. Instruments usually are extremely compact, use up little material in proportion to their value, and can be shipped at low unit costs.

Most of the fine instruments for which Massachusetts is famous are made by comparatively small, highly specialized, companies.

For example, Newton's Jarrell-Ash Co. specializes in devices for analyzing materials by examination of the lines of the visible light spectrum emitted by the materials themselves. An astonishingly varied use of this method is being made throughout the world and JACO spectrographs are in use in many foreign countries as well as in most of the States.

Oil that has been used to lubricate moving parts can be analyzed by this instrument to determine its content of minute metallic particles—and thus to disclose the amount of wear on the bearings. A trace of paint sometimes can reveal the make, model and year of manufacture of a car involved in a hit-and-run accident. By burning in an electrical arc a piece of metallic alloy and photographing its emitted spectral lines the analyst can tell what metals are included and their relative quantities in the alloy.

Another interesting instrument made by JACO is the fluorometer, a device designed to measure the fluorescence of dense materials, either in solid or liquid form. It is particularly useful in detecting the presence of minute qualities of uranium and beryllium in biological fluids.

HEART INSTRUMENTS

One of the great makers of electrocardiographs in the Nation is Sanborn Co. of Waltham. Their production, together with that of one other producer in this State, places Massachusetts in the top bracket in this field.

The electrocardiograph is a device for making a permanent visible record of characteristics of the heartbeat permitting more detailed examination by the specialist than is possible by listening with a stethoscope.

Sanborn also turns out a metabulator, a valuable diagnostic instrument used to determine whether a patient is burning up his food too rapidly or too slowly; a visoscope, which shows heart action on a cathode ray tube, something like a television screen, a multichannel biophysical recording system capable of measuring and recording simultaneously as many as eight physical events, and a number of electronic instruments for industrial uses.

Baird-Atomic, Inc., of Cambridge builds and ships all over the world a broad line of analytical and control instruments for industry, medicine, and research. Stream analyzers, electronic counters, spectrophotometers, laboratory gas analyzers, pulse height analyzers, densitometer comparators, and radioactivity detectors are included among this company's products.

LARGEST IN ITS FIELD

The Foxboro Co., at Foxboro, believed to be the largest strictly industrial instrument maker in the world, is rounding out its first half century of production of units to control variables. The company's specialty is compact-sized instruments for continuous measurement of temperature, rate of flow, acidity, and other variables, particularly in moving fluids, petrochemicals, textile processing, the metals industries, water and sewage plants, and so on.

Although most of these instruments are mechanical and pneumatic, this company also is producing electronic and radionic devices, an example being a profiler for use in papermills. This sensitive instrument can measure the differences between the amount of energy emitted from a radioactive source and the amount received after passing through a sheet of paper and thus accurately determine the weight of the paper.

In addition to devices produced by companies specializing in the instrument field there also are, in Massachusetts, many companies that make instruments as a sideline to activities in other fields.

Included in this list are General Electric, Polaroid, Raytheon, Sylvania, Ultrasonic, Transonics, National Radio, and Avco Mfg. Co., among other. Although it is difficult to draw a line between what constitutes an instrument as opposed to a tool or a machine, a great many devices for precision measuring are made in Massachusetts. In fact, there is little doubt that this State sets the pace for the Nation in this respect.

NINETY-EIGHT BAY STATE COMPANIES MAKE TEXTILE MACHINERY

(By Frederick D. McCarthy)

One of the oldest industries in the United States, the manufacture of textile machinery had its birth in Waltham, and Massachusetts boasts of the greatest number of such manufacturing establishments in the Union today.

Despite its relative antiquity, the textile machinery industry is more advanced and aggressive today than at any time in its history. Due to numerous technological developments, the productivity rate per man-hour in the textile industry, it is estimated, has increased approximately 50 percent within the last 10 years, a rate far surpassing that of most other industries.

This has been made possible, points out James H. Hunter, president of James H. Hunter Machine Co., and president of the American Textile Machinery Association by extensive long-range research and development programs of American textile machinery builders.

PAYROLLS OF $43 MILLION

Some 98 textile machinery establishments are operating in Massachusetts, or more than 18 percent of the national total of 535 firms, according to the 1954 United States Census of Manufacturers. Pennsylvania is in second place, with 62 firms, or 11.5 percent of the total.

Payrolls of the Bay State companies aggregated more than $43 million and value of products shipped in 1954 was in excess of $101 million.

The famous Northrop automatic loom was first introduced by Draper Corp., of Hopedale, in 1894, allowing 1 weaver to operate 16 looms. That was a great accomplishment, the invention revolutionizing the textile industry and launching it on its great mass productive economy.

However, hopping ahead to the automatic single shuttle loom introduced by Draper Corp. largest manufacturer of cotton looms in the world, the progress since the first Northrop has been so rapid that the two pieces of equipment seem only remotely related.

Currently, the average weaver's productivity is more than 600 percent greater than that of the worker who operated the first automatic loom.

NEW SHUTTLELESS LOOM

Taking a peek at the last two decades, it is apparent that while the basic principle of textile weaving has changed no more than the use of wheels on an automobile, everything else has been altered on the loom just as it has been on a car: speed, efficiency, ease of operation, and maintenance, safety devices, use of automatic features, performance, and price.

Important changes in textile machinery have brought about increased versality, improved quality, increased automation, and lowered costs of maintenance.

One of the topflight, present-day research projects of Draper Corp. is the Draper shuttleless loom, which operates without shuttle, bobbin, or battery. Research has reached the point of actual mill test. Increased speed, reduced maintenance, and a high degree of automation are expected from this new loom.

FIRST TWO-SHUTTLE LOOM

Back in the depression days of the thirties, Crompton & Knowles Corp., of Worcester, perfected the first two-shuttle loom permitting the changing of shuttles without stopping the machine. Today this firm holds approximately 1,200 patents covering products relating to automatic bobbin-changing and automatic shuttle-changing features of its box looms.

Saco-Lowell Shops, another outstanding textile-machinery manufacturer, has its main plants in Biddeford and Saco, Maine, but its principal offices are located in Boston.

This company also had its origin in Massachusetts. Three principal companies came together to form the organization which since 1912, has been known as Saco-Lowell Shops.

The three original companies were formed in Waltham in 1813, in Newton in 1814, and in Saco, Maine, in 1825. The intital aim of each was to produce, not machines, but cloth. Each, nevertheless, created an independent textile-machine shop and eventually concentrated on the production of machinery.

COMPANIES DIVERSIFYING

In November 1956, Saco-Lowell acquired a 25-percent interest in Elliott Addressing Machine Co., of Cambridge, one of the Nation's leading factors in the office equipment field. Saco-Lowell also has a division which produces automotive parts.

A spokesman for this company said these outside activities are in line with a diversification policy initiated a few years ago to give greater stability to employment and operations.

Whitin Machine Works, of Whitinsville, is another prominent Bay State textile-machinery manufacturer which has been branching out into other lines.

STATE'S FISHERMEN REAP $35 MILLION HARVEST

(By Earl Banner)

The Bay State has held a preeminent position in the Nation's fisheries since colonial days and, chiefly by virtue of its position in close proximity to the greatest and most productive fishing banks in the world, couldn't very well lose its position as the Nation's top producer of ground fish without abandoning the business entirely.

And that isn't likely to happen. For, in spite of the sounds of distress emanating from the ports of Gloucester, Boston, New Bedford, Provincetown, from time to time, the Bay State's fisheries still provide employment for a lot of people and keep a lot of money in circulation.

Last year, for instance, Bay State fish packers and processors paid out more than $35 million to Massachusetts' 4,100 fishermen and vessel owners who, between them, man and operate some 540 vessels of all sizes. They paid out another $30 million to Canada, Iceland, Norway, and other fish-exporting nations for the fish they imported.

FISH SCARCE LATELY

There are about 80 vessels in the Boston fishing fleet now. They made only 2,457 trips last year, the lowest since 1944, when wartime operations hampered the local fishery. Their landings totaled only 135.6 million pounds, the lowest since 1924. But they got more money for their fish—$11.2 million, as compared with $10.5 million in 1956 and $9.2 million in 1955.

MILLION-POUND DAY

The Boston fish pier had its first million-pound day in nearly a year just last Monday when some 20 vessels landed a total of 1,381,000 pounds of fish. About half of these were haddock, the species that brings the highest price, and the price of 15.25 cents a pound was considered very good for that volume. The last previous million-pound day had been on March 18, 1956, when the price was pegged at only 7 or 8 cents a pound.

At this caplog price, the producers of haddock, fillets would have to get at least 40 cents a pound wholesale in order to stay in business, since the recovery in fillets from fish-in-the-round is only about 42 percent.

PAINFUL READJUSTMENTS

The New England fishing industry has been going through a period of painful readjustments throughout the past decade, an experience that it has successfully survived many times during the past 300 or more years of its history.

Outstanding examples of this were the now gone cod, mackerel, and menhaden fisheries of the 1880's. More recently, there was the rise and fall of the yellowtail flounder fishery in southern New England and its replacement on the same grounds by an even greater industrial fishery for the producers of fishmeal, animal food, and oils.

BIG NEW BEDFORD CATCHES

New Bedford, after a sorry start during the early months of 1957, wound up with a season to remember. Several new vessels were added to the scalloping fleet which brought in an alltime record catch of 16,458,000 pounds of scallop meats valued at $7,984,000.

The New Bedford fishermen did a bit better than just all right with yellowtail flounders, too. Their catch of this species totaled 14 million pounds, some 5 million more than in 1956. Total landings of all species of fish at New Bedford last year—103,270,000 pounds valued at $13.1 million.

The thing of it is, New Englanders are handier than anyone else in the United States to the richest fishing grounds in the world. They extend all the way from Nantucket Shoals to the Flemish Cap, some 1,300 sea miles. It is altogether likely that New Englanders will continue to send ships and men to harvest this wealth for a long time to come.

Texas Writer Sees Capital, Labor, and Management as Triumvirate

---

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the text of an article under the title "Capital Is Labor," written by Mr. Charles A. Breitung, of Austin, Tex., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL IS LABOR

(By Charles A. Breitung)

The impression seems to be established that there is a vast chasm between capital and labor. As a matter of fact, capital is and always has been labor—the fruit of the labor of an individual or of a group of people. This seems to be fundamental. Certainly in a democracy such as we enjoy in the United States of America, capital has been created, with the help of Almighty God, by the works, inspiration, and labor of millions of men and women.

LINCOLN'S WORDS

The words of Abraham Lincoln can be aptly quoted:

"Labor is prior to, and independent of, capital. Capital is the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between labor and capital, producing mutual benefits."

The history of the Labor movement in the United States has been a slow assertion of the rights of the rank and file of men and women engaged largely in manual skills and trades.

MUCH MORE

But labor represents much more than that.

Management is labor, of the most intensive sort. Management requires a larger capacity of training, and frequently longer hours spent in close studies of the problems of operation and finance.

Meeting a weekly or monthly payroll is an experience which anyone must go through in order fully to appreciate what makes the

wheels go round. The money does not grow on trees.

A product, whatever it is, must be made and sold at a price sufficient to pay all costs and taxes plus a profit, or else the venture folds up.

CAUSE OF GROWTH

Our industries in the United States have grown to tremendous size because of the combination of the teamwork of people who were willing to advance funds, of the people who were competent to furnish the gift of management, and of the people who had the gifts and genius of cooperative skills and know-how. All of these are essential in the growth of a successful business.

Investment funds come from the savings of the many and the cumulative interests of the very few fortunate ones who have been able to conserve family wealth. From shirtsleeves to shirtsleeves in three generations is still largely true in this great country of ours. It is perhaps just as well that this is so, because it does give everyone a chance to achieve material prosperity, and do it by his own efforts, plus the will of God. The person who talks about his own bootstraps is an idiot or a fool.

LABOR'S PROGRESS

One cannot help but be impressed with the progress of organized labor during the past thirty-odd years. It is a story of teamwork and effort. Part of it is a story of misdirected idealism which sought objectives without knowing how to attain them. The right to quit work in a free democracy, is a God-given privilege. There are also duties and obligations implied with it. To say that babies must do without milk for days, or that the rank and file of our citizens must do without police or fire protection, or that we, the people, must do without anything, because the rights and privileges of a few are being violated, is not equity under God.

Labor does have intrinsic rights: It also has privileges and obligations. Likewise management, also mostly labor in another form, has basic rights, which it has earned; it too has privileges and responsibilities. Among responsibilities is the stern duty and trust to see to it that every man willing to work is employed. And if conditions do not warrant full employment, then that at least subsistence is provided during the periodic occurrences of readjustment.

A democracy cannot afford depressions when men and women through no fault of their own are unable to find gainful employment. The black side of a balance sheet may be black enough in the eternal scheme of things.

INVESTORS' RIGHTS

And the people who put up the funds, either directly through their personal savings, or indirectly through their life insurance equities or savings investment in bonds or stock or interests, have rights and responsibilities. They have the funds to invest. They have the right to expect a fair return on these funds commensurate with the risks involved. They also have the responsibility to the vast army of men and women employed to see to it that these workers receive a fair and just compensation for their labors.

In good times these people with funds enjoy profits by way of dividends and the increase in the property value. In bad times they receive no dividends and their property values shrink. And yet, they have an implied obligation to see to it that the men and women and their families, who work in the establishments in which they have financial interest, do not suffer unreasonably because of lack of the basic subsistence, of of food, water, and shelter.

The haunting fear of the rank and file is that they may not be able to even buy daily bread.

STATE SOCIALISM

State socialism, with its fantastic will-o'-the-wisp theory of equal rights for all, is fundamentally unsound. A man or a woman aspires, because he or she was a personal gain to achieve. The level of the mass average is the inevitable morass of the prehistoric quicksand which destroyed the monsters of that age. The Almighty made us as individuals; no two grains of sand are alike, let alone humans.

This brings up the point of ownership in these enterprises, large and small. Labor demands rights. Labor can have rights and ownership, which begets vested rights, by buying them with their own savings.

SIMPLE SOLUTION

As B. F. Fairless, recently chairman of the board of the United Steel Corp., has stated, labor can become the owners of these large corporations which employ them, by the normal process of stock purchase.

It is that simple.

Organized labor, with its millions of members in these multiple unions, can own sufficient interest in any and all of these companies, to exercise a voice in the management and policies of these projects. This involves responsibilities, and abilities. This is the challenge to organized labor. Organized and unorganized labor can either employ skilled, fairminded, professional and technical experts, or they can promote a program of training within their ranks so that this leadership is available to them in increasing numbers.

They want rights; they have the right to acquire ownership. Equity is fair play. It always has been, despite legal entanglements and obstacles.

FORMULA

With millions of men and women holding membership in these many unions, the will to ownership is governed by the willingness to save a few dollars each month collectively. Twenty million members in a union could invest $1 per member per month in the stocks of various enterprises. Within a few years the millions of members would play a very definite part in the management. The management is dedicated to the principle that the public must be given what they will buy, whether it is shoes or automobiles, houses or food and clothing. And $240 million per year invested in corporate securities would indeed play an important part in the relationship between invested capital, management, labor, and the consuming public, which likewise is largely labor.

WRONG DIRECTION

The discords caused by the temporary inability of the consuming public to obtain the services and goods desired, when the uneconomic strike periods occur, do not seem to be intelligent forward steps. Public opinion when properly informed with facts will certainly insist that all parties shall receive fair treatment. Little is gained by walkouts and strike protests, sometimes staged with elements of violence and disregard of property rights and public-service responsibilities, other than the loss of wages and salaries by labor and management, and the shortage of goods and services to which the general public have become accustomed.

No group in our democratic life has the right or privilege to hold the public welfare in contempt, or to overcharge the public for goods or services required in ordinary daily living.

The will of democratic government must be the voice of the majority of the people, and not the selfish wish of any organized minority, whether it be capital funds or labor, or management which is essentially a form of labor.

PUBLIC INTEREST

We can ardently hope for the day when these differences of opinion between deputized management representing ownership, and the groups of organized labor, can be disposed of in harmony and with mutual understanding without the interference of political influences whose main objective is often to gather votes for self-perpetuation in office. The public interest is paramount. The public is the Government.

In addition to the gigantic corporate structures, there are many hundreds of thousands of small enterprises, owned largely by the management, and operated with the help of men and women who are employed for stipulated salaries and wages. The relationship of management and labor, and capital and labor, is a personal one in these businesses. There is consequently more of a family atmosphere of harmony prevailing, with of course the personal factors of occasional discord.

When it is all summed up, the principles of the Golden Rule of doing unto others as you would have them do unto you, must be the basis of continued prosperity and peace in our national and international relationships.

Maine Cities Ask Jobs, Not Charity

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that a column from the February 17, 1958, Christian Science Monitor entitled "Maine Cities Ask Jobs, Not Charity" may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAINE CITIES ASK JOBS, NOT CHARITY

(By George H. Favre)

"What my people want is jobs, not charity."

In these words Mayor Clement F. Deschambeault of Biddeford sums up the hope and desire of his townspeople and the people of Biddeford's twin city, Saco. With a joint population of about 30,000, Biddeford and Saco have 3,302 unemployed, about 30 percent of the working population.

Of these, some 1,400 persons in Biddeford are on the relief rolls, with 140 families totally dependent on city welfare.

Mayor Peter A. Garland of Saco reported about 3,200 workers who have applied for unemployment benefits, out of a work force of 13,500. Of the unemployed, some 1,000 have applied for city aid, and about 100 families are presently wholly dependent on the city.

But while in no way minimizing the urgency of the problem, both mayors agreed yesterday that reports of economic distress in their twin cities have been blown up.

Radio and television reports of long breadlines and rumors that the economically vital Saco-Lowell shops, which produce textile machinery, were about to close down were categorically denied by the executive heads of both cities.

"I don't want to minimize the situation here," Mayor Garland said, "but things aren't quite as bad as some people would have you believe."

Mayor Deschambeault, who agreed with the Saco chief executive's evaluation, stated that the great need is not for food and clothing but for jobs. "The most important thing is to bring new industries to the areas," he affirmed.

City welfare agencies have been distributing surplus food for some time to families on assistance rolls in both cities.

Some 1,400 workers were thrown out of work last year with the closing down of the York division of the Bates Manufacturing Co., one of New England's largest textile firms.

Unemployment benefits for many of these workers are now running out, which will put an increasing burden on the relief rolls. Also contributing to the situation is a cut of 20 percent in the work force of the Saco-Lowell shops, which will affect 400 workers.

Mayor Deschambeault said that while the welfare case load has doubled in the last months, a $40,000 appropriation by the city is believed adequate to carry the load.

Meanwhile, over the weekend, in response to the sudden flare of publicity given the Biddeford-Saco unemployment situation, a spontaneous demonstration of neighborly concern brought donations of fresh foodstuffs to the area.

William V. Benson, a south Portland lobster dealer, together with other businessmen in the greater Portland area formed a good-neighbor committee to collect supplies for needy families in the Biddeford-Saco area.

The group is seeking contributions from businessmen, manufacturers, and producers through appeals made by radio station WLOB in Portland and seven affiliates on the lobster network.

Among the pledges of help received were 3,000 loaves of bread, 1,000 pounds of fresh fish, 520 quarts of canned sardines, 1,500 cans of corn, and milk, sugar, beans, fruits, and vegetables.

Mayor Garland this morning stated that the fresh foodstuffs will be moved as soon as possible with the most perishable commodities being distributed first so as to prevent any spoilage.

Triggering the generous action of the Portland merchants were news reports that tons of Federal surplus foodstuffs were being rushed to the area on an emergency basis.

Mayor Garland explained that Government surplus foods have been given out to the families of unemployed workers for months now, and that the latest 6-ton shipment was merely a temporary loan from Portland school-lunch program reserves to meet a momentary shortage.

"I don't want to leave the impression that the situation is not serious," Mayor Garland said. "Our unemployment problem, which had been a growing one over the past 6 years, is grave. But I do want to emphasize that the need is for more industry, more jobs."

He cited efforts on the part of Saco to help itself through an active program of industrial development, through which some $60,000 has been raised by public subscription. With the funds a 170-acre tract has been purchased for development, and the nonprofit development corporation is now tracking down several potential leads.

"We are definitely hopeful," the mayor said, "but of course industrial development is a highly competitive business these days."

Another possibility being explored is occupancy of the 800,000 square feet of factory floorspace abandoned by the York division of the Bates Manufacturing Co. last year.

Mayor Garland stated that a tannery has requested permission to move into the property. A hearing was held 2 weeks ago before the Maine Water Improvements Commission on the question of what effect the tannery might have on the already industrially polluted Saco River.

Meanwhile, Senator FREDERICK G. PAYNE, Republican, of Maine, has sought aid for the twin cities as has Representative ROBERT HALE, Republican, who said in a letter to the President that worsening unemployment made immediate aid necessary. Representative HALE urged that the President implement recommendations of the executive board of the Biddeford-Saco Textile Workers Union of America.

The union has asked the President for the channeling of defense contracts to the Saco-Lowell shops; support of all legislation designed to aid the textile industry; institution of an immediate public works program by construction of a sewage disposal plant on the Saco River; and extension of unemployment benefits to workers who have exhausted their benefits.

National Guard Men Deplore Proposed Reduction

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. TALMADGE. Mr. President, I have received a telegram from 81 members of Headquarters Battery of the 250th AAA Battalion of the Georgia National Guard, deploring proposed reductions in National Guard strength. I agree fully with their expressed views and ask unanimous consent that their telegram be printed in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

AUGUSTA, GA., *February 19, 1958.*

Senator HERMAN TALMADGE,
United States Senate,
Washington, D. C.:

The National Guard is the custodian of individual liberty of all Americans. The United States has never won a major war without the National Guard. As National Guard men we deplore attempts to reduce the National Guard. Request you use every means possible to prevent reduction of strength of National Guard.

Clarence Prather, George Toole, Calvin Broome, William Bush, Robert Gibbs, George Smith, Alfred Spires, William Haston, James Haupfear, Riley Jones, George Lawson, Cleonard Pittman, William Roberts, Carol Rhoden, Irvin Waters, Jerry Reese, Preston Sweeney, Carlton Whitaker, James Worrall, Eugene Adams, Frank Cheesborough, Jimmie Hale, Lincoln Hosner, Lester Jennings, Robert McKettrick, Ronald Pound, David Stringfield, Jack Anderson, Willard Baker, Thomas Burton, Doyle Brewer, Jack Chavous, Walter Chavous, Aubrey Crawford, Charles Harris, Carl Howard, Quitman Hughes, Rudolph Keen, Thomas King, Hugh Langston, William McDaniel, Franklin Otis, Claud McMullan, Robert Randall, Neal Riddle, David Sanders, Russell Smoldt, Frank Whitaker, Franklin Wood, Harry Cozart, James Davis, Jack Fountain, Roy Gay, Bobby Griffin, Foster Grimaud, William Herbert, Haskell Hughes, Jesse Kendrick, Willis Laird, Clifford Livingston, Walter Mays, Charles Moody, Anthony Powell, Joseph Stringfield, Bob Vintson, Wiley Andrews, Donald Akins, George Badger, Robert Dean, Robert Hardy, William Marks, Woodrow Newman, Charles James, Bobby Jones, Billie Otts, William Rowe, John Sheehan, Dean Smith, Donald Smith, Willie Williams, Keith Walls, Headquarters Battery, 250th AAA Battalion, Georgia National Guard.

Jurisdiction of the Supreme Court

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. THURMOND. Mr. President, in the February 21, 1958, issue of the Greenville News, of Greenville, S. C., there appears a column by one of the ablest of our Washington writers, Mr. Holmes Alexander.

It discusses the subject of special interest to all of us and I ask unanimous consent that the article entitled "Jenner's Bill Aimed at Checking Jurisdiction of Supreme Court" be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JENNER'S BILL AIMED AT CHECKING JURISDICTION OF SUPREME COURT

(By Holmes Alexander)

WASHINGTON, February 20.—"A great cannon, loaded to the lips," was somebody's description of Daniel Webster in 1852 at his last momentous appearance in the United States Senate. Tone the description down a little; but not much, and you could use it to identify Senator WILLIAM JENNER, Republican of Indiana, who is in his last session and primed for a farewell salvo.

A gun in JENNER'S valedictorian salute is his bill (S. 2646), which would limit the Supreme Court's jurisdiction in considering certain appeals. Hearings have just begun, but the ideological lines were drawn behind closed doors in scrimmages with the Senate Judiciary Committee. It is the familiar battle, as old as the American Republic, between fundamentalists who believe that our freedoms are best protected by strict adherence to the Constitution and loose constructionists who believe in bending the law to fit the continuing crisis of emergency always. Personalities apart for the moment, this is how the argument on S. 2646 is shaping.

Fundamentalists: The Founding Fathers devised their incomparable system of checks-and-balances to make certain—among other things—that none of the three branches of Government should ever become too powerful. Thus the Congress, the Presidency and the Supreme Court—while all-powerful in unison—cannot separately infringe upon one another's duties and cannot threaten the people's numerous freedoms. In article III, section 2, there is a check by Congress upon the power of the Supreme Court. It reads:

"The Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions and under such regulations as the Congress shall make."

This clause, according to constitutional fundamentalism, clearly means that Congress has the right and duty to check the Supreme Court from assuming run-away authority. Congress is under solemn instruction to check the Court's abuses by naming exceptions and regulations in the Court's right of hearing appeals from rulings of lower courts or from rulings of Congress.

Loose constructionism: The Jenner bill (S. 2646) is an attempt to discipline the Supreme Court for decisions which certain Members of Congress do not like. This would be an arbitrary and capricious act by Congress. The law is kept alive and up to date by these judicial decisions.

The fundamentalists do not deny the first part of this charge. Senator JENNER and his conservative colleagues fully admit that they do not like many Supreme Court decisions. They contend that, far from being arbitrary and capricious, they are following the instructions in the Constitution by attaching exceptions and regulations to the Court's appellate jurisdiction. The following are the five fields in which the Jenner bill would prevent the Court from upsetting decisions reached in lower courts and in Congress. Under S. 2646 the Supreme Court could not overrule:

1. Action against a witness for contempt of Congress.
2. Action of the Federal Government in firing a security risk, as long as it was done under an act of Congress.
3. Legislation in any State for the control of subversive activities within the State.
4. Action of any school or college to control subversive activities within its teaching body.
5. Regulation by any State concerning admissions of persons to practice law within the State.

Obviously, from this list, backers of the Jenner bill believe that the Supreme Court has abused its powers in recent decisions concerning: contempt of Congress, Federal internal security firings, State antisubversion laws, college antisubversive rules for faculty members, State laws to prevent Communists and their supporters from practicing in the local courts.

Does Congress have this right? The fundamentalist case, I am told, rests upon the reconstruction era decision in which a Mississippi newspaper editor named McCardle was arrested for some alleged infringement of reconstruction law. McCardle appealed to the Supreme Court. Congress, fearful of testing the dubious laws of that shameful era, quickly enacted a statute which withdrew (as the Jenner bill would do) the Supreme Court's appellate jurisdiction in the pertinent field of law. The case against McCardle was automatically dismissed. Chief Justice Chase acknowledged the right of Congress to act as it did. He declared:

"Without jurisdiction the Court cannot proceed at all in any case * * * the only function remaining to the Court is that of announcing the fact and dismissing the cause."

Thus if Congress should pass the Jenner bill, the Supreme Court would be bound by precedent to treat is as law of the land.

Statement by Hon. Homer E. Capehart, of Indiana, on 10th Anniversary of the Communization of Czechoslovakia

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have made on the 10th anniversary on the communization of Czechoslovakia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CAPEHART

Ten years ago, on February 25, 1948, the communization of Czechoslovakia was completed. This communization was effected, in the 3 years from 1945 to 1948. The nations of former Czechoslovakia, the Czechs, Slovaks, Sudeten Germans, Hungarians, Carpatho-Ukrainians, and Poles were subjected, enslaved or expropriated and expelled from their centuries-old homelands.

We Americans as well as the other free peoples of the world, remember on the occasion of February 25, the fate of the Slovaks, Czechs, Hungarians, Poles, Sudeten Germans, and Ukrainians, and give the expression of our deep sympathies toward these unhappy peoples and of our hope that they again will be free and independent in the future, enjoying the full freedom, private property, and free enterprise, democracy and self-determination which we Americans consider to be our own and for which these nations are longing.

I believe that we should give our encouragement to the exiled leaders of these nations to strive actively for the return of freedom to their peoples, for the realization of a policy of liberation by peaceful means. As Americans, we believe that this world cannot be forever half free and half slave, we wish it to be fully free and we believe that the slavery and injustice, afflicted on all the peoples of former Czechoslovakia, will be terminated in a not too distant future.

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on juvenile delinquency by Mr. Arley R. Woodrow, a well known St. Louis attorney. I believe that Mr. Woodrow's article contains a number of helpful suggestions and provocative ideas, and I am certain it will be of interest to Members of Congress and the people at large.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUVENILE DELINQUENCY—SOMETHING CAN BE DONE ABOUT IT

In beginning this discussion, I will quote from a letter that was printed in the Mail Bag of the St. Louis Globe-Democrat, May 5, 1956:

"To the EDITOR:

"Recently the public was shocked to learn that some university students had formed a group that was planned to be the brains of a crime ring. The crimes of youth range from purse-snatching to burglary, robbery to rape and murder.

"These crimes are not committed alone on skid row, but in the city where people live, some of the boys and girls coming from better families.

"We are spending billions of dollars yearly to send boys and girls to prisons, reform schools, and in building more and better prisons. We try to lock the door after the horse is stolen.

"Little or no attention is given to the boy or girl until a crime is committed. That is to say, that there is no great organized effort to give help and guidance to American youth.

"The need for something to be done other than sending offenders to prison is well recognized. The circuit attorney of St. Louis has proposed that certain steps be taken, with State and city funds, to give assistance to chronic offenders on skid row.

"The need for recreational and training centers in every community is well recognized. Ministers, club leaders, progressive leaders of labor unions, all see the need for more and better community centers that can and will furnish activities for youth, and some have taken steps to correct the present deplorable situation.

"Churches have opened their basements for young people and some labor unions have recreational rooms. Boys' clubs are doing a fine job. All of these point the way but do not in themselves solve the ever-growing problem.

"There are thousands of young people in St. Louis and other cities with no place to go, no place for recreation and training. This can be said of older people, too.

"On my way home from my place of business, I frequently pass a delicatessan. Half a dozen boys and girls sit and stand around, some drinking soda water, others just looking bored. Then an old car comes along and all pile in and away they go in a cloud of smoke. There is nothing else for them to do.

"By boys and girls (in this letter) I mean all young people up to, say, 22 years.

"Every community should have its recreational and training center, where every opportunity should be provided for amusement, for wholesome entertainment. There should be ample opportunity for every boy and girl—youth—to pursue his or her desire for entertainment and training.

"The community should have its neighborhood theater, where youngsters could show off in their own shows, debates, etc.

"Opportunity should be given for training in art, music, drama, and there should be training in boxing, wrestling, jumping, swimming, play writing, acting, directing, jewelry making, fashion designing, tailoring, gardening, scientific research, marketing, as well as many other things that youth might want to do.

"The recreational centers should have their own newspapers, written, edited, and printed by the youngsters themselves.

"There should be frequent hunting and fishing trips, weekend excursions for all who want to go, and fun at State and National parks.

"A stipend should be provided for every participating boy and girl in all training activities.

"These activities should be, to a limited extent, self-governed. The boys and girls should make their own rules and enforce them in their own courts.

"In addition to furnishing the means for recreation and training, there should be an organized effort to draw every boy and girl into the program. This organized effort should be block by block, and in more crowded residential sections, every apartment house should have its own organization, and all should be supervised by competent, trained personnel.

"Such a program would keep our factories humming to turn out needed supplies, and would furnish employment for trained personnel.

"Such a program is a multibillion dollar program.

"It is correct that we have adequate defense forces, armed with the most modern equipment. American youth is our first line of defense."

In the few paragraphs which follow I shall attempt to show how the foregoing letter can be put into action, while at the same time help business and labor to prosper.

However at this time I should here quote some of the things I said before the Missouri State Legislative Committee on Juvenile Delinquency when it held a hearing in St. Louis.

"When the subject of juvenile delinquency is raised, some people lift their eyebrows and secretly think, 'It can't happen in my home.'

"Then the lightning strikes where it was never expected. The boy who wouldn't do a thing like that really does it. Sorrow is brought into the home of the innocent as well as into the home of the boy who committed the crime. I am thinking of 6 boys who kidnaped and raped a 13-year-old girl.

"Those who think in terms of the death penalty, the whipping post, and other forms of severe punishment should be given to youthful delinquents always think in terms of the 'other fellow's boy' and never of their own."

I also called attention to the fact that something should be done to prevent crime. In this connection, attention was called to the letter quoted above.

A conveniently located and properly conducted recreational and training center would give every young person an opportunity to be recognized. "The desire to be recognized causes many people to become great leaders, outstanding citizens in their community and nations," I told the committee, and also pointed out that the desire to be recognized often causes delinquency. Society must provide a way for young people to prove their ability to lead as well as a way to exhaust their energy.

"We have built skyscrapers on the old swimming hole," I told the committee, "and turned the brush thicket where junior used to hunt into flats and business houses.

"Older boys and girls find recreation in driving their cars on the streets and highways at breakneck speed. The only places they can find where there is music and fun is a tavern—when they get drunk they are no different than grownups, except that they have more energy and perhaps less good judgment. Society must furnish places for recreation in every neighborhood. This will be good for older people too.

"The program should be organized," the committee was told. "Every young person in the neighborhood should be contacted and urged to join a group of his choice.

"Such an organized effort would result in two lists: those who are active in youth activity and those who are not.

"The inactive list should be scrutinized by people trained in social work to the end that every boy and girl, every young person in the community would find a place in activity.

"This is a big program," I continued. "It is a nationwide program. It is a multi-billion dollar program. It is a program that requires Federal aid."

I also pointed out to the committee on juvenile delinquency that much frustration could be overcome by reducing the voting age.

Now, if a community center were built in every neighborhood and conducted as pointed out, what would happen to the economy of the country? What would happen to business, big and small? What would happen to employment, to labor?

Today we are spending increased appropriations to continue our crime program. Keeping and feeding and housing criminals is increasing daily. Building bigger and better prisons does not improve the community, does not improve the country. Every one cannot enjoy a prison. But every one can enjoy a community center where all may gather and enjoy themselves.

Today our Government is throwing money around like the proverbial drunken sailors. A little of this money could be tossed into a youth program that would give every American youth something to do, something to think about, a hope for the future.

The building industry, manufacturing plants and labor and farmers would find profit in such a program.

Many young lawyers and others who now find employment in our crime program would be able to take part in a much more enjoyable activity, which should be just as remunerative financially as well as provide much more fun.

Of course there are people who will say that such a youth program is creeping socialism, etc. But this is no more creeping socialism than is the United States postal system, the public school system, the fire department, the police department, etc.

The people have always turned to the Government for help in times of need. American youth today is in need of help.

We should ask our lawmakers to consider the needs of American youth. The youth program herein suggested will give the boys and girls of America a new lease on life and will give business increased activity.

Proposal To End Treatment Plant Construction Program Imperils Nation's Battle Against Water Pollution

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. BLATNIK. Mr. Speaker, although we seldom think of it as such, one of the Nation's most precious natural resources is water. Once taken for granted—just as the air we breath—the importance of water has recently taken on greater and greater proportions. And for good reason, when you consider that safe water and enough of it are fundamental elements, inseparable and indispensable to the health and well-being of man.

The absolute necessity for an effective water conservation and utilization program becomes apparent when you take into consideration the fact that while the demand for water constantly increases, the supply of water remains constant. Mr. Speaker, there is as much water available to us today in this country as there was available to the Pilgrims when they landed in 1620. And yet the demand for it has increased to amazing proportions.

IMPORTANCE OF WATER

Water is the most used raw material in our factories. The fast growing synthetic and chemical industries require tremendous amounts of good water. The steel industry alone uses 13 billion gallons a day. It takes 365,000 gallons to produce a ton of rayon yarn; about one-half million gallons for 1,000 yards of woolen cloth; more than a million gallons for a thousand barrels of aviation gasoline.

Industry, it is apparent, requires water—tons of it. Of the total water use in the Nation in 1950, 35 percent was by industry. The forecast for 1975 is 62 percent or 215 billions gallons per day. With the growth of industrial production and population, a paradox will be presented to industry: How to use less water while needing more. The requirement for a lesser use is developing from the necessity to assure the municipalities, agriculture, and other users as well as industry obtain their needed share.

Take municipalities for instance. By 1975, our present population is expected to increase by 37 million people, 90 percent of whom will locate in communities or urban areas. Water supply consumption will increase from 15 to 25 billion gallons per day for domestic use.

Take the increased use of water for agriculture, especially irrigation. In 1900 we were irrigating 7.7 million acres which required 20 billion gallons of water each day. In 1955 we were irrigating almost 4 times as much land—29.5 million acres. Yet we used 6 times more water—120 billion gallons each day. By 1975 we will be irrigating 37.4 million acres requiring 170 billion gallons of water a day.

Add to all this the increased recreational use of water and the increase in waste transportation and you arrive at the startling conclusion that by 1975 this country will require an increase in the current water supply of 145 percent—equal to the additional supply of 145 New York Cities, requiring the flow of about 11 Colorado Rivers.

This spells nothing but trouble because of the simple fact that while the demand for water increases daily the supply remains constant. According to a recent study made by the Industrial College of the Armed Forces, there is little reason to expect any marked change in our gross resource of water by 1980. In other words, we'll have as much then as we have now—but with a demand increase equal to the flow of 11 Colorado Rivers.

This report goes on to say that:

Although there are now several promising techniques in the research and development stage, such as desalting of sea waters, reduction in evaporation losses, induced rainfall, and other reduction of water losses, none of these can be depended upon to change the overall supply of water in the near future.

Next to the very air we breathe, I would say water is most important to human life. It is also essential to economic and industrial progress. It is also essential to our entire defense structures.

As Secretary of Army Brucker recently said: "The United States can no longer treat water as an inexhaustible

resource and allow it to run a wayward and wasteful course to the sea." But that is exactly what we are doing today in our polluted rivers and streams.

Pollution is a waste of water and unless we tackle this water-pollution problem, and tackle it hard, we are going to be in very serious trouble in a few short years. Pollution is one of the largest contributors to our present and future water-resources problems and we must recognize that its control is one of the most effective and economical water conservation measures available to us.

POLLUTION PROBLEM SERIOUS

The pollution problem has gone from bad to worse in the past few years.

In 1920, 48 million people were served by sewers, and wastes had a population equivalent of 42 million persons. Today 95 million are served by sewers, and wastes have a population equivalent of 55 million persons. By 1975 an estimated 160 million persons will be served by sewers, with wastes having a population equivalent depending on what we do about pollution in the interim. And what has been our progress in supplying facilities for the treatment of these wastes? Right now, there is a need for 9,255 municipal treatment projects.

The picture is even darker regarding industrial waste. In 1920 organic wastes discharged by industry had a population equivalent of 50 million persons. Today that is more than doubled. Organic wastes discharged by industry has a population equivalent today of 110 million persons. By 1975 we know that our present industrial capacity will be doubled. The amount of pollution will again depend largely on what we do today and in the years to come in the field of pollution control. A 1955 survey by the Public Health Service shows a total of 5,700 treatment projects needed by industry.

And what about the future? In the Army college study I referred to before, the demand-supply situation was broken down region by region. Listen to some of the conclusions regarding the problem in 1980:

New England region. Pollution abatement is needed in certain areas, especially in southern New England.

Delaware-Hudson region. Serious water problems seem to be inevitable for area.

Chesapeake region. Pollution abatement is a growing problem in this area.

Eastern Great Lakes-St. Lawrence region. Pollution control is absolutely essential to protect the Great Lakes supply.

Upper Mississippi region. Pollution abatement is also a must for this area.

And the report goes on, covering each area of the country, each time with the same conclusion—pollution problems will become increasingly serious.

Fortunately for us, pollution can be controlled. Pollution is not something that must be endured as an inevitable consequence of our urban and industrial growth. Pollution abatement is possible, but it is an expensive process and it requires the cooperation of government, at every level, industry, and the public itself.

Responsibility for pollution abatement for the protection of water resources is shared today by local, State and Federal agencies. Under the American tradition of community responsibility, each city and industry has a clear obligation to construct, operate and maintain all the pollution abatement works necessary to assure that its wastes will not cause harm to others.

FEDERAL POLLUTION CONTROL RESPONSIBILITY AND ACTIVITY

The Federal responsibilities are primarily of a supporting nature, designed to assist and strengthen State programs. They include research, technical assistance on particularly difficult problems requiring highly specialized personnel or other resources not always available to individual State agencies, promotion of coordinated interstate action, and enforcement on interstate pollution problems. Since 1956 Federal responsibilities include Federal grants in aid, amounting to $50 million a year, to assist local communities in the construction of sewage treatment plants and facilities. I was the original sponsor and author of that program and am happy to report that it is working out splendidly.

As of January 31, 1958, Mr. Speaker, $72,543,846.36 in Federal grants have been approved for 875 projects representing a total cost of $367,064,915. In addition, Public Health Service regional offices are now processing 245 additional projects representing a total cost of $136,369,970 of which $23,939,912 would represent Federal grants. State agencies, at the same time, are processing 392 other projects which will cost $458,715,818, of which $42,808,783 would represent Federal grants.

This is a fine record for a program that supposedly did not have a chance. But we find, that despite the need for this program and despite its successful operation, it is being attacked from many sides.

Of course, this is nothing new. Every effort has been made since the enactment of Public Law 660 to block appropriations for the grant program. The first year the Bureau of the Budget froze the funds for 3 months. Last year an attempt was made to kill the appropriation on the floor of the House. We stopped that—but only by a narrow margin.

Now it looks like we have got a new gimmick to contend with—a completely new and cleverly appealing scheme for torpedoing this most vitally needed Federal function. This time, apparently, it is to be done under the alluring mantles of economy and States rights.

JOINT FEDERAL STATE ACTION COMMITTEE

Last August the President suggested the formation of a committee to study the question of Federal aid to the States with a view to determining which of the present grant programs could be properly turned over to the States and the Federal participation ended. This group, known as the Joint Federal-State Action Committee, issued its first progress report on December 5, 1957, and in it recommended that Federal grants for sewage treatment plant facilities be ended. This recommendation together with certain others will be considered by the governors' conference to be held next May. It has not yet been approved by that conference.

Apparently this does not make any difference to the President because in his fiscal 1959 budget we find the following language regarding the grant program under Public Law 660:

While this budget recommends continuation of this program at the 1958 level, it is expected that by the end of 1959 the Federal Government and the States will have had an opportunity to act on the recommendation of the Joint Federal-State Action Committee that the States assume this function entirely. Therefore, it is anticipated that no funds will be included in the 1960 budget for this purpose, should this recommendation be accepted as practicable by the Congress.

Mr. Speaker, in considering the practicability of this recommendation the Congress should pay close heed to the bases of the recommendation. Let us examine the Joint Committee's findings, the evidence presented, and see if the President's anticipation is justified.

The joint committee's first finding, found on page 35 of the report, was that municipalities and private industry, except in certain emergency periods, have borne virtually the full costs of waste-treatment construction projects, and outlays for such purposes have grown significantly.

The first part of this finding is so obvious it could have gone without saying. The second is misleading.

Naturally, prior to the time the Federal Government enters into a particular field or activity, local governments and interests have the entire responsibility. The important question is what has been the result of municipalities and private industry bearing virtually the full cost of waste-treatment construction projects? The result, simply, Mr. Speaker, has been the accumulation of a tremendous backlog of needs in sewage-treatment works construction.

As of January 1955, the Public Health Service estimated that the cost of municipal pollution-abatement needs for 1955–56 was $3.49 billion for sewage-treatment plants and $1.84 billion for interceptors. This makes a total of $5.33 billion for the next 10 years. These figures include the cost of building for the backlog, replacement for obsolescence, and construction for increased population. The table below shows these figures in greater detail:

Estimated cost of municipal pollution abatement needs (sewage treatment plants and interceptors), 1955–65

Item	Description	Cost for 10-year period 1955–65 (billions 1954 dollars)		
		Sewage treatment plants	Interceptors	Total
Backlog of needs as of Jan. 1, 1955.[1]	1. Communities needing treatment facilities including places with sewer systems requiring both sewers and treatment (22.7 million population).	1.03	0.60	1.63
	2. Communities served by facilities requiring replacement (2.1 million population).	.11	.03	.14
	3. Communities served by facilities requiring enlargement, addition, or improvement (13.7 million population).	.07	----------	.07
	4. Communities with needs, but type of improvement undetermined (1.6 million population).	.04	.02	.06
	Total backlog of needs	1.25	.65	1.90
Obsolescence, 1955–65.[2]		1.24	.48	1.72
New requirements, 1955–65.[3]	1. Increased needs in presently sewered areas (17.3 million population).	.89	.67	1.56
	2. Needs in communities having no sewers or treatment in 1955 but which will develop need in next 10 years (1.6 million population).	.11	.04	.15
	Total requirements	1.00	.71	1.71
	Total cost of municipal pollution abatement needs, 1955–65.	3.49	1.84	5.33

The chart shows that despite every effort made by local communities, who are generally genuinely sincere in their efforts to clean up their water supply, they have fallen further and further behind until today, according to latest available figures, the total backlog of sewage-treatment plant needs alone amounts to almost $2 billion. Add to that obsolescence and new requirements and you have a total 10-year need of $5,330,000,000.

To meet this need, therefore, the local communities will have to spend at the rate of $533 million a year for the next 10 years. They have never come close to spending this amount. The average yearly expenditure for treatment-plant construction, going back as far as 1913, has been $180 million. And that is in terms of 1955 dollars. Only once, and that was during the PWA–WPA days, did construction keep pace with need—and that only because Federal grants were available.

The claim of the joint committee, Mr. Speaker, that treatment-plant construction outlays have grown significantly in recent years also requires examination. According to the joint committee, the annual dollar volume of waste-treatment construction in recent years is as follows:

	Millions
1952	$176
1953	238
1954	282
1955	249
1956	393
1957 (estimated)	475

These amounts, Mr. Speaker, were arrived at by taking the total of sewage-treatment works contract awards and raising it by 25 percent. I was unable to find anywhere in the report why the total was raised 25 percent, but I am sure the joint committee had some reason to do it. For the record, however, I would like to show the actual total of sewage-treatment works contract awards for the same years as compiled by the Public Health Service, which administers this grant program. The actual totals are as follows:

	Millions
1952	$137
1953	190
1954	228
1955	201
1956	354
1957 (estimated)	329

An examination of either table, Mr. Speaker, shows that despite increases in plant construction outlay still enough is not being done and we are continually falling behind. It is the joint committee's contention, however, that the trend toward greater expenditures and stimulation in this field began before the enactment of the grant provision in Public Law 660 and, therefore, there is no real need for the program.

Mr. Speaker, the joint committee is either trying to deceive us or is just plain ignorant of certain facts. Included in the 1956 dollar volume of treatment-plant outlays, Mr. Speaker, is a $78-million project completed in that year, after being under study and development for the past 30 years, in the Pittsburgh metropolitan area. A project like the Pittsburgh plant comes along once every 10 to 20 years, but this joint committee includes it to show an increase in treatment-plant construction. If not for the Pittsburgh project expenditures during 1956 would have been below the $300 million mark by over $25 million.

So to begin with the joint committee is basing its trend on a project that comes along once every 10 to 20 years. Moreover, the committee fails to point out in its report that the rather substantial increase in treatment-plant construction for 1957 was the result of Federal stimulation under Public Law 660. Whichever table you follow, the joint committee's or the Public Health Service's, it is apparent that during 1957, the first year of operation under the Federal treatment-plant-construction program, more contract awards for treatment-plant construction were let than in any single year in our history. From the committee's own figures we actually have the best single argument for the continuation of Federal assistance that I have ever seen. Moreover, the increased activity for 1957 was a result of Federal stimulation amounting to less than $20 million. The entire $50 million appropriated was not spent that year. This tremendous jump in 1957 was the direct effect of the Federal program.

I think the question whether this Federal program is helpful was answered in the December 1957 issue of Minnesota Municipalities, as follows:

> The fact is that the existing grant-in-aid program has been a great success. Except during PWA days and the period during which the present aid program has been in effect, municipalities have never constructed enough sewage-treatment plans to adequately handle their increasing needs.
>
> Under the present program, while Federal grants accounted for only an estimated 10 to 12 percent of the total construction outlays in fiscal 1957, the Federal program has in effect generated the greatest sewage plant construction program in the history of the Nation.
>
> Although the aid offered by the Federal Government has been relatively small, the program has served to move many crucial local projects off dead center and has, as a result, broken the bottlenecks to a more widespread program by getting small upstream municipalities to initiate control programs.

Yes, Mr. Speaker, the trend is definitely toward greatly expanded treatment-plant construction activity, but only because the Federal Government finally assumed its share of the responsibility for cleaning up our rivers and streams. To reach any other conclusion would be inconsistent with the facts, including the very facts presented by the joint committee.

STATE PROGRAMS EXPAND UNDER FEDERAL AID

Now let us turn to the second finding, which is: State governments have been active in this field for many years, mainly to plan and coordinate statewide pollution control work. This, again, is a well-known fact and tribute should be paid to the Nation's public health officers and State pollution control activity officials who have devoted so much of their time and effort to what is more often than not a thankless task. I worked closely with these State people during the writing of what is now Public Law 660. I know how active they have been and I know the handicaps under which they have been forced to work in the past.

Originally, Mr. Speaker, the administration asked for $2 million yearly Federal grants over a 5-year period to assist the States in expanding and operating their water pollution control programs. A conference of State health officers held here in Washington agreed that $2 million was inadequate for Federal assistance to 53 State and Territorial water pollution control agencies plus several interstate agencies to carry out effectively the purposes of the bill. So the executive committee of the Association of State and Territorial Health Officers urged that the amount be increased to

$5 million, and that amount was approved by the House. In conference it was cut to $3 million which is now in the law.

These Federal grants are needed to stimulate State activity in the pollution-control field. Federal program grants under section 5 of Public Law 660 accelerate not only State programs but State financial support as well. Experience under the original Pollution Control Act, Public Law 845 of the 80th Congress, proves this point conclusively.

State water pollution control program expenditures (with breakdown as to source of funds)

Year	Total	State funds	Federal grant
1950	3,088,097	2,286,941	845,519
1951	3,799,805	2,983,322	815,313
1952	4,785,514	4,016,580	768,934
1953	3,912,404	3,912,404	0
1954	3,989,257	3,989,257	0
1955	[1] 4,000,000	[1] 4,000,000	0
1956	[1] 4,000,000	[1] 4,000,000	0

[1] Estimated.

It is obvious what happened under the old law. From 1950 to 1952, when Federal program grants, as distinguished from construction grants, were available, State expenditures showed a definite increase. Then, from 1953 on, when the Federal grants were discontinued, State activity remained static at the plateau reached in 1952, the last year of Federal grants. The Federal stimulant and incentive was taken away, and State activity, which had been on a steady rise, leveled off.

With the enactment of Public Law 660 in 1956 the increase in State activity began aagin. Although actual expenditures are not yet available, budgeted figures show that in 1957 the total spent on State pollution control programs was $6,926,739, of which the Federal Government contributed $1,937,107 and the States $4,989,632—almost $1 milion more than they are estimated to have spent the year before and for the 3 preceding years before that. In 1958 it is predicted that a total of $8,331,243 will be spent by State pollution control agencies. Of this amount $5,531,232 will be purely State funds, with the Federal Government contributing the balance of $2,709,-123. Again, over a million and a half dollars increase in State activity as a direct result of the Federal grant program which has served as a stimulant to the States to accelerate their own programs.

These State programs are the backbone of any really effective pollution control program. As former Assistant Secretary of Health, Education and Welfare Roswell Perkins said before our subcommittee:

> In the final analysis, pollution control is achieved through State action to bring about construction of needed treatment works. For this reason, it is essential that the States be adequately equipped to do the job. In recent years, the rapid increase and concentration of industry, and the continuing growth of urban areas, have thrust enormous pollution problems on many States. Some States have expanded their programs to meet the growing problem. On the other hand, many State water pollution control agencies are inadequately supported. For example, in 32 States annual appropriations for water pollution control in 1954–55 were less than $50,000; 23 of these States provided less than $30,000 a year.
>
> The inadequacy of the support of water pollution control activities is particularly significant in those States now experiencing large-scale industrial expansion, with the attendant urban development. The type of assistance provided for in these bills would be especially important to these States.
>
> Rounding out our assistance to State programs is the provision of expert consulting assistance on complex problems due to new types of pollution. The central staff of consultants at our Taft center is available to assist all the States on problems, which although they occur throughout the country, do not occur frequently in any one State.

Thus, the second finding of the joint committee, Mr. Speaker, told us notihng we did not already know, while leaving out the all important fact that Federal financial assistance has a definite and accelerating affect on State pollution-control activities.

STATE FINANCIAL AIDS INADEQUATE

The third finding of the committee is that some State governments provide financial incentives to municipalities and industry for waste treatement projects. It lists 11, all together: California, Maine, Maryland, New Hampshire, New Mexico, New York, Ohio, Oregon, Pennsylvania, and Vermont.

An examination of these State grant programs shows:

First. The programs in Maine and Maryland were directly stimulated by enactment of Public Law 660 and are predicated on the existence of that act.

Second. In addition to the programs in Maine and Maryland, the programs in New Hampshire, New Mexico, Ohio, and Vermont were all enacted after the passage of Public Law 660.

Third. Most of the programs provide exceedingly small amounts of money making their effectiveness questionable. The California program, for instance, providing a $1 million fund for loans pales to insignificance when you consider that last year total contract awards for treatment plants in the State amounted to close to $60 million. In New Mexico the legislature appropriated $150,000 for 2 years. Last year New Mexico was spending at the rate of over $1 million for treatment plant construction. While there are all worthy and commendable programs, and the States inaugurating them should be praised, they are not nearly enough to get the job done even in the State involved much less considering the fact that the great and overwhelming majority of States have no such program at all.

A few States, Mr. Speaker, New Hampshire, North Carolina, Virginia, and Wisconsin, have enacted legislation providing financial assistance to industries for waste treatment construction. These acts provide merely for accelerated amortization for tax purposes of industrial treatment facilities or they exempt industrial treatment facilities from local taxation. They are few in number and limited in scope.

It is perfectly obvious that while some States do provide financial assistance to their communities and industries, the overwhelming majority of the make no provision for such assistance and for all intents and purposes, the financial responsibility for constructing treatment plants, without Federal aid, rests squarely on the hard-pressed cities and towns throughout the country.

MEANINGLESS FINDINGS DO NOT JUSTIFY CONCLUSIONS

The joint committee's fourth finding is that the Public Health Service provides technical assistance to State and interstate agencies, and through them on request to communities and industries. To which I say only, "They had better be." That is what the law tells them to do, and if the Public Health Service were not doing what this joint committee found it was doing then an investigation of some sort would be in order. Mr. Speaker, of what significance is this fourth finding? How in the world can a finding that a Federal agency is doing what the law directs it to do lead to the conclusion and holding that Federal assistance to the communities for treatment plant construction should be discontinued?

The meaningless nature of the findings carry over to the fifth, as well. Almost as if they were making some sort of discovery, the joint committee finds that beginning in fiscal 1957, Federal grants were made to local governments to aid in municipal sewage treatment plant construction, a field previously reserved primarily to State and local government.

I wonder which definition of find fits this finding. According to Webster to find is defined, first, to meet with, or light upon, accidentally; hence to fall in with, as a person; or, second, to come upon by seeking or by effort. I do not know how much effort or seeking it took to find out that since fiscal 1957 there has been a Federal grant program to assist communities in the construction of municipal treatment plants. But I know for sure that the joint committee did not light upon that fact accidentally because that is the program they were after in the first place.

But to call this a finding does a disservice to the word itself. Upon finding it to exist, this joint committee recommends that the construction program under Public Law 660 be eliminated. That is about the extent of it. They had to find that it existed before they could recommend its discontinuance and that is the reason, it seems, for the fifth finding.

SIXTH FINDING GOOD ARGUMENT FOR CONTINUATION OF GRANTS

Going to the sixth finding, we find a further example of how the committee states a fact as a finding, trying to leave the implication, at least, that this is a reason for discontinuing the grant program. The sixth finding, however, might backfire on them. Actually, it is a good argument for the program—not against it. The finding is that Federal grants will account for an estimated 10 to 12 percent of total construction outlays in 1958; this percentage will decline as local governments increase their construction programs to meet growing

waste-treatment requirements in the years ahead.

To the committee this is a finding to justify the repeal of the program. To me it is an argument for its continuation.

It is true that Federal grants account for only about 10 to 12 percent of the total treatment-plant-construction outlay and that this percentage will decline as local governments increase their construction programs. This finding, that the Federal share is so small, leads to the seventh finding which is that the States can, therefore, absorb the cost. But we will get to that later. First, let us see why the Federal share is only 10 or 12 percent and why it will decline with increased local expenditures.

Under the existing program $50 million a year is made available to the local communities. The grants are limited to 30 percent of the cost of the project or $250,000, whichever is smaller. When a large and expensive project is approved for a $250,000 grant, the ratio of the Federal contribution to the local outlay is bound to be reduced. Many of these projects cost well over a million, and some much more.

As a result, Mr. Speaker, the percentage of Federal participation has been low. But, the important thing to remember is that this low percentage of Federal participation has stimulated tremendous local participation. When we build interstate highways at a 90–10 Federal-local ratio nobody complains. But when it comes to investing in clean water at a unbelievably favorable 10–90 Federal-local ratio, it is called an unwise program. Where else does the Federal Government get such a good return on its grant dollar? Considering only the projects constructed under the program itself the ratio is running about 5 to 1—local over Federal. And for the overall construction program containing projects both with and without Federal aid the ratio is 9 to 1—local over Federal. What better return for our investment could we ask?

The fact that the percentage of the Federal grant to the total national outlay will decline as local outlays increase is as obvious as the nose on a fourth-grade math student's face. With a constant Federal share, as dictated by law, and an ever-increasing local participation stimulated by that Federal share, the percentage of such Federal share must decrease. The fact, Mr. Speaker, that the Federal percentage will decrease is not a reason to scrap the program but to continue it on as a good investment. This rather interesting finding No. 6 is one of the best arguments I have seen in favor of the continuation of the Federal-grant program under Public Law 660.

FEDERAL PROGRAM SHOULD BE INCREASED, NOT CUT

Now we come to the seventh, and final, finding of the joint committee. This committee found that the Federal sewage-treatment plant construction grants are relatively small in terms of costs of needed projects and could easily be absorbed by the States. The first part of the sentence is exactly what I have been saying ever since we enacted Public Law 660. My original proposal called for twice what is now contained in the law, but we had to settle for the existing program due to incessant opposition from the administration and certain other forces. Time and time again I have said, "Fifty million is not enough. We need at least $100 million a year for 10 years to do the job right." I am happy the committee agrees that $50 million a year for 10 years is a relatively small amount. But we part company there. Because it is small, says the committee, we can get rid of it. That is a rather interesting way of looking at things. The way I see it, if the amount is small and the needs large the answer is to increase the amount. The logic of the committee's approach escapes me. It reminds me of a man with 6 children but money enough to feed only 3. Following the committee's logic, his solution is to let them all starve.

The second part of the finding does not seem to jibe with the facts. We are asked to believe that since the Federal grants are so small they could readily be absorbed by the States. Readily is an interesting word. Here it is 1958 already and only 11 States have grant programs of their own. Most of these are of rather recent origin and two of them are directly tied to the Federal grant program. I might say with the exception of Pennsylvania the only effective State financial aid programs are predicated on the Federal aid provided for in Public Law 660.

To say now, after less than 2 years of experience under the act, that the States will readily absorb the Federal contribution overlooks the fact that the reason we enacted section 6 in the first place is the fact that through the years the States have not assumed their responsibilities in this field and therefore the Congress was obliged to take action to preserve a vital and precious natural resource—water.

Wishing will not make it so. Nor will merely saying the States will do something result in their doing it. Past experience has proved the need for some form of Federal stimulation. Present experience is proving the rather limited Federal program is filling that need to a far greater extent than ever thought possible.

WATER A NATIONAL PROBLEM

From these seven findings, Mr. Speaker, the joint committee holds that local waste treatment facilities are primarily a local concern and their construction should be primarily a local or State financial responsibility. Now primarily under Public Law 660, the construction of waste treatment facilities is definitely a local financial responsibility. In the first section of the act itself Congress declares it "to be the policy of Congress to recognize, preserve, and protect the primary responsibilities and rights of the States in preventing and controlling water pollution, to support and aid technical research relating to the prevention and control of water pollution, and to provide Federal technical services and financial aid to State and interstate agencies and to municipalities in connection with the prevention and control of water pollution." So the committee is doing nothing more than restating the declared policy of Congress in this regard. And nothing in Public Law 660 detracts from that primary local responsibility in any way.

The construction phase of the Federal pollution program is dependent on local responsibility. The municipalities initiate action through their State pollution control agencies who must approve each and every application for a Federal grant. These State agencies are given the responsibility of establishing a priority list so that the most important projects in each State are sure to receive a Federal grant from the limited funds available. The local communities make all the arrangements, do all the work, and put up, as the committee itself points out, 90 percent of the money. If this is not primarily local responsibility, I cannot imagine what is.

By saying that the responsibility for the construction of waste-treatment facilities is primarily local, it does not follow ipso facto that the problem is exclusively a State and local problem. Far from it. It is also a national problem and therefore a national responsibility. The day is past when we can accept a purely local view on water-resources problem.

Neither stream pollution itself nor the construction of the treatment plants to clean it up can be considered purely local in character. The problem is a national problem. Its solution, while primarily the responsibility of State and local governments, requires Federal assistance. Under the construction grant section of Public Law 660, the Federal Government is doing nothing more than assuming its share of responsibility in solving a national problem.

Not only does the joint committee take the position, following its seven findings, that treatment plant construction financing is a local concern, but it says further that "should communities require additional financing, the funds should be forthcoming from the State governments on a loan or grant basis as the States may determine." There is no question Mr. Speaker, but that they require additional financing. The record is replete with the fact that they do require such financing and this is tacitly admitted by the committee itself in taking the position that the State governments should assist the communities in the financing of the necessary construction.

EXPERTS CITE NEED FOR FEDERAL AID

And finally, Mr. Speaker, the committee takes the position that there is no evidence to demonstrate the continuing need for the present Federal subsidy of an essentially local responsibility. It is simply amazing that this committee should take this position after a very short period of study during which it could not possibly become fully acquainted with the problem of water pollution and its control. This group, echoing the false charges of the NAM and the Chamber of Commerce, finds there is no need in an area where the recognized experts in that area find a very crucial and vital need. This com-

mittee flies in the face of all the evidence available and without citing one fact to sustain its position, maintains there is no need.

The committee is in disagreement with the Public Health Service which administers this program. Mr. Gordon E. McCallum, Chief of the water supply and water pollution program of the Division of Sanitary Engineering Service of the Public Health Service, in an article published in Water Engineering, pointed out that the Nation's pollution abatement needs will total $5.3 billion for the next 10 years. Earlier, Mr. Speaker, I discussed this same point and I refer you again to the table showing the backlog of needs, the obsolescence and new requirements. It is obvious that despite great local effort these needs were not being met prior to the enactment of Public Law 660.

We have seen that it is the committee's contention that the trend toward greatly accelerated local activity began before the enactment of Public Law 660 and therefore there is no need to continue the Federal grant program whose main purpose is to stimulate such local activity. I have already pointed out the fact that the evidence this committee uses to establish its trend are both false and misleading. As further proof of this we find that since the enactment of Public Law 660 an increasing number of States have registered record treatment-plant construction activity. In a survey recently completed it was shown that the number of States in which a record amount of treatment-plant construction was begun has greatly increased since the enactment of Public Law 660. In 1952, 4 States had a record construction year. They were Delaware, Massachusetts, Mississippi, and South Dakota. In 1953, 5 States had a record year—New Mexico, Oregon, Tennessee, Texas, and Wyoming. In 1954, only 3 States—Arkansas, New Jersey, and New York. In 1955, again 4 States—Michigan, New Hampshire, South Carolina, and West Virginia.

Then, suddenly, in 1956, following the enactment of Public Law 660, the number of States having a record treatment-plant construction year jumped to 13—Alabama, Colorado, District of Columbia, Idaho, Indiana, Kentucky, Louisiana, Nevada, North Carolina, Pennsylvania, Rhode Island, Vermont, and Virginia. Finally last year, as the impetus of the Federal program really began to be felt, 19 States had a record year—Arizona, California, Connecticut, Georgia, Illinois, Iowa, Kansas, Maine, Maryland, Minnesota, Missouri, Montana, Nebraska, North Dakota, Ohio, Oklahoma, Utah, Washington, and Wisconsin. An impressive record, Mr. Speaker, and every indication points to another record year for an ever-increasing number of States in 1958 and beyond. And if this keeps up for another 8 years under Public Law 660, and there is no reason to believe it will not, by 1966 we will have solved the municipal pollution problem in this country. That's what has happened with this small Federal program, which this committee recommends be scrapped.

Another group of experts, Mr. Speaker, disagrees with the committee on the question of need. We have already seen that the Public Health Service which administers the program on the Federal level disagrees. The men who administer it on the State level also disagree. The Association of State and Territorial Health Officers at its annual conference last November 3–8 adopted a resolution favoring a continuance of this program. This association is composed of the chief health officers in all the States and Territories—men devoted to the task of protecting the health of the Nation. These are the men who administer the program on the State level and their resolution citing the need for the continuation of the program is as follows:

RESOLUTION 4: FEDERAL GRANTS FOR WATER POLLUTION CONTROL

Whereas the Federal sewage treatment works construction program has been a highly satisfactory joint municipal, State, and Federal endeavor, achieving the goals set forth by the 84th Congress in Public Law 660 in abating water pollution; and

Whereas the increased activity in sewage treatment plant construction due to the program has materially aided in the abatement of pollution problems throughout the Nation; and

Whereas there still continues to be a serious water pollution problem amenable to relief by Federal grants, and

Whereas this program, while primarily designed to provide more adequate sewage treatment facilities has also exerted and continues to exert a significant influence upon the improvement of the quality of the Nation's water supply, and

Whereas this program is contributing significantly to the betterment of interstate relations, health and recreational facilities of the people of this country, and

Whereas continuation of this construction grant program will eventually eliminate the pollution problem in this country in the time specified by the 84th Congress: Now, therefore, be it

Resolved by the Association of State and Territorial Health Officers at its annual meeting with the Surgeon General, assembled, November 3–8, 1957, That Federal grants for the water pollution control program be continued up to the total amount authorized under the terms of Public Law 660, 84th Congress; and be it further

Resolved, That a copy of this resolution be transmitted to the Surgeon General, to the Secretary of the Department of Health, Education, and Welfare and to appropriate congressional committees concerned with such legislation.

This same group, by the way, during the hearings on the bill in 1956 opposed the grant section out of a fear that it would delay rather than stimulate construction. It is a tribute to the administration of the program by the Public Health Service that the State health officers now reverse their position and support the program.

Another group which most certainly qualifies as experts in this field because they deal daily with the problems of municipal pollution are the Nation's mayors. Through their organization, the American Municipal Association, they have come out in favor, not only of a continuation of the program, but its acceleration to 100 million a year.

Federal, State, and local officials, Mr. Speaker, who work daily with this pollution problem, who know first hand the needs and requirements, are practically unanimous in their disagreement with the committee's contention that there is no need for a continuation of this program.

Private interests, also, interested in the quality of the Nation's rivers and streams, also support the program and cite the need for its continuance.

The Nation's conservationists have been in the forefront of the fight for clean streams. Fifty million outdoor recreationists who look to water for relaxation believe there is a need for this program. The Izaak Walton League favors doubling Federal appropriations for treatment plant construction.

As League President William H. Pringle pointed out recently:

Operating as a strictly voluntary program and recognizing that the demand for pollution control and most of the financing must come from the grassroots, the Federal Aid to Water Pollution Control Act has proved so popular with local and State public health and pollution control experts that a great backlog of requests for cooperative local-State-Federal projects has piled up.

Sharply disagreeing with the conclusions of the joint committee, Mr. Pringle added:

No citizen organization has had a more constructive record of pollution control activity than the Izaak Walton League. We've worked since the early twenties to bring a stop to the pollution of the Nation's water resources. We've made good progress, but we all have been hampered by lack of a uniform national pollution control policy and program. We have that now, and we have no intention of seeing it abandoned in the misguided name of economy or of returning Federal powers to the States.

It has proved to be the most effective single piece of pollution control legislation ever passed by Congress and is a heartening example of voluntary cooperation by local, State and Federal Government to combat a broad, public evil. The Izaak Walton League will fight with vigor and unity at local, State and National level to assure continuation of the program and will seek increased appropriations in order that completion of the job can be assured within a reasonable period.

In short, Mr. Speaker, experts at all levels of Government and private interests disagree with the joint committee's position that there is no need to continue the program.

COMMITTEE'S RECOMMENDATIONS MISLEAD PUBLIC

From its findings and position the joint committee recommends the following action:

The Joint Federal-State Action Committee recommends that the President request Congress to take necessary action to discontinue construction grants for local waste-treatment facilities.

The committee recommends, therefore, that the governors request the State legislatures to—

(a) Provide such financial assistance for waste-treatment facilities as may be necessary;

(b) Strengthen, as needed, State water-pollution-control programs as they relate to both municipal and industrial wastes;

(c) Improve municipal capacity to raise funds to finance waste-treatment works.

The committee is asking the States to do that which the great majority of them have never done before. It recommends

the return to the day when Federal aid for treatment-plant construction was not available to the local governments, causing the great backlog of needs to build up to the danger point. We must face the fact that because of the tremendous demand on the local and State tax dollar treatment-plant construction finds it hard to compete with such more attractive activities and projects as roads, airports, hospitals, parks, and other municipal improvement projects. Let us face it. About the last thing people think about or spend money on is sewage. By the time the local tax dollar has gone around for the more attractive projects, many of which receive Federal aid, there is nothing left for a treatment plant. If we remove Federal aid now, we relegate the construction of these projects to the bottom of the financial totem pole once again, a position it has maintained for many years, considering the terrific backlog of needs which has built up.

As a substitute for the incentive provided by Federal grants under Public Law 660 the joint committee dangles before the governors of each State the prospects of a new-found source of State revenues—namely, 40 percent of the money collected by the Federal Government on local telephone-service taxes. The committee's recommendation for action regarding local telephone-service taxes is as follows:

The Joint Federal-State Action Committee believes that the local telephone-service tax is a logical revenue source for State and local governments. It recommends, therefore, that the Federal tax on local telephone service be changed so as to provide a 40-percent tax credit to those States enacting a 4-percent local telephone tax, not counting taxes already levied prior to the adoption of the credit device. This would mean that the Federal liability under the local telephone-service tax would be discharged to the extent of 40 percent for any taxpayer paying this amount of tax to his State government. At the end of 5 years the Federal levy should be reduced 4 percentage points automatically.

The Joint Federal-State Action Committee recommends that:

1. The President request Congress to take necessary action to provide up to a 40-percent Federal tax credit against the Federal local telephone-service tax for States enacting or increasing such taxes, the credit arrangement to last for 5 years, at which time the Federal tax will automatically be reduced by 4 percentage points.

2. The governors and the legislatures of the several States take necessary steps to avail themselves of this additional revenue source.

According to the committee, an estimated $370 million will be collected in fiscal year 1958 by the Federal Government from local telephone service taxes. Forty percent of that—or close to $150 million—will be made available to the States under the joint committee's plan. Superficially this may be a rather tempting offer. But, Mr. Speaker, nowhere in the report could I find the basis for an assurance that the return of such funds would guarantee their use for pollution control or treatment plant construction. Without such an assurance it seems strange that the joint committee would recommend the outright repeal of the Federal treatment plant grant program before it could be determined that the activity would actually be assumed by the States. And, stranger, indeed, that the President would include this recommendation in his budget even before the full governors' conference acted on it.

This idea of simultaneous reduction of grants and taxes has been considered before. One of the most blue ribbon of all the President's blue ribbon committees—the Commission on Intergovernmental Relations—considered this same proposition and reported the following:

The Commission has explored the suggestion that States would be assisted by a simultaneous reduction in Federal grants and certain Federal taxes. This approach would be inadequate in the current situation, since grants serve an essential purpose by assisting in the support of specific functional programs. Moreover, any general or selective reduction or repeal of Federal grants coupled with an equivalent reduction in Federal taxes would intensify the fiscal problems of the lower-income States, which would lose far more in grants than they would gain in taxes. On the other hand, a tax cut of sufficient magnitude to indemnify fully every State would result in a total loss of Federal revenue that would far exceed the grant reductions.

An alternative would be to reduce grants to the richer States and increase grants to the poorer. But since the purpose of grant programs is to stimulate and support particular activities in which there is deemed to be an important national interest, the question would arise as to whether the national interest would be fulfilled if changes of this kind were made.

Then, too, it cannot be assumed that taxes surrendered by the National Government would be fully utilized by either State or local governments. For example, recent experience with the Federal admissions tax (which was cut two-thirds in 1954) is inconclusive but not reassuring, despite the fact that its suitability for local use has often been stressed.

Moreover, Mr. Speaker, a close examination of this tax-rebate concept shows it is simply not designed to cope with the pollution-control problem—or any other, for that matter. The joint committee's implication that under their proposal such activities as pollution-facilities construction would be continued at its present level is a deliberate attempt to deceive and mislead the American people. The implication simply cannot be justified by the facts.

The Subcommittee on Intergovernmental Relations of the House Committee on Government Operations has prepared detailed tables showing the shortcomings of the joint committee's telephone tax-rebate proposal. The subcommittee has been studying this problem and under the chairmanship of the able gentleman from North Carolina [Mr. FOUNTAIN] has contributed greatly to the study of this serious problem. On February 18 the subcommittee heard testimony from the cochairmen of the joint committee and are currently closely studying the joint committee's report.

Table I below, prepared by the subcommittee, shows the distribution of telephones and local telephone-service revenues per capita in calendar year 1956, by State.

TABLE I.—*Telephone service in the United States, distribution of telephones and local service revenues per capita in calendar year 1956, by State*

State	Total telephones per 100 population [1]	Percent households with telephone service [1]	Local service revenues per capita [2]
Alabama	19.86	50	$12.71
Arizona	27.17	55	22.76
Arkansas	18.21	42	11.22

Texas	30.38	65	20.22
Utah	34.68	79	19.43
Vermont	30.00	73	18.11
Virginia	28.35	65	17.51
Washington	37.41	80	25.66
West Virginia	22.67	57	13.45
Wisconsin	34.02	80	18.91
Wyoming	33.07	69	17.74
United States	35.45	76	23.23

[1] Estimated by American Telephone & Telegraph Co., as of Jan. 1, 1957.
[2] Estimated by Federal Communications Commission.

You will note from the table that the total telephones per 100 population, the percent of households with telephone service, and the local service revenues per capita vary widely from State to State, contrary to the joint committee's finding that telephone service is uniformily distributed over the country.

Regarding total telephones per 100 population we find a high of 48.01 in Connecticut and a low of 15.29 in Mississippi. We find 98 percent of the households in Connecticut with phone service—the Nation's high—but only 39 precent in Mississippi—with the wide range between. And the same wide range holds for local service revenues per capita—the basis on which the tax is collected—from $36.60 in New York to $9.77 in Mississippi.

Yet the joint committee maintains the telephone tax is widely and unformily distributed over the country—not concentrated in a few States. What it fails to point out, however, is that the highest income level States will receive far more in tax rebates than they now receive in Federal grants for pollution control and

vocational rehabilitation, while the lowest income States will receive far less.

Table II shows exactly what will happen under the joint committee's plan.

TABLE II.—*Comparison of yield from 4 percent tax on local telephone service and Federal grants for vocational education and waste treatment facilities construction, for selected States*

States ranked by income level [1]	Yield from 4 percent tax on local telephone service (in thousands) [2]	Federal grants (in thousands)			
		Total	Vocational education		Waste treatment facilities construction [4]
			Older programs [3]	Practical nursing and fishery trades [4]	
10 highest:					
Delaware ($2,858)	$400	$539	$165	$24	$350
Connecticut ($2,673)	2,200	979	315	36	628
New Jersey ($2,443)	5,800	1,838	644	80	1,114
California ($2,419)	16,300	3,893	1,620	220	2,053
Nevada ($2,413)	200	495	151	18	326
New York ($2,395)	22,500	5,056	2,070	236	2,750
Illinois ($2,383)	11,000	3,383	1,461	169	1,753
Massachusetts ($2,206)	5,500	1,865	638	90	1,137
Michigan ($2,156)	6,800	2,712	1,182	140	1,390
Ohio ($2,154)	7,900	3,305	1,478	174	1,653
10 lowest:					
Mississippi ($964)	800	2,116	826	110	1,180
Arkansas ($1,088)	800	1,789	657	84	1,048
South Carolina ($1,133)	900	1,735	656	84	995
Alabama ($1,229)	1,500	2,162	898	114	1,150
North Carolina ($1,305)	1,900	2,727	1,288	168	1 271
Tennessee ($1,317)	2,000	2,214	958	120	1,136
Kentucky ($1,324)	1,600	2,089	908	114	1,067
South Dakota ($1,330)	400	944	253	30	661
North Dakota ($1,365)	300	991	257	31	703
Georgia ($1,400)	1,900	2,225	964	123	1,138
Total, all 48 States	148,000	84,468	33,179	4,228	47,061

[1] Based on per capita personal income, 1956, shown in parentheses.
[2] Estimated by joint Federal-State action committee, fiscal year 1958.
[3] Expenditures for fiscal year 1956. Older programs include agriculture, home economics, trades and industry, and distributive occupations.
[4] Allotments for fiscal year 1958.
[5] Allotments for fiscal year 1957.

Source: All expenditure figures from joint Federal-State action committee, progress report No. 1, December 1957. Income data from U. S. Department of Commerce. Prepared by Intergovernmental Relations Subcommittee, U. S. House of Representatives.

Note that all but 2 of the 10 highest income States (Delaware and Nevada) will receive far more in tax rebates than they now do in the form of Federal grants for pollution control and vocational rehabilitation; 2 of the programs the joint committee recommends be returned to the States.

By the same token, each of the 10 lowest income States will receive less in rebates than they now do in grants for these programs. It is just a case of the rich getting richer and the poor getting poorer. It is unfair and unjust to ask these lower income States to suffer even greater financial hardships while turning over to the wealthier States a windfall in tax rebates.

It would be different, Mr. Speaker, if these low income States were not putting forth adequate effort to meet their needs. The fact is, they are. The average fiscal effort of the States is 7.5 percent, which represents the ratio of State and local taxes to personal income with the State.

We find, from a table prepared by the Library of Congress and which appeared on page 9306 of the CONGRESSIONAL RECORD of June 26, 1957, that only 4 of the 10 highest income States were above this average effort. At the same time, 7 of the 10 lowest income States were above the national average.

There is no question but that the Nation's lower income States are making a valiant effort to meet their responsibilities, but the lack of funds makes it impossible for them to do without Federal aid in certain fields. Yet these are the States which would suffer most under the joint committee's proposal.

Last October, Mr. Speaker, labor's Economic Review published by AFL-CIO saw the danger inherent in the joint committee's plan and pointed out:

In the first place, lower income States that now receive the largest proportionate share of the Federal grants cannot possibly recoup their losses by levying the taxes that Washington would relinquish. Only the wealthiest States—that need aid least—would benefit from this callous States' rights scheme.

This proposal would restore the uncivilized and outmoded concept that only those who can pay the price deserve decent public services. It would curtail or completely eliminate school lunches, vocational training, assistance for the aged, and many other important services in precisely those States in which family incomes are the lowest and, therefore, their needs are most acute. The slight progress already achieved toward raising minimum standards would be reversed.

Secondly, it cannot be taken for granted that these services would continue as in the past, even in the States that are better off. The absence of the stimulus of Federal matching grants would strengthen the powerful reactionary bloc in the State legislatures that always fights adequate appropriations to meet public needs. There can be little doubt that even in the more prosperous States many civilian service programs—now encouraged largely by the existence of Federal aids—would be watered down or ended.

The net effect of the joint committee's plan, Mr. Speaker, would result in the Federal Government giving up $148 million of revenue in exchange for an assumption by the States, however nebulous, of $85.5 million in grants—a net loss of $62.5 million to the Treasury. And without 1 cent of tax reduction for the people.

ACCELERATED CONSTRUCTION PROGRAM NEEDED TO HELP COMBAT RECESSION

Mr. Speaker, because of the great need for enough water of the right quality, pollution control is a vital and necessary function of government, at all levels. The Federal Government has a definite responsibility which it is now fulfilling under Public Law 660. The Federal Government could and should be doing even more, however, especially in light of the present unemployment situation. There is a need now to not only continue the construction-grant program but, because of the economic situation, actually accelerate it.

It is an interesting fact, Mr. Speaker, that the President has put forth a $2 billion post-office construction program. That amount represents exactly the amount of the backlog needs of treatment plant construction. Yet in this vital area of water conservation the President recommends that we eliminate certain Federal activity altogether. This administration's sense of values is amazing.

As the distinguished chairman of the Senate Public Works Committee pointed out just the other day, an accelerated treatment plant construction program, stimulated by increased Federal grants, would be an excellent recession antidote. Senator CHAVEZ placed in the CONGRESSIONAL RECORD for February 17, on page 1927, tables showing the estimated impact an accelerated treatment plant construction program would have on our economy in terms of estimated payrolls and man-years of labor.

We have seen that under the existing $50 million a year program, $200 million of local participation is being stimulated for a total of $250 million worth of projects. The estimated payroll for this work is $75 million. The work requires 1,311.9 man-years of labor.

As Senator CHAVEZ has pointed out, doubling the Federal share would result in a comparable doubling of local activity with a corresponding double in payrolls and man-years of work. The projects are planned, Mr. Speaker. We could proceed with them now if sufficient Federal funds were available.

Here is a job crying for attention, Mr. Speaker. A task if left undone which would seriously curtail the Nation's future growth and expansion. A natural area of Federal activity which would add immeasurably to the future strength of the country. An activity if pursued diligently which would produce jobs, increase payrolls, and most important, protect our most precious natural resource—water. Mr. Speaker, I cannot urge this House too strongly to reject the President's proposal to discontinue Federal aid for treatment plant construction as recommended by our joint committee and at the same time let us move forward in the battle against pollution at an accelerated rate. For the present, this will be an excellent anti-

recession remedy. For the future, it will guarantee a supply of clear, fresh water to our children.

Norman Thomas, Victor Reuther, and Others Protest Torture of Spanish Students and Workers

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Norman Thomas, Victor Reuther, and Others Protest Torture of Spanish Students and Workers."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORMAN THOMAS, VICTOR REUTHER, AND OTHERS PROTEST TORTURE OF SPANISH STUDENTS AND WORKERS

Norman Thomas, Victor Reuther, and other sponsors of the magazine Iberica, which is dedicated to a free Spain, sent a telegram to President Eisenhower on Friday, February 7, urging that no further economic aid be granted the Franco Government in Spain from the President's emergency fund as long as Spanish students and workers are being beaten and tortured.

According to reports received by Iberica directly from Spain over 200 university students and workers have been arrested in Madrid alone during the past month as part of a stepped up campaign of terrorism. All are suspected of being opponents of the Franco regime and are indiscriminately labeled as Communists. In police attempts to force confessions many have been subjected to violent beatings and tortures such as being forced to hold their hands or feet on red-hot electric stoves. Several victims have gone insane as a result of the treatment received in the course of these interrogations while others have been hospitalized with broken bones.

Police sadism has reached such a point that even former Spanish Minister of Foreign Affairs, Alberto Martin Artajo, has written an indignant letter of protest to Gen. Camilo Alonso Vega, Minister of Internal Security.

In their telegram to President Eisenhower, Norman Thomas and the other sponsors of Iberica expressed concern lest United States aid to the Franco regime be injurious to our long term relations with Spain.

"In Spain we are rapidly losing the good will of the people," they warn the President, "by our active support of an oppressive and necessarily transitory dictatorship. If we wish to insure our accessibility to our costly Strategic Air Command bases on Spanish territory in the future, then we had better take another look at our relations with the Spanish people today."

The complete text of the telegram to President Eisenhower follows:

FEBRUARY 7, 1958.

President DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

MR. PRESIDENT: We are informed that the Franco Government in Spain has asked another $30 million from your emergency fund in addition to the $20 million already granted. We respectfully call your attention to the unpublicized fact that brutal repressions within Spain have been on the upgrade within the past few months. During the last few weeks over 200 university students and workers in Madrid alone, suspected of being opponents of the Franco regime and indiscriminately labeled as "Communists" have been arrested and many have been subject to cruel torture. By extending financial aid to the Franco dictatorship we are in a sense intervening in Spanish internal affairs and becoming accessories to these repressions. Therefore, we urge that you withhold further aid pending a termination of such uncalled for brutality.

In Spain we are rapidly losing the good will of the people by our active support of an oppressive and necessarily transitory dictatorship. If we wish to insure our accessibility to our costly Strategic Air Command bases on Spanish territory in the future, then we had better take another look at our relations with the Spanish people today.

Respectfully yours,

NORMAN THOMAS,
VICTOR REUTHER,
ROGER BALDWIN,
FRANCES R. GRANT,
ROBERT J. ALEXANDER,
LOUISE CRANE,
Sponsors of IBERICA Magazine.

Address care of Norman Thomas, 112 East 19 Street, New York, N. Y.

(NOTE.—Aside from the $41 million in foreign aid appropriated by Congress to Spain, for the fiscal year ending in June 1958, $20 million has been extended to the Franco Government from the President's emergency fund and another $30 million is being urgently requested. All of this is in addition to the hundreds of millions of dollars in economic aid already extended to Spain in connection with the United States base program.)

Identifications: Norman Thomas is chairman of the Post-War World Council; Victor Reuther is administrative assistant to the president, AFL-CIO; Frances R. Grant is secretary-general, Inter-American Association for Democracy and Freedom; Robert J. Alexander, specialist in Spanish and Latin-American affairs, is professor of economics at Rutgers University; Roger Baldwin is chairman, board of directors of International League for the Rights of Man; Louise Crane is publisher of Iberica magazine.

Attacks on the Supreme Court

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Attacks on the Supreme Court," by John E. Dunsford and Richard J. Childress, professors at St. Louis University Law School. These two scholarly gentlemen have written an excellent article in which they present many thought-provoking ideas. I believe they have done a splendid job in setting the Supreme Court in its proper perspective.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATTACKS ON THE SUPREME COURT
(John E. Dunsford and Richard J. Childress)

According to an old dictum, it makes a difference whose ox is being gored. In the past few years the Supreme Court has gored some oxen (plus, now and then, a sacred cow), and the proof of the proverb lies in the sustained attack which has been mounted. The common judgment is that contemporary criticism of the Court has few parallels for scope and intensity in American history.

Disparagement of court decisions is not a new phenomenon, of course. Criticism of the High Court has flashed like summer lightning through the Nation's history, and one ordinarily need go no further than his favorite historical character to find some juicy tidbit of invective. Indeed, a case might be made against the present expressions of pique solely on the grounds of their pedestrian tenor.

Senator WILLIAM E. JENNER has characterized the Court's work as lacking solid foundation in either legal principles or commonsense. Prof. Edward S. Corwin has suggested that the justices bone up a little on the history of the Constitution before trying to remake it. Journalistic pundits have alternatively explained their disagreement with the Court's opinions by claiming that the justices are sadly deficient in scholarship, or haven't had sufficient lower court experience to function properly on the high bench.

The unique status of the Court makes it a scapegoat for any group in our society. Unlike politicians, the Supreme Court cannot be all things to all people. The nature of the institution impels judgment and decision—the deliberate choice between competing claims and theories. And what pleases the Civil Liberties Union is apt to wrap a fog of gloomy debate around the next American Legion convention.

A focal point of modern tensions, the Court is vulnerable to attack from all sides. In the important policy questions which the Court must decide substantial group interest can be identified with both sides—the losing as well as the winning side. The Constitution is very often invoked to protect the rights claimed by the minority or the unpopular side of public issues. It is, thus, inevitable that the Court will decide against some powerful and vocal groups. Just a glance at some of the recent decisions which feed the contemporary controversies is sufficient to show the type of problem with which the Court is confronted, and the variety of social groups which it has antagonized.

CASES REVIEWED

Segregationists and State rights groups are still smarting from the 1954 opinion of the Supreme Court in *Brown* v. *Board of Education of Topeka* (347 U. S. 483), which held the racial segregation of students in public school to be a violation of the equal protection clause of the 14th amendment. Some of the attacks were of the emotional sort including the perennial question, "Would you like your sister to marry a Negro?" Others reached for the cloak of constitutional respectability with claims that the 14th amendment had never been properly ratified, that the Court failed to follow its own prior decisions by rejecting the separate but equal doctrine, and that the Court had used sociological rather than legal criteria to determine the meaning of equal protection of the laws.

Perhaps the most publicized decision of the past term of the Court was the *Jencks* case (353 U. S. 657 (1957)). Both law-enforcement officers and other citizens, preoccupied with security against subversion, protested the High Court's ruling that in a Federal criminal trial, after a prosecution witness has testified, the defendant is entitled to inspect the witness' prior statements which

were made to Government agents and are in the Government files and which touch the events and activities on which he has testified. The purpose of this inspection is to give the defendant the benefit of information which might show that the witness has told inconsistent stories. It would seem only fair the accused be enabled to impeach the reliability of an inconsistent Government witness. Certainly, the defendant could not readily do so if the prior statements on the same subject matter are locked in the prosecution files. It is particularly worthy of note that the probity of the rule was demonstrated in the Jencks case itself where one of the witnesses, Harvey F. Matusow, subsequently recanted his testimony under oath. It should be noted too that the extent to which the Government files had to be exposed was limited to statements touching the subject matter on which testimony had already been given. The Federal Bureau of Investigation may like to protect its files, but a limited use of them is often proper if a person charged with crime is to be able to get information necessary for his defense. Some lower Federal courts had already required such a practice. A few months after the Jencks case Congress passed an act which left the decision substantially intact as a Federal procedural rule.

Some legislators and other citizens with a deep-seated conviction that the Court and the Nation are soft on communism were irate over the Court's holding in *Watkins* v. *United States* (354 U. S. 178 (1957)) which limited the investigative powers of congressional committees. The decision reversed a conviction for contempt of Congress based on the defendant's refusal to answer some of the questions posed by the House of Representatives' Committee on Un-American Activities. The Court traced the history of legislative investigations from the English Parliament through to recent congressional hearings and found a new tendency in the investigations which involve a broad-scale intrusion into the lives and affairs of private citizens. The constitutional infirmity in the conviction of Watkins, the Court found, was rooted in the vagueness and the sweeping character of the House resolution creating the committee; this made it impossible for the witness to know the extent of the committee's authority to command his cooperation in answering the questions propounded. The Court reasoned that Congress has no power to expose for the sake of exposure:

"The theory of a committee inquiry is that the committee members are serving as the representatives of the parent assembly in collecting information for legislative purpose. An essential premise in this situation is that the House or Senate shall instruct the committee members on what they are to do with the power delegated to them. Those instructions are embodied in the authorizing resolution."

The Court, after investigating the resolution creating the Committee on Un-American Activities, found: "No one could reasonably deduce from the charter the kind of investigation that the committee was directed to make." The Court concluded: "Petitioner was thus not accorded a fair opportunity to determine whether he was within his rights in refusing to answer, and his conviction is necessarily invalid under the due-process clause of the fifth amendment. The Court also stated that Congress in its investigations must not encroach unreasonably upon the individual's privacy or upon his liberty of speech, press, religion, or assembly.

Groups preoccupied with security against the menace of Communist subversion were once more disturbed at the Supreme Court's reversal of the convicition of 14 west coast Communists for conspiracy to violate the Smith Act. The decision in *Yates* v. *United States* (354 U. S. 298 (1957)) defined the statutory term "organize" to include only initial organizations. As a result parts of several indictments were declared invalid as covering acts beyond the 3-year statute of limitations. By this holding the Court rejected the Government's interpretation of the Smith Act and applied the familiar rule of law that criminal statutes are to be construed strictly. The Court also made a distinction between teaching the violent overthrow of the Government as an abstract doctrine in the academic sense and advocacy that incites to illegal action. This distinction was applied to the Smith Act which was interpreted to allow academic discussion of communism while prohibiting incitement to overthrow the Government. The distinction is not only a valid one but essential if the truth of a philosophical or theological position is not to be decided by legislative fiat. The government which is competent to declare Marxism false is able to say the same of Thomism. This does not, however, prevent the Government from prohibiting speech that incites illegal action, as the Court had earlier held in *Dennis* v. *United States* (341 U. S. 494 (1951)). This important distinction was forgotten by alarmist critics excited to discover that 14 Communists were not yet jailed.

Some of the groups which are concerned with civil liberties found cause for dissatisfaction in the Court's handling of obscenity in *Roth* v. *United States* (354 U. S. 476, (1957)). Occasional blasts from the other side of the fence came from those who agreed with the Court's opinion that obscenity is not within the area of constitutionally protected speech or press, but who disagree with the standard approved by the Court for defining obscenity. The standard applied by the lower court was whether to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to prurient interest. While it is true that this might not be an ethician's definition of obscenity, ethicians do not make up the juries that have to rule on the charges. Some of the groups devoted to civil rights were also disturbed at *Kingsley Books* v. *Brown* (354 U. S. 436, 1957)) which allowed an injunction against the sale of obscene books. Here the objection was that prior restraint on the press violated freedom of press guaranteed by the first amendment. Justice Frankfurter's opinion attempted to meet the objections against prior restraint with this argument: "Instead of requiring the bookseller to dread that the offer for sale of a book may without prior warning subject him to a criminal prosecution with the hazard of imprisonment, the civil procedure assures him that such consequences cannot follow unless he ignores a court order specifically directed to him."

Veterans' organizations—as well as those who in general distrust foreign justice—were incensed at the action of the Court in denying relief to an American soldier whom the United States Army proposed to deliver to the Japanese Government to be tried for the killing of a Japanese woman in Japan. The issue was complicated by the 1951 Security Treaty and an administrative agreement with Japan. Under this agreement a joint committee of the two countries met but was unable to decide which nation should prosecute the soldier, Girard. The Secretary of Defense and the Secretary of State determined that the United States would waive jurisdiction. It was the waiver of jurisdiction which brought forth the cries. In the Court's opinion the United States could waive jurisdiction under an article of the agreement which provided: "The authorities of the state having the primary right shall give sympathetic consideration to a request from the authorities of the other state for a waiver of its rights in cases where the other state considers such a waiver to be of particular importance." The Court expressed its belief that the wisdom of the arrangement is exclusively for the determination of the executive and legislative branches. Here it is ironic that the Court is criticized for not interfering with the action of Congress and the Executive, whereas the usual complaint is that the Court is guilty of usurpation of the powers of the coordinate branches.

A section of the business and industrial community was dismayed at the Court's finding in *United States* v. *E. I. du Pont de Nemours and Company* (353 U. S. 586 (1957)) that section 7 of the Clayton Antitrust Act prohibited the lessening of competition through the holding of stock in a customer corporation (i. e., prohibited vertical stock acquisition). Section 7 of the act makes it unlawful "to acquire * * * the whole or any part of the stock or share capital of another corporation * * * where the effect of such acquisition may be * * * to restrain such commerce in any section or community, or tend to create a monopoly of any line of commerce." The act was adopted in 1914 and the earlier applications of the section had been made to prevent the lessening of competition through holding of stock in a competing corporation (i. e., to prohibit horizontal stock acquisitions). The Federal Trade Commission had not applied the section to vertical stock acquisitions, and it is safe to say that the section was generally thought not to apply to such acquisitions. The Court further held in the Du Pont case that the question of whether competition was lessened could be made at the time the Government filed the suit and did not have to be made at the time of original acquisition. The Court said the statute was applicable whenever the reasonable likelihood appears that the acquisition will result in a restraint of commerce or in the creation of a monopoly of any line of commerce." It is hard to deny that the Du Pont case expands the meaning of the Clayton Act, but it must not be overlooked that the case was brought at the instance of the executive branch of the Government and that the Congress can readily modify the act if it believes that the Court has erred.

Taking a broad view of the decisions here noted, one is struck by the kind of problem with which the Court is saddled. These cases called for judgments on core issues of our society: procedural rights of the individual faced with the massed power of the State; limits of free expression in a pluralistic society; irreducible minimums of minority interests; permissible affiliations of economic blocs; propriety of method in combatting subversion. These involuted questions underlie the facts of the cases. They call for specification and resolution, not in the sweet-sounding phrases of the speculative, but in the harsh irrevocable words of decision.

At any given time the diverse principles and overlapping assumptions which constitute a functioning government are in a precarious and shifting balance; this state of affairs is more, not less, true in a democracy. The task of the Supreme Court is nothing less than the articulation of this amorphous public philosophy and the application of it to the controversies which are properly brought before the bar.

Much of the present criticism can be traced, then, to an ignorance of what the judicial act entails, or to an unwillingness to accept the system of government which provides for a Supreme Court with power of review.

The popular notion of law demands a code of well-defined and finished rules under which all imagirable problems fit with snug exactness. Thus men who in their daily lives suffer agonies of indecision over what

suit to buy expect that a Justice can interpret the Clayton Act correctly. Those who conscientiously grapple with large but individual problems of moral conduct are chagrined when the Court cannot produce some slide rule to determine the meaning of obscene for 170 million of us.

The fact that lower courts are reversed in their decisons is a scandal of a sort. "Don't lower court judges know law, too? How, indeed, can there be disagreement over what the law is?" The supposition behind the objection is obviously that courts are invading the province of Congress, contrary to all the principles of government which are summarized in the textbooks: "the legislator makes the law, the executive enforces it, and the judiciary determines violations." Do we have a government of law or of men, runs the complaint.

This view—which, incidentally, is not necessarily restricted exclusively to those outside the legal fraternity—assigns to the judge merely the elementary task of applying law to facts and transcribing the results. Whatever validity such a philosophy has for the routine class of lawsuits, it fails miserably as an explanation of the operation of a Supreme Court. For the Supreme Court also has as a primary function the interpreting of a written Constitution, with the gloss that such interpretation is authoritative.

Constitutions are not the same type of animals as other laws. They are not designed to detail the solutions of every problem that can arise. Instead, they set down norms and guideposts within which particular decisions must be reached. All of this is elementary.

TASK OF COURT

Yet even when the Court is not exercising itself on a specific constitutional issue, it is normally concerned with problems that in their scope and complexity inevitably require a system of values and a list of priorities. Legal questions are in their essence manifestations of value clashes within our society itself. Only infrequently do legislators resolve these clashes comprehensively. The legislative process requires that the different interests be reconciled and that a law regulating an area of human conduct be expressed in terms which reflect a consensus required for its enactment. But the Court cannot stop when it has found the law's area of common agreement; it must judge the issue which has been presented to it. And the mere fact that the issue has reached the Supreme Court is some evidence that the statute gives only equivocal answers.

A failure to realize what the Court is called upon to do leads to frustration and annoyance. The innocent observer can only explain judicial disagreement, as Holmes put it, "as if it meant simply that one side or the other were not doing their sums right, and if they would take more trouble, agreement inevitably would come."

Depending on whether one agrees or disagrees with the decision, the Court is, in this simple view, either a society of god-like creatures, or a club of nodding mortals.

Yet even those who have a sophisticated understanding of the vital elements of judicial decision sometimes close their eyes to the structure of our American legal system. The Court is not merely a sounding board for debate on the burning questions of the day; it is a terminal point. The prevailing doctrine under which we live encompasses an independent and supreme judiciary which guards the sacred fires of the Constitution, and regulates and resolves the justiciable tensions. The alternatives to this system (and this fact bears periodic repetition) are anarchy or tyranny.

The Supreme Court is a consequence of the need for an impartial and a detached evaluation of governmental activity in the perspective of the Constitution. If the Nation acts in haste, it has a Court to prevent an extended repentance. But, additionally, the Court serves the real need of bringing issues to a conclusion. However it may gall us at the time, the buck stops here.

A distinguishing mark of our legal system is the precedence of process over power. The Court may make a decision but its enforcement lies basically in a willingness of the people to give that respect which is due the system itself. This respect does not hinge on agreement with any individual mandate of the Court, but on the knowledge that problems must be resolved by law.

The carping which overlooks the nature of the judicial process, or which balks at the meaning of the system, is dangerous precisely because it tends to destroy and not to improve law. No one would seriously preach the heresy that the Court is above criticism. The current problem is quite to the contrary. Mny of those who have attacked the Court in past months have actually forestalled effective criticism. As one lawyer put it, "I wish some of these people would shut up so that I could take issue with some of the Court's opinions. But I don't want people thinking that I'm in agreement with the rash charges that have been made."

The charge that the Court is playing a creative role, rather than a mechanical one, is noteworthy only for its naivete. Those who think that disagreements can be eliminated by requiring the Justices to have a given amount of lower court experience are only deceiving themselves. They canont see what Justice Frankfurter means when he writes: "One is entitled to say without qualification that the correlation between prior judicial experience and fitness for the functions of the Supreme Court is zero." And why is this true? Because, he tells us, "the Court's preoccupation today is with the application of rather fundamental aspirations and what Judge Learned Hand calls moods, embodied in provisions like the due process clauses, which are deliberately designed to supply only general norms of decision. The judicial process in applying them involves a judgment on the processes of government. The Court sits in judgment, that is, on the views of the direct representatives of the people in meeting the needs of society, on the views of Presidents and governors, and by their construction of the will of the legislatures the Court breathes life, feeble or strong, into the inert pages of the Constitution and the statute books."

Similarly naive is the mock horror with which other critics of the Court contemplate the immense power which the Justices wield. Among the crass remedies which some disgruntled critics would apply is a periodic reconfirmation of the Justices by the Senate. Thinking the bathwater foul, they are momentarily not concerned that the baby will be dumped out as well. At bottom their complaint is not that here is a Supreme Court but that the present Court does not reflect their views.

To be effective, the critic of the Court must appreciate the complex processes of human judgment; he must also concede the imperative need for finality in resolving vexatious problems.

There is no guaranty that the values which the judges apply are the proper ones. Every decision, then, should come under the closest scrutiny. Nor is there harm when decisions are taken to another (for example, the congressional) arena. But criticism must have direction, or it will be worse than futile. It will be simply destructive.

The Vital Work of the Asia Society

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 24, 1958

Mr. WILEY. Mr. President, in recent years, Americans have fortunately become increasingly aware of the continent of Asia, its peoples, its cultures, its economic, political, social, and other problems.

One of the fine organizations which has been responsible for increasing the knowledge and understanding by our people of this vast continent, especially south and southeast Asia, has been the Asia Society.

Thanks to the Society's efforts, new bonds of friendship are constantly being created and developed the mutual good of ourselves and our friends in the East.

Volume 1, number 1, the January 1958 issue of the Asia Society Letter describes an interesting cross section of the work of this organization. It includes a prefatory note by Mr. John D. Rockefeller III, who has served in this worthy connection, as in so many other splendid connections, in the interest of our country and of international good will.

I ask unanimous consent that excerpts from the January bulletin be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

NEW YORK CITY.

To Members and Friends of the Asia Society:

The interest and warm response that the founding of the Asia Society has engendered has been most gratifying. It is clear that there are many persons in this country, Asian and American, who share the conviction that fostering increased knowledge and understanding between the peoples of the United States and of the countries of Asia is an important and valid undertaking.

There are many ways in which international understanding can be advanced. None of us can predict with any degree of exactitude which elements in intercultural contracts are most important for fostering mutual understanding, but we can hazard some guesses on the basis of past experience. The schoolchild who learns about the daily life and interests of his contemporary in a foreign land, the university student who studies a foreign culture, the technician or businessman who deals with foreign firms or perhaps resides abroad to carry on his work, the reader of a novel depicting the emotions and feelings of people in a foreign culture, the government official who deals with international affairs, the museum-goer who sees exhibits of foreign paintings and sculpture—for all these people such experiences bring some degree of increased understanding. And increased knowledge in turn creates deeper insights, so that what may at one time have appeared a totally alien culture and an incomprehensible people gradually becomes familiar. One's own cultural horizons are thus expanded.

Our members come from many walks of life and are engaged in a wide variety of activities: businessmen, housewives, scholars,

students, Government officials, artists, engineers, writers, schoolteachers; our special interests in Asian affairs vary as widely. Through this newsletter we hope to inform readers of developments in Asian-American affairs that will be of interest to them. We will report on individuals identified with Asia and on institutions and groups working in this field. We will also inform readers about books, exhibits, films and other relevant items of interest.

The society's program is now getting underway. The appointment of committees to develop and carry out our program has begun and details of the committees formed thus far are noted in this first issue of the newsletter.

In welcoming members into the society may I, on behalf of the board of trustees, express our sincere appreciation for your interest and support and the hope that the efforts of the society will make a fruitful contribution to American-Asian understanding and friendship.

JOHN D. ROCKEFELLER 3D.

FOREIGN SERVICE FOR UNIVERSITIES

In Manila, a young American area specialist interviews a Filipino disk jockey whose program is rapidly establishing him as a powerful opinion molder over a wide area. In a midwestern college classroom, a former USIA official and onetime English instructor in China discusses a case history of a Japanese business enterprise with the members of an economics seminar.

Both of these men are engaged in different phases of the program of the American Universities field staff, a unique organization which is, in effect, a foreign service operated by and on behalf of American education. Established in 1951 by the heads of several American colleges and universities, the AUFS has developed a new approach to the study of foreign societies and has enabled its member organizations to maintain better communications with foreign areas than any of the institutions could accomplish alone. A professional organization of scholarly correspondents, the AUFS carries out a program of intensive field studies abroad combined with educational activities on American campuses. Major emphasis is on areas in respect to which university offerings have been relatively scanty. More than half of the program is currently devoted to countries of the Far East, south, and southeast Asia; other regions being studied are mainly in the Middle East, Africa, and Latin America.

Scholar-journalists

Blending the techniques of the scholar and the journalist, the AUFS staff member spends about 18 months at a time in his assigned area, sending back frequent reports which are published and distributed by the AUFS. He then returns to the United States and participates in a program of visits to member universities and colleges, spending 10 days on each campus lecturing, participating in discussion meetings and in a variety of other ways helping the institution fulfill its responsibility for bringing to faculty and students fresh and authoritative knowledge and judgments about foreign societies. The field staff's contribution is of special value because it supplies up-to-date facts and analyses of current developments. There are very few textbooks on the geographical areas reported on by AUFS men, and of the available books all but a handful are out of date.

Each of the 13 staff members has had years of study, residence, and work in a foreign area prior to joining the AUFS. He is as familiar with a foreign society as he is with his own and he has won recognition for his professional competence, although this is not always measured by the academic yardstick of advanced degrees. While a staff man usually has a primary interest related to one of the major academic fields of study, he is expected to be sensitive to the whole range of the society he observes and to include in his reports data that will be useful to a variety of disciplines.

Reports from the field

This joining of the roles of academician and journalist is reflected in the range of subjects covered by staff members' reports from the field. A random selection of titles from the cumulative index of reports issued to date covers such diverse topics as the Chinese motion picture industry as a tool for Communist propaganda, a report on the status of Japanese negotiations toward settling reparations accounts, case studies of the household budgets of three Indonesian families, an assessment of the position of the Chinese minority in Malaya, an analysis of the implications of shifting policies of American aid in the Philippines, observations on political forces and trends in an Indian state, and an account of nationalist sentiments in the 10th year of Pakistan's independence. Biographical sketches of well-known personalities and of obscure villagers, tabulations and analyses of election results, appraisals of the special problems faced by scholars and technical assistance personnel in the field are the subjects of some of the other reports. AUFS staff members writing from some 20 countries send in more than 90 reports in the course of a year.

The use made of the resources of the AUFS varies from campus to campus. Each member institution is free to adapt the program to fit its own educational methods. One university calls on AUFS men to contribute papers to an interdisciplinary faculty-student seminar and to lead the seminar discussions when they appear on the campus. At another school, a graduate seminar in international relations uses field staff reports as its sole source material. One college schedules the appearance of four AUFS men to do most of the teaching for eight weeks in a core course on international relations. A graduate school of business administration uses the program to help orient its students to the environment and problems a businessman encounters in foreign countries.

* * * * * *

Responding to the interest shown in the AUFS reports by educational institutions, government agencies and business organizations, the board of trustees in 1955 arranged to make multiple copies of these reports available to institutional subscribers. Inquiries about the reports should be directed to AUFS, 522 Fifth Avenue, New York, N. Y.

"IN STEP" AND INDIA

Business relationships have always been an important factor in the complex of communications between Asia and the United States. In the last decade, with the rapid acceleration of Asia's economic development, the scope of these business contacts has broadened correspondingly, branching out from rather small, self-contained circles to a network of relationships bringing together large numbers of administrators, engineers, and technicians with a mutual interest in commerce and industry.

One of the most dynamic examples of the expanding channels of communication provided by the business world is the program known as In Step, the Indian Steel Training and Educational Program in the United States. In Step is designed to train Indian engineers to take their place in their country's rapidly expanding steel industry. It is also providing 200 future leaders of Indian industry with a rare opportunity for first-hand knowledge of American economic life and the American people.

India's training needs

India graduates some 3,600 engineers from her technical schools each year. But technical training is not enough to equip a man with the skill and experience needed to supervise the operations of an expanding steel industry. For that, there is no substitute for on-the-job training. However, India's steel industry does not yet have the facilities to supply the necessary amount of in-service training. To help meet this need, the In Step program was developed through the cooperation of the Governments of India and the United States, the Ford Foundation, five American educational institutions, and the American steel industry.

PROGRAM COMMITTEES

The Asia Society is forming a series of country committees to give particular thought and attention to programs relating to individual Asian countries. The first of these, the India Committee, has been set up under the chairmanship of Norman Cousins, editor of the Saturday Review of Literature. Members of the committee are: Senator John Sherman Cooper, former American Ambassador to India; Dr. Leona Baumgartner, commissioner of health of the city of New York; Dr. Amiya Chakravarty, professor of philosophy at Boston University; Mrs. Julie d'Estournelles of the Woodrow Wilson Foundation; Mrs. F. F. Richardson, wife of an executive of the Standard-Vacuum Oil Co.; Mr. Phillips Talbot, executive director of the American Universities field staff; and Dr. Arthur T. Mosher, executive director of the Council on Economic and Cultural Affairs, Inc.

GALLERY COMMITTEE MEMBERS

A committee has also been formed to operate the art gallery which will be a part of Asia House. The chairman of the Gallery Committee is Mrs. James Laughlin, a member of the Junior Council of the Museum of Modern Art. The members of the Gallery Committee are: Mrs. Louis V. Ledoux, for many years a patron of Asian arts and chairman of the Arts and Exhibits Committee of the Japan Society; Dr. Aschwin Lippe, associate curator of the Far Eastern department of the Metropolitan Museum of Art; Mr. Porter McCray, director of circulating exhibitions of the Museum of Modern Art; Mrs. John A. Pope of the Circulating Exhibits Division of the Smithsonian Institute; and Mrs. John D. Rockefeller 3d, a trustee of the Museum of Modern Art and formerly president of the International Council at the museum.

A Cultural Exchange Committee has been set up under the chairmanship of Mrs. John D. Rockefeller 3d. The committee's members are: Miss Doris Duke, Mr. James Laughlin, Mr. Joshua Logan, Mr. Lincoln Kirstein, Mrs. Eero Saarinen, Mr. Carlton Sprague Smith; Mrs. James Laughlin is a member ex-officio. The Cultural Exchange Committee will be concerned with exhibits to be shown in this country both at the Asia Society and elsewhere and with small exhibits that will circulate in Asia. It will bring here from Asia a few persons working in the fine arts, including poets, novelists, and translators and some musicians and dancers.

ASIA IN THE SCHOOLS

For thousands of school children in the vicinity of New York City and for countless other viewers as well, the countries of Asia are no longer remote places inhabited by unfamiliar peoples. Each Tuesday morning for the past four months, in classrooms and school assembly halls the customs and traditions, the arts and folklore and many other aspects of life in different parts of Asia have been brought to the students through a series of half-hour television programs titled "Spotlight on Asia."

Presented by the New York City Board of Education in cooperation with the Metropolitan Education Television Association and WPIX, Spotlight on Asia reached schools in New York, New Jersey, and Connecticut and home viewers in those areas as well.

Each program in the series dealt with a different country or group of countries in Asia. The content varied from week to week but in general each half hour contained the following elements: Participation by nationals of the country being explored; some exhibition of the arts, crafts work, dances and music; a description of the national dress; models or pictures of typical dwellings; perhaps a filmstrip showing anything from rush hour on the Tokyo elevated train to a caravan crossing a pass in Nepal. Written, produced and moderated by Miss Jean Eicks of the New York City Board of Education. Spotlight on Asia offers a prime example of what can be done to give Americans a sense of genuine contact with Asia, using a minimum of resources close at hand and operating in effect without a budget.

Asian participants

Personnel of Asian Embassies and consulates in New York and Washington cooperated generously, lending slides, films, and art objects for display on the program. Even more important, many of these diplomats and sometimes their wives and children took part in the telecast, answering questions posed by Miss Eicks, explaining and describing the way of life in their own lands.

Presenting in 30 minutes a coherent picture of a land whose very name may be unfamiliar to the viewer is a knotty problem. Miss Eicks and her associate producer, James Morske, resolved it by keeping the script simple and relying primarily on cultural devices to give the audience a sense of identification with each Asian land and people.

* * * * *

KOREAN ART TREASURES

For the first time in history, a collection of Korea's national art treasures is being shown abroad. Almost 200 examples of Korean art through the centuries will be on display in a series of exhibitions in the continental United States and Hawaii. The exhibit is of great significance in the art world not only for the beauty and uniqueness of the individual pieces but also because no foreigners except for the very few who have visited Korea have even seen these works.

The Asia Society, Inc.—Officers: John D. Rockefeller 3d, president; Ernest A Gross, vice president; Phillips Talbot, vice president; Dr. Grayson L. Kirk, chairman; August Maffry, treasurer; Edgar B. Young, secretary; Paul G. Sherbert, executive director. Trustees: Chester Bowles, Arthur H. Dean, Lloyd W. Elliott, John Exter, Arthur B. Foye, Harry A. Gibbon, Ernest A. Gross, William R. Herod, Dr. Grayson L. Kirk, Mrs. James Laughlin, August Maffry, Dr. Edward S. Mason, W. E. Murray, John D. Rockefeller 3d, James J. Rorimer, Dr. Lauriston Sharp, Howard C. Sheperd, Edwin F. Stantan, Phillips Talbot, Juan T. Trippe, Mrs. Stanley P. Young.

Dwight Jones of the St. Paul Pioneer-Press

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. McCARTHY. Mr. Speaker, last week a great newspaper editor died. He was Dwight Jones of the St. Paul Pioneer-Press. I wish to call to the attention of the House of Representatives this column in that paper by one of Dwight Jones' staff, Paul Light. The column details an aspect of Mr. Jones' character as it will long be remembered in the newsroom of the Pioneer-Press:

ONCE OVER LIGHTLY
(By Paul Light)

MEMOS WERE HIS DELIGHT

If Dwight Jones were to read these words I shudder at the memo he'd slide under my office door.

Memos to the staff were Dwight's delight, a verbal calisthentics of sorts. He was an inspired artist in their creation. His memos rose to the satirical heights of a Swift; the terse, descriptive powers of a Hemingway; the poetic flourish of a Shakespeare.

If you received one, you never forgot it.

You showed it proudly, as one does a red badge of courage, to fellow workers.

But now the memos and the writer are no more. Dwight Jones, managing editor of the Pioneer Press, died Sunday of a heart attack.

And we, his staff, are much the lesser.

One of the editorial crosses Dwight bore every night was reading the Paul Light column before it went downstairs and into type.

He bore it bravely as he did everything else in his life, from the bloody days of Belleau Woods to the envied scorn of his superior golf game.

As every proper managing editor should, he expressed definite opinions of what he read. These opinions were not wasted on idle air.

They were forged into imperishable memorandums which were more notorious for their verbal bark than their bite.

I'll never forget the memo I found under my door one fine spring morning:

"DEAR PAUL: A fascinating column this morning. I read it with interest. I read it again, and again, and again. What was it all about? Dwight."

He had right to wonder. I read it over again and darned if I could answer his question.

Dwight had a disturbing habit of being right.

Another of his triumphs I'll always treasure is the brief, and to the point memo:

"PAUL: Plaasa chack tha lattar "a" in your typawritar. And than claan it, dammit. I can't tall from your copy whathar you maan 'a' or 'a.' Sincaraly, your managing aditor, Dwight Jonas."

When I was a young reporter, Dwight quite frankly frightened me.

He was lean on both bylines and back slaps.

There was no story I wrote which would glean the barest of compliments from his lips. In fact anyone I considered a major journalistic triumph he would agree wasn't too bad but did I notice the sheriff's name was spelled with two "l's" instead of one?

The man obviously had not heard—I thought.

But that was until one confused night when a downtown building blossomed into flames.

Inexperienced, bewildered and frightened I took off on a dead run to cover the blaze. I arrived at the scene only to discover I'd left my camera back in the office.

When I dashed back in, Jones barked, "Why are you back so soon?"

I had to admit I'd forgotten my camera.

Grabbing it, I dashed out again.

At the fire I discovered now I'd forgotten the film.

The fire was waning. The flames were going and only threads of oily smoke remained. Oh, how I dreaded going back into that office and admitting the second boo-boo of the night.

But go back I did and admitted my foolishness.

The roof didn't fall. Instead Dwight grinned and took a young cub aside.

"It happens to the best," he said. "But it happens only once, remember that, from this you'll learn to stop and think before you run."

But in case I ever did forget, Dwight kept a blank sheet of photographic paper in his top drawer.

Whenever I got a bit too big for my editorial britches, he'd crook a come here finger.

He'd fish out that thumbworn picture of nothing and say, "Remember?"

Yes; I remembered.

And I'll never forget that I have worked for a newspaperman's newspaperman, Dwight B. Jones.

Montana: The Frontier Went Thataway

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 24, 1958

Mr. MURRAY. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Montana: The Frontier Went Thataway," written by Mr. Herbert Howarth and appearing in the March issue of Harper's magazine.

Mr. Howarth is an Englishman who was privileged to spend a term at Montana State University in Missoula.

Mr. Howarth aptly observes that anyone in his senses would rather live there—in Montana—than anywhere else in the world.

He was particularly impressed with Missoula, situated on the western slope of the Rocky Mountains between Glacier and Yellowstone National Parks.

However, the author leaves one impression which needs correction. He refers to the seemingly great amount of leisure in Montana. I am afraid he confused leisure with unemployment.

Montana now stands, I regret to say, highest in the Nation in the percentage of unemployed workers who are covered by unemployment insurance. Thirteen percent of the insured workers in Montana are now jobless.

The picture of Montana which he paints so prettily is rapidly being darkened by the specter of unemployment—depression, if you please, on the farms, in the mines, in the forests, and along Main Street.

Mr. President, the rising unemployment in my State and in other States is further indication of the need for prompt executive decisions, legislation and appropriations to develop our great natural resources, to provide full employment, to make this Nation of ours truly great and to help our people achieve a full and better life.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONTANA: THE FRONTIER WENT THATAWAY
(By Herbert Howarth)

We stopped one evening to buy cream at a farm where Missoula edges the mountains,

beyond which Montana becomes Idaho. It was a small farm, started a generation and a half ago by homesteaders from middle Europe. The strong-featured grandmother who poured cream for us in the kitchen, still talked with a Hungarian chime in her voice. The family was just sitting down to supper: to cottage cheese and chives, a bowl of steaming buttered corn, another of giant potatoes, a baked meat loaf in 2 inches of tomato sauce, coffee. The cutlery was sterling, heavy and good. Revere saucepans shone on the range. A small farm, but its prosperity made us, with European scenes still fairly fresh in our memory, reflect, "Who in Europe today has a farm like this?"

We were, as that comparative way of putting it shows, still fairly recent arrivals. My wife was born in Switzerland, I in Britain, and we were in Montana for the academic year—I was lecturing at Montana State University's Missoula campus. This was not our first sight of the United States; we had enjoyed previous stays at other American universities; but it was our first spell in the Rocky Mountains.

As we came out, I looked across the plantation of raspberry canes. The hills were pleasant in the sunset. A vacant lot beyond the farm was marked, "5 acres for sale."

"Why are we just visitors?" I asked my wife. At that moment it seemed near perfection to have the genial productive life of Missoula, to settle into the rhythm of its hard, clean winters and fruitful summers.

If we could have acted on that thought, would we really have liked it? Arrivals stream steadily into Missoula, but it doesn't keep a hold on all of them. It is growing, but it has a quick turnover of transients. Newcomers separate into two distinct groups: those who find the promise of a satisfying life in it and will stay; those who come hopefully, but now are restless and will move on.

For Missoula confronts you with this test: can you be content with what is good, relaxed, unconsciously kindly, but short of the stimuli of larger cities? Or must you have, to buoy you, that typical modern urban life where a complex, saturated law and culture flow above a lower level of complex, saturated antilaw and vice? There are no double levels in Missoula. A minimum of urbanity, maybe, but with it a minimum of trouble. Missoula, like all Montana, has its contradictions, some of which I will try to pin down, but they are innocent, transparent.

MONEY AND PASSION

The first thing about Missoula is its affluence. It insists on the newest in living styles. It puts more up-to-date cars on the street, per capita, than I have seen in a prosperous Michigan town of the same size near the automobile plants. It is building impressive and expensive houses up all the creeks and canyons and equipping them lavishly. Even in the older houses the interiors have comfort and charm.

Beyond the perimeter and into the hills obvious up-to-dateness diminishes, but spending power is abundant. The day before Christmas Missoula filled with families from outlying ranches. Leathery men, girls in rough cowboy trousers with yellow hair trailing to the base of their spines, piled out of cars and practically stripped the stores. The packed toy basement of Montgomery Ward had, at dusk on Christmas Eve, been emptied of all but 3 or 4 bicycles.

What is extraordinary is that collecting this spending power does not produce tensions or pressure. No one in Montana is in a hurry. If there were barometers of public anxiety, installed like the temperature clocks over the city banks, they would register low all the way from Glacier Park to Glendive. Men take their jobs, including the heavy and dangerous jobs in forest or mine, at a leisurely pace. The natural resources teeming on the flanks of the divide seem to turn to money easily enough to obviate competition. Where there's enough for everybody, there's no need to be acrimonious rivalries. In fact, the norm of Montana is mutual helpfulness. This sense of security in abundance actually seems to make for more efficiency rather than less, and it has one definite result: a margin of free time for everybody.

The usual problem of leisure is what to do with it. The old Puritans hated leisure because their experience was that very few people knew how to use it except badly. Missoula and its neighbors have, I think, only a modicum of the depleting kind of leisure routines. There is a modicum of drinking: cases of bourbon are wheeled in high pyramids out of the State liquor store into waiting cars. There is a modicum of gambling. But these international phenomena never go far in Missoula, never culminate in violence or public unpleasantness. The reason is that male energy is happily mated to a pleasure always available a mile or two from the doorstep. Western Montana is the country of sport: of the primitive, basic sports, hunting and fishing; and, after that, mountain climbing and skiing.

Missoula men invest their passions in these sports. A young student wrote to me: "In the month of September I feel the urge to go hunting. I just can't wait to get sighted in on a deer. I am hunting continually in my subconscious mind." On Sunday evenings in the fall the cars roll back townward with an elk or moose, clotted with blood, over roof or bonnet, and turn it in at their freezer locker. Occasionally a hunter doesn't come home, for they're a trigger happy and not too prudent crowd and have been known to pick each other off, or drill a station wagon, by mistake for a deer. In the skiing weeks—a lovely subzero season, when the morning sun comes up orange on the snow—there are new casualties daily swinging on crutches into office or classroom. But in nonchalant Montana nobody minds.

In fact, this sport on the hills and in the rivers is probably the source of the easy tempo and mental cleanness of Missoula. The folks who close their offices or clinics as early as they can on Friday afternoon; disappear up the creeks, and come back brown and smiling to the job on Monday, renew their energy while they use it. They remake themselves with age-old sports that play mind and muscle at the pace of nature.

HUGGING TOGETHER

The women, though they do ski and shoot (and once or twice a year fell the bear that intrudes in the backyard), are not focused on sport to the same extent. To handle their leisure—and no European woman would credit how much leisure they have—the follow the regular American trend and invent a round of group activities. They have created enough clubs in Missoula to program the week 2 or 3 times over: religious, charitable, astro-theosophical, literary, factfinding, fact-dispensing clubs; Friday Clubs that meet on Wednesday, As You Like It Clubs.

Every male is tempted to caricature club work, in Missoula or anywhere else. But it has a value. It involves at lease a minimal sense of social responsibility, produces heightened social consciousness; and some of the clubs require a program of reading, especially the network of book clubs that members of the university have set up (giving their own time) through the country districts over a hundred miles' radius. It is obvious that in isolated areas the book clubs may be the only—and certainly can be a significant—point of exchange of ideas. Still, within the area of Missoula itself there are too many clubs. What people are likely nowadays to need more in a town of 22,000 is a pause in the gregarious life. One or two nights a week might, as an experiment, be publicly declared private nights. Instead, the ladies contrive pretexts to get together 3 times every 24 hours.

This hugging together in the mountain communities is surely a folkway formed in pioneer days and out of pioneer conditions, where neighborliness was a necessity against loneliness, accident, and illness. The frontier customs are still alive in Missoula. New arrivals are hailed with a party and presents, and local businesses send round their version of the Welcome Wagon with vouchers and invitations. When there is sickness, every neighbor comes with help and food from her kitchen. When you are in difficulties on the road, every passer-by stops and helps.

Is it also a pioneer tradition that makes Rocky Mountain men prefer plain wives? I noticed that of 20 girls in a group I met, 2 had engagement rings—they were the pleasantly plain girls of the group. Most wives in the city look similar. Sometimes, thinking over this sociological phenomenon, I imagined that it conformed with the male experience in frontier conditions: the old experience that beauty causes trouble and that a fellow can be almost damned in a fair wife. Montana has left many of its pretty girls single, although there is reportedly a girl shortage in the State. The desirable girl is the straightforward girl, who will be master of the house, hold the bankbook, drive firmly to the chairmanship of a telephone committee (and so bolster her husband's standing), produce a litter of young, and insist annually on throwing out the old appliances and buying new models.

Incidentally, although they have the latest appliances and superb kitchens, and demonstrate recipes to each other in their clubs, only a few wives can cook (and even these seldom do). Rich Montana—which spends generously on appliances, fishing tackle, and guns—is frugal on food. The monthly food budget is modest and is the first to be cut in any domestic economizing, and there is a tendency to save by taking margarine instead of butter or extending fresh milk with powdered milk. To a Britisher this is an unexpected feature; my wife contrasted the way in which food is the first priority on a British family budget while the economies are on appliances and equipment. This is partly because Britain undervalues a wife's time and labor, my wife commented; but she also asked whether the steady eating that goes on in otherwise austere Britain is, by a parodox, actually a symptom of the austerity and the paucity of goods. The fact that a place of abundance like Montana rates eating low on a list of activities suggests that eating, in any quantities beyond a very low minimum, is only a psychological necessity, and that the people who are prosperous, both actually and psychologically, can grow and thrive without much eating. Certainly Montanans grow and thrive.

IS IT PROPER OR LEGAL?

It seems curious that Missoula has not attracted more women doctors. As far as I could check in conversation and from the telephone book, no woman physician was practicing there last year. A woman gynecologist could make a fortune, for the town is observant of the proprieties, reticent in personal relations.

Propriety, too, may be a carryover from frontier traditions, when anyone with sense would avoid provocativeness. I should say, however, that to a transatlantic visitor America as a whole seems formal, ceremonious, discreet, attentive to the proprieties. Lurid stories are sometimes told us regarding the big cities of the East or the Pacific, but in brief passage through these it has not been my luck to confirm them. J. D. Salinger's Catcher saw marvels through uncurtained hotel windows in New York, but I did not. Whereas from a 9 p. m. electric train threading the London suburbs.

But while Missoula completely respects an unwritten code of behavior between persons, it is superbly nonchalant in its relations with the officially written and impersonal law. The town treats its police with an indifference so unconscious and genuine that there isn't even humor in it. Half the drivers have no licenses. No one thinks of going in to pay a parking fine, or of answering a summons to court. Cars are to be registered by January 31, but no one hastens, and the law acquiesces by gently moving its deadline onward month by month.

This is a typical Main Street incident: A rancher is sitting at the wheel of his car, double parked, staring at a store. A highway patrolman passes in the opposite direction, stops level with him, hoots to call his notice. He stares at the store, doesn't move his head. Another hoot. When I next look round, the patrolman has moved on and the rancher is still double parked.

The attitude runs all through Montana and is significant—but not alarmingly significant. It means a simple dislike for regimentation. It is possible just because there is little lawlessness of the criminal degree; it is securely anchored in every man's certainty that he can rely on himself and his neighbors for sound behavior and honesty. A newcomer from the East will characterize Missoula as an extraordinarily honest town, and the absolute honesty and reliability contribute to the overall absence of tension. You can feel confident in every transaction.

Little crime in Montana, and little vice. A girl whose father owns a night club in another Montana city has assured me that the nocturnal offerings of the State are clean. She never saw vice in any tangled sense of the word till she saw California. I don't know whether she is right about California, but I find it easy to think her report on Montana is accurate.

Her remark about California arises, I fancy, from a widely prevalent Montanan conception of that State, which is just near enough to be the natural objective for the ambitious, just far enough to be the screen for strange and colorful projections. California is the Montanan's heaven and hell. It is heaven in its opportunities: once there, they tell each other, you never leave. It is hell in its supposed complications: you must keep an impassive face as you walk those west coast streets, or your glance will be taken as an invitation. Having met in Oakland and Los Angeles the same quiet correctness as elsewhere, I suppose that my friends who say this are only doing what is currently popular: localizing the mythical perversions of our time elsewhere.

A LEAP IN THE DARK

Quite independently of these fantasies, Montana feels a strong pull from the coast. Those transients who do not think they can adapt to Missoula's life will move on into Washington State, then perhaps work southward. For transients, that is all very well. It is not so obviously well if young men and women growing up in Montana homes come under the same magnetism, or, for that matter, if the somewhat fainter pull of the East draws them. There may be—and I believe that there already is—an outflow of the brightest minds, which the State cannot afford to lose.

The excellence of Montana's State University system actually sharpens this problem, though it also promises the best hope of a solution. The university has units in a number of centers. I saw only the Missoula unit, but if the others are as good, they are very good. A tiptop faculty teaches there. Many of the men have come from other States, deliberately choosing the mountains because, they say, the students bring unspoiled minds to their work, free from the sophisticated resistances that are sometimes a product of urban growing up.

It is remarkable to watch the interaction of faculty and students. When they arrive as freshmen, the boys and girls sometimes bring barely the first rudiments of academic habits of mind. They may have come from small, lonely, rural schools. Or, if they have had the fortune to grow up in a town (say, in Missoula itself with its splendid new million-dollar county school), they may have, offsetting their better academic preparation, a fear of privacy, like their elders'—in the dorms they shy away from the few single rooms and choose shared rooms, where they prevent each other from studying.

On the other hand, almost all young Montanans have an important asset: they have a knowledge of life that comes from spending vacations in responsible and tricky jobs: logging, trucking, tractor handling. Unlike the young in other places, where maturing still has to follow learning, they have begun to mature before they have begun to learn in the academic sense. They are all the readier to take in that kind of learning. They are gawky in their freshman year, but in the next two the interaction with the faculty begins to show, and in the fourth year they talk and write as men and women of high caliber.

Then comes the dilemma. The good student, in proportion to the extent he has been stimulated, wants urban pleasures that he has encountered in print in the process of learning. His town cannot supply enough of them, and his appetite is urgent. The pull from out of State becomes irresistible.

It is true that this exodus may be good for the rest of the Nation. But Montana needs its best products. Startling technical developments are imminent. New resources are being tapped, new industries settled. Over the next 10 years the face of the towns, even the skyline itself, may be transformed. These coming changes are necessary, and it would be as mad to resist them as it has always been mad and impossible to halt technical progress; and no one wants to. Almost no one is even thinking about the matter. Only a few thoughtful men are pointing out that the changes should be regulated, so that they shall not extinguish the graces and inner strength of present Montana: the ease, the sense of ample time and space, and the concomitant friendly honesty.

Montana is going to make its leap forward in any case, but at this moment it is shaping for a leap in the dark.

Just because Missoulans think individually, not in civic terms, they cannot easily plan for a problem like this. They feel that Missoula grew naturally across the lane that led from the mountains through the canyons to the eastern plains—the lane the Indians always used and the railway surveyors inevitably adopted—and that this process could not be bettered. Ever since the 1880's Missoula has been an active subcenter of the regional railway network; it has absorbed flour-milling and sugar-refining plants. So today when it is being offered its share in the new industries springing up all over the State, it is tempting for Missoulans to say: "Let them come. We have space for them all." But if they look about them they may see, even now, as a byproduct of the last 10 years' growth, warning signs that expansion can throw a spray of physical ugliness—like the straggling tin-can jungle along the main approaches.

As I said earlier, new arrivals face the problem of whether to stay in Missoula or push on to the coast. At present both alternatives are pleasant. The man lucky enough to have an equable Horatian temperament stays in Montana and enjoys his Sabine life at its kindest; the other man pushes to the Pacific and has his motley and culture. But in 10 years Missoula itself may be a motley, a scar on the hills.

What insurance can be taken up against this prospect? That depends on the extension and intensification of the university's work. Its teachers can communicate to students and parents their sense of the urgency of local needs. They can also work out and communicate a philosophy of public planning which will not damage the easy spirit that is part of the character of present Montana. What is needed among the students is a seeping awareness that, though it is good to go out of state for a taste of the world, it is even better to come back and play an influential role at home. The university already contains some striking instances of this process in action: its president, Carl McFarland, a brilliant man, formerly active in national affairs, came home to give his energies and considerable vision to strengthening the university that produced him; the faculty includes talented local men who went to Yale or Berkeley and came back to live and to help.

POSTSCRIPT

I add a line to these notes on the way east from Montana. The more miles fall behind, the more I realize the beauty of Missoula. To the newcomer the beauty is not promptly evident: the mountains may seem less erect and impressive, the life a fraction less robust, than he had supposed. But it will steal into him imperceptibly every day, lent by the changing lights on the hills, the resinous air, the pulsing rivers.

Anyone in his senses would rather live there than anywhere else in the world. Anyone who has been there would want to keep the beauty in Montana. It seems to me, at this moment of writing, that there is a broad national reason why America has a stake in keeping that beauty alive. As the Westerns on TV make clear, America loves her frontier tradition. The frontier has become an image of purity—of a moment when the mind was adventurous, courage high, and when the continent opened up at the thrust of these virtues. There is sentiment around the image, but it has a real center. Clear of sentiment, true and natural, a nuclear something of the frontier spirit is retained in Montana.

The Brussels Fair

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, editor of the Gary Post-Tribune, should bring to the attention of Congress our responsibility before the world in participating in the Brussels Fair.

We spent billions on our mutual-security and defense programs but this expenditure will pay large dividends in the contest of winning good will and world opinion.

THE BRUSSELS FAIR

At the coming Brussels World's Fair, one of the biggest and most intelligently conceived in history, the United States will have a rare opportunity to portray for millions of visitors the exciting story of its achievements and its hopes for the future.

It is an opportunity we should grasp eagerly. American prestige is only just beginning to come back from the depths to which it sank after Russia's 1957 satellite launchings.

The Brussels exposition, to run 7 months from April 17, gives us a remarkable platform upon which to display the full range of

American life. Belgium is going to great lengths to provide the participating nations with an expansive physical and cultural setting.

But unless Congress changes its tune, the United States is likely to lose rather than gain in prestige at Brussels. Thus far Congress has voted only $12,345,000 for American participation. This is only about a fifth of the $60 million Russia will spend, not including $10 million in related propaganda activities.

The United States will have a beautiful pavilion, carrying out a challenging architectural concept. But unless Congress votes the additional $2 million President Eisenhower has requested, the American pavilion will operate on an 8-hour-day schedule.

Visitors passing our building will find the doors locked at 6 p. m. But they will be able to visit the large Soviet hall nearby, and the other major exhibits, for 4 more hours.

This is only a part of the story. The Soviet Union is planning to send its finest singers, actors, ballet dancers, and other performers. It will present impressive scientific and industrial exhibits. Even West Germany will be represented during the fair by its five major opera companies.

On the other hand, the United States has projected only modest displays and cultural programs. Our leading singers and others have protested over their inadequacy.

We are a nation of fine, vigorous musical and theatrical traditions. The reaction has been excellent when we have sent any of our stars on foreign tours. Our scientific stature is world legend. But evidently some in Congress do not see the point of proving it to a world that has begun to have doubt.

Even if our shaky prestige were not involved—and it very much is—one would think that national pride alone would prevent us from going to Brussels looking like the tag end of the parade.

Address of the Honorable Carmine G. DeSapio

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 18, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues an incisive and eloquent enunciation of the practices and policies of the big businessman's administration of President Eisenhower.

The Honorable Carmine DeSapio, in the following address delivered before the annual dinner of the New York State Democratic Committee, shows clearly how the administration has broken faith with the American people:

REMARKS OF THE HONORABLE CARMINE G. DESAPIO, DEMOCRATIC NATIONAL COMMITTEEMAN AND SECRETARY OF STATE OF THE STATE OF NEW YORK, AT THE ANNUAL DINNER OF THE NEW YORK STATE DEMOCRATIC COMMITTEE, NEW YORK CITY, SATURDAY, FEBRUARY 15, 1958.

Any gathering of Democratic leaders affords us opportunity to restate not only our party objectives but our party duties to the community and the Nation. To others this evening I leave the pleasant task of outlining new goals and programs. For myself, I should like to discuss an obligation—our party obligation to compel the national administration to deal frankly and truthfully with the people of our country. It is our unescapable duty to hold that administration to the highest standards of candor and accuracy in setting forth our exact position in a world of peril and a period of increasing distress at home.

We cannot excuse ourselves from this duty on the ground that it might seem like carping partisanship. If international tension is sharpening, if our posture of defense is weakening, if our prestige is waning, if our problems are growing, then it is imperative, in the public interest, to call the Eisenhower administration to account. We demand a frank and complete statement of our position as to our strength abroad and our economic plight at home.

Recently a distinguished churchman demanded that as a self-governing Nation, we be told the truth—the exact, unvarnished truth. In this demand, often stated by temporal leaders, he reminds us that we are not children. We are a politically adult people who can guide ourselves in wisdom if we know the nature and dimensions of the problem we must face.

For years, we were blandly assured that we were comfortably ahead of Soviet Russia in every department of defense.

That was not true.

For years, we were told that American science, education and technology enjoyed complete superiority over the Soviet.

That was not true.

For years, we were told that we had contained Russian power and even that Russia was on the point of internal collapse.

That was not true.

For years, we were disarmingly assured that Soviet progress in atomic power, thermonuclear weapons and the ballistics field was so slow that we could keep our lead by a minimum of national energy.

That was not true.

We suddenly find ourselves faced with crisis, but we still do not know the exact shape and size of that crisis!

Of only one point are we certain: that we are not even yet exerting an effort sufficiently arduous to guarantee our national survival. And had it not been for the dramatic demonstration of growing Soviet power in its strides towards control of outer space and in the perfection of a missile which soon will have the potential of destroying our country, we would to this day be lullabied into unfounded confidence in our security.

We are a free people capable of meeting any challenge, if we are but told the truth. Our party is a political instrument capable of demanding the truth.

For months, as signs of economic distress multiplied, we were told that our domestic economy would continue on a smooth plateau of prosperity.

That was not true.

We were told that the Government's fiscal and farm policies assured us a healthy business level.

That was not true.

We were told that unemployment would be spotty and insignificant.

That was not true.

From the sad disillusionment which followed, we must conclude that the business of government is too important a business to leave to amateurs. Perhaps they have not told us the truth because they did not know the truth themselves, but if this be so, then these short-term executives, borrowed from big business, should be replaced by men who know something of the science of government and the honored art of politics. We might note parenthetically that in the Eisenhower administration the turnover in tycoons has been terrific.

The other day, a distinguished Democratic governor upheld the importance of the politician as an expert in administering public affairs. He thought, as do we, that government should be run by men skilled in its methods and wise in the ways of men. Politics, which is the technique of government, is the only profession in which a man on loan from a corporation or a public-spirited amateur is often presumed to be more competent than the specialist. How big a mistake this is, the Nation is just beginning to perceive, for these so-called hardheaded men lack not only experience but faith. The truth is the Republican administration has been afraid of democracy and of the people and so, the people have been misjudged, misled and mismanaged.

It is our duty to demand an accounting—to demand a full disclosure of the balance sheet of American strength. Armed with the facts, the American people will evolve a wise and vigilant policy at home and abroad. To help shape, serve and implement this policy, the Democratic Party promises seasoned men, promises leaders who don't regard the jobless man as a statistic, promises technicians of government who understand it for what it is—a skilled exercise in human relations in the discharge of a wise and decent program. Upon the success of such free democratic government, the fate of all western society may fatefully depend.

Every man and woman in this great banquet hall tonight is a politician. Whether you be labor leaders, teachers, industrialists, bankers, farmers, workers, housewives, or students, the fact of your interest in politics, and your support of a political party, makes you a politician. And I submit that this is an honorable designation and one which evidences acceptance of your responsibility as American citizens, and your recognition of the truth that politics is everybody's business.

We must not wait until September or October to start our election campaign. We must proudly declare ourselves now—today—to be political leaders—politicians. We must bring to every man and woman of our State not only the message of the Democratic Party but the lesson of Republican inaction and indecision. We must, each of us, declare himself and herself to be a political teacher and we must undertake a full and comprehensive program of political education designed both to tear away the curtain of hypocrisy and to bring to light the great beauty that is truth.

This is a great night for our Democratic organization. Our party is on the march. We are moving forward to greater successes and greater responsibilities. In 1957 the people of the greatest of all cities reelected Bob Wagner as mayor by a plurality close to a million. In 1954 the people of the leading State in the Nation elected Averell Harriman as governor. And in 1958 they will reelect Governor Harriman and the entire State ticket by a minimum plurality of 375,000 because the people of New York State want to place their faith, their trust, their future in our party's program and philosophy.

And, certainly, with two such examples as our dynamic mayor and our great governor—two Democrats who typify the determination of our party to serve the people in the spirit of humanity and in dedication to integrity—certainly, with these great leaders, New York once again sets the standard for progress and achievement in government.

Again may I extend to you my personal thanks as well as the thanks of our party for all that you have done. With men and women such as you in our ranks, we cannot help but achieve ever greater success for our philosophy, for our program and, most of all, for the people whom we are mandated to represent and whose welfare we are pledged to protect.

Let's Avoid Newspaper Depression

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. O'HARA of Minnesota. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New Ulm (Minn.) Daily Journal of February 10, 1958, entitled "Let's Avoid Newspaper Depression," by Walter K. Mickelson.

LET'S AVOID NEWSPAPER DEPRESSION

Now that the Minneapolis Tribune has gone as far as they can go in their slumming reports from the canebrakes and bayous down in the segregated lands of the divided South, they have sent Carl Rowan out in southern and southwestern Minnesota to listen to the tales of troubles of busted farmers, overextended implement dealers, and overexpanded automobile dealers. The picture Rowan presents is a frightening and a maudlin one of small towns being forced to the wall—businessmen ready to close up—and southern Minnesota business in general going to balls of fire.

The reports of this able and brilliant writer would be interesting—and even at times highly entertaining—if they weren't so dangerous, and so extremely dangerous.

With the best intentions in the world, the Minneapolis Tribune writer has become an advance man for a depression.

He does not tell the whole story. He tells just a part of it, and it is a tragic part, for some of the areas in rural America which are making an adjustment from a war to a peace economy. There is no question that the rural sections are facing something of a recession right now. Except for the war years, they have faced it for nearly 40 years. Neither is there any doubt that many small villages have a tough struggle ahead. They have been facing and meeting these adjustments ever since the flivver took the place of the horse and buggy and paved roads replaced the mud roads years ago. Years ago the farmers and people in the small towns realized they faced problems but they never tried to solve them simply by wringing their hands and talking to sympathtic reporters. They solved them by thinking and hard work!

The Tribune series would not be so dangerous if they merely provided interesting reading—and, we presume, more circulation—but they are dangerous because they solve nothing and do make people afraid of the future. If you take a slight recession and throw upon it the gasoline of fear and doubt, then sooner than one thinks we can have a blazing depression. As the man, whom most of the Star-Tribune writers revered and supported, Franklin D. Roosevelt, said in 1933, "All we have to fear is fear itself."

Since these Tribune articles have appeared we have heard men say: "Well, I was thinking of buying a new car, but I guess I will have to make the old car do. If a depression is ahead for us, I don't want to spend the money."

We have heard a farmer say: "I had planned to buy a new tractor next spring, but if we are heading for a depression, I guess I better hold up."

We know of one man who was thinking of establishing a new business which would give employment to 30 people, but he now is thinking maybe he better forget it for a while "until I see how this depression I have been reading about develops."

Fear. Fear. Fear. Make people afraid of the future, afraid to move, and you can turn even a prosperity, to say nothing of a small recession, into a roaring depression. Unreasoning fear closes factories and makes the sheriff the chief salesman at foreclosure and farm sales.

What is behind all this talk of farm depression in southern Minnesota? There is no question but what there is some basis for fact plus a frozen corn and soybean crop last fall.

The farmers have been in something of a recession ever since World War I, except for war years, because we have lost much of our world markets, and our agriculture has been producing surpluses. We have never had a realistic farm program in the last 40 years and the present President, whom the Star Tribune has supported so enthusiastically, hasn't come any closer to a peacetime solution than the others. In order to adjust themselves to the present situation, farmers have had to mechanize, farm greater acreage, and reduce the number of people employed on our farms. This has reduced the number of farms and farmers.

The small villages and non-county-seat small towns have had their troubles from these and other conditions.

Our present cities and villages were laid out 50 to 100 years ago by the railroads. Because 8 miles was a long way to travel by team and wagon or horse and buggy, the railroads laid the villages out about 8 miles apart. These cities and villages grew and prospered after a fashion until about 1908 when Henry Ford began to sell his flivvers by the millions and people demanded paved roads instead of mud. As this movement accelerated, many of the smaller villages began to have their struggles and some of them have had to fight for their lives.

There is no doubt that rural areas over this Nation and probably the world are in an age of transition. They always have been. The livery barn had to give way to the garage and the blacksmith shop has been succeeded by the automobile mechanic. The small village has a different and perhaps a lesser role to play than before. Undoubtedly the farmer who is still a competitive force in an almost noncompetitive world needs a farm program which is more realistic, sympathetic, and understanding. There is no doubt that every village, small town, and city could be helped immeasurably if they could secure one more or just one factory.

The big question is how are we going to secure any or all of these things if we all go slumming, sit and wring our hands and weep over our troubles and misfortunes. How are we going to get people to buy and take chances if we convince them we are in the midst of a depression which none of them ever realized before? How are you going to get industries to locate in southern Minnesota if capitalists believe we are all busted anyway, and that they will have to carry the tax burdens of those who have failed in business?

No. Southern Minnesota isn't busted. It's good farmers are not quitting and its hard-working and enterprising merchants are not throwing in the towel.

The vast majority are working. Our farmers are producing and we are all paying out taxes and the overwhelming majority are going ahead and are making progress.

We have invited Mr. Rowan and the Tribune to interview both sides and present the whole story and not a one-sided, gone-bust, down-the-drain picture they have presented. It isn't true. It isn't fair. And it just isn't right to one of the best sections in Minnesota.

THE HUMAN SIDE

A man lived by the side of the road and sold hot dogs.

He was hard of hearing so he had no radio.

He had trouble with his eyes so he read no newspapers.

But he sold good hot dogs.

He put up a sign on the highway to tell how good they were.

He stood by the side of the road and cried: "Buy a hot dog, Mister."

And people bought.

He increased his meat and bun orders.

He bought a bigger stove to take care of his trade.

He got his son home from college to help him.

But then something happened.

His son said, "Father, haven't you been listening to the radio? There's a big depression on. The European situation is terrible. The domestic situation is worse."

Whereupon the father thought, "Well my son has been to college. He reads the papers and he listens to the radio and he ought to know."

So the father cut down on his meat and bun orders; took down his advertising signs, and he no longer bothered to stand on the highway to sell hot dogs.

And his hot-dog sales fell almost overnight.

"You're right, son," the father said to the boy. "We are certainly in the middle of a great depression."

Address of Congressman John E. Fogarty at the 50th Anniversary of Varnum Continentals, East Greenwich, R. I., September 21, 1957

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include a speech which I delivered on the occasion of the 50th Anniversary of the Varnum Continentals at the Varnum Memorial Armory, East Greenwich, R. I., on September 21, 1957.

ADDRESS OF CONGRESSMAN JOHN E. FOGARTY AT THE 50TH ANNIVERSARY OF VARNUM CONTINENTALS, EAST GREENWICH, R. I., SEPTEMBER 21, 1957

It is a distinct privilege to be invited to the hospitable town of East Greenwich and to share with Varnum Continentals and their friends in this golden anniversary of a proud military organization. I say proud, justly proud, because it preserves the distinguishing mark of the soldier—his uniform—in the fundamental glory of its colors and its trappings at that crucial time in our country's history when our colonies earned the right to be a nation. This organization preserved the uniform as we seek in this day to preserve the liberties and the opportunities that men who wore that uniform died to preserve for us. The courage and sacrifice of 180 years ago made possible this America of today.

In keeping with its patriotic principles and its basic obedience to the Commander in Chief of us all, it is a part of this celebration that we shall toast the President of the United States. That is the privilege entrusted to me and, conscious of all that it means in this troubled hour of world crises, I propose that toast—the President of the United States.

It is a happy coincidence that our President is our guest. He finds rest and respite from the cares of office in the city of Newport which is our common pride here in Rhode Island. There is nothing of party—there can be nothing of prejudice—as we all wish him a happy stay, and a refreshing return to the burdens of the White House to which the wishes of his fellow citizens, expressed in the democracy of the ballot, have called him.

The Newport upon which our President looks is a Newport of peace and plenty. He can hardly recognize in it the wartime Newport—the Newport of the Revolutionary War. Only from the history books will he know that it felt the hand of the oppressor—the British firebrand was applied to its homes—and men, women, and children were refugees from the cruelties of the invader.

But the East Greenwich of that time knew history at first hand. It was to this town, a seaport town, that the refugees of that winter came in their suffering. And it was here out of the scanty supplies that a wartime East Greenwich could gather, that the inhabitants shared the little they had with their fellow countrymen in need.

And it was from here, musket in hand, that citizen left his plow, his books, his leisure, and set out for Massachusetts when the neighboring colony was hard pressed by the same British redcoat.

It was in that goodly throng that Nathaniel Greene marched as a private, while James Mitchell Varnum was in command.

This is the name you would perpetuate. And you have chosen well. For in the short span of his life it may be said that he summed up the ideals of obligation to his country, and symbolized the opportunities of that country, as almost a complete volume of duty and destiny.

America means opportunity for education. James Mitchell Varnum symbolized that as a graduate with honors in the very first class of Rhode Island College, later to be known as Brown University, in the year 1769. He sought to repay this opportunity to learn by teaching others. He moved on to the study of law and the civil liberties that are dear to us. He defended them, that they might pass untarnished from colonial court to the justice of a sovereign state in a confederation of States.

He was a citizen-patriot in the best sense that has given us a citizen army throughout all our history on the premise that if we are to deserve freedom, it shall be the duty of each of us to defend that freedom. He was a colonel among his neighbors, he was a general by choice of our Government, he was a general by selection of the immortal George Washington.

It was no empty title he earned in a war that was long and cruel. The cause to which great men pledged their lives, their fortunes, and their sacred honor, was fought in agony and privation. The battle of Rhode Island was bitter personal adventure to the men like Varnum who bore the brunt of it. It is hard for us to believe that our gentle State was ever the battleground of men's hates. But the American will never forget the name Valley Forge. It was more than a name to James Mitchell Varnum. It was the Gethsemane of the colonial cause. Amid its stark tragedy, no heart was braver than that of General Varnum. We can imagine the pride and satisfaction of General Washington as he named this lad of East Greenwich, the light of the camp.

We have seen Varnum as student, lawyer, and soldier. His neighbors next chose the role of statesman for him and elected him to the Continental Congress in May 1780. To this day we are indebted to him for the boldness of his ideas, the courage of his convictions, and his outspoken advocacy of liberties to chart a new nation to its destiny. He gave an example of the private citizen with an awareness of public duty which has been the bulwark of our democracy, the strength of our political system, the source of our leadership as nation after nation has passed from the prime position they once held among world governments. It is startling to recall that there does not now exist in the world any nation in the same form it knew when James Mitchell Varnum raised his voice in that Continental Congress of 1780.

Next we see Varnum in the role of expanding America, when what is now Ohio was proclaimed as the Far West. We of New England may have forgotten that we then considered the great State of Ohio as part of our territory and staked our claims there.

This was then our Northwest Territory. General Varnum accepted appointment as Federal judge for the Territory. It was truly a frontier with Marietta set for its capital and the white dwellers living behind stockades to protect them from the Indians. I mention this to indicate the sacrifice that Varnum made, leaving the comfort and peace of the neighborhood where he was admired and respected, the home that was the loveliest in all this colony, and enduring the hardships of journey by horseback to the periols and privations which were finally to claim his life. As surely as the soldier on the battlefield, General Varnum died in what others might call exile from familiar scenes but what he deemed to be his duty and an honor conferred upon him by the Nation he loved and served.

I have probably been telling you a familiar story; but I feel that here in the name of Varnum you commemorate more than the military, you pay tribute to true Americanism, to the qualities that we must be able to command in this hour if our Nation is to survive.

America has come of age in the 50 years that you mark today. The 20th century has seen a world explode more than once and has seen our country break out of its isolation into world responsibility. The musket has given way to the missile, yet the atomic age brings no more peace than the colonies knew. The great ocean has narrowed and distance is no longer a defense. Mountains are leveled as jet planes break the sound barrier. Refugees come not from Newport but from far off Hungary. We declare that we have in the atom the greatest possibilities for peace and plenty. Yet a great part of the world hungers for food, and a greater part of the world hungers for security from war's alarms.

It is not my plan nor my privilege to settle here today all the problems of the world. But I submit that the security of America's future can lie in the pattern molded by the life of James Mitchell Varnum.

In a world where science challenges the secrets of nature we must have schools. We must have educated men and women, trained to meet the threats of any nation as Varnum's education prepared him for both Congress and military command.

We must have law and men to defend it, or life, liberty, and the pursuit of happiness will be the possession only of the powerful.

We must have military strength, which must also be the pride and the possession of the citizen. We must be bold enough to mark time with no chip on the shoulder, but we must be strong enough to surpass so that we may survive when our freedoms are assailed.

We must have public service. The private life and public duty, of which I have spoken, must command the respect and the response of all of us.

We must have men prepared to sacrifice. This is a sacrifice of service. It can be by the man in uniform. It can be by the man in public office. It can be by neighbor working for love of neighbor, for pride of the community, and for love of country. It is reborn in us as we appreciate the blessings God has bestowed upon this land of ours.

This is the kind of patriotism, I believe, that inspires this day. It reaches deeper than the uniform—into the human heart. It reaches back farther than 50 years. It reaches farther back than the Revolution. Farther than the name of Varnum even. But it is the inspiration of this day. It reaches back to the time when men first learned that they should live as brothers under the fatherhood of God.

Benson Paints Partial Picture of Farm Plight

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ENGLE. Mr. Speaker, the Sacramento Bee has written an excellent editorial regarding Mr. Benson's recent proposals, pointing out that Mr. Benson has simply failed to recognize the fact that the farmer is getting less for what he produces and paying more for what he buys and that no amount of railing about the evils of high price supports will alter those two basic facts. Mr. Benson has the responsibility of coming up with a program that faces up to the facts and shows some imagination and ingenuity in solving the dilemma in which a poor farmer finds himself.

BENSON PAINTS PARTIAL PICTURE OF FARM PLIGHT

The Eisenhower administration's farm program has had no surplus in one area—that of candor. And Secretary of Agriculture Ezra Taft Benson's performance in Sacramento did nothing to pump candor back into that program.

In 1952 when President Dwight D. Eisenhower was campaigning for his first Presidential term he stated he favored support of the farm economy at not less than 90 percent of parity and that his administration would work toward 100 percent in the market place. His current program calls for giving Benson authority to set supports as low as 60 percent.

In Sacramento Benson said agricultural exports set a new high in fiscal 1956–57. He omitted to say his own department recently announced these exports in the last half of 1957 fell 10 percent below those of the same period in 1956. Of course it is the current picture which tells the facts about the state of agriculture.

Benson also emphasized that income per person on farms last year was up 4 percent over that in 1953. Naturally per capita income is likely to increase if the number of farmers diminishes and 2,800,000 farmers have left agriculture in the last 6 years. Under such conditions per capita income may rise even while total farm income sinks. The Agriculture Department's own figures show net farm income for 1957 at $11,900,000,000, down from the $12,100,000,000 of 1956.

Benson is undoubtedly correct in arguing that the surplus problem never will be licked and stability achieved so long as the farmers can depend upon high rigid supports. But he has not confronted with candor and courage the fact the farmer still has to buy his equipment and other commodities in a largely protected area where administered

high prices prevail. So long as this condition exists there is an injustice, especially to the sound family farmer, in forcing his sector of the economy into the free market.

To be sure Benson said there is no intention to withdraw supports entirely. But the weakness in his program lies in the fact he is plunging the farm economy into a highly competitive market without first coping with the inflexibilities of other factors which affect it, especially the farm middle man and food processor. The victim is likely to be the small family type farmer.

And a more candid analysis of the farm picture would enlist greater public confidence.

Stand Your Ground on American Resources

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. McGOVERN. Mr. Speaker, when the National Rural Electric Cooperative Association held its annual convention in Dallas, Tex., early this month, it included as one of the main speakers on its program agenda, Mr. Kenneth Holum, of Groton, S. Dak.

I am proud to say that Mr. Holum has been a close acquaintance of mine for many years. All South Dakotans have come to know him as a keen student of soil and water conservation. Dedicated to the cause of wise resource development throughout the Nation, he has devoted a great deal of his time and energies to this important issue during the last two decades, even though he has been and still is, a busy farmer.

Known throughout the Nation for his work in this field as well as the REA cooperative movement, it was only fitting that President Truman appointed him to the Missouri Basin Commission some 10 years ago. Mr. Holum is presently executive secretary of the South Dakota Association of Cooperatives and chairman of the Western States Water and Power Consumers Conference, numbering some 17 States.

Speaking of the urgent need to fully develop our precious water resources for the production of more abundant electric power, flood control, water conservation, and recreational activities, Mr. Holum told NRECA convention delegates:

The President in presenting his budget for fiscal 1959 to the Congress, said with respect to water and resources, "The construction activities of the Corps of Engineers and the Bureau of Reclamation for flood control, navigation, irrigation, water supply and power projects will be limited in 1959 to ordinary continuation of the work started in prior years." No new starts of multiple water resource projects is provided for in the fiscal 1959 budget. Moreover, in a statement delivered before the House Committee on Ways and Means on January 17, the Director of the Budget said, "Another recommendation which will hold down budget totals is that no new projects be started in fiscal 1959 for construction of water resource projects by the Corps of Engineers and the Bureau of Reclamation."

With few exceptions the only new water resources development projects that have been started during the 5 years of the Eisenhower Administration have been those which have been initiated by the Congress exclusive of the administration's recommendations, and in some cases in the face of a refusal by the administration to invest the money for these projects even after it has once been appropriated.

Let us bear in mind that of the total budget of some $72.5 billion, only $900 million, or approximately 1.24 percent, is devoted to water resources development. These are not expenditures but rather investments in America's future. Were every Bureau of Reclamation and Corps of Engineers project deleted from the budget, the savings in terms of the total $72.5 billion would be almost imperceptible. Sixty-four percent of our total budget will go to the Department of Defense for design, development and production of weapons of destruction.

We all realize that our defense must be second to none, but it is my honest conviction that the future of our country, and the future of the world, lies in resource development for abundant production. We cannot win the battle for the minds of men with weapons of destruction. In the end we will win that battle because we produce abundantly the good things that a hungry world demands and craves.

Then Mr. Holum offered this striking contrast to United States plans and efforts in the field of water and resource development:

The Russians know that a nation's mechanical power determines its strength. They have 17 hydroelectric-power projects under construction on the Volga River alone. They are building 40 great dams. Three of the 40 are bigger than Grand Coulee. They are building 1 turbine 3 times as big as any in the United States.

Discussing concepts of electric power in this Nation, Mr. Holum said:

Just a few short years ago when we began the development of the Missouri River under the Flood Control Act of 1944, shortsighted private utility executives were telling our people that when Fort Randall, Gavins Point, Big Bend, and Oahe Dams were completed, the people of South Dakota would have power running out of their ears. They told us that we would have electric current to light up the tails of hundreds of thousands of jackrabbits that were infesting our fields at the time. Now, 12 years later, everybody recognizes that we are moving into a period of critical power shortage. We anticipate a critical power shortage in the State that lies at the heart of the Missouri Basin with four great main-stem dams within its borders. Cheap power quickly finds a useful market.

Last week our concern over power supply in the Missouri Basin became more acute when Gen. G. E. Galloway, Missouri division engineer, told us that, because of the proposed budget, power from Oahe would be delayed 18 months. It is reckless extravagance with an area's resources and the Nation's welfare.

We have tremendous water resources in this country. We have great undeveloped and underdeveloped water resources that must be developed to the maximum. This Nation cannot afford the luxury of an underdeveloped Snake River. Strategically located all over the United States we have great reserves of fossil fuel. In many areas we have tremendous reserves of lignite, subbituminous and bituminous coal that have never been developed. In my own State and in our sister State of North Dakota we have a practically unlimited supply of lignite coal. Using modern technology, that lignite can generate tremendous amounts of energy at low cost. Properly integrated with the hydroelectric system on the Missouri River so that available hydropower is used for peaking instead of base loading, savings can be vastly increased. The same situation applies all over the United States. We know the techniques for large-scale developments of these resources. Before Mike Strauss and Oscar Chapman left the Department of the Interior, they had developed plans for the transmission lines of tremendously high voltage needed to transport the power which can be moved so much more cheaply than fuel. Russia builds the high-voltage transmission lines; we do not.

Urging farmers of America to stand their ground and fight for a more enlightened resource program, Mr. Holum concluded:

We should ask Congress to declare it to be this Nation's policy to develop its power resources to the maximum. This declaration must be implemented with authorizations and adequate appropriations. Rural development must be expedited, not delayed. Our atomic-energy program must be accelerated for the good of the public.

George X. Sand—Conservationist of the Year

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ROGERS of Florida. Mr. Speaker, in Florida, because of the vast number of outdoor recreational attractions, we are very conscious of the need for conservation. One of the outstanding conservationists of our State and Nation is Mr. George X. Sand, of Deerfield Beach, Fla. George Sand is well known for his writings for national outdoor and general magazines. Knowing of Mr. Sand's great interest and activity on behalf of conservation programs, it was with a great deal of pleasure that I noted that he had been selected as the conservationist of the year by the Florida Sportsmen's Clubs awards program under the sponsorship of the Florida Wildlife Federation.

The following article from the Florida Wildlife Federation sets forth the basis and reason for this outstanding award to George X. Sand:

George X. Sand of Deerfield Beach, Fla., widely known and liked writer for the national outdoor and general magazines, after being sponsored by the Anglers Club of Broward County, has been named Conservationist of the Year by the Florida Sportmen's Clubs conservation awards program.

The awards program is under the auspices of the Florida Wildlife Federation and is sponsored by the Sears Roebuck Foundation. According to Florida Wildlife Federation president Dr. H. R. Wilber the high award given Sand represents the most significant recognition of individual conservation activity made in Florida during the past 25 years.

A gold medal, a governor's certificate, and a check for $100 were presented the 43-year-old writer by Florida's Gov. LeRoy Collins at an elaborate banquet held at Tallahassee, the State capitol, on February 8. The af-

fair was attended by hundreds of leading conservationists from throughout the southeastern United States.

In selecting Sand for the top honor over many other noteworthy Florida conservationists the following highlights of the veteran writer's 1957 conservation activities were taken into consideration:

1. During the year he fought repeatedly via newspaper and national magazine articles against various threatened public land grabs and other anticonservation activities, both in his own State and throughout the United States.

2. In the spring of the year he addressed the 22d North American Wildlife Conference at Washington, D. C., traveling several thousand miles at his own expense to do so. At that time he recommended that the Coordination Act of 1946 be revised (to give the United States Fish and Wildlife Service a leg to stand on for a change) and that the Congress also abolish future attempts of the Army to reconvey existing Federal reservoirs back to the original owners at a small fraction of the improved value, and at the expense of the public for fishing, hunting and other recreational use, and further, that public access be assured taxpayers to such reservoirs built in the future. Over 61 million Americans had been provided outdoor recreation at such Federal reservoirs the year before.

(Walter Gresh, the U. S. Fish and Wildlife Service regional director for the 12 Southeastern States, subsequently described this talk that was published verbatim in the CONGRESSIONAL RECORD, "The best paper, with punch and facts, that I have ever heard" and the Congress has since decided to act upon Sand's recommendations.)

3. One of the public land-grab exposés which Sand made at the national magazine level earned for him an 18 horsepower outboard motor and a gold trophy as second prize in a nationwide writing contest jointly sponsored by Johnson Motors and the Outdoor Writers Association of America to encourage broader public interest in conservation.

4. During 1957, at considerable personal travel expense and inconvenience, the writer addressed in person a number of large sportsmen's groups throughout Florida to bring them firsthand observations on such timely and important conservation problems as the dangerous waste of the State's fresh water supply, the fencing off of many Florida lakes against sportsmen, ill advised filling of waterfront lands by real estate developers, the urgent need for a salt water fishing license, and so on.

5. Also throughout the year 1957 he personally contacted by either telephone, telegraph, letter or in person every elected Florida Congressman in Washington at least once in connection with such Florida conservation problems, as well as many senators and representatives at the State capitol, including Governor Collins.

6. As president of the 180-member Florida Outdoor Writers Association Sand's first project was to eliminate the strained relationship that had existed through misunderstanding between this large statewide conservation group and an even larger and equally sincere one, the Florida Wildlife Federation. He also served as 1 of the 3 pioneer committee members (the other 2 being the presidents of the FWF and the Southeastern Fisheries Association, respectively), a determined committee which months later would see a genuine spirit of good will and mutual respect emerging for the first time between the sports fishing and commercial fishery interests in Florida. One outstanding result of this was the introducing into the Florida Legislature by the commercial fishermen (who had blocked all previous attempts) the bill which has since made the snook a game fish—something that had been the dream of Florida sportsmen for years.

It is now a matter of record, also, that Sand provided the large Florida writers' organization with the best conservation administration it had enjoyed since it was formed a decade before.

7. Recognizing the vital need for bringing strongly together for the first time Florida's many large and nonaffiliated sportsmen's groups (who had remained weak through their very insistence upon maintaining what they described as their individual identity) Sand in 1957 originated and followed successfully through with the idea of forming a much-needed Florida Conservation Council, a committee to be made up of delegates from each of these independent groups, so that for the first time a single committee could speak authoritatively for the majority of the State's sportsmen. Sand enlisted the aid of such influential groups as the Florida Wildlife Federation, the Florida Audubon Society, the FOWA to make this a reality.

Sand has been writing for the past 17 years. Hundreds of his fiction, articles, and picture features have appeared in such diversified top United States publications as the Saturday Evening Post, Life, Argosy, True, Field & Stream, Outdoor Life, Parade, Popular Mechanics, Farm Quarterly, many more. He lives with his wife, Phyllis (also a professional writer and photographer) and two daughters, Gail, 11, and Karen, 9, on the Florida lower east coast. His Conservationist of the Year award represents the first such honor to be bestowed by the recently created Sportsmen's Clubs Conservation Awards Program. Intent of the program in future years will be to further the proper utilization and conservation of resources of the State of Florida—soils, waters, minerals, forests, and wildlife, through an awards program designed to bring about the greatest interest in conservation projects and to give proper recognition to those persons and organizations who make outstanding contributions to the general resource and welfare of the community, region, and the State.

Water Pollution Control

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. BLATNIK. Mr. Speaker, the Nation's conservationists and outdoor enthusiasts have been in the forefront in our battle to save the Nation's rivers and streams from the blight of pollution. One of the leaders in this fight has been Mr. Charles H. Callison, conservation director of the National Wildlife Federation.

Mr. Callison testified this morning before the House Subcommittee on Intergovernmental Relations in opposition to the recommendations of the Joint Federal-State Action Committee that the treatment plant construction grant program under Public Law 660 be returned to the States. Representing the Nation's conservationists, Mr. Callison gives a penetrating and excellent analysis of the pollution problem and the Joint Committee's recommendations.

His statement follows:

The National Wildlife Federation is a nonprofit, citizens' organization made up of State wildlife federations and sportsmen's leagues in the various States, Alaska, and the District of Columbia. The combined memberships of these State affiliates, adding up to more than 2 million persons, make the federation the largest conservation organization in America.

The hunters and anglers of this Nation, Mr. Chairman, and others interested in the out-of-doors and wildlife conservation, have long been aware of the creeping and cancerous growth of water pollution. They have long warned about, and fought against, this destructive menace that only recently, in years of growing water shortages, has burst shockingly upon the consciousness of most Americans.

The National Wildlife Federation was organized in 1937, a movement growing out of the first North American Wildlife Conference, which was called by President Franklin D. Roosevelt in 1936. Ever since that date the federation has been campaigning for effective water pollution control at both State and Federal levels.

Many of the State federations have been fighting the battle much longer. The League of Ohio Sportsmen, for example, will observe their 50th anniversary next month. Even the New Mexico Wildlife and Conservation Association, in the relatively youthful West, had its origin before the First World War. Others have acquired long records of service and respectable antiquity exceeding that of the National Federation.

The reason for doing this bit of bragging about our history, Mr. Chairman, is simply to emphasize the fact that the National Wildlife Federation, and its member groups, is no Johnnie-come-lately in the field. Our State federations have been campaigning, educating, pleading and fighting for effective State laws and adequate State programs in pollution control for decades. Indeed the organized sportsmen were the first sizable body of citizens to sound the alarm that this Nation could not go on dumping untreated sewage and industrial wastes into the public waters that are the very lifeblood of the economy.

This isn't surprising. Hunters and fishermen tend to become conservationists. This is because they get closer to nature than most other citizens, excepting perhaps farmers and many farmers are also sportsmen. They learn to appreciate natural resources, to understand ecological principles. They get out on the streams where they can smell the stench and see the destruction caused by pollution.

In 1954 we devoted National Wildlife Week to a nationwide campaign aimed at awakening the public to the menace of water pollution. During that campaign, and subsequently in an official statement of policy, the federation declaimed the following objectives:

"1. Sound and effective pollution control laws and programs in every State.

"2. Adequate Federal authority to clean up pollution in interstate waters in cases where the States, interstate or private agencies cannot or will not do the job.

"3. Adequate sewage treatment facilities in every community; adequate waste prevention or waste treatment by every industry.

"4. Adequate research by public and private agencies aimed at improving the efficiency of sewage treatment and at solving difficult problems of industrial waste control."

Mr. Chairman, the contamination of the public waters of America by dumping untreated sewage and industrial wastes into them is nothing more than the literal, physical destruction of natural resources. What happens when a stream is befouled and poisoned by pollution?

Its waters cannot be used for household purposes except after costly treatment.

Industries requiring clean water for their processes have to seek plant sites elsewhere.

This adds to the cost of commodity production, depresses the polluted community.

The waters cannot be safely used for swimming, boating, water skiing, or other forms of aquatic recreation. Parks and playgrounds along the shorelines must be posted with warning signs.

Farmers cannot use the stream to irrigate their fields or water their livestock.

Fish die in these waters. Waterfowl and other wildlife shun them.

Real estate values decline along the polluted river, because no one wants to live above the stench of an open sewer.

All this, gentlemen, is sheer waste. It is worse than waste, it is needless destruction of natural resources that this Nation can no longer afford.

Since the industrial and urban growth of this Nation began, we have fallen steadily behind in our puny efforts to check and abate water pollution. Except for one short period of years in the 1930's when Federal public-works money was available for sewage-plant construction, the volume of untreated wastes poured into our streams has steadily increased. Each year we lost more new miles of stream and shoreline to pollution than we were able to rescue from pollution.

By 1956 the situation had passed the point of national toleration. In that year a conservation-minded Congress passed Public Law 660. It is a moderate law that emphasizes, and encourages, State and local responsibility for pollution abatement. Its enforcement provisions are benign but it is, nevertheless, somewhat stronger than the toothless Taft-Barkley Act of 1948 that it amended and replaced.

Public Law 660 has one provision that does give this Nation its first real chance to get abreast of the sewage problem. This is the construction-grants program. This is the program that was opposed at the time and has been under fire ever since by certain trade associations representing industries that have a vested interest in water pollution.

Mr. Chairman, the National Wildlife Federation, together with all its State and local affiliates, worked hard for Public Law 660. To my certain knowledge, because I personally attended all the committee hearings and took part in many of the conferences leading to its enactment, it was supported also by every other national conservation organization. It had the endorsement and active support of the Garden Clubs of America, the National Council of State Garden Clubs, the General Federation of Women's Clubs, and of other similar organizations.

When it was passed, Public Law 660 was hailed as a great victory by conservationists up and down this land. Indeed, we called it the greatest single accomplishment of the 84th Congress in the field of natural-resources management.

These same organizations, to a man and woman, have supported appropriations for the programs authorized in Public Law 660, including the construction-grants program. We shall continue to support them.

Although the construction-grants program has only fairly gotten off the ground, the record to date proves our faith and our hard work were not misplaced. Sewage-treatment plants are now being built by American towns and cities at a faster rate than ever before in American history. The polluted streams and beaches are becoming clean.

Even the so-called Joint Federal-State Action Committee, whose recommendation we are here opposing, estimates the dollar volume of waste-treatment construction in 1957 would total $475 million, nearly 25 percent more than in 1956 and about double the annual average from 1952 to 1955.

The stimulation provided by Public Law 660 has been all the more remarkable, and encouraging, in view of the fact that the municipal bond market in 1957 was the worst since 1935. It is quite evident that hundreds of the smaller cities could not have financed new sewage-treatment facilities, and would not have started them, without the aid and incentive of the Federal grants.

In the 14 months since the grants program actually got started in December 1956, until the end of January 1958, a total of $72,543,844 was approved in grants for 875 projects, total construction cost of which is figured at $367,064,915. But, as of January 31, 1958, there were applications on local drawing boards or being processed in State and regional offices for other grants totaling $87,710,668, to assist in the construction of some 922 installations estimated to cost a total of about $700 million. This clearly shows, Mr. Chairman, that the stimulation brought about by Public Law 660 is only now beginning to make itself felt.

It also indicates that an annual program of $100 million in Federal grants would be more realistic, and more in line with national pollution-control needs, than the $50 million authorized in Public Law 660. You will recall that, as originally introduced by Congressman BLATNIK, this legislation proposed $100 million in Federal incentive grants annually up to a total of $1 billion over a period of years.

It is an interesting theory, Mr. Chairman, that if the Federal Government discontinues this program the States will step in and provide financial aids to take up the slack. It is an interesting theory, but we know from bitter experience it will not work. A few State legislatures might act promptly to carry on the program without interruption, but delays up to 10 years and longer would inevitably occur in most States. Meantime, we would once again be falling further and further behind in the pollution-control problem.

For one thing, we know from long and recent experience that the same groups that are now doing their best to kill the Federal grants program, would be on hand in the lobbies of the State legislatures to oppose stronger State laws, and to block adequate appropriations. These are the groups that have a vested interest in polluted streams. They are the same groups that sparked the unsuccessful attempt on the floor of the House last year to knock out 1958 appropriations for the construction-grants program.

The theory that the Federal Government has no responsibility for water-pollution control also is utterly without validity. So many major streams and watersheds, so many metropolitan areas, are interstate in character. It is only through Federal action, in cooperation with State and local agencies, that the toughest pollution problems can be overcome. The knotty problem of the Potomac, right here on the doorstep of the Federal Government, is a case in point.

If it is valid to argue that spending Federal funds to help clean up municipal sewage is a misuse of Federal tax dollars, it is equally valid to argue that all flood-control works should be paid for by the local beneficiaries and by the landowners on whose lands the floodwaters originate. It is possible to calculate with reasonable accuracy the proportion of overflow waters that are contributed to a stream system as a result of land misuse by farmers and ranchers in a watershed. Do we try to argue that the farmers who own and operate the watershed lands should pay for flood-control works downstream? As a matter of fact, the Federal Government contributes from its general revenues through several programs to help the farmers install soil conservation and water-control measures and to protect the watersheds from excessive runoff. All the taxpayers of the Nation contribute to the cost of mainstream flood control.

There is just as much reason, based on broad public benefits and the interlocking community of national interest, behind Federal grants to stimulate the construction of sewage-treatment works for pollution abatement.

In conclusion, Mr. Chairman, we wish to reemphasize that the problem of water pollution in this Nation demands action, not theory.

We are getting action at last under Public Law 660. The conservationists of this country will oppose, and will fight with all the resources at their command, any attempt to scuttle, or to weaken, any part of the Federal program.

At the same time, they will continue to work, with all the resources at their command, for stronger State laws and more adequate State appropriations for pollution control and abatement. They will throw their organized strength behind municipal bonding issues and other local actions to clean up the polluted waters.

I make the above predictions, Mr. Chairman, as statements of fact. This is one issue on which conservationists have no doubts. On this issue we know how we stand. For the immediate economy and public welfare, and for the long-range security of America, water pollution must be cleaned up.

Statement by the Honorable John Foster Dulles, Secretary of State, Before the House Committee on Ways and Means in Support of the President's Proposals for an Extension of the Trade Agreements Act, February 24, 1958

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. CURTIS of Missouri. Mr. Speaker, the Secretary of State, Hon. John Foster Dulles, made an excellent statement in behalf of the President's proposals for an extension of the Trade Agreements Act before the Ways and Means Committee today. Although this statement will be contained in the printed hearings of the Ways and Means Committee, I believe it will be beneficial if the House membership had this statement available for consideration at this time. Accordingly, I am having it inserted in the Appendix of the RECORD.

The statement follows:

STATEMENT BY THE HONORABLE JOHN FOSTER DULLES, SECRETARY OF STATE, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS IN SUPPORT OF THE PRESIDENT'S PROPOSALS FOR AN EXTENSION OF THE TRADE AGREEMENTS ACT, FEBRUARY 24, 1958

I

I am here to support the President's proposal to extend and strengthen the now-expiring Trade Agreements Act.

That proposal has two main aspects:

1. It is designed to benefit our national economy by enabling us to share more of the world's trade and commerce.

The Secretary of Commerce and the Secretary of Agriculture have convincingly shown the importance of the President's proposal from this domestic standpoint.

2. The President's proposal is also designed to help make the United States secure against external danger.

It is that aspect of the President's program that I today ask you to consider.

II

The reciprocal trade agreements legislation of the United States, enacted in 1934 and extended and strengthened since then on 10 different occasions, has by now become symbolic, the world over, of economic cooperation as a substitute for economic warfare. It stands for the proposition that everyone is better off by exchanging goods rather than by trying to be self-sufficient.

Following the depression of 1929, many nations sought to revive their economies by building up trade barriers in terms of tariffs, quotas, and currency barriers. The consequent decline in world trade brought about, by 1934, extreme nationalism in several countries and that was a major cause of World War II.

Since World War II, the trend has happily been in the other direction, at least so far as the free world is concerned. The United States, by far the greatest single economic unit, has been an indispensable leader in this respect. Our Trade Agreements Act, as renewed and strengthened from time to time, has reflected a purpose to build up, and not pull down, international trade.

Today this is more than ever important. That increased importance results from the grave dangers that we face from Communist imperialism.

III

I shall speak first of the physical danger that we face.

Since 1955 when the Trade Agreements Act was last extended, there have been revolutionary developments in the instrumentalities of war. Hydrogen bombs have been developed in quantity, with explosive power measured in terms of megatons, and not mere kilotons. The means of their delivery have been vastly increased, not merely by supersonic planes but by missiles hurled through outer space and traversing distances running into the thousands of miles.

For the first time in history, the United States is subject to major devastation from weapons launched from foreign soil.

That danger is met, and our peace is preserved, by one fact and one fact alone—that is that the free world is not disunited, but works together and provides dispersed power to retaliate against armed aggression. That dispersal is a vital element. If our retaliatory power were located only in the United States, it would not be a dependable deterrent for it might be largely obliterated by a sudden blow. It takes cooperation all around the world to assure that Soviet armed aggression will be deterred.

This cooperation cannot be sustained on a purely military basis, with disregard of economic factors. The United States is the economic heart of the free world. The economies of other free nations depend, in large part, on the flow of trade—their economic life blood—to and from the United States.

The dependable and effective use of joint military facilities in other lands faces inevitable collapse unless the governments and people associated with us feel that their relationship with the United States contributes not merely to military security but also to indispensable economic security.

Does this mean that our friends and allies may try to coerce us into trade arrangements which, from our standpoint are improvident? It does not mean that. Never has any foreign government attempted to negotiate in those terms.

But there are certain facts of life that we must recognise. One is that representative governments cannot ignore the sentiments of their people. And other peoples will scarcely believe that we regard security as a two-way proposition, or that we take the Soviet Communist danger seriously, if we seem to be unconcerned about their economic welfare and force them to economic dependence on the potential enemy.

The peace of the United States, now more than ever, depends upon maintaining with other free peoples a sense of fraternity and of community. This implies willingness to cooperate with them in the field of trade and commerce.

IV

It would, however, be a great mistake to assume that the only danger our Nation faces is that from open armed attack. The greater danger comes from the political-economic warfare of international communism.

Its strategy involves subverting one country after another until finally the United States is isolated and its economy so depressed that, to use Mr. Stalin's words of 1924, the United States will consider it expedient voluntarily to make substantial concessions to the proletariat. That strategy was recently restated by Mr. Khrushchev in these words:

"We declare war upon you—excuse me for using such an expression—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

It would be reckless to treat that threat as negligible. Soviet rulers have been rapidly developing their means of waging economic warfare against the United States and have now achieved an industrial level that enables them to export manufactured goods in increasing quantity and variety, and to take in exchange large amounts of natural products—agricultural and mineral—either for their own use or to dump on free-world markets. They hope thus to gain economic dominance, and subsequent political dominance, in many countries that seek an assured foreign market whereby to earn the means to pay for essential imports.

Already the Soviet bloc has initiated this technique in relation to Egyptian cotton and Syrian cotton and wheat. The Communist rulers no doubt hope thereby to gain a controlling influence over the Suez Canal and the Syrian pipelines, with which they could dominate the economy of Western Europe.

Similar Soviet-bloc efforts are manifest in relation to other areas.

If other free-world nations think that the United States market will be increasingly closed to them, that will immeasurably help the Soviet Communist bloc to prosecute their plan of economic encirclement and ultimate strangulation of the United States.

V

Some elements of United States industry seek to improve their competitive position by implying that any competition from abroad, merely because it is foreign, should on that account be debarred.

The United States cannot accept that viewpoint without endangering our whole Nation. There is, of course, a wide range of cases where foreign competition should be restrained, and is restrained, by protective action. But a general disposition to exclude foreign goods whenever they are competitive, would gravely disrupt economic, political and spiritual relationships which are required for our own welfare and for the defense of our peace and freedom.

It is neither un-American nor unpatriotic to have national policies designed to assure a congenial and friendly world environment. Since our earliest days it has been, and now is, accepted United States doctine that our own peace and security interlock with conditions elsewhere. We have, when needed, paid a great price in blood and treasure to prevent other lands from falling under the control of hostile despotisms.

The first great foreign policy of the United States was the Monroe Doctrine. It declared that the peace and security of the United States would be endangered if hostile despotisms were to extend their political systems into any portion of this hemisphere. By the Caracas Declaration of March 1954, the American Republics declared that the domination or control of the political institutions of any American state by the international Communist movement would endanger the peace of America. The Congress of the United States in June 1954, with only one negative vote, endorsed that Caracas resolution.

If, indeed, the spread of international communism to this hemisphere endangers our peace, shall we seek by sound economic measures to prevent that? Or shall we adopt trade polices that will create the very danger we signaled?

Our second great foreign policy evolved in relation to Europe. In World War I and World War II, the United States incurred casualties of the order of 1 million and spent hundreds of billions of dollars rather than see the other side of the Atlantic fall under the domination of a hostile despotism. Now this threatens for the third time. Shall we have trade policies that will unite Western Europe with us in vigorous freedom? Or shall we renounce this waging of peace?

Our third great foreign policy evolved in relation to the western Pacific. We were unwilling that the Far East and the Pacific Ocean should fall under the domination of hostile war lords. In order to prevent that, we fought a long and hard Pacific war. Unless we have enlightened trade policies, we shall risk losing all that we thought we had won at so grievous a price.

Since the close of World War II, the United States has, by treaties or joint congressional resolutions, proclaimed, as regards nearly 50 nations, that the peace and security of the United States would be endangered if these other nations were to fall into the clutches of Communist imperialism. But the Communists are not going to keep hands off merely because of bold treaty words or resounding congressional proclamations. The Russian and Chinese Communists are tough. Our words will command respect only if we are seen to be ready to back them up.

If we are to avoid the grim alternatives of war or surrender, we must have the national policies and actions represented by our mutual-security program and by the Trade Agreements Act.

With these measures, the United States and its allies can peacefully win the cold war. President Eisenhower said last December in Paris: "There is a noble strategy of victory—not victory over any peoples, but victory for all peoples." The policies of the free world over recent years have been winning policies, and clearly so.

Armed aggression has been deterred, and the free world has cooperated successfully to resist Communist subversion.

In Eastern Europe, outbreaks in East Germany, Poland, and Hungary have shown the discontent of the captive peoples and their longing to become again free and self-respecting nations.

Within the Soviet Union itself there have been sensational political changes over the past 5 years which represent not merely personal struggles for power but a conflict of policies related to the growing desire of the people for more intellectual freedom, more personal security, and better living conditions.

It is by no means visionary to foresee the time when nations and peoples now being exploited by international communism for external adventures and world conquest, will have governments genuinely dedicated to promoting the welfare of their own people.

Then indeed the international scene will be transformed.

However, this result will not be achieved unless the free-world nations stand firm on the policies that create a unity which nullifies both the military and the political-economic threats which now stem from Communist imperialism.

The imperialist leaders have, or believe they have, one asset on their side—that is the tendency of the democracies to get tired and not to be willing to persist in the efforts that are required to sustain free world unity and strength. If that unity ever collapses, then the Communists could feel that victory was within their grasp.

The essential is that we hold fast to policies which have demonstrated their worth and which if persisted in will assure that the ultimate victory will be that of the people, not of the despots.

VI

Let me take, by way of illustration, four key positions—north, south, east, and west.

To the North there is Canada. The United States and Canada are inescapably interdependent from the standpoint of continental defense. In 1957 Canada bought from us about $3.9 billion of goods and sold to us about $2.9 billion of goods. Canada has expressed its concern at the size of this adverse trade balance. If the Canadian Government and people were to assume that it is our purpose to make that trade balance still more adverse, there would inescapably be adverse repercussions on our joint North American defenses.

I turn to the south, to Venezuela. It supplies petroleum products which were vital to us and our allies during World War II and the Korean War. Later, Venezuelan petroleum prevented a major catastrophe when, in 1956, the Suez Canal was closed and the Iraqi-Syrian pipeline blown up. Venezuela bought from us, in 1957, about $1 billion and sold to us about $900 million of goods. If the Government of Venezuela considers that we intend to put up serious barriers to imports from Venezuela the consequences will not be in the interest of our national security.

I turn eastward to Europe, taking the United Kingdom as an example. The British people are authors and stanch defenders of free institutions. We have a varied and vital military cooperation with the United Kingdom. We have just concluded with it our first IRBM agreement. The United Kingdom lives by participation in world trade. In 1957 it bought about $1.1 billion of United States goods and sold to us about $775 million of goods.

If the United States were to adopt policies that would set in motion a series of worldwide trade restrictions and high tariff policies, the effect upon the United Kingdom would be grievous.

If we turn now to the Far East, we have the case of Japan. Japan is our second largest market for American goods generally and our best market for agricultural products. Japan has a population of some 90 million. They live in an area about the size of California, but with no comparable natural resources. The Japanese must manufacture and trade to live. They are, indeed, the only important industrial nation in the Far East. They bought from the United States in 1957 about $1.250 billion of goods, and sold to us about $600 million of goods.

In the period of the early thirties, when world markets were closing and international trade declining, the leadership of Japan passed to those who believed that Japan, in order to earn a decent livelihood, would have to impose its rule over China and Southeast Asia to insure adequate markets and sources of raw material. That led to war. Today the Soviet Union and Communist China eagerly covet the use of the industrial power of Japan for their military and economic warfare purposes. The Japanese resist that unholy alliance. But surely our trade policies ought to help to make it possible for Japan to gain a livelihood within the free world.

There is no suggestion that the United States should eliminate all restrictions on all imports from these four countries, or from any other countries. Actually, special measures have recently been taken to limit imports from each of the four countries I have specifically mentioned. For example, there is a Government-sponsored voluntary restriction which limits oil imports including those from Venezuela and from Canada. There is an increased duty on bicycles from the United Kingdom, as a result of escape clause action. There are Japanese imposed restrictions on textiles, flatware, and other goods sold to the United States.

Surely a system that contributes so much to our political and military security, which takes account of the needs of our domestic industry and which provides our farmers and industrial workers with vast markets, should be effectively continued.

As other witnesses have testified, there is developing a new situation in Europe as a result of the common market treaty which will create a common market without trade barriers as between six countries of Western Europe. It remains to be seen whether those responsible for the common market will adopt liberal trade policies or protectionist policies as regards others. The decisive period in this respect is from now through 1962. Much will depend upon the example of the United States and the bargaining power of the United States. This is a particular reason for extending the act for 5 years and strengthening it as requested by the President.

George Washington gives pertinent advice in his Farewell Address. He counsels that our national policies should be formulated, not on a basis of sectionalism, but on the basis of overall national interest. "Every portion of our country," he says, "finds the most commanding motives for carefully guarding and preserving the union of the whole." And that union, he adds, should be "directed by an indissoluble community of interest, as one nation."

Almost every national policy hurts some and benefits others. The form of our taxation; the nature of our defense purchases; the location of Government operations—all of these and other national policies inevitably tip the scales of competition. Often, and certainly in the field of trade, those few who may be hurt are more vocal than the many who may gain. I do not complain that those who may be hurt are vocal. That is their right. But the Congress has a duty. The determining factor should, as George Washington said, be the "guarding and preserving of the union of the whole."

The Trade Agreements Act stands as a worldwide symbol of enlightened statesmanship. Failure to renew and strengthen that act as the President has requested would set back the clock and endanger our Republic and each and every person in it. That is the paramount consideration.

Law of the Land?

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. LOSER. Mr. Speaker, I would like to call the attention of my colleagues to an editorial which appeared in the Nashville Banner on February 21, 1958, entitled "Law of the Land?"

Is the law of the land made by judicial interpretation or by congressional enactment? This question is one which must be decided and it would be well for all of us to give it the study needed in order that we may act and once again know that the law of the land is based on the Constitution of the United States.

The editorial follows:

LAW OF THE LAND?

Who makes the law of the land?

How is it made? By judicial interpretation or by congressional enactment?

These are valid and challenging questions just now; and they need competent answer before recklessness under pressure's wild momentum—and without the brakes of study and reason—carries the country to the point of no return.

Actually the Constitution is—originally—the law of the land. It hasn't been amended in any of the particulars today distorted into invasion of basic rights. Nor has Congress officially forfeited the rights of exclusive legislative powers. Where the Supreme Court encroaches upon that domain, Congress can act to redress the grievance of invasion.

For example: In June 1950, the Supreme Court reversed the judicial rulings of a century—which under present theory had been the law of the land—to divest coastal States of their tidelands rights. It held on that date that the Federal Government has paramount rights to the tidelands.

Supposedly then that became the law of the land. And every subordinate court would be expected to deal accordingly with any case before it.

Congress did not accept that. Congress was of the opinion that the issue was one for legislative determination. A little under 3 years later, Congress did act on the question, and overwhelmingly. It enacted a law restoring tidelands title to the States to the extent of their historic boundaries.

Only Congress can deal adequately and authoritatively with the present issues, insofar as Federal responsibility is concerned.

It has that obligation—primarily to assert just where the lines of authority fall; and they fall exactly where the Constitution drew them. Otherwise the law of the land is a nebulous instrument, subject to capricious change without benefit of legality—an item of confusion, abuse, and danger.

Local Government and Problems of Water Pollution Control

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. BLATNIK. Mr. Speaker, last week the Honorable R. P. Weatherford, Jr., mayor of Independence, Mo., addressed the Surgeon General's Conference with State and interstate water pollution control administrators. Mayor Weatherford represented the American Municipal Association and its 13,000 member cities on the subject of municipal sewage-treatment problems.

Mayor Weatherford's remarks should be studied by all those who believe that the construction-grant program under

Public Law 660 should be returned to the States.

Similar to the style of another man from Independence, Mo., Mayor Weatherford lays it right on the line and pulls no punches. No one knows the problems of municipalities better than the men who represent them and they, through their spokesman Mayor Weatherford, are opposed to repealing the treatment plant construction program under Public Law 660. In fact they advocate an expanded program of Federal aid in order to effectively deal with the problem of stream pollution.

Mayor Weatherford's statement follows:

Gentlemen, my humble honor indeed it is to address you on behalf of the 13,000 member cities of the American Municipal Association on the subject of Municipal Sewage-Treatment Problems. As many of you know, this is a subject on which I have spoken with considerable feeling on previous occasions and on which I shall probably speak many times again.

The national policy on water pollution of the American Municipal Association was first clearly enunciated at its 31st annual congress in Philadelphia on December 1, 1954. This policy has been reaffirmed each year. At our last American municipal congress in San Francisco in December 1957, the following recommendations concerning the Federal water-pollution control program were unanimously adopted:

The Congress is urged to continue and expand the 1956 Water Pollution Control Act by:

1. Providing for an expanded program of research and technical assistance;

2. Liberalizing the financial provisions of the act by increasing the total loan and grant authorization and by raising the percentage of Federal contribution available for each project to cover at least 50 percent of the cost of the project, with no ceiling limitation as to the maximum amount;

3. Increase the annual authorization from $50 million to $100 million; and

4. Establish separate incentive aid program designed to promote the construction of waste treatment facilities on a metropolitan area basis.

You are all aware, I am sure, of the recent recommendation of the joint Federal-State action committee relating to termination of the Federal grant-in-aid program to cities for the construction of sewage treatment plants. Again on this occasion the American Municipal Association strongly supported the grants feature of the Federal act. The official policy of the association was expressed to President Eisenhower by AMA President Ben West of Nashville, Tenn. Mayor West said in part:

"In view of all the evidence concerning the impact of this program to America's cities and to the Nation as a whole, we feel compelled to register with you our strong conviction that termination of Federal assistance for the construction of sewage waste treatment plants will seriously jeopardize the possibility of ever developing an adequate water conservation program for the Nation.

"All the evidence points to the continuing need for Federal financial assistance in the field of water-pollution control and on an expanded basis. We urge you to press for continuance of this program, at least until the prospect for its solution by all States is entirely assured and until Federal withdrawal from the field will in no way jeopardize the formulation of an effective national water-conservation program."

We have some idea as to the rough dimensions of the total public-facility problem faced by urban areas. By 1975, for example, our population will have increased from approximately 175 million to something close to 225 million. Households will increase from approximately 45 million to close to 65 million. It has been estimated that raw land for urban use will be taken over at a rate of 1 million acres annually.

There are more than 15,000 local governments in the 174 metropolitan areas that include and center about cities having 50,000 or more inhabitants. About three-fifths of the entire population of continental United States resides within these areas. Most of the Nation's increase in population since 1950 has occurred in metropolitan areas, chiefly in the suburban portions surrounding the central cities. With this suburban growth have come urgent problems of making adequate provision for local schools, police and fire protection, transportation facilities, water and sanitary services, and other community needs. The framework within which these needs must be accommodated is, in most cases, a complex structure of numerous autonomous local governments of many different types.

Under the present law, communities within metropolitan areas cannot pool Federal grants for the construction of joint treatment facilities. This negative approach to what could be a most effective means of handling large area disposal problems should be corrected and made positive by rewarding growing local governments who band together either by cooperative agreement or otherwise in the handling of a common problem by making stimulating Federal grants available to assist them in constructing a common treatment plant to serve all their needs.

A 1955 survey by the Public Health Service of municipal pollution-abatement needs estimated that their cost for the period 1955–65 would be $5.33 billion. Of this total, sewage-treatment plants would cost $3.49 billion and interceptors would cost $1.84 billion. These estimates covered and then-existing backlog of needed construction, obsolescence of older treatment facilities, and new sewage-treatment needs that would develop from population growth and new needs in previously unsewered places.

This represents a staggering financial load for the cities of the Nation. To meet these needs we will have to construct sewage-treatment works at the rate of more than $500 million per year. The magnitude of this task is shown somewhat by the fact that since World War II we have not been able to average half that amount. There is at present a backlog of needed municipal pollution-abatement projects of well over $1 billion. You are probably well aware that it was this backlog that led in large measure to the construction grant-in-aid provision in the new Federal legislation.

In solving its pollution-abatement problems, the municipality faces both fiscal and technical problems, not to mention administrative and organizational problems in the metropolitan areas. In all of these areas the community requires assistance. Since the problems of finance are most difficult from the viewpoint of municipal government, let me address myself to this point first.

Compared to the Federal and State governments, the municipality is near the bottom of the tax revenue source totem pole. Tax dollars are in short supply in municipalities. Nevertheless, city officials must find the money to build, improve, and maintain streets, schools, libraries, airports, water systems, parks, and all the other public projects needed in a modern municipality. The needs for all these projects is constantly increasing and city officials are finding it more and more difficult to divert their already limited funds into sewage-treatment construction.

We all recognize, I am sure, that the sewage plant just doesn't compete in the same voter's league with schools, libraries, parks, etc. This is especially true, since the average voter sees the sewage plant as a primary benefit to those who live downstream if he ever sees it at all. Perhaps a part of the problem lies in the failure of the Water Pollution Control Agency in selling its product and its benefits. Another part is again the obstacles in organizing adequate pollution controls on a metropolitan, regional, and interstate basis.

The final problem is very real to the municipal official. Many municipal bond issues for sewage treatment needs have been defeated by the voters in recent years. Many communities find they have no current funds and are already at their statutory limit for bonded indebtedness. The market for sewage revenue bonds is generally uncertain. In 1957 the municipal bond was at its lowest in many years, particularly for sewerage, and many issues went unsold. We believe that if it had not been for the stimulating effect of the Federal grant program, 1957 would have had one of the lowest construction contract award levels since World War II. Instead, the grant program helped generate the most widespread sewage plant construction year on record.

The AMA believes that most municipalities are unable financially to deal effectively with the water-pollution program. For the most part, State governments are unable to give financial assitance or show little or no inclination to do so. Only the Federal Government has the resources to provide the financial assistance needed to meet the problem. We believe that sewage pollution involves health and water resource problems of national significance and that the Federal Government has a definite responsibility to render financial aid to municipalities in meeting these problems.

The American Municipal Association fully subscribes to the principle of Federal grants for the construction of municipal sewage-treatment works. We favor section 6 of Public Law 660 except that we believe its financial provisions are too limited and should be revised sharply upward. We also believe, as I have already noted, that stimulatory Federal assistance should be brought to bear on the problem of developing adequate metropolitan treatment programs.

The municipality also faces serious technical problems in dealing with water-pollution situations. I will not dwell at any length on these since this is an area entirely familiar to you gentlemen.

The first problem of this nature that comes to mind is this business of selling the need for costly sewage treatment to the general public. The already overburdened taxpayer can see the benefit to some other fellow downstream but can't see any benefit to himself. Consequently he often votes "No" on a bond issue and our problems of financing are again multiplied. We just haven't done a good job of relating pollution to overall water use or to the municipal taxpayer how pollution prevention and abatement benefits him by benefiting the health and welfare and economic potential of the States and the Nation as a whole.

Municipalities, metropolitan areas, and geographic regions need better planning for their sewage-treatment plants. All too often such plants are constructed with State approval and within 10 years become inadequate for the problem that has developed. It is a hundred times more difficult to refinance improvements to a relatively new sewage-treatment works than it is to finance the original construction. We believe there should be a close working relationship between the State water-pollution-control agencies and State planning commissioners and State municipal leagues. These State agencies, working in concert with municipalities and their consulting engineers, could do much to assure adequate planning for municipal sewage treatment. Among them they certainly have the financial, engineering, administrative, and planning experts to do the job.

The high cost of sewage-treatment construction is a serious problem to municipalities. The city must buy what is on the market since it has no other source. The market price has gone up steadily without any apparent increase in many years in the efficiency and economy of the product. The city is certainly in no position to develop new and better methods for treating its own sewage. Nor does it appear to us that anyone else is doing much about this increasingly serious problem of high costs for sewage treatment. Much more research and development must be undertaken by the regulatory agencies, both State and Federal.

Let me mention one more problem and this relates to the operation and maintenance of treatment works after construction and to the training of personnel. We recognize without question the primary responsibility of the city in operating and maintaining its own sewage plant or contributing its share in handling larger area problems. But, at the same time, we recognize that there is an overall responsibility on the part of the State pollution control agency in the municipal sewage treatment plant and its operating personnel. It is very important to those responsible for municipal sewage treatment to know that there is an overall importance and interest attached to pollution control at community level.

This can be done effectively by State supervision, inspections, training courses, professional associations and all the other means so familiar to you all. We wouldn't dream of building a school, staffing it with teachers, sending our children to it and then never pay attention to the school again. The State wouldn't allow it if we tried.

Where does the municipality look for leadership in solving its sewage treatment problems? To themselves alone? To the Federal Government? Or to the States? Everyone recognizes that only the local government itself can initiate the necessary remedial programs of prevention and abatement.

The broad concern for the quantity and quality of the Nation's water resources is properly that of the Federal Government. That proper concern includes a positive effort to see to it that State and local governments can and will assume their responsibilities in meeting their share of the problem.

We believe that communities should be able to look to the State for some of the answers to their pollution problems. In seeking these answers from State water pollution control agencies, we wonder if it is not reasonable to ask them:

1. What are you doing to keep your governors and State legislators informed of the water-pollution problem and its needs?

2. Are you working closely with your State municipal leagues and State planning commissioners to promote better understanding of pollution problems and to reach better solutions of them?

3. What are you doing to sell the values of municipal sewage treatment to the tax-paying public?

4. What are you doing to help solve financing problems in the light of the peculiar needs for pollution abatement?

5. What are you doing to reduce the cost of municipal sewage treatment?

6. What are you doing to promote efficient and economical operation and maintenance of municipal sewage treatment plants once they have been constructed?

Finally, I believe a word about industrial pollution, which is a very formidable part of the total pollution problem now confronting us, is appropriate.

I believe it goes without saying that a large part of industrial pollution exists to a degree unrecognized for the real problem it poses, simply because it hides behind the torrent of untreated domestic sewerage.

We must not defer coordinated action on the part of all levels of government to eliminate the ever-increasing flow of untreated industrial wastes in our Nation's waterways. The States and the State legislatures in particular must recognize the need and take action to accomplish an effective program to control industrial pollution. Without such control domestic programs, no matter how successful, cannot do a complete and lasting job.

The Federal Scholarship Act

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 18, 1958

Mr. MULTER. Mr. Speaker, on February 17, 1958, I appeared before a subcommittee of the House Committee on Education and Labor in support of my bill, H. R. 821, to provide loans to needy, qualified students. My testimony before that committee follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER (DEMOCRAT, OF NEW YORK), BEFORE THE HOUSE COMMITTEE ON EDUCATION AND LABOR, FEBRUARY 17, 1958

Mr. MULTER. Mr. Chairman and members of the distinguished House Education and Labor Committee, many words have been written on this subject in the past few months. I will limit my remarks in the hope that this committee and the Congress will soon substitute action for words. To my mind there is no more important action that this Congress can take than to enact a Federal-aid-to-education measure. This would go to the heart of the problem pointed up by sputnik and in the long run contribute more to the strength of our country than having any number of spheres circling the earth. We will miss the boat and perhaps even the spaceship if we are satisfied with crash programs in weapons and satellites which will provide only temporary strength. Gentlemen, you are now considering the very future of this country. I hope only that my bill and my testimony this morning will be of some assistance to you in successfully discharging this task.

The purpose of H. R. 821 is to furnish loans to the country's needy and scholastically qualified students so that they may continue their education beyond the high school. State agencies will select the students to receive these loans.

The amount of money available to a State would be determined by the ratio which the number of its Members in the House of Representatives bears to the total number of Members from all the States which have accepted the provisions of this act. My proposal, if enacted, would authorize for the Federal scholarship fund the sum of $5 million for fiscal year 1958 and $10 million for fiscal year 1959 and such sums as are necessary for succeeding years. For a student to be eligible for a loan, his State must designate a State agency and establish certain methods and standards of selection. Moreover, the Commissioner of Education may suspend loans to students if he determines that the State agency is discriminating against individuals on the basis of race, creed, color, or national origin. The State will only be required to make certain deposits into the Federal scholarship fund if the fund is not self-sustaining, but in no event can this State payment exceed 10 percent of the amount of advances made to students from that State during the preceding year.

The Federal Scholarship Act would loan to an eligible student an amount not in excess of $1,000 a year for the first 4 years of study in any educational institution of college-grade studies. In addition, the bill would provide $1,500 a year for 4 years to students in graduate schools.

Repayment of the loan by the student will be over a 10-year period with interest at 1 percent per year.

Let me review briefly the reasons such a program is needed. As you know, I have supported such a program for years and first introduced this legislation in 1955. Recent events have dramatized the urgency for such a program, which is long overdue. The reasons we must now enact a Federal-education program fall into four categories, viz: security and defense, rising costs of a college education, the requirements of a free democratic society and the moral obligation of the Government to the youth of the country. I shall discuss each of these briefly.

1. Security and defense needs: There is no reason for one to discuss this in detail. In recent months the facts and arguments have been well publicized. We are not developing to their fullest (neither quantitatively nor qualitatively) our most valuable natural resources—human talent, ingenuity, and skill. And this is true in all fields, not just physics and mathematics. The Commission on Human Resources and Advanced Training concluded in 1954 that the Nation is producing enough persons competent for higher education to meet the demands for specialization in all fields. In other words, we need not emphasize 1 or 2 fields of study if we do something about the fact that fewer than half of the upper 25 percent, and only 6 out of 10 of the top 5 percent of high-school graduates are obtaining the higher education which would enable them to develop their full potential. Other studies indicate that with aid available for study in any field, more than half of the students would pursue careers in teaching, engineering, and scientific research.

Congressmen should be well aware, as are most scientists and educators, that successful solutions to our national problems are equally dependent upon the contribution of biologists, medical doctors, lawyers, economists, social scientists, and so forth. If we overemphasize a single branch of learning we will probably create as many problems as we solve.

2. The rising cost of higher education: If we review briefly the yearly income of the great majority of American families as compared to the present average costs of attending college, there can be no doubt that a financial barrier exists for many bright young students.

In its current population reports, the Bureau of the Census estimated that in 1956 there were 23 million families that received a yearly income of $5,000 and less, 7 million families had incomes of $2,000 and less. Now, a recent report of the United States Office of Education states that the cost of attending undergraduate college in 1956–57 averaged $1,500 a year at public institutions and $2,000 a year at private institutions. I will not belabor the point. The facts speak for themselves. Most of the children of these families cannot financially afford to attend college. The Congress of the United States cannot afford to allow America to draw her future brain power only from the economically favored few. As we all know there is no correlation between a family's income and the capabilities of its children. Tens of thousands of capable high-school students fail to enroll in colleges each year for financial reasons. We must rectify this situation.

3. The point clearly emerges from this, gentlemen, that our ideal of equality of opportunity conflicts with the situation which we are allowing to persist. Let us recall that education is essentially the communication of a society's culture or way of life. As our Western culture becomes more complex, higher education becomes more important. We have progressed from a system of education solely within the family to one where it requires 16 to 20 years of formal education to acquire specialized knowledge. Therefore, to deny financial assistance to capable, needy students is to deny them their equal opportunity to acquire knowledge of, and participate fully in the cultural heritage and way of life of the United States.

In addition we endanger our democratic institutions if we do not meet the increasing demand for broadly educated scientists, lawyers, educators, yes, even legislators, to deal with the increasingly complex problems of the social and physical world.

4. The moral responsibility of the Government grows out of all of the above. It is our duty to see to it that the country is now secure and remains so and it is our duty to see to it that all talent is given the opportunity to develop through its own efforts in order that the country remains morally and physically strong and that our ideals do not become empty words.

I will now deal with the special value of the loan program provided for in my bill. It alone will not do the job. However, not only will a greater number of students receive specialized training if this Federal Scholarship Fund is created, the better, more serious students will be attracted by such a program. If we provide this opportunity for loans, the industrious, serious, and highly motivated students will respond. Slackers and those not serious about the importance of an education will not undertake the obligations of repayment. In this way we are assured that those mentally gifted students who are willing to exercise initiative and to work hard will have the opportunity to develop themselves and thereby make a high level contribution to society. A loan program is therefore an important complement to any scholarship grant program which you gentlemen may consider.

Let me now briefly deal with arguments which have been advanced in opposition to such a program. First of all there are those who contend that the loans will not be repaid. This cynical argument displaying an amazingly profound lack of faith in the youth of our country is not borne out by the facts. The record is as follows:

During World War II we had a temporary measure, the student war loan program, which lent three and one-third million dollars in its 2 years of existence. As of December 31, 1957, approximately 90 percent of this sum has been repaid in addition to $375,695 in interest. Only 1.4 percent or $46,403.81 has been charged off and referred to the General Accounting Office. An undetermined amount of this has even been collected. The Department of Health, Education, and Welfare anticipates that the major portion of the small outstanding balance will be collected.

The experience of private institutions is likewise very successful. The following is from an article which appeared in the New York World Telegram and Sun, May 5, 1956. "According to the director of admissions at Rensselear Polytechnic Institute, 'The experience of almost every college is that there is virtually no loss by default.'" Thus, the record supports those who have faith in the integrity of the Nation's students.

The most foolish argument is that no one would take advantage of a loan program. I suppose I find this point peculiar because I just don't know anyone who withholds help from those who need it for fear it will not be accepted. This is too easy an escape from fulfilling an important responsibility. In addition, I am convinced from my mail and the facts that a publicized Federal loan program would not go begging because it would be meeting a real need and one that will increase in the future.

Let me point out in conclusion that this bill will not place a burden on the Federal Treasury since it provides for a revolving loan fund. Furthermore, the issue of Federal control is not involved as the aid is to students with the administration of the program placed in the hands of State agencies.

Please understand that I do not say this bill is the panacea for education. It will not cure all problems. It will not give us all the specialists we need—not even those in any single field. But it is one instrumentality that will help the overall program.

Gentlemen, we can and must at this juncture in our Nation's history provide for the future, demonstrate an abiding faith in our youth and discharge our moral and legislative responsibilities. I submit that the one thing we cannot afford at the present time is further postponement of enactment of this program.

Mr. Chairman, I appreciate this opportunity of appearing before your commitee to present my views. Thank you.

Mr. ELLIOTT. Thank you, Mr. MULTER. I have one comment with respect to your statement, and that is in the nature of a question. Do you think that the $5 million which you propose for the first year, and $10 million for the second year, and such sums as may be necessary for the years thereafter, are sufficient to get the program underway?

I am thinking of this against the backlog of something over 200,000 of the brightest students who do not go on to college each year.

Mr. MULTER. I am sure it will not solve the full problem, nor will it do as much as it should. Let us start it gradually. Let us see if it does have the popular acceptance that I think it will have.

Secondly, we can start off the first year with 5,000 students. If we double that the second year we can take care of 10,000. Let us see how many will avail themselves of the privilege. If the demand is far in excess of the amounts provided for, we can then in 1960 or even in 1959 as we see what the demand is for the program and how many students are availing themselves, then reassess the program. We may in 1960 say there is not enough demand for it. Let us abandon it. I doubt it. I think the demand is going to increase for the program.

This is not an expenditure. It is not going to cost us any money. From the experience we have had, every dollar of this money will come back. With the 1 percent interest it will pay all the administration costs and return the money and cover any possible losses.

Let us try it as a test program. We tested it, as I indicated, during World War II on a temporary basis. Let us try it again. After we have had a year or two of experience let us reassess the program.

Mr. ELLIOTT. The gentleman from New York.

Mr. WAINWRIGHT. I would like to congratulate my friend, Mr. MULTER, on the program, and point out several things in his statement. First of all, he was a presputnik on education, which I think is quite relevant these days because so many of us, to a certain extent, myself, have only been fairly recently enlightened. I think that your program, which as you point out, you put in in 1955, was a proper start.

I am inclined to agree with you in your monetary value. On the other hand, there is another school of thought which must be given careful consideration.

The chairman has a comprehensive bill in. Title III of the chairman's bill provides a $40 million amount generally along these same lines as your bill. However, I am not clear on this. Does your bill specifically tie it into a scholastic qualification? In other words, is there eligibility, as there is in the chairman's bill, only to those who fit into certain requirements?

Mr. MULTER. Oh, yes. I leave it to the States to pick the students, but the States will have to set standards. It will not be merely applying for a loan because the boy or girl wants a loan to pay tuition. The boy or girl will have to show aptitude.

Mr. WAINWRIGHT. How about economic requirements? Will the applicant have to show that he is a needy case?

Mr. MULTER. Yes; the applicant should show that he is a needy case. He should not be required to show financial responsibility.

Mr. WAINWRIGHT. He would show that he did not have sufficient funds?

Mr. MULTER. Yes; he should show that if he did not get the loan, he could not carry on.

Mr. WAINWRIGHT. You were in Congress then. I did not know about this program that you referred to. Was it called the student war-loan program?

Mr. MULTER. That was the title of it, yes, sir.

Mr. WAINWRIGHT. As of December 31, of this past year, there were 80 percent paid up?

Mr. MULTER. Yes.

Mr. WAINWRIGHT. Was this a 10-year program, do you know?

Mr. MULTER. Yes; I believe the program permitted a student to repay his loans over a period of 10 years. It did call for a higher interest. I think it calls for 4 percent interest.

If you noticed the figures, I pointed out with a $46,000 chargeoff of loans as against $375,000 of interest, if we would divide that by 4 so as to reduce the interest rate, instead of 4 percent to 1 percent, you would still have $90,000 of interest collected in this period, and you have only had $46,000 in losses. It did cost more than $46,000 to administer the program.

Mr. WAINWRIGHT. Many of the proposals that have been presented to us tie in a loan program to the qualification of the student. That will mean that it will be necessary for this committee and for Congress to have some kind of legislation similar to that recommended by the administration where we can find out who are the bright ones and who are the dumb ones and separate the wheat from the chaff. Would you be inclined to support such a program?

Mr. MULTER. I would support the all-inclusive bill that the chairman has introduced. I have no pride of authorship. I am not asking this committee to report my bill. I am asking the committee to report a bill which will include this program. The grant program is important. All the items in the chairman's bill are important. All, together, will go a long way toward solving the whole problem. The loan program is only going to solve one part of it, a small part of it.

Mr. WAINWRIGHT. I have no further questions.

Mr. ELLIOTT. The gentleman from Minnesota.

Mr. WIER. I only have one curiosity to throw out. If this program was in effect during World War II, and I have no knowledge of it, as a matter of fact, of course, I was not here during those days, who sponsored this legislation, why was it sponsored, and why was it discontinued?

Mr. MULTER. I was not here in Congress when the bill was originally enacted. I came down in 1947 in a special election. This was already on the statute books at that time.

I believe the reason for initiating the program was because there was a tremendous need to channel more students into the colleges.

Mr. WIER. Was it initiated by the Department or by the committee or how did it come into being?

Mr. MULTER. I know that it had the administration's support, but whether the original idea came from the administration or from some Member of Congress or from outside educational forces, I do not remember. I know it did have the administration's support.

The surprising thing is that after it proved so successful on a temporary basis, we let it die.

It just so happened that nobody showed enough interest to revive the program or extend it.

Mr. WIER. I assumed from the résumé that you made that you had made a pretty close check on the legislation and that you had gotten in touch with the HEW for a history of the bill.

Mr. MULTER. I did not check on who sponsored it.

Mr. WIER. I mean the history of it.

Mr. MULTER. I did check and study the operation of the program to determine whether or not it was a successful program. It was successful. Students did apply for and get the aid and then kept their obligation and repaid.

I think you will find that most of the debts that were written off were because the student died rather than because he wanted to default.

Mr. WIER. Where did you get the information you have today?

Mr. MULTER. From the Department of Health, Education, and Welfare.

Mr. WIER. You did not ask them anything about the history of the bill?

Mr. MULTER. Nothing about the original sponsorship; no, sir.

Mr. WEIR. Let me ask the Chairman a question. You have had the department here?

Mr. ELLIOTT. Yes, sir.

Mr. WIER. Has there been anything approached on a question of a trial run on this type of legislation by the administration, or do they not know anything about it?

Mr. ELLIOTT. They have referred to it, I will say to the gentleman, just in passing, to the effect that this program was in existence during World War II. I believe, to be specific, that the witness Doctor Flint referred to it. I think in the testimony that he gave originally here last August or thereabout, that you will find something about it in the printed volume of hearings.

Mr. WIER. I know where to look now.

Mr. ELLIOTT. The gentleman from New York, Mr. Gwinn.

Mr. GWINN. Mr. Multer, I was reading last night a little Greek history and you reminded me of the statement of Socrates which was to the effect that statesmen or politicians who concerned themselves only with the immediate demands of organized groups, used the power of government for temporary purposes, were only contributing to the destruction of the nation, whereas those who took a long look into the future and thought in terms of the future welfare were indeed great statesmen.

So you qualify as a great statesman if you had lived in Socrates' time.

Mr. MULTER. Thank you, sir.

Mr. GWINN. I wonder if you have got enough evidence to support the idea that the student today needs loan funds. I had a letter from the University of Virginia last week saying that they have in that single university $300,000 unused for lending to students.

Mr. MULTER. I am surprised to hear that, Mr. Gwinn. I think there has been a poll made of educators on the subject. I think they divide about equally between those who would favor grants and those who would favor loans.

I will say that if you take the total number that would favor both grants and loans, you find that a very large percentage of them favor the principle.

I assume that that takes in men who have had experience in colleges that is quite different from the one you referred to.

Mr. GWINN. There is another feature. I think we lack specific information about what the need is. The fact that only $3¾ million was applied for in World War II would indicate that the demand was not very great at any time, and the fact that it was discontinued after two years was further evidence that the demand for loans was not very great.

Mr. MULTER. Except, Mr. GWINN, we must have in mind the war years and the temperament of the boys during the war years. There was much uncertainty of what their future was. Their desire was to get into the service and get the job done. I had that with my own boys. The older boy was then in an engineering school at Cornell, and his desire was to get in and get his service behind him and get the war behind him. Parents who had boys in colleges those days did not know whether those boys would go back or not when the war was over. Most of them when they returned went right on and did finish.

The temperament of the boys was very much different.

I think the encouraging thing is that they did use as much as they did during the war years for a loan program.

Having in mind that this is really going to cost us nothing except possibly the cost of administration of the program, and that will be very small, let us try it and see what happens.

Mr. GWINN. It gets the Federal Government into the business again that belongs to the individuals and to the local community. It seems to me you get to the point where it will raise the constitutional question once more. Is this a proper function of the Federal Government? It cannot be really called a defense measure or a military measure.

Mr. MULTER. It is a welfare measure. I think I know your philosophy on the matter. Let me put it this way, sir: Why should we not take this position? As long as we are going to continue to make loans, Federal loans to business, why should we not also make it to the youth of our Nation?

Mr. GWINN. Why you can justify most anything on the loans that we are making which is about one-fifth of all the lending that is done in the Nation today. That is the trouble. Most of those loans are partially bad. Many of them are wholly bad. We have the Government in business on a big scale. Of course that to me is the reason why we should not certainly expand further this incredible Government that we have, and I am speaking of it under Republican auspices, because I think we are making respectable everything that Roosevelt and Truman did, eminently respectable.

Why should we not, while we are trying to revamp our notions about what the functions of government are, try to stop this sort of business? Why do we not take a look at what it is that we have already bought with Federal dollars?

Mr. MULTER. I am the wrong one to ask that, Mr. GWINN, because as you probably know I thought those were good programs under Roosevelt and Truman and espoused them. I think they are good programs under Eisenhower. I think they are good programs no matter what party is in control. That is why I think we ought to expand them.

If you disband our Small Business Administration, where are these small-business men going to get the loans? If you take away the Federal Reserve Board and its Federal Reserve banks where will the big banks get their money? I say that is good business. It is not only good business, it is good for our country, it is good for our economy, and we could not get along without it.

If we agree with the material viewpoint, that it is proper for government to help business then it is proper for government to help these youngsters get an education. Maybe some of them will later come to this body as Congressmen and espouse your viewpoint rather than mine, but I am willing to run that risk.

Mr. GWINN. If they are beholden of the Government they will begin to worship the Government like they did in olden times.

Mr. MULTER. There also I do not agree. When you get to worshipping a government in a democracy, in a republican form of government like ours, it is self-worship, and we are not going to get to the point of worshipping ourselves. We are too individualistic for that.

Mr. GWINN. I wish I were as hopeful as you.

Mr. ELLIOTT. Thank you, very much, Mr. MULTER. Your statement has been most helpful, and we appreciate your time and consideration.

Mr. MULTER. Thank you, Mr. Chairman.

We'd Better Start Selling America to the World

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. LOSER. Mr. Speaker, I was greatly impressed by a recent story appearing in the Nashville Tennessean some days ago written by the Honorable Coleman A. Harwell, vice president and editor of this great southern newspaper.

Mr. Harwell has just returned from a European trip and he suggests a number of things that can be done by America to strengthen western unity and the cause of freedom.

He calls to the attention of the readers of this newspaper that we have expended nearly $18 billion in foreign aid during the last 12 years. He suggests that our vast surpluses of food should be put into channels that will take it to hungry people and relieve the agriculture distress.

This article is most thought provoking. It is a new approach to foreign aid, and one that should be read by every Member of the Congress.

It follows:

WE'D BETTER START SELLING AMERICA TO THE WORLD—RED SALESMEN OFFER TOUGH COMPETITION

(This is the final article in a series by the editor of the Nashville Tennessean, who has just returned from a trip to France and England. Other articles, one on the London theater and the other dealing with some travel pointers, will appear in subsequent Sunday editions.)

(By Coleman A. Harwell)

There is great need for dramatic leadership to break the grip of the cold war.

America alone can provide this leadership.

If she does not, she is in danger of tipping more of the world toward Russia's influence.

These are some of the things that America can do to strengthen western unity and the cause of freedom:

1. Launch a crash program of atoms for peace.

2. Sponsor through Unesco or elsewhere, a great unified scientific plan for world betterment, including a drive on cancer, malaria and other dread diseases.

3. Develop a new approach to world economic needs, including a lending program that will increase productivity and buying power. At the same time, work to reduce world tariffs and thus stimulate trade.

4. Put our vast surpluses of food into channels that will take it to hungry people and relieve the agriculture distress which is a major factor in our present economic difficulty.

Easier said than done? True.

Far fetched? Possibly, but consider the alternatives.

In the 12 years since World War II we have spent nearly $18 billion in foreign aid. Most of it has been for military purposes. People in the lands affected are still about as hungry and ill clothed and ill housed as they were.

The hope of winning the cold war seems dim. The probability of a crackup in Russia or an upheaval among its satellites appears slight. For one thing, the scientific achievements of Russia and the surprising extent of Russian economic penetration into uncommitted nations, stretching from the Pacific to the Mediterranean, suggests increasing strength.

So, do we continue to stockpile more bombs and perfect our missiles, while Russia does the same? Do we have a summit conference and agree to curtail military competition? In either case, it seems the best to be hoped for is a stalemate.

So much attention has been focused on a summit meeting—plans and arguments concerning one—that less dramatic aspects of the East-West situation have almost been lost sight of. One might even suspect the summit matter is being emphasized to distract attention from Russia's vast economic drive.

MILITARY AFFAIRS ONLY

We should bear in mind that a summit meeting concerns military affairs only. Of course, they must be dealt with, but we must realize that the game may be won elsewhere while we are concentrating on these worrisome and dangerous, though possibly unrewarding matters.

Meanwhile, if we are not active in other ways, we can be certain that Russia will be. She already is. And we can be certain that the uncommitted regions of the world, and even our friends, are not going to sit around and twiddle their thumbs.

They are not particularly afraid of meeting Russia in the market places, or elsewhere for that matter. While we hold Russia at bay militarily, now with our Strategic Air Command and later with missile bases, we may find she has won vast areas and populations with her economic offensive.

It is not the writer's intention to intimate that our military program, including NATO, is useless. Quite the contrary. We need stronger forces in our joint defense program, for both psychological and physical reasons. We cannot leave Russia's military might unchallenged.

But we cannot continue to suffer such setbacks as have occurred in the last 2 years without suffering permanent damage. The three big ones were:

1. Hungary.
2. Suez.
3. Sputnik.

Paul-Henri Spaak, secretary general of NATO, who says we are losing the psychological cold war to Russia, places considerable blame on the western press, charging we have ballyhooed sputnik and given too much play to Bulganin's letters.

The answer to that, we believe, is that the press on the whole did no more or less than to report the facts. If it erred at times, it usually put things straight speedily. If Bulganin got more space and bigger headlines than Spaak, or we, wanted him to get, it was because he made news. The same space was available to our leaders.

The damage to western prestige and unity, we submit, was done largely by the three things listed above.

HARD LESSONS

Hungary showed that no satellite nation can look to us for rescue; Suez showed that western nations could be drawn off balance by their anxiety and frustrations; sputnik showed that American doesn't always have the most and the best and the biggest of everything, including initiative and imagination. (These two qualities, incidentally, are the essentials of good salesmanship. Khrushchev obviously is using them in his economic campaign.)

What a young Englishman said to me about another aspect of Suez was shocking to me. He is a conservative, thoughful young man who lived several years in America after World War II.

He said that many Britons, possibly a majority, were opposed to the Suez venture. But, he said, they were outraged when we denounced the British and French.

"After that," he said, "many of us felt that America was not to be relied on as a friend. In fact, some said America was no more to be trusted than Russia."

A scathing comment, extremely difficult to take quietly. But there came to mind what an old friend, a veteran American news correspondent, had said to me the day before:

"These people make you mad. But you can always tell just where they stand. And, another thing, no matter how mad they make you, you know when the showdown comes, when you need them, you can count on them."

He's lived in England most of 17 years, covered the blitz in London and the war on the continent, has been in every country of Europe and the Mideast, has sized up peoples in all of them in a particularly incisive way. His judgment seemed to me worth respect.

HE WAS A FRIEND

So when the young Englishman delivered himself of the scathing comment on America, I reminded myself it was a friend talking. And the thought occurred that if we do not want more friends, and others, talking the same way or worse we'd better get busy with some leadership.

President Eisenhower's open skies and space-for-peace proposals do not seem to serve the purpose. What we need is a practical program to compete with Khrushchev's salesmanship.

Eisenhower seems definitely on the right track with his recommendation for increased loan funds and is assured of support in Congress.

This is what we need more of in place of Mr. Dulles' continuous travelogues.

It is to be hoped that President Eisenhower and the Democratic Congress will work together to provide a practical program and dynamic leadership which the free world direly needs.

McSchwartzism

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune properly calls attention to the conduct of Dr. Bernard Schwartz and some of the members of the House Subcommittee on Legislative Oversight.

The many unproven charges and accusations against public officials and Government agencies without having given the accused an immediate opportunity to tell their side of the story, and having these people tried in the court of public opinion by having leaked information to certain newspapers is not good ethics.

Certain liberals in this country continuously alledged unfairness on the part of the McCarthy Senate committee proceedings attributing these irregular methods to the late Senator's committee. Where are all these self-righteous liberals and liberal organizations today? Why are they not vehemently protesting the methods used by Bernard Schwartz?

The lack of action by the liberals only helps to confirm my long-held opinion that the great majority of them are fakers and will justify any action or program which carries out their ends and only have a passing and superficial interest in justice and ethics as real principles of everyday conduct.

The Chicago Tribune editorial is as follows:

[From the Chicago Sunday Tribune of February 16, 1958]

MCSCHWARTZISM

Dr. Bernard Schwartz has been testifying before the House subcommittee that fired him as its chief counsel. Dr. Schwartz said that he and his staff had found evidence indicating that Richard A. Mack, a member of the Federal Communications Commission, had received $3,650 in checks from an attorney who, in Dr. Schwartz' opinion, acted for the successful applicant for a TV license in Miami, Fla.

These and many other charges regarding Government officials of high rank, eminent members of the bar, and other citizens have been heard, and the persons concerned were not given an immediate opportunity to tell their side. Without the knowledge of the committee members, Dr. Schwartz' investigators secreted a wire recorder when they interviewed Commissioner Mack. Instead of turning over the recorded interview to the committee after he was fired, Dr. Schwartz had his wife hand it to Senator MORSE for safekeeping.

Isn't it odd, then, that those who screamed loudest in protest against the alleged irregularities of the McCarthy inquiry are not up in arms over the arbitrary or unfair conduct of the investigators and some of the committee members in this inquiry into the Government's regulatory commissions? Part of the evidence and many of the charges of misconduct have been leaked to favored newspapermen, but not even this highly irregular method of conducting the com-

mittee's business has been condemned as McCarthy was condemned.

The conclusion to be drawn from this difference in the attitude toward the two investigations is not that Dr. Schwartz' methods are unspeakably wicked but that Mr. McCarthy's weren't unspeakably wicked, either. Surely no one can pretend that corruption in public office is a trivial matter, but neither is the progress of the Communist conspiracy in this country a trivial matter. Both are extremely serious subjects, requiring the attention of Congress.

Dr. Schwartz was determined to expose weaknesses in the organization of the regulatory commissions because if they are left uncorrected our Government itself will be undermined. Mr. McCarthy was equally zealous to keep Communists from undermining the military and moral strength of our people.

Of the two dangers, that of communism is the greater and more immediate, for it is no secret that the Reds are determined to destroy freedom in the United States if they can, by any means that comes to their hand. They may have the means at this moment.

Public opinion today is on the side of Dr. Schwartz. The people want to know, and believe they have a right to know, whether the officials in the regulatory agencies are honest; whether Sherman Adams, the President's chief assistant, has intervened in behalf of any litigant before these agencies; whether Thomas E. Dewey, as a lawyer, has taken any advantage of the fact that the administration is heavily indebted to him for Mr. Eisenhower's elevation to the Presidency.

Similarly, we have always believed the people for the most part were with Senator McCarthy. They thought they had a right to know whether the cause of communism was being advanced in this country and abroad as a result of carelessness in guarding our military secrets or the infiltration of American installations by Communist spies.

The people were right both times. Those of us who refused to join the clamor against McCarthy are consistent in upholding Dr. Schwartz. It is those who were anti-McCarthy but are now pro-Schwartz who need to explain an inconsistency.

Dewey at Manila

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release:

The missile which the United States Navy Department fired 60 years ago, on February 25, 1898, directed to Adm. George Dewey, at Hong Kong, hit solidly on its impact area, 10,000 miles away, and started a chain reaction that established United States supremacy in the Pacific Ocean and had far-reaching effects upon our history. The war-headed message was dispatched by Assistant Secretary of the Navy Theodore Roosevelt, the centennial anniversary of whose birth on October 27, 1858, is now being observed. It compelled worldwide recognition of the United States as a power with which all nations must reckon in their immediate or long-distance planning.

War with Spain was imminent. Theodore Roosevelt realized the vital importance of preventing action by the Spanish Fleet at Manila. His message to Admiral Dewey said: "Order the squadron except *Monocacy* to Hong Kong. Keep full of coal. In the event of declaration of war (with) Spain, your duty will be to see that Spanish squadron does not leave the Asiatic coast, and then (conduct) offensive operations in Philippine Islands. Keep *Olympia* (flagship) until further orders."

As a result of this order, Admiral Dewey concentrated and prepared his fleet at Hong Kong, which he left on April 27, under further instructions from Secretary of the Navy John D. Long, "to commence operations at once, particularly against Spanish fleet. You must capture vessels or destroy."

Dewey arrived off Manila late April 30 and commenced his bombardment early May 1, with 6 warships and a revenue cutter against the Spanish fleet of 10 ships aided by the shore batteries. All Spanish ships were sunk or put out of action and Dewey commenced and successfully maintained his blockade of Manila the same day.

On August 13, Manila surrendered to Admiral Dewey. Thus the Philippines were lost by Spain. Their acquisition, and that of Hawaii, contributed greatly to our dominance in the Pacific Ocean. Historians credit these results to the foresight and courage of Theodore Roosevelt, and the effective execution of his order to Admiral Dewey on February 25, 1898.

Of Admiral Dewey's accomplishment, Theodore Roosevelt later wrote:

"Admiral Dewey has done more than add a glorious page to our history; more even than do a deed the memory of which will always be an inspiration to his countrymen, and especially his countrymen of his own profession. He has also taught us a lesson which should have profound practical effects, if only we are willing to learn it aright.

"In the first place, he partly grasped and partly made his opportunity. Of course, in a certain sense, no man can absolutely make an opportunity. * * * Nevertheless when the chance does come, only the great man can see it instantly and use it aright. In the second place, it must always be remembered that the power of using the chance aright comes only to the man who has faithfully and for long years made ready himself and his weapons for the possible need."

Radio Free Europe

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SCHERER. Mr. Speaker, many of my colleagues of the House may not have heard the broadcast of Fulton Lewis, Jr., on February 19, in which he interviewed Mr. George Brada, a native of Czechoslovakia who lives in Munich, and who is the administrative assistant to Dr. Walter Becher, a leading member of the Bavarian Parliament.

The interviews deals with the type of job Radio Free Europe is doing. Since all of us in the Congress are vitally interested in the reactions of Europeans to this activity, it is my feeling that my colleagues and others who read the CONGRESSIONAL RECORD should have the benefit of Mr. Lewis' broadcast, which follows:

FULTON LEWIS, JR., BROADCAST OF FEBRUARY 19, 1958

Mr. LEWIS. Tonight, ladies and gentlemen, I have for you what I consider a very important witness in the Radio Free Europe story. All through this thing, the Free Europe sponsors have been begging the most important question involved; they say it is all a noble enterprise because it is sending the message of truth and freedom to the captive people behind the Iron Curtain. Granted this is an admirable enterprise, the question is whether this is actually what they're doing. A lot of important people are taken to Munich every year on plush junkets to see the machinery in operation and get a stopoff in Paris on the way back, and they say what a wonderful thing it is. The catch is that none of them really knows, because none of them is ever able to find out what these broadcasts are really saying, what line they're taking—they are all in foreign languages—they could be saying anything and not even the American officials would know because they can't understand the language either.

Tonight I have with me Mr. George Brada, a native of Czechoslovakia, who lives in Munich, who is administrative assistant to Dr. Walter Becher who, in turn, is one of the leading members of the Bavarian Parliament, both of whom are in this country as visitors. He is in a position to tell us, firsthand, what the truth is and what these broadcasts really do say.

Mr. Brada, you have seen the stacks of photostats which I have been presenting to my listeners, as evidence of what is really going on in Radio Free Europe and what is being said in their broadcasts—are you able to tell us whether or not these photostats are authentic? Do you have any way of knowing?

Mr. BRADA. Oh, yes. I have seen thousands of Radio Free Europe documents, and these that you have are absolutely authentic. You see, Mr. Lewis, the great majority of people working for Radio Free Europe in Munich are entirely out of sympathy with what they are doing. Most of them, if they were able to earn the same living in some other way, would not be working there at all. In other words, there is an anti-Communist underground in the operation.

Mr. LEWIS. And the employees have access to the files?

Mr. BRADA. They have constant access to the files, and they can very easily remove documents which they consider important or which show how the broadcasting is protecting communism. They bring them out to show to friends, or they will bring them out for anybody they think can be helpful in exposing what is going on. They have no sense of loyalty to the organization. They are merely earning a living.

Mr. LEWIS. Now, Mr. Brada, you have heard many Radio Free Europe broadcasts, I assume.

Mr. BRADA. I have made it my business since early 1952 to monitor the broadcasts, either by listening to them or recording them or by reading the scripts.

Mr. LEWIS. The Crusade for Freedom advertises these broadcasts as being a great fight against communism and a message of truth and freedom to the people behind the Iron Curtain. What is your opinion of them?

Mr. BRADA. Oh, they sometimes use the word freedom, but they never use it in the sense of giving back to the people the freedom that the people once knew. They never use it in the sense of freedom as the Western World knows freedom. This is just an empty word with them. They talk of freedom in terms that amount to a return to the national front governments which were led by Communists. At that time, they also talked about freedom, but the people knew very well there was no freedom.

Mr. LEWIS. Do the broadcasts denounce communism, as we are led to believe?

Mr. BRADA. They denounce Communist Russia * * * they denounce Stalinist communism * * * but they praise and promote the development of National communism. They never recognize the internal danger of communism to these countries as you recognize it to your country here in the United States.

Mr. LEWIS. Now, could you enlarge on that a little?

Mr. BRADA. Well, yes, in this way: they never make any mention of your congressional investigations into communism or subversive activities. I have never heard the first word about the Alger Hiss case, or about how China was lost to the Communists or the Harry Dexter White case, or any of the others. These things are carefully concealed in the same way that the true story of the communization of these Iron Curtain countries through the national front governments are concealed. They never mention the truth about the working methods and tactics of the state security police, and its agents-provocateurs in the East at the present time.

Mr. LEWIS. What is their attitude toward the Gomulka government of Poland?

Mr. BRADA. They picture Gomulka as a great national hero in whom they place all their hopes for the future. The proof of the fact that they are very friendly to Gomulka lies in the fact that Gomulka's government no longer makes any attempt to jam their broadcasts.

Mr. LEWIS. What about Tito?

Mr. BRADA. It is the same with Tito. They spend many hours every day in favorable propaganda about Tito and Titoism, but they constantly soft-pedal or eliminate any criticism of what is wrong in Titoism. You see, Mr. Lewis, much of the evil that is done by the Radio Free Press propanganda is done by emphasizing the things that are favorable to national communism, and never mentioning the things that are unfavorable to it.

Mr. LEWIS. Would you say that the broadcasts are soft toward communism?

Mr. BRADA. I would say very definitely, yes. They take the line that no real effort toward liberation of the people in the East is necessary or even desirable, and that if everybody simply has faith, the evolution of Titoism or Gomulkaism will follow in the other countries as a natural course of events. They preach the idea that communism eventually will just fade away of itself.

Mr. LEWIS. Mr. Brada, do you think that communism has faded away in Poland or in Yugoslavia?

Mr. BRADA. You are asking the wrong person, Mr. Lewis. Ask the tens of thousands of Polish and Yugoslav refugees who are constantly escaping from both countries. Or, if you can, ask some of the hundreds of thousands in both countries who are starving under the Communist system.

Mr. LEWIS. Radio Free Europe talks about "truth dollars" and the "message of truth" being sent behind the Iron Curtain. Is it the truth, Mr. Brada?

Mr. BRADA. Yes, in a sense, they tell the truth. Most of the broadcasting time is allocated to a never-ending repetition of banalities. It is a sort of special little game of truth that Radio Free Europe plays for itself. It goes something like this: The Communists call the Americans imperialists. Americans are not imperialists. The Communists claim they want peace. The Communists do not want peace. This endless repetition of trivialities only spreads boredom and turns listeners away. The question is not whether they are telling the truth but whether they are telling any truths that amount to anything or accomplish anything. The fact is you can impart many lies and make much evil propaganda by telling the truth.

Mr. LEWIS. Now, just what is the real purpose behind the Radio Free Europe propaganda, Mr. Brada?

Mr. BRADA. The real purpose, Mr. Lewis, is very simple. Radio Free Europe is being operated by the discredited politicians of the old national front governments, who collaborated with the Communists and finally sold their countries out to communism. They fled to the West, and merely continue their political activities, using the radio transmitters of Radio Free Europe to try to continue the political propaganda which they no longer could deliver in person. Their purpose is the same purpose they had before they fled into exile—the communization of their nations. These people are not any high-minded idealists who are interested in fredom and liberty and justice and a restoration of all those things to their home countries. These people are politicians—discredited politicians, at that—and their purpose and hope is somehow to get themselves back into control, so they can impose their own private brand of communism on their countries in place of the present brand. That's the reason they are soft on Tito and soft on Gomulka. They want to be Titos and Gomulkas themselves.

Mr. LEWIS. And you don't approve of that?

Mr. BRADA. It is unimportant, Mr. Lewis, whether I approve or not. If the American people want ot pay the bill for any such operation, that is their privilege. But if they are paying the bill, it seems to me that they should know what they are paying for, and not be asked to support it under false pretenses.

Mr. LEWIS. Thank you, Mr. George Brada, we appreciate your taking the time to tell us the facts about the Free Europe broadcasts.

A Bill To Facilitate Construction of a Superliner Passenger Vessel

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. PELLY. Mr. Speaker, I have today introduced a bill to authorize the payment of construction differential and cost of national defense features of a superliner passenger vessel for operation in the North Atlantic to replace the Steamship *America* which is about to become obsolete.

This bill carries the language recommended by the Department of Commerce in its report on H. R. 9342, which is the original bill of the distinguished chairman of the House Merchant Marine and Fisheries Committee, Mr. BONNER.

In addition to the wording suggested by the administration amending Mr. BONNER's measure to authorize building of a sister ship to the steamship *United States*, I have added a provision so that for purposes of determining the fair cost of national defense features to be paid by the Government the normal commercial speed for the superliner shall be considered as 28.5 knots without a penalty if the ship averages a running speed up to but not exceeding 30.7 knots.

The impasse in negotiations between the United States Lines and the Federal Maritime Board has been over the factor of what should be considered the normal commercial speed.

My bill would have Congress set the new vessel's normal speed as 28.5 knots which is the average running speed of England's *Queen Mary* and *Queen Elizabeth*.

Testimony of Clarence Morse, Maritime Administrator, backed by the General Accounting Office was to the effect that he had construed 30.7 knots to be the normal commercial speed because this has been the average speed of the steamship *United States*.

Mr. Morse has stated an agreement could be reached between the United States Lines and the Maritime Board within the framework of the Merchant Marine Act of 1936 if 28.5 knots was established by Congress as the basic peacetime speed of the ship.

Mr. Speaker, in introducing this legislation I have sought to break the roadblock to an agreement under present policy and law without having the Government build the ship and sell it at a fixed price as provided by the chairman's bill. Certain strong objections raised by the administration would be eliminated by this new bill and I think it might encounter less obstacles before and after final passage.

I wish to emphasize, Mr. Speaker, the importance of an agreement between the proposed operator and the Government. The Navy says there is a vital need of the new ship as an auxiliary troop transport in the event of war, and that speed is the best safeguard against the submarine menace.

Likewise let me point out the economy of a privately built ship ready for use if necessary, as against Navy vessels with 100 percent Government cost of construction and maintenance.

The distinguished chairman of the House Maritime Committee has made valiant efforts to work out a means of arranging for construction of the new superliner. My purpose is to assist the chairman to harmonize the differences between the various parties of interest.

Tom Little's Finest Hour

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LOSER. Mr. Speaker, one of the greatest political cartoonists of our generation, Tom Little, was signally honored by Silliman Evans, Jr., and his newspaper, the Nashville Tennessean, the other evening at a giant dinner in his honor. Friends and cartoonists from over the Nation gathered in Nashville to do honor to this Pulitzer prize-winning cartoonist of 1956, who for 43 years has worked on this great newspaper. He was again given National recognition by Freedom's Foundation at Valley Forge, Pennsylvania, a few days ago, receiving

two George Washington honor medals for oustanding works in his chosen field. These honors were conferred on him "for valuable contributions in furthering democracy and religious understanding."

Since this distinguished newspaper man is known across the Nation as the outstanding political cartoonist of his generation, I thought the editorial appearing in the Nashville Tennessean, entitled "Tom Little's Finest Hour," would be of interest to Little's friends in the Congress and throughout the country.

Unanimous consent having been obtained to insert the editorial in the Appendix of the CONGRESSIONAL RECORD, the same follows:

TOM LITTLE'S FINEST HOUR

This was Tom Little's finest hour. His position as one of the country's foremost cartoonists had been long established. His fighting qualities in behalf of good causes was known throughout the land and across the seas. His deep human qualities were a familiar story.

But here were his friends, or part of them, gathered from far and near to pay tribute to his accomplishments in long service with the Nashville Tennessean. All of his well-wishers and admirers, of course, could not have been gathered under one roof, but these were a representative group, including famous members of his specialized profession who found gratification in hailing the Pulitzer prize winner and holder of many other significant awards.

Success rarely comes easily for any man, and Tom Little has been no exception. But in his case, a talent for hard work and a remarkable flair for arresting ideas has been unbeatable. By the broad strokes of his crayon he pleads a cause more effectively than can be done with words, and by the same means he can assail those who nave been unfaithful to the public trust.

That he has used his gifts aggressively is accepted, but at the same time he has more than his share of humility and understanding.

At last night's gathering his heart must have been warmed, and beyond that there was the knowledge that the sincere tributes were indorsed by countless others who hold him in such high regard. More than a Nashville institution, he influences the thought of America; and it is in this broader role that he has been toasted.

Nowhere is pride in his accomplishments greater than among his associates on this newspaper and we stand in the forefront of those who salute him for high achievement.

Schwartzism

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SHEEHAN. Mr. Speaker, in its editorial of February 19, the Washington Star brings into proper focus the conduct of Bernard Schwartz, ousted chief counsel of the House Subcommittee on Legislative Oversight, who has made wild accusations against certain people without promptly giving them the proper opportunity to defend themselves.

The Star editorial states that Dr. Schwartz seems to have a talent for overstatement. In making these wild-swinging generalized accusations, Mr. Schwartz seems to have the support of the liberal elements in the country. These liberals have taken practically no action, but instead appear to support Swartzism, which apparently consists of gross overstatements, wild accusations, and personal use of congressional committee material and committee files without regard for the rights of the persons involved.

The Star editorial follows:

VERY THIN STUFF

The "case" against Sherman Adams in the matter of North American Airlines, as it has been developed by Dr. Bernard Schwartz, strikes us as being about as thin as thin can be.

Dr. Schwartz, who seems to have a talent for overstatement, referred to the North American case last week when he accused the House Subcommittee on Legislative Oversight of trying to frustrate his plans to "bring to light the machinations of the White House clique in controlling decisions of these (regulatory) agencies." He has also imputed "grossly improper" activity to Mr. Adams in connection with this matter.

Well, let's take a look at what Mr. Adams, assistant to the President, actually did.

On June 26, 1953, he wrote a letter to Murray Chotiner, one of Vice President NIXON'S campaign managers. This letter evidently was in response to a request for help in the North American matter from Chotiner, who is a lawyer. Mr. Adams wrote that he had gone over the matter carefully with the then Acting Chairman of the Civil Aeronautics Board. (The CAB had started proceedings to revoke North American's operating authority for violating regulations.) Mr. Adams also said that North American, if dissatisfied with the CAB ruling, could appeal to the courts, and that this might delay final action for as much as 2 years. The CAB ruled against North American, the case was taken to the courts, and the courts upheld the CAB.

Just where is the gross impropriety? The Adams letter seems to us to be a polite brushoff. Certainly he did not influence the CAB, and he did not tell Mr. Chotiner anything that the latter, as a lawyer, did not already know.

Dr. Schwartz argues that what North American wanted was delay, and he complains because the CAB agreed to stay, or hold up, its order pending the court appeal. But what else could the CAB have done? North American unquestionably had the right to appeal to the courts. Does Dr. Schwartz think that the CAB, by enforcing its order immediately, should have put North American out of business before it had its day in court? If so, this surely is a strange concept of justice.

What all of this adds up to, in our opinion, is another example of the smear at work. The Vice President's campaign manager and the assistant to the President are linked to "the machinations of the White House clique." The headlines proclaim that Mr. Adams has done something grossly improper. But when one wades through the transcript of the testimony it is clear that Mr. Adams did nothing to control the CAB decision, and did nothing to rescue either Mr. Chotiner or his airline client. Following are two significant questions and answers, as reported in the transcript:

"Question. Doctor, do you know how many other people, Senators, Congressmen, had written to the CAB with reference to this case?

"Answer. Yes; there was tremendous pressure from all sides, both from the Congress, from the Executive, and also outside, generated, primarily by North American.

"Question. Sure, and notwithstanding that, the CAB went ahead and put him (North American) out of business?

"Answer. Yes; eventually."

All of which leads us to the obvious conclusion that neither the alleged machinations of the White House clique, nor those of any other clique, were controlling the decisions of the CAB.

Hair of the Dog

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of a column by Henry Hazlitt from the February 24 issue of Newsweek magazine entitled "Hair of the Dog." The article in question is a strong denunciation of deficit spending as a possible cure for the economic difficulties in which we find ourselves today.

The article follows:

HAIR OF THE DOG

(By Henry Hazlitt)

It is only a few weeks since the President reported that the Nation's output of goods and services in 1957 totaled $434 billion, the highest figure on record. In December 1957, moreover, the average hourly earnings of manufacturing workers, at $2.11, were also the highest on record. But suddenly, overnight (if you believe the Democratic speeches in Congress), we are in a cataclysmic depression. Mass unemployment and starvation stalk the land, forcing soup kitchens and breadlines. (It is true that official estimates of unemployment rose to 5.8 percent of the labor force in January as compared with 5.2 percent in December.)

The Democratic politicians are almost praying for a depression so they can have the privilege of saving us from it this November, and again in 1960. And they have not the slightest doubt about the remedy. It is, as you might have guessed, for the Government to spend more money. Especially we must start more public works. The question is not whether they are needed, but how much employment they will provide, and how much they will add to purchasing power. It is assumed that every dollar spent by Government somehow magically multiplies itself in increasing national income. Given this theory, economy in government is not only unnecessary but antisocial and wicked; and squandering and waste are the height of economic wisdom.

NO MAGIC IN DEFICITS

It seems necessary to point out all over again that the Government-spending theory has been repeatedly disproved in practice. In the fiscal year 1944, the Federal Government spent $95 billion; in the fiscal year 1947, it spent only $39 billion. Here was a drop in the annual spending in this 3-year period of $56 billion. A budget deficit of $51 billion in 1944 was also turned into a budget surplus of $754 million in 1947. Yet instead of a recession in this period there was a substantial increase in employment, wages, and

prices. Again, in the fiscal year 1953, the Federal Government spent $74 billion; and in the fiscal year 1955 only $64 billion. The budget deficit also dropped from $9.4 billion in 1953 to $4.2 billion in 1955. Yet in the calendar year 1955 the gross national product increased $25 billion above that of 1953.

I have repeatedly tried to explain in this column not only that the Government-spending nostrum or Government-deficit nostrum does not work in practice but that it is theoretical nonsense as well. This leads us to the depression remedy that the conservatives and Republicans are now suggesting, which is a cut in taxes. President Eisenhower has said that he would favor a tax cut to brake the recession unless the economy turns up by midyear. Now a tax cut would at least have several advantages as compared with an increase in expenditures. It is a smaller invitation to reckless Government spending. A wisely made tax cut, moreover, could increase incentives. But this is not what anybody is suggesting. What is being mainly suggested is an increase of $100 or more in the personal income-tax exemptions which would take millions of people off the income tax entirely, leaving the confiscatory rates on higher incomes and the excessive rates on job-giving corporations.

WAGE RATES AND JOBS

The President wisely pointed to the danger of "going too far with trying to fool with our economy," and implied that he would want such a tax cut only if it would not be inflationary. But the very purpose of such a tax cut would be to resume inflation. What is proposed, in short, is a cut in taxes without a cut in expenditures, to increase the size of the deficit, and to get recovery by deficit.

The worst of all remedies for the recession is that proposed by Walter Reuther and the AFL–CIO. It is a further increase in wage rates so increase purchasing power. As I pointed out here last week, a further increase above present peak wage rates would simply increase cost of production, squeeze out more profit margins, price more goods and more labor out of the market, increase unemployment still more, reduce payrolls, reduce labor's total income, and turn recession into real depression.

The country may well pray to be saved from its saviors.

Education for Freedom and Security

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 13, 1958

Mr. SIKES. Mr. Speaker, I wish to have inserted in the CONGRESSIONAL RECORD the speech made by Mr. M. D. Mobley, executive secretary of the American Vocational Association, Inc., before the Alumni Chapter of Alpha Gamma Rho Fraternity of Washington, D. C., on Saturday, February 15, 1958, on Education for Freedom and Security.

Mr. Mobley is one of America's best known experts in the field of agricultural legislation. I have personally observed his work for many years and I know that his statements deserve serious consideration.

The speech follows:

EDUCATION FOR FREEDOM AND SECURITY

My subject for tonight is Education for Freedom and Security. I shall attempt to bring to you the facts relating to the major problems with which the free nations of the world are concerned at this point. For several years I have given much thought to some of these problems. During the past 6 months, as a result of a foreign assignment that took me around the world, I have had reason to give these matters concentrated thought.

Today the free world is confronted with serious problems that have direct bearing on the security and freedom of people everywhere. They involve the battle for the minds of men, the armament race with Soviet-dominated countries, the economic war that is beginning to take form, the world population explosion and the yearning of people in underdeveloped countries for a better way of life.

In our efforts to maintain a just and lasting peace, we must never lose sight of the fact that security and freedom are concepts which dominate the desires of men of all races and nationalities throughout the world. The yearning for freedom is perhaps stronger with those like us who were born and bred in its tradition. But the two ideals are essentially inseparable. Man cannot enjoy one without the other. Freedom means little to the man who is starving through no fault of his own. Security means little to a man who cannot also exercise his freedom of thought and his God-given individuality.

In recent months we have heard much about America's education system—its faults and shortcomings. It seems that everyone has suddenly become an expert on education—even those who have not been in a school of any sort for years. Some of the information, or maybe I should say misinformation, that is being blandly presented in speeches in the press and over the radio and television would lead one to believe that educators should try to make scientists and engineers out of all the people. Our Nation has no need for millions of people with a smattering of science and mathematics which would occur if we should make advanced courses in these fields compulsory for all secondary school pupils. Instead we need a few hundred thousand able, talented, outstanding scientists and mathematicians. No one would question the importance of scientists and engineers to our Nation's security and well-being, but we should not become so hysterical and warped in our thinking that we would try to force every child regardless of his talents or lack of talents to study advanced science and higher mathematics. We must continue our efforts to develop an adequate and comprehensive program of education for all the people—a program that recognizes individual differences of people. We must continue to maintain school offerings that deal with human values, good citizenship and skills and knowledge essential to production know-how. We should not allow a couple of Soviet sputniks to cause us to become hysterical and launch forth on a program of revamping America's education system that may do more harm than good.

On the other hand, we should constantly study critically our schools and ever strive to improve them. I would be the last to claim they are satisfactory and that they cannot be improved, but let's not become hysterical. Nor should our studies be launched on a basis of witch hunting.

There is much talk about poorly trained teachers. We all know there are far too many such teachers in our public schools today. I have reached the conclusion that there is not too much wrong with our school system that adequate salaries for teachers would not in time correct. Too many of the people are shedding crocodile tears and are releasing half-truths about the weaknesses of our education system. They might accomplish more if they would think up and support ways and means of providing adequate funds to employ and hold fully qualified and competent teachers.

In years ahead, education—especially those phases which increase the efficiency of workers—will be of increasing importance. We are entering what appears to be the first stages of an all-out economic war with Russia. This is no secret.

Russia's Khrushchev has already made known, in no uncertain terms, the Soviet plans in this field of activity. Only a few months ago he said to an American newspaper publisher, and I quote:

"We declare war upon you * * * in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the intercontinental ballistic missile, but in the field of peaceful production. We are relentless in this, and it will prove the superiority of our system."

Last fall, while in Karāchi, Pakistan, I saw positive evidence of Russia's attempt to battle us and other free nations for the markets of the world. While there I visited the exhibit of Soviet manufactured goods being offered for sale in this foreign country. The exhibit included tractors, grain drills, pumps for irrigation, automobiles, motorcycles, machine tools, sewing machines, bicycles, scales, meat grinders, microscopes, electric percolators, cameras, watches, porcelain and many other items. Placed on each exhibit was the name of the local concern where it could be purchased, and in some cases the price was displayed.

The products I saw were well made. In fact many of them appeared to be carbon copies of American manufactured products and of goods produced in other countries.

For example, the cameras were almost identical with the German Leica camera. The tractor for sale looked very much like the John Deere.

The thing that alarmed me was the fact that the prices were much lower than the prices of similar goods manufactured in this country. For example, the tractor on display was being offered, so I was told, for 5,000 rupees which at the rate of exchange is a little more than $1,000. The same tractor in the United States sells for well over $2,000.

Along with the battle of economy which may last for centuries, if we are able to maintain peace, is the battle for the minds of men. With the Soviet goods shipped to foreign countries, go Soviet technicians who are trained propagandists as well as technicians.

Not long ago William Benton, publisher of the Encyclopedia Brittanica, who spent several months in Russia, wrote a story that appeared in the December 1956 issue of Coronet magazine, under the title "The Soviet Technician: Ominous Threat to the West," and with the subtitle "We have Nothing To Match These Unique Technological Schools That Turn Out Supertechnicians Without a College Degree."

According to an article that appeared in Life magazine there are 3,796 of these "tekhnikums" in Russia that graduate 70,000 technicians per year. They serve in positions between professional workers and skilled or semiskilled workers.

Mr. Benton stated in his Coronet article the following, and I quote:

"Many of these tekhnikums turn out what might be called junior engineers. Actually these juniors are supertechnicians and specialists who fill vitally important secondary jobs, leaving graduate engineers free for more highly skilled work, and creating a surplus. And, this surplus is what is helping defeat us in the cold war in Asia and Africa.

"Trained in propaganda as well as science, the Soviet engineers and tekhnikum graduates are exported by the hundreds to underdeveloped nations thirsting for guidance and leadership in all fields of technology.

"The United States, lacking this 'middleman' technician category, is wasting thou-

sands of its well-trained engineers in comparatively second-rate jobs—as sales engineers, manual writers, glorified draftsmen, and troubleshooters. Not only are we graduating little more than half the engineers that the Soviet is, but we are wasting their talents for lack of tekhnikum counterpart."

At the present time the United States is providing technical assistance to about 50 underdeveloped nations throughout the world. This program is designed primarily to help the people of these nations to acquire skills and knowledge that will make it possible for them to produce more and have more.

Some of these underdeveloped nations pose a serious and threatening problem. They are ripe for communism.

If we were to classify the countries of the world into 3 groups, we would find that the total population in the group of the highly developed nations, such as the United States, Canada, Australia, and New Zealand, is only 400 million. In the intermediate group, such as the countries of southern and eastern Europe, the Soviet Union, Japan, and the more prosperous countries in Latin America, the population is about 500 million. In the underdeveloped group, including all of the countries of Asia and Africa, most of those in Latin America, and a few in southeastern Europe, the population is about 1,800 million.

This means that approximately two-thirds or 66 percent of the people of the world live in underdeveloped countries, about one-sixth or 16 percent in the intermediate group, and less than one-sixth or 16 percent in the highly developed countries.

The low level of production per person is the cause of the stark poverty of most of the people in underdeveloped nations.

Though tremendous progress in productivity has been made in the highly developed countries, there are today more poverty stricken people in the world than there were 50 or 100 years ago. The population in underdeveloped countries has continued to grow at an accelerated rate, but the production of goods has not increased accordingly.

In recent years—since 1930—the rate of increase in population in undeveloped countries has been almost twice that of the highly developed countries.

If the present rate of increase should continue, the earth's population will double every 42 years. This would mean about 6 billion people in the world by the year 2000.

This tremendous increase in population—should it occur—will place an ever greater strain on the earth's resources and will intensify the struggle for food and raw materials. In addition to the great increase in population the demand per person is also rising.

All this means that we must increase research not only in the missile and other armament fields but in the field of agriculture and nutrition in order to find ways to produce more per unit, more per man and to create new and cheaper foods.

The primary reason for the unprecedented growth in the world's population has not been due to the increased birthrate, though the birthrate has increased. The main factor has been the decline in mortality.

The cheap method of control of malaria and other diseases through the use of miracle drugs has played an important role in lowering the mortality rate, especially among infants. For example, a year's protection from malaria can, in some countries, be made available at less cost than one haircut in Washington.

It seems ironic that as we reduce mortality from dread diseases in the underdeveloped countries, we have not been able to get the people to produce sufficient food to prevent malnutrition. As we improve health conditions and prevent death from diseases, which result in extending the average life span, we must help the people of these underdeveloped countries find ways through research and efficient production to produce more. Proper education is one of the important tools for accomplishing this.

In Pakistan, where I spent 7 weeks last year, I was told that 8 workers out of 10 live on the land and are engaged in farming. Yet they do not produce enough to feed themselves, although a very large percent of their agriculture is devoted to the production of food. I could not help but compare this with the situation in the United States where only about 1 out of every 10 workers are engaged in farming. Yet we produce more farm products than can be consumed domestically and marketed profitably in the foreign markets.

Thomas Jefferson once said, "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

Freedom and security in the struggling underdeveloped countries of the world—where two-thirds of the world's population live—depend largely on education, an important part of which must be training that will help them acquire skills and knowledge so they can produce more and have more.

In my estimation, this is a phase of our foreign-aid program that must be expanded. Not only because it is the humanitarian thing to do, but because it is vital to our own security and well-being, and to the freedom and security of people everywhere.

Social Security in 1958

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 21, 1958

Mr. REED. Mr. Speaker, three present Members of the House—Mr. JOHN W. McCORMACK, Mr. THOMAS A. JENKINS, and I were members of the Ways and Means Committee in 1935 when it reported out the Social Security Act. The report accompanying this legislation included minority views which Mr. JENKINS and I signed. These views concluded with the statement that:

The minority membership of the Ways and Means Committee have at no time offered any political or partisan opposition to the progress of this measure, but on the contrary, have labored faithfully in an effort to produce a measure which would be constitutional and that would inure to the general welfare of all the people.

That nonpartisan spirit has prevailed throughout the intervening 23 years, both during the periods when my good friends, Mr. Robert L. Doughon and Mr. Jere Cooper, were chairmen of the committee and our party was in the minority, and during the periods my good friend, Harold Knutson, and I were chairmen and ours was the majority party.

All of us on both sides of the House have a right to be proud that in social-security legislation over the years we have followed the letter and spirit of this initial statement and "have labored faithfully in an effort to produce a measure that would inure to the general welfare of all the people." That this tradition of statesmanship shall continue to govern our actions is currently of highest importance in view of recent social-security developments to which I shall shortly refer.

The 23 years since the enactment of social security have witnessed profound changes. We have had not only the greatest war in history but the greatest economic expansion in any two decades of our national life—and our social-security system has reflected this fact. Between January 1, 1937, when social-security taxes first became payable, and 1950 when its coverage was first substantially amended, our economic expansion was reflected by the constant increase in social-seclurity revenues. Earning subject to social-security taxes and accordingly social-security-tax receipts, doubled between 1938 and 1942, and in 1950 were nearly three and a half times what they were in 1938.

Besides increases due to our economic growth, revenues have been further increased by the 1950 and subsequent amendments. These have increased coverage from about 3 jobs out of 5 to the presently nearly universal coverage, and have increased the maximum employer-employee taxes on an individual from $60 per year to a present $168 plus $21 for disability. This has meant a nearly fourfold increase in revenue—from less than $1.7 billion in fiscal 1948–49 to over $6.5 billion in fiscal 1956–57—plus a third of a billion from 6 months' taxes for disability.

As rapid as these increases in contributions have been, they have not kept pace with the increase in benefit disbursements. The natural increases in numbers eligible for benefits and in benefit levels would have been great. But these increases were greatly augmented by the 1950, 1952, 1954, and 1956 amendments which liberalized benefit formulas, provided for new starts, disability freezes and dropouts for computing benefits, reduced eligibility requirements, increased permissible earnings of beneficiaries, reduced the retirement age for women, and otherwise increased benefit payments. In combination, benefit expenditures have increased some tenfold, from less than $0.7 billion in 1948–49 to nearly $6.7 billion in 1956–57—while supporting contributions increased less than fourfold—from some $1.7 billion in 1948—1949 to some $6.5 billion in 1956–57.

Let me repeat these critical figures for the fiscal year ending last June, giving the exact amounts to the nearest $1,000: contributions $6,539,837,000, and expenditures $6,664,638,000. For the first time in its history the system's disbursements exceeded its contributions. It lacked $124,751,000 of being pay as you go. This crossing point, where expenditures exceeded contributions was estimated in 1956 to occur just before 1960. On the basis of those estimates, we provided in 1956 for a combined employer-employee tax increase of 1 percent, effective January 1, 1960, and for similar increases in 1965, 1970, and 1975.

At the time of the 1956 amendments your committee secured the best estimates then possible. When the conference agreement of July 16 settled the minor Senate-House differences, esti-

mates were again made, this time on the agreed bill, and were printed on July 23, 1956. Table 7 of those estimates showed for 1957 and 1958 that contributions would exceed benefit expenditures, that in 1959 the contributions plus interest would exceed benefit expenditures, and that in 1960 with the scheduled social-security tax increase, contributions would again substantially exceed expenditures. In each of these years the trust fund would increase. The balance of $21.8 billion at the beginning of 1956, was estimated to increase to $24.5 billion by the end of 1959, and to nearly $26 billion by the end of 1960.

These estimates were based on high employment assumptions and were so labeled. High employment means not only high-payroll tax receipts, but also importantly affects the number who decide to retire and hence the size of benefit disbursements. Intermediate assumptions were made for other factors such as mortality.

I mention these assumptions because, as is illustrated by what has actually happened since the estimates, it is utterly impossible to make any social security estimates not subject to very substantial variations. Perhaps we should have warned the House as to these implications of high employment assumptions, but I question whether it would have made any difference had we done so. I feel that we have had as good actuarial advice as is possible, and that the actual situation which has developed is not to be considered a reflection on Mr. Robert J. Myers, who has been the social-security actuary and our committee's actuarial adviser for many years. Mr. Myers has rendered to the social-security program and to the Congress very distinguished service as the chief actuary and as the congressional adviser on actuarial matters. Mr. Myers has brought to his duties great professional competence and abundant integrity that have given to those relying on his ability deserved confidence in his well-considered views. Instead, it is due to economic and other uncertainties inherent in old-age and survivors' insurance, which cannot be resolved into dependable estimates by any actuary. We find this inherent uncertainty reflected in the latest Trustees' Report on the Social Security Trust Fund, filed last April 30. This report contains estimates which have two assumptions as to future employment levels. Under one of these, the trust fund is estimated to increase by June 30, 1961, more than $2 billion over the estimated balance of June 30, 1957. Under the other assumption, the trust fund is estimated to decrease some $1.8 billion. Both estimates include contributions plus interest on the trust fund, in receipts. Both estimates show that expenditures will exceed contributions—under one assumption, this deficit is over a quarter of a billion dollars, under the other it is over $4 billion.

Recent experience indicates that even this disturbing report may prove optimistic.

Estimated contributions for fiscal 1956–57 were more than a quarter of a billion dollars above the amount actually realized and estimated expenditures nearly a quarter of a billion dollars less than were actually spent. The estimated surplus of contributions over expenditures turned out to be nearly a half billion dollars wrong. It turned out that we had nearly a quarter of a million dollar deficit.

The estimates for the current year may prove to be overoptimistic by a much greater margin than were last year's estimates.

It is questionable whether the revenues for the current year will actually exceed last year's revenues, but the estimates call for about a billion dollars more. It is practically certain that expenditures for the current year will be far more than three times the expenditures which we have figures on for the first third of the year—so we can feel almost certain that these are again very greatly underestimated.

I look forward to the next trustees' report, which we should receive by next April, as I feel certain that its new estimates will take account of the actual experience occurring since the last report. It should prove most helpful in deciding on appropriate action.

The last few months have demonstrated that social security's basic variables so affect its income and outgo that even with the finest actuarial advice there is a tremendous uncertainty as to what costs are going to be and what social security tax rates will be needed to meet these costs. We have had brought home the fact that in contrast with ordinary insurance and annuities where the annual premium is fixed within narrow limits and actuaries deal principally with mortality, social security requires also the best guess possible of future economic conditions. For these future conditions largely determine the total earnings which will be taxed and hence the system's future contributions, and also greatly affect the size of the rolls and, in the long range, the benefit levels, and hence the expenditures. We need more experience in the actual operations of the 1956 amendments.

The situation I have outlined calls for statesmanship of a high order. As is always the case, there are numerous social-security bills pending before the Ways and Means Committee for liberalizing the system. These were introduced in good faith and possibly may be construed as commitments of their authors. I am deeply appreciative of this situation. I feel that the author's constituents will appreciate that these bills were introduced on the assumption that the 1956 estimates of receipts over expenditures were correct and that the surplus of receipts over disbursements would make the proposed liberalizations feasible. I cannot believe that public opinion would favor enacting these bills under the present circumstances. I should like to stress this point because the American people are vitally concerned in the soundness of our social-security system. Would it not be considered a betrayal of our trust if we, at this time of a mounting social-security deficit, recklessly deplete the trust fund by further liberalizing amendments?

The fundamental principle, adopted at the outset of the old-age and survivors insurance system, was that the system should be actuarially sound. The original act established what was termed the "old-age reserve account" and which, since the 1939 amendments, has been called the Federal old-age and survivors insurance trust fund. The principles leading to its establishment and purpose were reaffirmed by the 1956 amendments. In establishing disability insurance at that time we likewise established a separate trust fund, the Federal disability trust fund, separately financed by the additional social-security tax which was imposed and earmarked solely for disability benefits.

There have been, particularly in the early days of social security, divergent views as to the appropriate size of the trust fund, but since 1939 the present general yardstick has been in the law. It contemplates that Congress shall act when the trust fund is unduly small or unduly large. This general yardstick is referred to as the "3-times rule"—the relation of the trust-fund balance to 3 times the estimated expenditures during any of the ensuing 5 years. There is also the unwritten rule that the system should not operate in the red—the pay-as-you-go rule. I do not believe that this House will ever knowingly act in violation of these rules.

Members of this House are keenly aware that they are, in reality, social-security trustees who represent, on the average, some 400,000 citizens of their respective district, practically all of whom are concerned with this great system as present or prospective, direct or indirect contributors and beneficiaries.

I have included in this 400,000 not only those presently employed and directly contributing toward benefits and those actually receiving benefits, but all, including wives and children whose breadwinners' take-home pay is affected by social-security deductions and whose every purchase is affected by social-security taxes passed on to them by way of higher prices, and who are in turn given a floor of protection by the system.

Each of us is pressed to make changes in the system and each recognizes that many of these changes may be desirable. Each of us appreciates that these proposals must be evaluated in terms of immediate and long-run costs, as such costs must, at least ultimately, be reflected in the social-security taxes. In thus weighing benefits and burdens we exercise a necessary trusteeship.

The Congress has been subjected increasingly to articles in the press which point out that social security has been liberalized every election year since World War II and cynically forecast that this year will be no exception. We properly resent this inference that social security is considered a political handout, irresponsibly provided by the Congress. Every student of the system knows the care and consideration which have been given each change. We have at times differed among ourselves on some details, but we have likewise recognized the integrity of those with whom we differ. Amendments have been

adopted only after a careful appraisal of their results, and we have been zealous above all else to preserve the financial integrity of the system.

The fact should be published that each 2 years there is a new House of Representatives, and that social-security proposals introduced the first year are in general the bills whose necessary study and consideration precedes our action in the second year—which is inevitably also an election year. The public should be fully appraised of the careful and considered actions which precede social-security changes.

I particularly stress the importance of a broad understanding of the reasons why the present social-security situation has developed. Members who may be disappointed in not getting action on social-security proposals which they prize, should take satisfaction that inaction demonstrates the falsity of charges that we are playing politics with social security. Much more important, it gives our people concrete evidence that their deep faith in the integrity and security of our contributory insurance system is not misplaced.

I cannot think of anything more tragic, both to the present and future beneficiaries of the system, than our knowingly enacting any proposal that would scrap the principle of pay-as-you-go and operate the system in the red, or which would increase expenditures at a time when the system already is so operating. Such action would undermine public confidence both in the system and in the Congress which controls the system. It is essential that the solvency of the old-age and survivors trust fund be preserved so as to safeguard the benefit rights of the millions of Americans who look to the OASI program for their retirement security. It is particularly essential that such benefit rights be protected with respect to our Nation's low- and middle-income families.

Walter Reuther Has It Coming

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, the much publicized controversy between the Kohler Co. of Kohler, Wis., and the UAW-CIO, headed by Mr. Walter Reuther, is nearing a public hearing.

In view of the widespread interest in this particular strike, I ask that the following editorial from the Arizona Republic dated January 12, 1958, be inserted in the RECORD:

WALTER REUTHER HAS IT COMING

Walter Reuther is fighting viciously to prevent the Senate Rackets Committee from investigating United Auto Workers. Reuther's objective is to make it seem that the committee's investigation of the Teamsters' Union was a public service, but that any probe of the UAW would be just low-down politics.

Reuther does not like Dave Beck, and his rivalry with Jimmy Hoffa has been bitter and often violent. It served his purposes to have both of them cut down to size, but now that the finger points toward the UAW, Reuther is screaming about antilabor bias.

Now that Hoffa and his friends have offered to give even more damaging evidence against Reuther than Reuther is alleged to have turned up on Hoffa, it is unquestionably the duty of the rackets committee to check into every aspect of Reuther's dictatorship. Dave Beck is a petty chiseler compared to Reuther, when you realize what a threat to American liberty Reuther's plans and performance present.

It is clearer now than ever before that the refusal of the committee to consider the operations of the Auto Workers would be the worst kind of politics. Under the chairmanship of the Democrats, the committee vigorously investigated the one big union which supported the Republican administration in the last election. If the committee now, as a result of Reuther's threats, shies away from studying the affairs of another union which supported Democrats, it can be nothing else but a brazen whitewash of political favors.

Reuther's union is the Nation's prime example of political power bought with dues and assessments against members. He excels in applying his doubtfully achieved political power in economic warfare. In the hate-strewn, violence-ridden Kohler strike, where Reuther's avowed purpose has become to break a great company unless it bends to his will, the UAW political arm reaches across the whole continent—city councils, county commissioners, State and Federal authorities have been pressured to boycott Kohler products. Some weaklings succumed. Congress should be interested in learning what methods were used thus to influence government.

Reuther cannot possibly disclaim responsibility for the death-dealing violence at Kohler. Surely the Senate Rackets Committee in all conscience must find out if he is responsible for what happened at Kohler and why he has been able to stay out of prison.

Just like last week, John L. Lewis, one of the great leaders of labor in America, referred to Reuther as "an earnest Marxist inebriated by the impetuosity of his own verbosity."

No fair person wants an investigation solely for the purpose of discrediting any branch of organized labor. No investigation should be undertaken for partisan political reasons. But neither should any investigation be avoided for such reasons. If Reuther is clean, an investigation won't hurt him. If the methods he uses are fair, he need not fear the results. But in any event, the public should know what goes on, and the Senate Rackets Committee is the only means it has of finding out. The committee cannot succumb to Reuther's present violent attack if it wants to retain the respect it has won from the American people.

V. Y. Dallman Conducts Campaign To Develop Public Interest in Elections

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include the sixth of a series of editorials by V. Y. Dallman editor of the Illinois State Register, on problems and responsibilities of party organizations.

The article follows:

DEMOCRATIC FEDERATION SEEKS TO AROUSE VOTERS TO ACTION

The Democratic Federation of Illinois offers some real hope that at least a part of the ills of the Democratic Party will be cured in time. This group has, as its sole aim, the building up of the party and its improvement to that stage where there will be real statewide competition in all counties, and where the party will be victorious in State contests.

There is certainly nothing wrong with that.

The organizers of the federation are all dedicated citizens. Some of them began their active support of Senator PAUL H. DOUGLAS in his 1948 campaign for the nomination. Some were members of the administration of Governor Stevenson. Many others are outstanding workers and fund raisers for the Democratic organization. Some of them are progressive ward or precinct officials, and a few are like-minded county chairmen.

They went about the formation of the federation in a straightforward, honest way. They consulted Senator Douglas, Governor Stevenson, Mayor Daley, former National Chairman Steve Mitchell, and State Chairman Jim Ronan. They explained their program fully. They gave their aims and policies wide publicity. Their program went through many refinements.

Can anyone in his right mind imagine that organizers of the federation would have carried on if they had faced disapproval on the part of those men named above? They would not.

It is amazing that a number of county chairmen are covertly opposing the organization of Democratic clubs in their counties. It is amazing that some misguided political figures have attacked the federation as a rump organization. It is tragic that some have adopted a purely negative attitude toward the club idea.

Don't they want to see the Democratic Party grow stronger? Don't they want to mobilize the whole Democratic strength which is presently not half mobilized? Don't they want to win State offices? Don't they want to carry Illinois for the national Democratic ticket? Don't they want to see the party alive with new ideas, new idealism, new and vigorous workers, young people and housewives all helping build up the Democratic Party?

The election returns, particularly of 1956, prove beyond any dispute that the job is not now being done. If the Democratic Party is going to win control of the House in 1958 and control of Illinois in 1960, it is not going to do so by remaining divided, half mobilized, full of suspicions and mutual animosities, and dragged down by do-nothingism in the ranks of too many of its local branches.

Cook County Chairman Mayor Daley, Senator DOUGLAS, and others named above cannot spend their time wholly in examining, recruiting, mobilizing, and training prospective party workers. Some who should be doing this are not doing the job.

True, the federation has been tagged in one or two newspapers as anti-Daley, because at its original Springfield organization meeting two or three individuals were critical of political tactics of the Chicago mayor. Five hundred people attended that meeting and participated in its democratic processes. It was inevitable that, with everyone having his say, some critical views would be expressed. That is democracy in action, for democracy in essence means that all views will be expressed and receive consideration.

The federation has been called a Steve Mitchell organization because he supports its aims. It is neither anti-Daley nor pro-Mitchell.

It is our opinion that the federation has demonstrated its faithful democracy, that it has pursued a calm and statesmanlike course even under provocation, and that it offers the best means yet devised to cure weaknesses in the Democratic organization. County chairmen and State Democratic officials should welcome the federation, not shy away from it.

As we said in an earlier article, the cure for the ills of the Democratic Party is more democracy, not less of it. This the federation seeks to provide.

Testimony of Lamar Fleming, Jr., in Support of H. R. 10368

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Lamar Fleming, Jr., of Houston, Tex., before the House Committee on Ways and Means, in support of H. R. 10368, renewal of Trade Agreements Act:

National attitudes that fitted past circumstances may cease to fit changing circumstances, as old suits cease to fit our changing bodies.

Among the circumstances which shaped our early national attitudes were the following. The early settlers were few in number. Their tremendous task was the development of a vast country and its resources, from the raw state. They depended for supplies and capital upon the European communities from which they had come, until arduously they could convert the wild resources of the new country to usable forms and achieve an excess of production so that they could have capital of their own. Their isolation was extreme, separated from their European sources of supplies and capital by months of ocean travel and transport and slow overland routes.

Besides these economic circumstances, an important political circumstance accompanied the severance of political ties with England. This was the policy of aloofness from the alinements and controversies of the Old World, which was pursued from the inception of the Republic until World War I.

The dependence on European capital, through investments and loans, lasted a long time. With the exception of a few years, it was 1876 before our exports caught up with and exceeded imports, evidencing a surplus of production sufficient to service Europe's investments in and loans to our economy.

The factory system of manufacture began to supersede handicraft and cottage industry in Europe during the early years of our Republic. The tremendous demands upon our limited labor force and capital for development of our country and its vast resources limited the availability of them to build and operate factories. We had to give priority to developing more immediate production from our fields, forests, and mines, for our sustenance and to pay for indispensable imports and service investments and debt.

On the other hand, we had experienced intermittent interruptions of supplies from Europe as a result of the series of European wars culminating in the Napoleonic Wars and our War of 1812, and this planted a desire to develop industry here. From it sprang customs duties to protect American industry in the American market.

Naturally this proposal met opposition on the grounds that it would tend to raise prices of the protected manufactures to consumers, including producers in the export surplus lines and persons in service occupations, which were categories not susceptible of customs protection. That this opposition did not prevail and that the protective system gradually was expanded probably was due to something more than the desire for self-sufficiency. In a nation chronically dependent on foreign investments and loans, straining to overcome a foreign-trade deficit and meet its international obligations, it may be presumed that whatever tended to reduce imports had an aura of desirability.

In 1820, 65 percent of our exports were crude foodstuffs and materials and less than 6 percent were finished manufactures, compared with 16 and 57 percent, respectively, of our inports. During the 1870's, crude foodstuffs and materials were 58 percent of our exports and finished manufactures were 15 percent, compared with 33 percent of each of these categories for the imports. In the years just preceding World War I, crude foodstuffs and materials were 40 percent of the exports and finished manufactures 31 percent, compared with 48 and 22 percent, respectively, for imports. In finished manufactures, imports still were double exports in the 1870's, but at the turn of the century the exports of them climbed above the imports and have remained above them ever since. The changes between 1876 and World War I occurred in a time of excess of general exports over imports, when domestic savings and capital were growing and immigration was supplementing the labor force, both facilitating the growth of industry.

World War I sharply changed the development of our economy and our world relations.

The needs of the belligerent nations, and our needs when we became one of them, called for a tremendous increase in our productive capacities, industrial, mineral, and agricultural, during World War I and an even greater increase during World War II. Both wars left the principal nations of Europe impoverished, particularly World War II, and left the United States the creditor nation and world money center. We were removed from the status of economic immaturity and dependence on investments and loans from abroad, into the position of leading nation in international investments and loans.

Our industrial expansion in World War I hastened a technological revolution and the organization of much of our industry on a mass production basis, in which plant investment back of the worker made efficiency in cost compatible with high wage scales. Adaptation of production to the technological revolution and mass production methods spread during the interval between the wars and was spurred further by World War II. Ours was the ideal economy for these changes, with our advantages in capital, popular buying power, and mass domestic market within a single customs system. American industry became the greatest and most efficient source of the kinds of products in which plant investment can do most to reduce man-hour requirements.

Technological progress and mechanization greatly increased the capacity and efficiency of our agriculture.

By 1956 the excess of exports over imports was $6,400 million, equal to more than half the value of the imports. Imports of crude foodstuffs and materials were double the exports of them; and exports of finished manufactures were more than three times the imports of them. Twenty percent of the exports were crude foodstuffs and materials, and 58 percent were finished manufactures, compared with 41 percent and 26 percent respectively for imports. Six thousand seven hundred million dollars of the exports, constituting more than the export surplus, was machinery and vehicles, products particularly susceptible to the advantages of technological progress and mass production. Imports of machinery and vehicles were $631 million.

Of course, we cannot long maintain export surpluses at the 1956 level. That is not even to be desired, for it would mean exporting a great deal of wealth for which we could not possibly collect.

The 1956 exports were swollen by subsidized agricultural exports in amounts which probably will not be recurring. For exports to continue at that level would require foreign grants at higher levels or increased imports or both. The cost to us as taxpayers and consumers will be less if the slack is taken up by increased imports rather than grants. I think our expanding industry offers us good reason to expect constantly increasing imports of raw materials for manufacture, especially minerals. I do not believe, however, that we can expect enough increase in imports to forestall partial choking off of exports unless our attitude becomes one of willingness to receive in substantial measure imports that are competitive with domestic materials and domestic manufactures.

The change in our circumstances from struggling debtor to opulent creditor, from purveyor of debt-paying cash crops and other raw materials to the world's principal supplier of manufactured goods, has brought us to this situation. We must give away part of our production, or cut production far below capacity, or buy more from the other fellow.

Changes have occurred elsewhere. The European nations and Japan were impoverished immediately after the war; but they have come back a long way, thanks greatly to our assistance. Their present productions surpass the prewar levels, although they have not achieved anything like a per capita parity with ours. Further development of it will add to world buying power and increase their value to us as customers, provided their and our developments are conceived in cooperative friendliness, in which event the expansive emphasis of each side will be in the productions for which it has comparative advantage. But expansion of European productivity could become more a competitive threat than a promise of added markets if the attitudes between us should become the dog-eat-dog kind, without recognition of the principle of comparative advantage.

Our economy has benefited tremendously from the mass production methods that were practicable here because of our mass market within a single customs system. Except beyond the Iron Curtain, there has been no European market within one customs system with as much as a third of our population. We now face the European common market with a population about equal to ours and resources at least challenging ours, to which Britain and other countries seem destined to affiliate themselves, with some reservations, adding fifty-odd million more population. The substance of this arrangement is that the member countries within a short span of years will eliminate duties between themselves and become a single mass market within one customs system. For imports from other countries, they agree to make their duties substantially the average of their present duties, but within and reconciled to their obligations under the General Agreement on Tariffs and Trade (GATT).

I believe this is one of history's masterpieces in statesmanlike accomplishment. Nations that were lagging as separate units will become potent through combination of

their resources and customs-free markets and exploitation of the efficiencies of mass production.

As a contracting party of the General Agreement on Tariffs and Trade, we are entitled to sit in with the members of the common market, to forestall establishment of duties that would impair our status quo under the GATT conventions, and generally to influence the conclusions in a cooperative direction.

Western Europe will not be the only common market. The Russian bloc already is one. This common market may be extended to include China and other countries; it may include China already. Regional common markets are being discussed in other parts of the world.

I do not think it is to be doubted that the interests of the Russian bloc will direct it toward cooperation with the European common market. While there is no vested interest except the state's, man-hours of labor will be directed to the lines where they can produce the most value. So it is reasonable to expect that Russia will direct her labor principally toward the productions for which she has comparative advantages, such as abundance of the raw materials, and will exchange the surplus of this production freely for the products of Western Europe in which the latter has comparative advantage, in order to get the most value, quality, and variety for the man-hours expended.

This will benefit both Russia and Western Europe. Talleyrand said there are no friendships between nations, only communities of interest. Trade is the base of normal international communities of interest. The growth of trade between these two mass markets will draw them closer together. The growth of trade between each of them and other countries will draw them and the other countries closer together. The growth of our trade with Western Europe and all other countries, including Russia, will draw us all closer together. And the reverse is equally true: significant refusal of trade with any country, creating conflict instead of community of interest, will deepen the gulf and misunderstandings and weaken the ties between us, which among nations is the counterpart of friendship between individuals.

The shaping of these developments may be very rapid. I referred earlier to the remoteness of our forefathers from the rest of the world. Advances in transportation and communications have annihilated remoteness between nations in the old sense. Communications now reach everywhere within seconds and fast transportation now can reach almost anywhere within a couple of days. All the world is becoming an instantaneous part of all the rest of it.

I also mentioned earlier our traditional policy of aloofness from alinements and controversies of other nations. This ended when we entered World War I and World War II. We have become the creditor of nearly all nations. We have become protector of nations against subjection to totalitarian rule. We are looking to all nations who resist this subjection for cooperation, political and, if necessary, military; and we ask many of them to furnish bases for our military forces. We are in active alliance with other nations for joint defense. We no longer are aloof; we seek the partnership of all nations for the common security.

In these circumstances, an attitude of detachment from the outside world would be blind anachronism. What we need in these circumstances is close attachment to the world.

Our tariff policy through 1930 was one of resistance to foreign trade—resistance to imports, which of itself restricted exports. The step toward encouragement of foreign trade was taken when the Trade Agreements Act was enacted in 1934, authorizing administrative negotiation of reciprocal tariff concessions. The step was implemented after the war by the General Agreement on Tariffs and Trade between thirty-odd nations, providing rules and a forum for negotiation of tariff concessions and of mitigations of the obstructive practices which many nations had adopted under the strains resulting from the war, as these strains relaxed, to prevent perpetuation of them as instruments of protection.

The Trade Agreements Act was adopted in times of depression. During its lifetime, our economy has achieved new heights of productivity and prosperity, our foreign trade has flourished, and our Nation has earned significant recognition for devotion to world-wide expansion of trade for the benefit of all concerned, including ourselves. Congress has been relieved of the burden, impossible of proper achievement by a legislative body, of working out every minute customs schedule—a burden which I am told consumed 18 months of logrolling in the case of the Tariff Act of 1930.

The matter before you now is the extension of the Trade Agreements Act, in a form which does not render it ineffective, for 5 years. I wish the proposal were to extend it indefinitely.

I am deeply convinced that the 5-year extension of the act and continuation of the policies involved in it will best serve the immediate and long-range dollars-and-cents interests of the American people. I am convinced it will accomplish more for our national security than many of the billions which will be appropriated for military purposes. I am equally convinced that denial of the extension or amendments that nullify the effectiveness of the act would have disastrous effects on our foreign relations and would aggravate sorely the responsibilities and difficulties of the diplomatic and military sides of our Government. We would be drawing back into isolationism at a time when discovery and evolution are shortening distances, drawing people and places closer together, and making more of the fruits of the earth available to those who do not hide behind walls of their own building. We would be abdicating a great destiny which lies before us to others less blind to the changes that are going on—to the nations in and to be affiliated with the European common market, to the great Eastern common market, and to other groups of nations which follow suit to secure the benefits of mass production and mass markets within single-customs area. We must not let this occur.

The Economy Without Politics

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MASON. Mr. Speaker, on Tuesday, February 18, the New York Times editorial page gave us a sane and sensible interpretation of the present business situation without what the Times called the smog that has enveloped the economic picture since it fell into the hands of the politicians—meaning, no doubt, the apostles of gloom and doom who are so assiduously trying to convince the voters that we are rapidly going into another real depression.

If this clear-thinking editorial covering the present condition of our economy could be printed widely, there would be no question of a Republican victory in November and business would take on the courage that is needed very quickly—and nothing else is needed—for recovery from the present slump.

Mr. Speaker, under permission already granted, I include the editorial from the New York Times entitled "The Economy in Perspective" as a part of my remarks:

THE ECONOMY IN PERSPECTIVE

Dr. Arthur F. Burns, first Chairman of the Council of Economic Advisers under the Eisenhower administration, has contributed greatly toward dispelling the smog that has enveloped the economic picture since it fell into the hands of the politicians. He did this in the course of a talk at the end of last week at Columbia University.

Political spokesmen, declared Dr. Burns, who played a major role in steering us out of the recession that followed the tapering off of the rearmament program in 1953–54, have exaggerated the extent of the present decline. They quote statistics showing that steel output has fallen 45 percent and the Federal Reserve index of industrial production 9½ percent. But this ignores the fact that steel, like the railroads, has been historically a prince and pauper industry, the fluctuations in which are far wider than the fluctuations in the economy as a whole. Neither do they mention that the decline in both these instances started from the highest level in history.

As to the industrial production index, this is an excellent index when it is employed by economists or others who understand its limitations, but it does not purport to be a complete measure of economic activity. No index could be that omits such important segments of the latter as the service industries, far and away the most stable area of the economy. Professor Burns estimates that the decline in overall output to date would be nearer to 2 to 2½ percent. than 9½ percent. This would leave the (price deflated) measure of economic activity on a par with 1955, the first full year of the 1955–57 boom.

Unemployment figures have been similarly misrepresented. Currently, the jobless figure is between 4,500,000 and 5 million. But, as Dr. Burns pointed out, this is a meaningless figure in the absence of allowance for seasonal considerations because December, January, and February are the 3 months of the year having the highest rate of unemployment. After seasonal allowances have been made, Dr. Burns indicated that not more than 1,250,000 to 1,500,000 can be attributed to the current business contraction.

According to Dr. Burns: "A study of slumps going back to World War I showed that the current decline was rather mild or moderate." He explained that it resembled far more closely the recession of 1953–54 and 1948–49, which were very mild, than those of 1920–21 and 1937–38, "to say nothing of that of 1929–33."

Science Education Not Enough

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. McGOVERN. Mr. Speaker, the American people have always believed that education is an essential foundation for democracy. No less a political

thinker than Thomas Jefferson stated emphatically that self-government is not possible except with an educated electorate.

I think by far the most important bill in our whole code, is that for the diffusion of knowledge among the people—

Jefferson wrote his friend Wythe in 1786. Writing in 1916 to another colleague, he warned:

If a nation expects to be ignorant and free, in a state of civilization, it expects what never was and never will be.

Jefferson, who designed both the physical plant and the curriculum of the University of Virginia, believed in a broadly based liberal education that gave due emphasis to the humanities as well as the science courses.

Recently, there has been a growing demand for more emphasis upon physical science in American schools. This demand is doubtless justified considering the neglect of science and mathematics in many of our schools. It would be a serious mistake, however, for us to become so concerned about the physical sciences that we neglect equally needed improvements in other aspects of the curriculum. What is needed now is a general improvement in the quality of our entire educational program. Anyone who doubts the crying need for better educational standards in the social science disciplines, as well as the physical science courses, would do well to read the following editorial from the Huron (S. Dak.) Daily Plainsman of February 10, 1958, which I include as follows:

THEY DON'T EVEN KNOW WHAT IT IS

Education for democracy is one of the claims which Americans make for their schools.

However, the Chicago Daily News cites evidence that our schools are turning out high school graduates who don't know the difference between Communist dictatorship and democratic capitalism.

The News points out that of 80 college freshmen asked to define "capitalism," most called capitalism a form of government—an evil and dangerous form of government.

Here are some of the definitions:

"Capitalism is more on the dictator type of government."

"Capitalism is the extreme measures taken by a group, country, or even a single person."

"I am sure there are many places where capitalism is going on at the present time, and if this practice should ever become nationwide, the country is in for a lot of trouble."

"Capitalism * * * is on the order of communism."

Compare those definitions with that given by Webster:

"Capitalism: An economic system in which * * * the ownership of land and natural wealth, the production, distribution and exchange of goods and the operation of the system itself are affected by private enterprise and control under competitive conditions."

The most unfortunate aspect of this deplorable ignorance was that these 80 freshmen wanted to become teachers. And it isn't likely they will turn out youngsters who know any more than they do about capitalism and how it functions in a democracy.

Is it any wonder that our economic and political picture is confused?

The Natural Gas Bill Controversy

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. MASON. Mr. Speaker, on January 30, 1956, a little more than 2 years ago, before a foolish attempt was made by an oil company's attorney to influence a Senator to vote for the natural-gas bill by offering a sizable donation to his campaign fund—and long before the recent unfounded deliberate distortion of facts that occurred in connection with a Republican political campaign fund-raising dinner in Houston, Tex.—I issued a statement covering the natural-gas-bill controversy. What was true then is just as true today. If the principle of the gas bill was right then, it is just as right today. Even President Eisenhower in his veto message endorsed and approved the objective of the Harris natural-gas bill, although he felt obligated to veto the bill because of the unfortunate incident that occurred in the Senate in connection with its passage.

In his veto message President Eisenhower himself said:

Legislation conforming to the basic objectives of H. R. 6645—the Harris natural-gas bill—is needed. It is needed because the regulation of producers of natural gas will discourage individual initiative and incentive to explore for and develop new sources of supply.

That quote from the President's veto message is an outright endorsement of the principles of the bill.

Mr. Speaker, the statement I issued on January 30, 1956, was as follows:

Should the Federal Government regulate and control the price of natural gas at the wellhead? The House said "No" when it passed the Harris bill last summer. Briefly, the controversy came about as follows:

In 1938 Congress passed the Natural Gas Act regulating the rates charged by the interstate pipelines for transporting gas. Since these carriers enjoy a monopoly in the field of transportation, it is only proper that their transportation rates—like all other interstate transportation agencies—should be regulated and controlled. However, in the Natural Gas Act of 1938 Congress said "the provisions of this act shall not apply to the production or gathering of natural gas," leaving the price charged for the production of gas to be determined by the operation of a free market.

In 1954 the Supreme Court by a 5-to-3 split decision—in spite of the clear prohibition contained in the act—ruled that the Federal Government had the power to regulate and control the price of gas at the wellhead. Since this decision was contrary to the express provisions of the Natural Gas Act of 1938 and violates the specific provision of that act, bills were introduced by Congressman HARRIS and Senator FULBRIGHT to nullify the Court decision and to place the production of natural gas where it had always been—the price at the wellhead subject only to the control of a free market.

The price of natural gas for heating homes is made up of three factors; namely: (1) The price to the producers at the wellhead; (2) the price charged by the pipelines for transportation; and (3) the price received by the local public utility for distribution.

The last two factors are regulated and controlled as public monopolies, yet they get 90 percent of the price charged the consumer. The producer of the gas gets only 10 percent of the price charged.

In other words, if the average Illinois consumer pays $70 per year for heating his home with gas, the producer gets only $7 of that total and the transportation and distributing agencies get $63. This figures out about 60 cents per month or 2 cents per day the consumer pays to the producer for the gas he uses. The balance of his bill goes to the pipeline owner and to the local distributing utility—each one of which has been and now is regulated and controlled by Government.

Mr. Speaker, I supported the Harris bill (H. R. 6645) in the House 2 years ago, and I expect to support H. R. 8525 whenever it comes before the House for action, because the principle of the bill and the objective of the bill are proper and desirable.

As a part of these remarks I include an editorial from the Houston Post pertaining to the dinner held in that city recently:

OPPONENTS OF GAS BILL DISTORT LETTER BY PORTER FOR OWN ENDS

The furor which has risen in Washington over a charge by a Washington newspaper that Monday night's dinner here for Representative JOSEPH W. MARTIN, Republican, of Massachusetts, House minority leader, was a gas lobby affair apparently intended in some way to influence the forthcoming vote in the House on the Harris-O'Hara natural gas bill is more than absurd. It is shocking. It indicates the extent to which opponents of the legislation will go to distort simple, honest actions and words.

The charge stems from an unfortunate letter which Republican National Committeeman H. J. (Jack) Porter sent out to TEXAS Republicans, asking their support for the dinner, which had the dual purpose of honoring Representative MARTIN as a friend of Texas in Congress and raising funds for the Republican National Committee. In it Porter referred to the well-known fact that MARTIN had supported the natural gas bill during the previous times it was before the House.

Holding dinners at which congressional leaders are speakers for the purpose of raising funds is a standard practice of both parties. There is no taint attached to them. As a matter of fact, because the money raised goes to the national committees, it is probably far less subject to criticism than direct campaign donations to candidates.

Why, then, should evil motives be attributed to such a dinner held here? Not by any stretch of a warped imagination could the affair be regarded as an attempt to influence Representative MARTIN, who knew nothing about the Porter letter and who already was on record as an advocate of the gas bill.

Representative MARTIN, a former House Speaker, is too fine a man to be placed in such a position by such distortion of fact. When the Republican Party was at its lowest ebb of influence some years back, he was one of those largely responsible for keeping it going and staging a comeback.

Why should it be deemed proper for dinners to be held in other States to raise money for the party while at the same time ascribing evil and chicanery to one held in Texas?

Policies Made for Wrong Reasons

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mrs. GREEN of Oregon. Mr. Speaker, when Brig. Gen. Hugh B. Hester retired in 1951, it was after more than 34 years of military service and many varied military assignments. General Hester, who is a native of North Carolina and a graduate of the University of North Carolina, has, since his retirement, undertaken graduate work in international relations at the University of Pennsylvania. General Hester has spoken out on East-West relations with great courage and understanding on several occasions. In the January 1958 issue of the Churchman he writes a very thought-provoking article on Policies Made for Wrong Reasons. Under unanimous consent, I include this article in the Appendix of the RECORD:

POLICIES MADE FOR WRONG REASONS—BROTHERHOOD: THE CENTURY'S ONLY HOPE FOR SURVIVAL

(By Brig. Gen. Hugh B. Hester)

Any search for the reasons for America's loss or decline of prestige in the power struggle for world leadership must extend much deeper than the present temporary setback in the missile-launching race. In fact, it must be sought outside the framework of power politics altogether, for mere physical power has now lost all meaning in a world both needing and demanding leadership of the mind and spirit over the barbarous brutality of military might.

The real reason for the decline, or rather decay, in our leadership lies in the abandonment of our great liberal traditions: Free search and inquiry, tolerance of heresy and nonconformity, and the superiority of the mind and spirit concept over brawn and matter. These we surrendered to McCarthyism under the false slogan of security but actually paid for in the coin of submission to the current fashion of conformity.

Surreptitiously and imperceptibly to most, an authoritarian orthodoxy has been cleverly subverting our social and political institutions. Under the smokescreen of Communist danger and, wrapped in the flag of patriotism, this poisonous virus continues to be adroitly injected into the American system. While the Melish and Oppenheimer cases are probably the most celebrated, they are by no means isolated instances of this. Daily we are becoming more and more what we purportedly fight: A garrison state of authoritarianism.

Even before Mr. Truman bought George F. Kennan's Communist containment policy—later expanded into the 20th century edition of the 19th century holy alliance by Mr. Dulles as the Eisenhower doctrine—and succeeded in selling it as a peace panacea package to the Congress, the United States was making policies for wrong reasons. Lend-lease and UNRRA, our greatest ventures in international cooperation, were sabotaged under the supposedly smart slogan: "Uncle Sam must not become Uncle Sap" and the completely isolationist policies of unilateral aid and military alliances, outside the United Nations, were substituted for these two great experiments in a global assault upon man's greatest enemy: Poverty.

Foreign aid is openly justified as a means of, or device for, having others fight our battles. Integration of the races at home is defended as necessary in the struggle for the minds of men. Federal aid for schools is advanced as necessary for training more students for the development of better and more effective weapons for the mass murder of other human beings.

Rarely is aid supported for the purpose of feeding the hungry, clothing the naked, and housing the homeless. Instead most boast that we are doing this only for our own self-protection. No official voice is lifted any more in support of honest, sincere negotiations at the highest responsible level: Summit meeting, for reducing military, political and economic tensions which might render unnecessary the attempted bribery of others to fight for our own skins. Few indeed, that is officially, oppose segregation as unchristian, or as a gross insult to the human spirit and a criminal assault upon the brotherhood of man. And fewer still propose Federal aid for the schools for the purpose of developing the whole man instead of scientific robots for his further debasement.

Here in Washington, where this is being written, the President is being abused, accused, denounced and even villified by much of the press, the radio and television commentators, the military and many others—much of it, of course, subrosa. This is done, not because he failed to fire his "brink of war" Secretary, Mr. Dulles, for sabotaging the 1955 summit conference, by demanding, subsequent thereto, of the Soviet Union terms which if they had been accepted, would have meant her unconditional surrender; not because he failed to resume, after his long illness, negotiations with the enemy for attainable and reasonable terms of coexistence; but rather because he now refuses to abjectly and immediately surrender to the hysterical demand for pulling out all stops for a crash program in an unparalled arms race which can only lead to world disaster and civilization's end. Unhappily his mose recent illness will reduce still further his already very limited influence in the mad race to war; now as irrational as the force directing the moth to the flame.

Only a few, led by such distinguished citizens as Norman Cousins, Walter Lippmann, James Reston, Thomas L. Stokes, Dorothy Thompson, and James P. Warburg, and an occasional editorial in the few remaining liberal papers, have the intelligence and courage to raise a voice in warning against all this madness. Most of the others continue to beat the war drums in an ever-rising crescendo of fear and hate, apparently believing that in this way they may finally provoke the "war to end all wars" they have been advocating for years. And all this allegedly because the Soviet Union recently launched two earth satellites: An achievement all mature men should approve and applaud as a contribution to man's knowledge of the universe in which he now resides and which he hopes later to inherit.

The hysterical nature and extreme violence of much of this obvious propaganda would seemingly suggest that some, if not most of it, may be motivated by what the psychologists term impulse projecton: that is, attributing to others one's own desires, or looking into the mirror without recognizing the familiar face reflected therein. This possibility gains further support from the earlier claims for the American century and our manifest destiny as well as from the current plaint about the necessity for bearing the burdens of our unsought leadership of the free world.

So long as our national policies are motivated by wrong reasons and our peace offensive permeated with false propaganda, just so long must both fail. A nation's security cannot be bought of other nations; integration of the races is a matter of right and justice, not of political expediency in an ideological struggle for whatever purpose; and education to be real must be for the whole man, not just scientific man. And, furthermore, 20th century man's loyalty now belongs to the family of man, not to the archaic anarchistic nation-state system.

Once the leaders of this Nation, or any other nation for that matter, recognize these truths and earnestly undertake the building of a cooperative world society for a meaningful future through honest and serious negotiations at the very top level with their opponents, this or that nation need no longer fear the future. This is so because human brotherhood is now the only reliable and helpful force in the 20th century struggle for survival.

Who Are the Unemployed?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an editorial by John R. Stewart from the February 24 issue of the Detroiter, the weekly publication of the Detroit Board of Commerce. The article in question shows that unemployment figures are not the most reliable factor in determining the economic conditions in this country at any given time.

The article follows:

WHO ARE THE UNEMPLOYED?

(By John R. Stewart)

Who are the unemployed? Today's count includes teen-agers who quit high school to get a job, oldsters who want to supplement their social security payments, marginal workers primarily interested in soft jobs at good pay, and women who enter the labor market only during periods of tight labor conditions, plus all others who would be willing to take a job if conditions suited them. They do not even have to be actively looking for a job; maybe the job they prefer does not exist in their area. In addition, the count includes all those millions of workers who, at any given date, are in the process of changing jobs.

To what extent, if at all, should the above be counted as unemployed? Obviously, coverage should be restricted if the term is to mean anything. Instead, under labor union pressure, coverage is progressively being increased. Latest change was made last year when another quarter million were arbitrarily added by a change in definition. Previously, in 1954, and again in 1956, the sample was enlarged by including more areas. Was it just a coincidence that each change resulted in an addition to the unemployment count? The January 1954 change was especially interesting. In that month, the sample was enlarged to cover 230 areas as compared with only 68 in the old sample but the number of households remained the same—25,000. This change in coverage raised the unemployment guesstimate to 3,087,000 for the month against only 2,359,000 as based on the old sample. A jump of 31 percent.

Estimates of both employment and unemployment, by the United States Department of Commerce, are based on personal interviews each month involving 35,000 households (sample increased in 1956). The unemployment count includes all idle persons of Commerce, are based on personal interwork.

The amount of unemployment at a given time depends not only on the number employed on that date, it depends also on employment levels of preceding months.

Thus, much of today's unemployment was created by the boom conditions of 1955 and 1956 which brought into the labor force many persons not normally a part thereof. This influx of temporary female help and marginal male workers brought the Nation's 1956 labor force up to 59.3 percent of the noninstitutional population, 14 years of age or older, an alltime high proportion.

A breakdown of the labor-force figures shows that a sharp increase in the proportion of women workers has been the cause of the steady rise in the labor force. In 1940, only 28.1 percent of working-age women were in the labor force; by 1950 this had risen to 33.1 percent. The latest month reported, November 1957, reveals 36.4 percent. In contrast, the proportion of working-age men in the labor force had dropped from 83.9 percent in 1940 to 80.8 percent today.

Admittedly, today's unemployment rolls are not made up exclusively of marginal workers or persons not normally part of the labor force. Many persons of this type are still gainfully employed while some persons who are part of the regular labor force are out of work. Nothing in this article should be construed as belittling the hardship of those families whose breadwinner is out of work through no fault of his own.

This article does wish to point out that (1) the unemployment count is inflated to the point where it has little meaning, and (2) that in any case, unemployment should not be used, as it is now being widely used, as the chief measure of economic conditions.

Employment, not unemployment, measures a nation's prosperity. When current employment data are available, they will show an economic condition much more favorable than indicated by the widely publicized unemployment figures.

Time for a Refresher Course

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BETTS. Mr. Speaker, the following editorial from the January 18 issue of the Marion Star offers the basis for some sober thinking in the matter of science education. In the face of great pressure to spend vast sums in this field, it might be well also to give some serious consideration to such fundamental ideas as are pointed out in this editorial:

TIME FOR A REFRESHER COURSE

It is seldom that any Federal budget allotment wholly satisfies those most directly concerned. The administration's billion-dollar educational program, which calls for $600 million from the States, is no exception.

Although the program, pared to a minimum, would cost the Federal Government about $224 million for the first year and an estimated billion dollars by the time of its expiration date 4 years hence, advocates of a more lavish outlay accuse the planners of being more concerned with a balanced budget than with the school crisis.

The exact size of the best program is always debatable, so it would be well to analyze the entire educational system in the United States and redesign the program to fit the nuclear age.

The current educational trend of substituting sugar-coated subjects and courses that provide only a smattering of information has unfitted the mind of many American students for hard work and clear thinking.

Statistics show how far we have wandered from the field of fundamentals in education.

Nearly one-fourth of all high schools in the United States now offer no courses in chemistry, physics or plane geometry. One-third offer no trigonometry, solid geometry or advanced algebra. Many of these schools, of course, are small.

But during 1956 only 34.4 percent of all high-school students took chemistry; 24.5 percent physics; 9.2 percent trigonometry; 7.6 percent solid geometry.

These subjects are fundamental for careers in science.

What is the solution?

Kevin McCann, president of Ohio's Defiance College, has come up with one suggestion that makes sense. Though admittedly not the cure-all, Mr. McCann says: "The solution may lie in the great pool of potential high school and college level science and math teachers in the small colleges which are devoted mainly to training teachers."

Mr. McCann suggests that the important thing is greater use of equipment and supplies that are too expensive for schools to buy and of teaching aid packages—films not now in existence but in preparation under National Science Foundation grants * * * the cost of these packages would be relatively small compared with a giant scholarship program."

In a Nation where the free-spending school of thought has predominated for so long, the logical place to begin revamping our education could well be with each of us, individually. A refresher course in practical economics would be a good starter course.

Resolution by the Oregon State Bar

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mrs. GREEN of Oregon. Mr. Speaker, many of us have, for years now, been concerned with the lack of effective utilization by the armed services of the skills and training of many of the persons under their jurisdiction. Corrective legislation has been enacted to prevent such waste with respect to some of the professions—but not with respect to all.

Depletion of our limited reservoir of skilled manpower through wanton waste should not be permitted to continue. This is particularly true in the case of attorneys, who are not now receiving compensation commensurate with that paid to members of the medical and other learned professions.

The need for remedial legislation is ably pointed out in a resolution adopted by the board of governors of the Oregon State bar. In order that the seriousness of the current situation may be brought to the attention of my colleagues, I have asked unanimous consent that the resolution adopted by the board of governors be printed in full in the CONGRESSIONAL RECORD:

Whereas there has been introduced in the Congress of the United States Senate bill 1165, which provides for additional pay and promotion for members of the legal profession serving with the armed services in a legal capacity, bringing the pay and promotion status of military lawyers to a level commensurate with the special professional pay and promotion schedule now available to members of the medical and other learned professions serving with the military; and

Whereas it is the sense of the board of governors of the Oregon State Bar that lawyers should receive such commensurate compensation and rank, for their professional training and skill are certainly as valuable to the Armed Forces as those of the other learned professions; that the armed services are having great difficulty in procuring and retaining even a minimum of military lawyers, and that if they are unable to do so, it will be impossible to administer properly the present Uniform Code of Military Justice; that said Code was made the basis of military justice largely through the efforts of civilian lawyers, and that we therefore have a responsibility to insure its successful operation; and that, finally, the Oregon State Bar has a peculiar interest in and knowledge of the needs and problems of the armed services: therefore be it

Resolved, That the board of governors of the Oregon State Bar indorses Senate bill 1165, and urges upon the Congress of the United States its passage, and the secretary be and he is directed to send copies of this resolution to the Members of the United States House of Representatives and the United States Senate from this State, and to the American Bar Association.

BOARD OF GOVERNORS OF THE
OREGON STATE BAR,
By GEORGE W. NEUNER,
President.

Attest by:

JOHN H. HOLLOWAY,
Secretary.

JANUARY 25, 1958.

The Late Hyman Landau of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of February 17, 1958, which comments on the passing of Mr. Hyman Landau, leading businessman and civic leader of Wilkes-Barre:

HYMAN LANDAU

Active on the local scene for more than a half century, Hyman Landau, Wilkes-Barre businessman, civic leader, and prominent figure in the Jewish community, was a self-made man. His was the familiar success story of the poor immigrant boy who made good in his adopted country and city.

No newcomer to these shores was more grateful to America than Hyman Landau for the way the doors of opportunity were opened to him after his arrival in Wilkes-Barre from his native Austria-Hungary. A watchmaker by trade, he became associated with the Landau firm, then owned by his uncle, the late Samuel Landau. From this modest beginning stemmed a career that easily qualified him for a place among the city's leading businessmen.

The three famous words, "God Bless America," immortalized in verse by Irving Berlin and sung by Kate Smith, were more closely identified with Mr. Landau locally than they

were with Mr. Berlin and Miss Smith nationally. He uttered them on countless occasions with a mingled sense of pride, humility, and appreciation, furnishing an index to his character and an explanation of his extracurricular activities.

Hyman Landau was regarded in business circles as a resourceful and courageous executive. Trained in the exacting school of experience, he learned to think things through before embarking on an enterprise, weighing the possibilities carefully. He acquired a well-deserved reputation as a keen observer, capable of anticipating trends. As a merchant, financier, and real-estate operator, he played a leading role in northeastern Pennsylvania.

In the spheres of religion, philanthropy, and civic affairs, he carved a second career that duplicated his worldly success. Here again astuteness and qualities of leadership asserted themselves with beneficial results. His charity crossed the boundaries of creed and nationality, his only concern being the worthiness of a cause or individual.

Wilkes-Barre is going to miss this enterprising citizen who contributed so substantially to its progress since the turn of the century.

The New Look of the Constitution

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. DORN of South Carolina. Mr. Speaker, I respectfully call to the attention of the House this splendid speech delivered by Donald R. Richberg almost 9 years ago. He accurately predicted the continuing attack on the Constitution of our country and its dire consequences to our people. Mr. Richberg's speech was foresight and I recommend it to the Congress as still being timely and worthy of the attention of each of us:

THE NEW LOOK AT THE CONSTITUTION, AN ADDRESS BY DONALD R. RICHBERG AT THE ANNUAL MEETING OF THE VIRGINIA STATE BAR ASSOCIATION, WHITE SULPHUR SPRINGS, W. VA., JULY 29, 1949

Long, long ago, when the sages of today were sweet 16, there was a Constitution of the United States which looked like the spirit of 1776. Today that Constitution has a new look. In fact, to many it has the look of the beckoning spirit of national socialism.

What has happened to the dear, old Constitution? Have the gland treatments, the face lifting and face saving of big and little politicians actually endowed it with new vigor, or have they merely sapped its mature vitality in trying to make it over in the image of headstrong youth?

For the moment it appears that even Communists are impressed by this appearance of rejuvenation. They may be half-sincere in asserting that it is no longer necessary to overthrow our Government in order to establish their slave Utopia. All they need to do, apparently, is to take over the Government, whose stumbling advances into socialism, are, step by step, being sanctified by Congress and courts as within the constitutional objectives of the National Government.

The impediments to tyrannical authority, created by a division of powers between the executive, legislative, and judicial branches, have been gradually destroyed by creating commissions in which laws are made, interpreted, and executed by one body of men. It will soon be only a short step to the designation to the President as lord high commissioner of the general welfare, invested with authority to regulate the business, the agriculture, and the labor of the Nation, and to establish economic security and slavery, from the cradle to the grave.

We made a tentative step in this direction in the late, never-to-be-forgotten NRA with which I had some experience. But neither the Congress nor the Supreme Court had been sufficiently liberalized in 1935 to approve this noble experiment. The Congress knocked it down; and the Supreme Court sat upon it so heavily that it suddenly expired. Nevertheless the subsequent validation of the agricultural acts, the Wagner Act, the Wage-Hour Act, the price control acts, the social security acts, and other socializing laws, indicates that the destruction of the NRA was only a stumble in the onward march of paternalism.

With constitutional barriers laid low we may now go forward to establish enough national commissions to regulate all our economic and social activities. Eventually, with farmers, businessmen, and workers, and their political leaders, all completely dependent upon the Federal Government for a livelihood, the President and his Cabinet, as a politburo, should be able to lay down the party line and have it followed by all who prefer economic security to liberty—which is currently assumed to be a vast majority of the people. But, what of the guaranties of individual liberty which are written in the National Constitution? Will they not stop the march of regimentation and prevent the enforcement of laws that compel individuals to live and work under the direction of an all powerful National Government? Many years ago the Supreme Court laid down the law in this clear language:

"The liberty mentioned in that amendment [14th] means not only the right of the citizen to be free from the mere physical restraint of his person, as by incarceration, but the term is deemed to embrace the right of the citizen to be free in the enjoyment of all his faculties; to be free to use them in all lawful ways; to live and work where he will; to earn his livelihood by any lawful calling; to pursue any livelihood or avocation, and for that purpose to enter into all contracts which may be proper, necessary, and essential to his carrying out to a successful conclusion the purposes above mentioned" (*Allegeyer* v. *Louisiana*, 165 U. S. 578).

Is that the law today? Ask the farmers, the business men, the workers, unionized or independent. Do they enjoy such liberty, or are they working under a multitude of restrictions enforced directly or indirectly by the National Government? Ask them what percentage of their earnings are taken by the National Government, and spent for them as a father might take and spend the earnings of his immature children.

It is true that the Supreme Court has recently reasserted in strong language the rights of free speech, freedom of the press, freedom of assembly, freedom from police oppression, and unfair trials for crime. The constitutional liberties of the actual, or probable, or prospective enemies of society, criminals, revolutionaries, and fanatics, are still jealously, even tenderly, protected. No one but a Communist—with his tongue in his cheek—could deny that our Constitution still provides a stout shield for every wrongdoer.

Every criminal can have his day in court; and if he engages in profitable crime it is a long, long day. Gangsters may slay and torture; but even the most notorious must be handled with kid gloves by a policeman. Thieves and spies and crooked gamblers may misuse the telephone; but policemen may not intrude on the privacy of their conversations. Communists may picket courts and seek to intimidate juries; but policemen must not interfere with their free speech. Massed armies of pickets may terrorize workers, destroy business and beat up men who want to work; but the National Government must not interfere, unless citizens outraged by lawlessness take the law into their own hands. Then there is a great clamor for the National Government to move in to make sure that the constitutional rights of the original lawbreakers are protected.

Please do not misunderstand me. I believe that the constitutional rights of every man accused of crime should be protected. I believe that officers of the law first of all should be compelled to obey the law. But, I do detest the political hypocrisy that proclaims that murders and organized crime by gangsters and labor gorillas in northern cities must be dealt with by the local police, because a Federal law would be unconstitutional; and in the next breath demands the passage of a Federal law to curb the comparatively rare outbreaks of lawlessness in the South.

There is another new look of the Constitution affecting civil liberties which I deplore; and that is the tendancy to subordinate the civil liberties of a majority of the people to special privileges which are granted to a politically strong minority. Every lawyer knows that the Constitution does not grant a single right to any minority of persons. It only grants rights to individuals; and every liberty guaranteed is the liberty of an individual. And so it follows that your right and mine must be exactly the same. Yet, we hear solemnly proposed, and endorsed by political party platforms, a Federal law to compel businessmen to employ workers whom they do not want to employ and to compel workers to work with men with whom they do not want to work. This is called in unconscious irony a fair employment practice act.

The announced purpose of such a law is to protect the alleged civil right of persons to employment which might be denied to them because of race, color, or religion. There is not one word in the Constitution establishing any such right. And so the drafters of the Federal bill thoughtfully wrote in a provision by which Congress would undertake to establish this nondiscrimination in private employment as a civil right. However, there is not one word in the Constitution giving the Congress power to create such a new civil right. On the contrary the 10th amendment provides that:

"The powers not delegated to the United States by the Constitution are reserved to the States respectively, or to the people."

And, most decisively, the ninth amendment privides that:

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

There is no more elementary right of any free people than freedom of association. There is a fragment of this right specifically preserved in the right of the people peaceably to assemble, which is protected by the first amendment. But the overall freedom of association in work or play is clearly a right retained by the people of the United States. This is an individual right which not only protects voluntary association but also must forbid any compulsion to associate. Otherwise it would be meaningless. If I could force my companionship on you, then I could destroy your freedom. You and I must have equal rights to accept or to refuse association with each other.

FEPC legislation, which would compel one man to employ another whom he does not wish to employ, also violates the constitutional liberty of contract to a degree never before attempted. Laws have been enacted making certain contracts illegal, or controlling the form or substance of contracts. But, so far as I am aware, this is

the first instance of an attempt to compel a man by law to make a contract with a person with whom he does not wish to make a contract.

Indeed, a contract under which an employer would be forced to serve an unwanted employee so closely resembles a contract under which an employee would be forced to serve an unwanted employer, that involuntary servitude appears to be the result in both cases. Even labor laws, which require bargaining and affect the scope of contracts, do not compel a man to make a contract. But FEPC laws, making it an offense to refuse to hire an applicant because you don't like him, would cut the heart out of liberty of contract. If such a law be held constitutional then where is the constitutional barrier to complete political control of labor?

Organized labor may in time learn this lesson, as it learns so many lessons—too late. Labor fought successfully for years to stop discrimination by employers against union members. But, when recently laws were passed to forbid a closed shop discrimination in favor of union members, the unions appealed in vain to the Supreme Court to declare such laws unconstitutional. So, if tomorrow it should be held that an employer has no right to exercise his free will in selecting his employees, then day after tomorrow it may be held that the employee has no free will to select his employer. Would this be involuntary servitude? Apparently not, if the Supreme Court should approve the present arguments of the FEPC advocates, because in a law forbidding discrimination against an employer the employee would have the same right that an employer now has under FEPC. He would not be actually compelled to make a contract of employment, because he would be free to stop earning a livelihood.

Perhaps I have said too much about FEPC, but since this horrible prospect is riding high on the tidal wave of the future, it seems well to point out how rapidly our ancient landmarks will be washed away whenever this wave breaks over the few constitutional barriers that still remain between us and the deluge.

The greatest constitutional barrier against the tyranny of national socialism has been so battered by storms of reform in the last 50 years that when its broken reef occasionally appears even scholarly critics refer to it as the anachronism of States rights. The new look of the Constitution has been fashioned in the image of headstrong youth. The young man in a hurry commonly assumes that the 14th amendment, plus the national money power granted in the 16th amendment, plus the judicial enlargement of the national commerce power, have made the States hopelessly subordinate to, and dependent upon, national lawmaking. In youthful ears any assertion of States rights sounds like a voice from the tomb wherein John C. Calhoun, Henry Clay, Jefferson Davis, and all their ideas of State sovereignty are supposed to be forever and completely buried.

Strange to say, the political principles of Thomas Jefferson are still regarded as so vital and enduring that political partisans of every stripe from conservative to radical acclaim his wisdom. Yet no man exceeded Jefferson in hatred and fear of the inevitable tyranny of centralized government. It was Jefferson who wrote that "A single consolidated government would become the most corrupt government on earth," and who prophesied that the road to destruction of the United States would be "by a consolidation first, and then corruption as its necessary consequence."

Also he wrote, "It is not by the consolidation or concentration of powers, but by their distribution, that good government is effected. Were not this country already divided into States, that division must be made that each might do for itself what concerns itself directly, and what it can so much better do than a distinct authority." (Writings of Thomas Jefferson; H. A. Washington edition, VI–543; VII–216, 223.)

In his first inaugural Jefferson called for the support of the State governments in all their rights as the most competent administrations for our domestic concerns and the surest bulwarks against antirepublican tendencies.

The principle of local self-government was written into the Constitution, not merely to induce the separate colonies to agree to the creation of a Federal union, but primarily to maintain the democratic responsibility of a government which resides close to the people who are governed and which is immediately subject to their scrutiny and their control. Let me quote the penetrating wisdom of Charles Warren, a profound student of our Constitution:

"The framers knew from experience, and they intended to preserve the principle, that a local government is a responsible government—a government which can never long be conducted in defiance of the opinions, the desires, or the prejudices of the governed; they knew that a distant and centralized government had been and could be conducted otherwise; and they were not inclined to authorize such a central government to interfere with or administer their local affairs, unless absolutely necessary for the safety, welfare, and permanence of the Nation as a nation."

How has it come about that today this profound principle is ignored and we have national laws regulating such matters of intimate and local concern as labor relations, wages and hours of work, agriculture, the growing and marketing of crops, manufacturing, merchandising, mining, and housing, with national tenacles stretching out to control education, the practice of medicine, and the unknown, glimmering, beckoning objectives of social and economic security.

No one can doubt that such an extensive field of operations for the national Government was never contemplated by the authors of the Constitution. No one can doubt that they deliberately denied any general police power to the national government which might authorize the extension of its authority into such realms. It was James Madison who wrote in the Federalist (January 29, 1788): "The powers reserved to the States will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people and the internal order, improvement, and prosperity of the State."

But, we are told that the social and economic conditions of 1787 have disappeared. We live in an industrialized civilization, with the lives and industries of 150 million people woven into one national enterprise by transportation and communication facilities unknown to our forefathers. We have become so interdependent upon one another that, it is argued, only national laws can insure that cooperation and harmony which are essential to our safety, health, and welfare. In a word, we are told that the National Government must exercise a police power superior to the police power of the States; and by legalistic magic such a power is being transmuted out of the national power to regulate commerce among the several States, or out of the national power of taxation, or—with the ghost of Madison violently protesting—out of the general welfare clause.

If, however, we should recur to fundamental principles, we would see that, while these social and economic changes may seem to call for more national lawmaking in order that the American people may be efficiently governed, they more insistently demand more local lawmaking if the American people are to continue to govern themselves.

A central Government of 150 million people has already become, and will remain, a Government of pressure groups and political traders. A central Government, gathering and spending billions of dollars for national defense has a clear objective and unquestioned responsibility. But, a central Government, gathering and spending billions of dollars to advance the general welfare, has the dubious objective and the questionable responsibility of taking from one man to give to another, of robbing Peter to pay Paul, of satisfying those pressure groups that may deliver more votes than the pressure groups unsatisfied, of feeding citizens who are vocal and organized at the expense of citizens who are dumb and unorganized, of paying for the votes of classes and communities that will support the party in power, out of the pockets of the opposition. This is, bluntly, that present corruption of Government which Jefferson warned was inevitable after centralization.

Isn't this also a defect of all local governments? Certainly it is a defect of all popular governments. But there are many redeeming virtues in misgovernment by cities, or counties or States. First, they provide the kind of misgovernment which the people who are governed want, or deserve. Second, they are so close to the people that their misdeeds are easily seen and exposed. Third, the responsibility of their public officials is direct and obvious. Fourth, a bad local government can be changed as soon as a majority of the people are informed and anxious to have a change.

On the other hand, national misgovernment, entrenched in one part of the country, spreads its evil authority over another part where the people neither want nor deserve such government. For a pertinent example, Virginia is a State whose citizens as a whole believe in economical government. But, its Senators and Representatives in Congress are powerless to save citizens of Virginia from taking and spending of their incomes by the National Government in a spendthrift paternalism that would not be tolerated within their own State.

Consider for a moment the regulation of labor relations by the Federal Government. The pressures of organized labor come from the industrial centers of the Nation, and largely from a few great industrialized States. The people who inhabit the vastly larger area of the United States are economically and socially antagonistic to the monopolistic demands and oppressive practices of labor unions. As freemen they should be permitted to live and work free from the remote controls of remote labor organizations which are endowed with special privileges and protected in evil practices by special immunities granted by a remote National Government.

It is a bitter complaint of organized labor that 16 States have made the closed shop unlawful. It was argued to the Supreme Court that these were States where organized labor was not strong enough to defeat such laws; so the Supreme Court was asked to hold them unconstitutional. The Supreme Court happily declined, being fortified by the provision of the Taft-Hartley Act which graciously permitted the States to enact such laws. Now in the battle against the Taft-Hartley Act we have seen the full power of the President and a national party machine exerted to impose upon the States a renewed tyranny of national labor law enacted to advance the special interests of organizations of a minority of the people, living and working in a small fraction of the total area of the United States.

This discussion could go on indefinitely. Let me terminate it abruptly with a few general observations. As an active practitioner, and a prospective teacher, of con-

stitutional law I must make a clear distinction between what the law is and what the law ought to be. The Supreme Court is the final arbiter of what the law is. But the people are the final arbiter of what the law ought to be and eventually shall be. If they believe that the National Government should have and exercise greater powers to promote the general welfare they will find the way to enlarge its authority. If they believe that more local self-government is essential to their liberties and their pursuit of happiness, they will find the way to enlarge the authority of the States and the municipalities.

It was Herbert Spencer who said that, "No philosopher's stone of a constitution can produce golden conduct out of leaden instincts." If the leaden instinct for economic security so dominates the common thought that men and women are willing to accept the paternalism of a national welfare state, then the golden dream of individual liberty and genuine self-government will fade out of the Constitution and out of the lives of the American people. But, if that golden dream, which inspired the writing of the Constitution, and inspired the American people to lead the advance of civilization for more than 160 years—if that dream still inspires them, they will reestablish home rule as the only trustworthy guardian of their liberties; and they will never cease to fight against that centralization of power which, as Jefferson said, "has destroyed the liberty of man in every government which has ever existed under the sun."

Tycoon's Success Formula

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mrs. GREEN of Oregon. Mr. Speaker, recently the Interstate Commerce Commission, utilizing procedures designed to weaken greatly public trust and confidence in the work of that Commission, granted a general freight increase to the Nation's railroads. These rates will operate so as to discriminate unfairly and unjustly against the West.

Many persons—including myself—protested the unseemly haste with which these rate raises were "railroaded through" the Commission.

I ask unanimous consent that there be printed at this point in my remarks the letter I addressed to the Honorable Howard G. Freas, Chairman of the Interstate Commerce Commission, protesting against these unseemly procedures.

But there is a further episode in connection with this rate increase which falls clearly within the jurisdiction of the Subcommittee on Government Oversight. I refer to the activities of Mr. Owen Clarke, who, just before he stepped out as Chairman of the Commission, issued the order setting in motion these hasty procedures. Having done so, he left the Commission and took a position with the Chesapeake & Ohio Railroad.

Mr. Clarke's hasty departure leaves many unanswered questions relative to the judicial type of conduct expected of one occupying a position such as did Mr. Clarke.

I have already addressed a letter to the Subcommittee on Government Oversight asking that this matter be investigated.

I desire also to call the attention of my colleagues to a pointed editorial appearing in the International Woodworker for February 12, 1958 in which the many unanswered questions concerning Mr. Clarke's appointment are raised. Under unanimous consent, I include the editorial in full in the CONGRESSIONAL RECORD:

JANUARY 21, 1958.

Hon. HOWARD G. FREAS,
Chairman, Interstate Commerce Commission, Washington, D. C.

MY DEAR MR. CHAIRMAN: This is in reference to *Ex parte 212* relating to the requested general railroad freight increase.

I wish to protest most strongly, in the first place, the procedures adopted by the Commission in this case. As categorized in a communication received from the Governor of Oregon, "the Commission handling of the present railroad freight-rate increase procedure (*Ex parte 212*) * * * has been extremely damaging to the public welfare including that of the State of Oregon."

The Governor, in his communication, went on to say:

"On December 27, while Clarke was still chairman, the Commission issued an order scheduling hearings concerning *Ex parte 212* under the so-called short-form procedure. This order generally provided that all statements, all evidence, all exhibits, all showings of any description made or submitted by the public in defense of the public interest must be prepared and on file with the Commission at Washington, D. C., on or before January 20, 1958."

"This order and the supporting statements of the railroads which, of necessity, have to be answered by the public by January 20, were not received by this office or any Pacific coast commission prior to January 6 or 7, 1958. This left exactly 6 working days in which to review voluminous statements of railroad officials and thereafter prepare evidence and exhibits in opposition to the proposed rail increases. It is utterly impossible for the Oregon Public Utility Commissioner's staff properly to prepare any type of responsible exhibits or evidence in this short space of time."

I cannot agree too strongly with these statements by the Governor. To give opponents such an extremely short time to review the voluminous, 174 page, complicated and complex tariff proposed by the railroads is preposterous.

I urge the Commission, therefore, to extend the date for the filing of replies and to extend the time permitted for oral arguments. The possible serious economic consequences to the economy of Oregon warrant, in my opinion, the Commission's giving all parties a full and fair opportunity to present to it all the facts.

It should be borne in mind that if the Commission should permit these new tariffs to go into effect subject to refund provisions upon subsequent investigation, it will not be of assistance to those many shippers in my State who will have no refund coming because the increased rates priced them out of the market. Equity demands, therefore, that the Commission have before it all possible relevant facts before it arrives at any decision permitting the proposed increased rates to go into effect even on a temporary basis subject to later scrutiny.

This is a matter of such grave importance that I am calling it specifically to the attention of Congressman MOULDER, chairman, Subcommittee on Government Oversight, with the request that during the course of his current investigation, he make certain that this matter is thoroughly studied and legislative safeguards be proposed to prevent a repetition of such an incident.

I wish to protest, in the second place, the proposed tariff because of its discriminatory features against shipments from the West. I protest specifically as discriminatory the 2 percent increase proposed in line haul transportation because its being put into effect would have such a disasterous effect upon the shipment of lumber products. I protest, also, the extraordinary high increases on accessorial or special service charges, some representing an increase of as much as 82 percent. I do hope that the Commission will go into each and every one of these proposed increases thoroughly and painstakingly before permitting them to become effective.

I urge the Commission, in its review of this matter, to give the utmost consideration to this question of discrimination against Western shippers. The transportation tax already works unfairly against this group. We should be careful not to compound this unfairness.

During the last weeks, I have received a surprisingly large number of letters from individuals and concerns in my district who would be seriously injured by the allowance of these increases, and who have felt so strongly about it that they have taken the time and the trouble to write. These letters are on file in my office and are available for your inspection.

Sincerely yours,

EDITH GREEN.

[From the Portland (Oreg.) International Woodworker of February 12, 1958]

TYCOON'S SUCCESS FORMULA

The American people must look like a flock of lambs to the gluttons of industry.

That's the only reason we can figure for their calloused disregard of principle, not to mention the already low standards of business ethics currently in vogue, as they fleece the public at every opportunity.

The case we have in mind involves the curious ethics of one Owen Clarke, until recently Chairman of the Interstate Commerce Commission, the so-called public agency charged with regulating interstate transportation in the people's interest.

Mr. Clarke is now a vice president of the Chesapeake & Ohio Railroad.

He was hurriedly appointed following the scheduling of a shotgun hearing on railroad requests for a rate increase in the western area of the United States.

The railroads decided that they needed a 2-percent increase in rates on lumber and lumber products shipped from the Western United States and a flat 10-percent increase in loghauling rates in the same area.

Mathematical genius is no requirement to see that this will raise havoc with the competitive position of the West in relation to the South, where freight rates already bestow sizable advantages.

This did not, however, stop Mr. Clarke from deciding, on the 27th of December, that a hearing was necessary. He proceeded to notify interested western public utility commissions and generously gave them until January 20 to answer the voluminous briefs prepared over the past several months by the railroads.

Irate westerners had no more than screamed with their first pains of anguish when Mr. Clarke forthwith resigned from the ICC and became, overnight, a vice president of the C. & O.

Meanwhile, in the words of Howard Morgan, public utilities commissioner for Oregon, there has been a noticeable lack of publicity on the salary to be paid Mr. Clarke, or the duties of his office, by either him or the C. & O.

We can't help but wonder at this reticence. Mr. Clarke has climbed rapidly up the ladder of success, but unlike Horatio

Alger, seems bashful about giving out the formula.

He ought to be bashful. Nothing more shameful in the history of public regulatory bodies has happened in recent years.

It is a commonly accepted standard among public utility economists that you don't go from a public body like the ICC directly to the payroll of those you are supposedly regulating without the elapse of a couple of years or more.

The fact that he went directly to the C. & O. shows better than anything else he could have done that he did sell out to the railroads.

Another serious factor in this case is the effort of Mr. Clarke's action on the public reputation of the ICC. No one can now assume that any decision rendered by that body during Clarke's tenure of office was honestly and impartially arrived at.

It's a fair conclusion, in our opinion, that Clarke's every act as Chairman of the ICC was taken with a view to increasing his value to the railroads. Apparently the C. & O. put up the highest ante.

We recommend to the Congress that they give Mr. Clarke's promotion the benefit of a thorough public investigation, so that others may learn this tycoon's success formula.

A Mother Asks Some Pertinent Questions Which Can Be Answered Only by Action of the Committee on Ways and Means

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. JONES of Missouri. Mr. Speaker, it is not often that I avail myself of the opportunity to extend my remarks in the Appendix, and I have attempted to reduce the amount of extraneous matter that clutters up the Appendix much too frequently.

But I received a letter this past week that is out of the ordinary, in that it gives a presentation of a condition far more eloquently than I could express myself on the subject of the need for more liberal exemptions in our income-tax structure.

This letter is written by a mother. It is written from the heart. It is, to me, one of the most forceful presentations that I have read on this subject, and it makes sense. I especially hope that it will be read by the members of our great Committee on Ways and Means which has the responsibility of adjusting our tax laws to bring about greater equity in the payment of taxes.

I have omitted the names from this letter, for after all the names are immaterial and this letter could have been written by any one of many hundreds of women who live in the 10th Congressional District of Missouri. It expresses, I believe, the views of many thousands more in similar situations all over this country.

This mother does not have all of the answers to one of the greatest problems with which we are faced, but she does have some suggestions, which, if translated into law, would go a long way towards correcting some of the inequities which exist.

To my colleagues, I say, read this letter and see if you are not impressed just as I have been. To the members of the Committee on Ways and Means, I say, how can we justify further delay in doing something to help families like the one described in this letter?

Here is the letter. Read it, please:

Congressman PAUL C. JONES,
Tenth District, Kennett, Mo.

DEAR SIR: I would like to introduce myself to you.

I am ——— ———, 41 years of age, the wife of ——— — ———, and the proud mother of 5 fine children; 4 boys and 1 girl, ages, ranging from 18 years to 2 years old.

My husband is a railroad brakeman earning a so-called decent wage; and as he is the sole bread winner in our family, it is certainly a problem planning a budget in raising a family of this size and giving them not the luxuries of life but the necessities they need. With the rising cost of living since the Republicans are in office, I do well to provide them with food and clothing—a place to sleep and keep warm. It certainly doesn't pay to raise a family these days. I would be so grateful if it were possible some time to shop for myself for a new dress, hat, and shoes, all at the same time; but what with? Wouldn't I love to have a dinner out and see a movie with my husband if we could afford a baby sitter and the price of a dinner and a movie.

My beef is this—Mr. Jones, I can't understand why? When a person reaches the age of 65 years and is still working—he gets twice the amount of exemption given him—$1,200 for himself, and his wife also if she is 65 years or over. I get $600 exemption for each child, and who can raise a child reasonably on a $600 exemption? Why can't the Government give the mother and housewife the benefit of the tax exemption, instead of a person 65 years of age and over? A person of that age doesn't eat as much as a growing child; neither does he buy the clothes that a child needs to go to our schools or to keep warm in winter; and to help combat bad colds and other diseases he may contact.

The Government hasn't, as far as I am concerned, given much thought to the common laboring man with large families. Oh, sure, it has been said that if a person wants security let him go to prison; there he can eat and have a bed to sleep in. I, for myself and my family, would like to have more than that. I want a decent living for my family and security for them in the future years to come. How can one send their children to college on a $600 exemption—deny the smaller children in the family of food and clothing they need, in order to send the older ones to college.

Maybe it would be a good solution to suggest that the Government send the children to colleges—they seem to be so eager to help with foreign aid to other countries and to help with their problems (that I don't think is necessary). Of course it is not for me to think about any such plan for I am just a small cog in this great democracy that we live in. Uncle Sam doesn't hesitate one moment when he needs fine, strong, alert, mentally fit, and well fed boys, when we or some foreign country go to war to take our boys. Has he stopped to think that it is the mothers who have raised them, sacrificing everything (and proud of it) to make them into the fine strong boys that they are?

What about this new deal about the doctors and medicines for a person 65 years or over; the Government again allows them the full deductions on this issue; but I have to have a certain percentage of the wage my husband earns before I can deduct the doctor bills and medicines from his income tax. Is this fair? Does a doctor charge me less when I go to his office than he does a 65-year-old person? He does not. Most all people that age have false teeth, eyeglasses, and about everything else they need in this line. But in order to raise my children sensibly, I am supposed to take my five children, my husband, and myself to the dentist and doctor for regular check-ups and it isn't free.

It is plenty damn disgusting to we mothers who are really interested in having large families to have to pay these high costs of living and taxes. I don't have the ambition to be wealthy, but I would like to see our great leaders give some thought to the poor laboring people who have given so much to have such a fine country. We have always had a great country built on the belief of equality for all; but in the past years we have failed to live up to this great issue. Now it is seemingly so, that all big corporations are thinking about is to fight the common laboring man; and speaking of the Government giving breaks to some one or body—it is for the wealthy man. If the Government would see fit to allow us more exemptions for our children, then we, as parents, would be able to pass more bond issues for better schools to send our children to; more money to be paid for the best teachers available to teach them, and send them to colleges to further their educations. We certainly can't do this on the $600 exemption we are getting now.

Mr. JONES, I do hope and pray that our Congressmen and Senators we voted for, and have faith in, will give more consideration and thought to we poor people with large families; in asking the Government to allow us more exemptions in order for us to be able to provide a better living and education for our children in the near future. I, as one mother, would be ever so grateful.

Yours very truly,

Mrs. ——— ———.

New Tune for Tariff League

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following article from the Salt Lake Tribune, of February 9, 1958, which contains some provocative observations on the timely subject of tariffs and foreign trade:

NEW TUNE FOR TARIFF LEAGUE
(By Robert W. Bernick)

Perhaps the American Tariff League should change its name.

Not only is tariff a bad word in some quarters of this country but admittedly the first impressions of such an organization on minds of a generation educated on free trade is that of a gray-bearded, outmoded, reactionary, narrow-minded, isolationist conspiracy to somehow turn the clock back.

ATL, of course, is a lobby agency, just as is the opposing Committee for National Trade Policy.

But it is a pleasure to report that reading of the Tariff League's recent 117-page analysis of the United States world trade policy does not disclose any sentimental longing for the old days of high tariffs.

In fact, the ATL's program and its sponsors, in the eyes of future historians, might well make more sense than some of the suggestions of those in Government and business who very sincerely believe that trade in a competitive world can be planned.

The ATL survey discloses that:

1. A goodly number of important people both in business and labor are behind the league. They don't appear to be the type who fit the rusty image of the professional tariff advocate.

2. The league isn't just agin' things. It has a program it proposes as an alternative to mere extensions of the Reciprocal Trade Agreements Acts of 1934 and some of the abuses apparent in this legislation.

3. There is a good deal more to issues of trade and tariffs than most people, including this writer, have been aware. In short, everything isn't black or white on this issue.

Protection always has been of great moment to residents of this area as foreign competition is an important and frequently controlling element in wages, profit, and employment in the sugar-beet industry, mining (whether steel or nonferrous metals), chemicals (potash, phosphates, etc.), coal and petroleum.

Of course, the reciprocal trades agreement program is up for renewal in Congress this year and much effort is being made to stir up support. A 5-year extension is sought along with another 25-percent cut in import duties of goods and raw materials shipped into the United States.

The proponents, all doubtlessly as sincere as the opponents, are convinced that this extension and further cut in duties is necessary to save the present economic situation, if not the free world.

But the American Tariff League in its conclusions to its study, feels quite differently.

"Today's world," says the organization, "is at comparative peace after 11 of the last 18 years have been consumed with war or reconstruction from war.

"The world is, today, only beginning to adjust to the new economic dynamics which face it. As we arrive at this turning point in our Nation's foreign economic policy, let us review the experience of over 20 years' operation under present foreign trade policy of the United States.

"The evidence demonstrates that:

"1. The trade agreements program (of 1934) has not played any substantial part in economic recovery from the depression or in subsequent economic developments. These have, instead, come from basic dynamics stemming from other elements such as peace, new markets for new products, upsurge of population, and increases in personal purchasing power.

TRADE POLICY LESS RESTRICTIVE

"2. Our own tariffs have been reduced by as much as two-thirds and the United States at this moment has the least restrictive trade policy of any major trading nation.

"3. The program of multi-lateral agreements which the United States State Department has erected over the years on basis of the 1934 act and which finds expression in GATT (the international General Agreement on Trade and Tariffs) is rapidly becoming outmoded by trends in the world toward economic nationalism, preferential trading areas and commonpool markets.

"4. Harm has been wrought upon many American industries in placing foreign policy considerations ahead of domestic well-being.

"5. Some industries have been selected as 'expendable' in this battle of world power dynamics.

"6. Over the years, the tariff structure has become a complete hodgepodge and an entirely fresh appraisal is necessary.

"7. Industries essential to the defense mobilization base of the American people in case of war have been seriously weakened.

"8. The basic wage gap between American and foreign workers remains substantial and in general has not been offset in American industry by higher productivity in this country.

"9. Reciprocity, the basis of the original Cordell Hull policy, has not been achieved. Instead, foreign markets for American goods have been artificially expanded by military and economic aid.

"10. Present uncertainties in United States business conditions and some deterioration of industries affected by foreign imports, are cause for grave national concern."

These are the findings.

Among them are many specific items.

One-third of our entire imports are of items produced in foreign countries by low wage employees in plants, mines, etc., owned or controlled by American firms.

As has been remarked, generalized, broad-scale tariff reductions have made it possible for some firms to escape the burdens of unionism, lowering productivity, high taxation, social legislation, and other factors in the United States, all of which in one form or another are said to be contributors to the American standard of living.

Or take the theory that we have to import in order to export. How important are exports to the United States as a whole?

The research staff preparing this ATL report shows statistically that exports now make up 4.6 percent of the total United States gross national product. In the 1920's, before the passage of reciprocal-trade acts, they accounted for 5.4 percent of the GNP. Before World War I, in the era of alleged high tariffs, exports measured more than 7 percent.

WAGE DIFFERENTIAL A FACTOR

Take the wage differential, a very real factor.

The average weekly wage in United States manufacturing on basis of a 40-hour week in 1956 was $80.19 cents. Of the United Kingdom on basis of a 46-hour week, it was $34.64. In Japan, the work week is 50 hours and the wage $11.86. In Mexico, weekly wages in manufacturing are $11.10.

In India, workmen labor 46 hours a week for $4.74.

Or take the proposal that some sacrifices must be made by selected industries (lead and zinc?) to accommodate the United States trade policy.

The United States Chamber of Commerce estimates that for every 100 jobs permanently lost, a community is deprived of $360,000 in annual retail sales; $270,000 in bank deposits; 107 automobile registrations; 112 households; 40 jobs in other enterprises and 4 retail establishments.

And so it goes.

New Foreign Service Legislation Needed

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks, I would like to include the text of an editorial from the February 1958 issue of the Foreign Service Journal. The editorial in question calls attention to the need for a pay raise for Foreign Service employees, as well as a liberalization of the provisions of the Foreign Service Act relating to survivorship annuities for widows and children of deceased Foreign Service officers. Both of these subjects demand legislative action by the Congress during its present session.

The editorial follows:

NEW FOREIGN SERVICE LEGISLATION NEEDED

As of this writing (early January) and with the 2d session of the 85th Congress just opened, we can think of a number of measures designed to benefit employees of the Foreign Service which we would like to see presented to Congress and which we believe would receive its favorable consideration. We would put high on a list of these measures (1) a pay raise for Foreign Service employees and (2) a liberalization of the provisions of the Foreign Service Act relating to survivorship annuities for widows and children of deceased Foreign Service officers.

A general pay raise for employees of the Foreign Service is, we believe, clearly and urgently needed in order to enable Foreign Service personnel to meet the demands of the rising cost of living. The last pay raise was granted by Congress in 1955, since which time the cost of living has risen sharply, as we are intimately and somewhat painfully aware. A pay raise for Foreign Service employees and a general pay raise for all Federal Government employees are inextricably entwined, we realize, but we hope the Department will be ready with its own proposals as regards the Foreign Service when the attitude of the administration and the Congress on this subject is known.

As regards survivorship benefits for widows and children, we believe it is important that the current provisions of the Foreign Service Act in this respect be liberalized to bring them at least roughly into line with the benefits presently accorded the widows and children of civil-service employees. Under current provisions of the act, a retiring Foreign Service officer is hard put to provide adequate survivorship benefits to his widow and children, a matter which is of immediate concern to those officers faced with retirement in the near future but which should be of concern to younger officers as well.

To illustrate in a general way what is involved in this matter for Foreign Service officers, let us take the hypothetical case of Mr. Jones, a Foreign Service officer who is retiring this month from the Service with an annuity of $6,000. Under current law, Mr. Jones may elect, upon retirement, to receive the full $6,000 for the duration of his life, with no provision for annuity for his wife if he should predecease her, or he may elect to take a reduced annuity for his lifetime, in which case his wife would receive an annuity after his death. The maximum survivorship annuity he could provide under present law would be $2,500.

Mr. Jones, as in the case of any Foreign Service officer, wants to provide for maximum survivorship for his wife, but the choice is not easy, for he learns that the cost to him is a reduction in his full annuity equal to one-half of the sum he wishes to provide for his widow, in this case $1,250, leaving him an annual retirement annuity of only $4,750. This is a steep price for Mr. Jones to pay, but in all probability he reluctantly elects to accept the reduction so that, should he die first, his wife will have support for the remainder of her life.

A civil-service employee retiring on the same $6,000 annuity, on the other hand, would be able to provide a higher maximum survivorship annuity for his wife ($3,000) for a reduction in his own lifetime annuity of only $420. He could, therefore, retire on an annuity of $5,580 as opposed to Mr. Jones' $4,750 and at the same time provide more generously for his wife's support if she should survive him.

In addition to this more favorable circumstance, the civil-service retirement provisions allow for a payment to the widow of up to $600 per surviving child under the age of 18. There is no provision for such payments under the present Foreign Service Act.

All this adds up, in our mind, to the need for legislation which will liberalize the provisions of the Foreign Service Act pertaining to survivorship benefits. We urge the Department to seek the enactment of such legislation from this session of Congress.

The Late Honorable Dwight H. Green, Former Governor of Illinois

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LIBONATI. Mr. Speaker, the citizens of Illinois heard with the deepest regret that the Honorable Dwight H. Green, 61, died Thursday evening in the Presbyterian-St. Luke's Hospital, where he had been a patient since November 21 in a fight against lung cancer.

This regret was shared by thousands of his fellow citizens throughout the United States, as stated in the words of Democratic Mayor Richard J. Daley, of Chicago, who credited Mr. Green with sponsoring creation of the State housing board and pioneering legislation in neighborhood redevelopment acts, which established principles of sound government in future legislation affecting great cities in this field. Also, his labor legislation, dealing with workmen's and unemployment compensation, were strengthened under Governor Green's leadership. Again, legislation affecting mine safety laws were tightened under his administration. His programing of consolidated school districts and improvement of the eduactional system of Illinois pointed the way to educational advancement.

His appreciation of the members of the general assembly and their problems can best be understood by the passage of laws, during his two administrations, increasing salaries and the establishment of an adequate general assembly retirement system, providing pensions for legislators as a token of appreciation by an appreciative electorate for good public service.

Governor Green was a man of high principles, great ability, and strong personal integrity. He waged a constant fight, down through the years, to keep the Republican Party of Illinois faithful to the principles of conservatism. He was of unswerving loyalty in his political and personal friendships and retired his own importance to his party in the national picture, to advance the political aspirations of candidates for the presidential preferment of his party.

Dwight H. Green was Governor of Illinois during the war years, from 1941 through 1948, and because of his fiscal soundness of policy and regulated economy, he accumulated in the general revenue fund the enormous sum of in excess of $150 million.

A number of the present Members of the House of Representatives in Congress from Illinois served in the general assembly while the Honorable Dwight H. Green was Governor of the State, and knew him intimately, and personally express their true feelings of admiration, respect, and sadness at the death of this distinguished, loyal, and patriotic American. He served his Nation in war, his State in high public office, and his community in civic and public movements as chairman for the raising of moneys in the cancer drive fund, arthritis and rheumatism funds. There was no cause too great or too small to interest this busy man. He was loved by everyone because he had a genuine love for human beings and was of such a sensitive nature that no person left his presence without feeling that he had met a man who wanted so much to be a friend.

It is a law of man that seldom does a man die with as long a list of friendships as he enjoyed in his years of affluence and influence; but it is true of Governor Green that, what friends he did make, they will never diminish in number. His life of sacrifice to public service was without financial remuneration, but his badge of honor, carried through life, marked him as an honest man. No one can ask for more.

It is with deepest sympathy that we extend to his family, his widow, Mrs. Mabel Green, his daughters, Gloria and Nancy, and his sister, Mrs. Mary Shearer, our heartfelt condolences and the blessings and protection of God in his memory.

Benson Must Go

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 29, 1958

Mr. WEAVER. Mr. Speaker, I want to call to the attention of my colleagues in the House a recent editorial from one of America's well-known farm publications, the Nebraska Farmer. It is entitled "Benson Must Go." I assure you that the sentiments herein expressed by this farm publication reflect the voice and the thinking of the bulk of our farm citizens and small-business people and particularly the average American citizen at the grass-roots level.

Lower prices and rising costs for the farmer will only push agriculture into further economic oblivion and this condition is already spelling trouble in certain parts of our business and industrial economy today. The prosperity of every community throughout this great land of ours is dependent upon the well-being of those engaged in agriculture. A program of reducing acreage and of reducing prices along with rising costs to the farmer means just one thing—less farm income. The theories of Mr. Benson are contrary to the laws of good commonsense because the farmer, like any other businessman, must maintain a level of income to meet his fixed expenses. If the price is low, he expands his production facilities to increase production, thereby adding to the total overall production of farm commodities.

Both the farmer and the consumer have been penalized by the Benson approach—because neither has benefited. The prices that the farmer receives for his products have gone down and the costs for food to the consumer have gone up.

Whether we like it or not, our whole economy is built around subsidies. Practically every segment of our economy has some protection. Labor has the minimum wage, industry has tariffs, and business has fair trade laws. Agriculture should therefore, too, be entitled to a fair degree of economic protection. It cannot survive on a competitive free enterprise basis in a subsidized and supported business and industrial economy. Our objective should be to restore a fair level of buying power to the American farmer.

Let us not put the farmers of America in an even tighter economic straitjacket. We need a Secretary of Agriculture who will be realistic and practical and face the facts to get results, not a Secretary who is stubborn and knows all the answers. As the author of this article comments, much more than political considerations are involved, "Benson has sold agriculture short."

This is food for thought.

The editorial follows:

BENSON MUST GO

For the good of agriculture, as well as the Republican Party, Secretary Benson has got to go.

Many Republican politicians, with their eyes on seats in Congress next year and on the Presidency in 1960, have been convinced for some time that Benson is a millstone around Republican necks.

If political considerations were all that were involved, we could see our way clear to letting the politicians stew. But this is not the case. Much more is involved. Benson has sold agriculture short.

Ever since he became Secretary, Benson has been spanking agriculture, urging farmers to stand on their own two feet, be rugged individuals and throw off the yoke of Government management—even if they went broke doing it. He has done this spanking publicly, thereby scuttling the efforts of any agricultural group trying to build its public relations and tell its true story to consumers.

Can you imagine Benson saying anything like the following:

"If, for the protection or convenience of consumers, it appears desirable to have ample supplies of farm products at all times to avoid the risk of shortages * * * consumers should share the cost for such protection and convenience.

"We are out of patience with the persistent cliché that farmers must 'learn to live with abundance' when such abundance results in cut price markets."

That is the type of thing you might well expect a Secretary of Agriculture to say. But it hardly needs to be said that it didn't come from Benson. It came from the National Grange in annual convention at Colorado Springs last month.

The guaranties and aids afforded to labor and industry by Government have escaped Benson's attention at the same time he has been abhoring such in agriculture. As a

Secretary of Agriculture, he has been spanking the wrong baby.

What agriculture needs in a Secretary is a man who will supply leadership to bring together warring factions within agriculture itself. No workable program for agriculture can be organized until this job is done. And it needs a man who will stand up as a champion for agriculture to fight for a feasible program once it is organized.

Unfair Treatment of Kings Point Academy in Military Pay Bill

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I am inserting into the RECORD the text of a statement which I am submitting to the Senate Armed Services Committee on the military pay increase bill, S. 3081, as it affects the United States Merchant Marine Academy at Kings Point, N. Y. I have also submitted a similar statement to the House Armed Services Committee on the companion bill, H. R. 9979.

My statement is as follows:

STATEMENT BY CONGRESSMAN VICTOR L. ANFUSO, SENATE ARMED SERVICES COMMITTEE, ON S. 3081

Mr. Chairman and members of the committee, I appreciate this opportunity to present my views before your esteemed committee on the bill S. 3081, to revise the method of computing the basic pay for members of the uniformed services.

Actually, I have no quarrel with this bill. I consider it a very meritorious and praiseworthy piece of legislation. All of us are extremely interested in improving the quality and the management of our military personnel, which this bill seeks to achieve. I am wholeheartedly in accord with the objectives of the bill, and most especially with the provision to increase the military pay. I feel we must do everything possible to retain the skilled officers and technicians in the Armed Forces, particularly at a time like this when skill is at a premium and is so necessary for the safety and the security of our Nation.

I want to direct your attention merely to one section in the bill which I consider detrimental and discriminatory. That is section 14 which seeks to deprive the uniformed officers and enlisted men of the United States Merchant Marine Academy at Kings Point from the proposed military pay increases and status benefits. Under this section, the Secretary of Commerce is given the authority to prescribe the pay and allowances for the officers and enlisted men at Kings Point, which may actually turn out to be pay cuts instead of increases as are to be granted to all other military personnel.

Adoption of this section would not only be discriminatory against the personnel at Kings Point, but will most certainly jeopardize the academic standing of a vital military educational institution by removing its excellent staff and faculty from their present protection within the framework of existing legislation governing the pay of these people. May I remind the members of this committee that in the Merchant Marine Act of 1936 it is specifically stated:

"The ranks, grades, and ratings for the personnel of the said Service (i. e., United States Maritime Service) shall be the same as are now or shall hereafter be prescribed for the personnel of the Coast Guard."

The Kings Point Academy was subsequently given the same pay status for its faculty and staff as was accorded the Coast Guard. Now an attempt is being made to deprive them of this legislative entitlement which goes back some two decades.

Aside from the fact that this constitutes a gross injustice, such action would most certainly result in demoralization at the Kings Point Academy and its future as an accredited educational institution would be seriously undermined. Approval of this section would undoubtedly encourage many of these people to leave Kings Point. In this way, the bill which is aimed to improve the quality of military personnel and keep them in the service, will achieve the exact opposite.

And one other point. We have been talking a great deal these past few months, ever since Russia launched her sputniks, about the vital role of education to our national security. All of us are keenly aware of the need for trained teachers on the college level and the urgency for training suitable personnel for our nation's security needs. But what are we doing? We are putting a provision into a bill for military pay increases which will only serve to withhold such increases from a group of government college teachers who are giving training of a special sort to our youth.

It is difficult for me to understand the logic behind this kind of action. On the one hand, we are breaking our heads to think of ways to assure victory in the struggle for our national survival; on the other hand, we are doing everything to discourage those who are in the front-lines of the struggle.

Mr. Chairman, I urge you and the members of your committee to delete this section from the bill so as to enable the personel at Kings Point to receive the same fair treatment as is given to other military personnel.

Fortieth Anniversary of Estonian Independence

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BENTLEY. Mr. Speaker, February 24, 1958 marks the Fortieth anniversary of the Proclamation of Independence of the Republic of Estonia and today event is being commemorated all over the world by people of Estonian descent and those Estonian citizens who live in a free land.

Estonia has been incorporated into the Soviet union by brute force and her people have now been Communist slaves for more than 10 years. However, they still long for the day of their deliverance from Soviet tyranny and their moral insistence against their totalitarian rulers remains unabated. They can preserve this spirit of resistance as long as they remain convinced that the United States will never abandon its own efforts on behalf of all the captive peoples and will continue to work for their freedom and right of self-determination.

It is therefore important that we take every opportunity to reassure the people of Estonia that our policy of liberation does continue. It is equally important to give encouragement to the anti-Communist spirit and activities of free Estonians throughout the world. There are many of them in my own State of Michigan to whom I would like to pay tribute on this occasion.

Mr. Speaker, it is my conviction that, just as the free flag of Estonia still flies in our own country, that this date will one day again see that flag flying in Estonia itself. The spirit of the brave people of Estonia will continue to resist communism until victory is theirs and until freedom returns to their country.

Andrew Jacobs, Our Former Colleague

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MADDEN. Mr. Speaker, the following article from our former colleague, Andrew Jacobs, of Indianapolis, Ind., is interesting in that Andy has not forgotten the fact that he is a perfectionist in politics and keeps an extensive file on governmental and political facts extending back through the years.

WHAT I THINK
(By Andrew Jacobs)
NEWS ITEMS

December 12, 1949: Senator HOMER E. CAPEHART, Republican, senior United States Senator from Indiana, charged at Butler Field House last night that Federal aid was a hoax. The Senator pointed out that the money the Government doled out came from the pockets of the voters in the first place and that the Government returned only about 8 percent of it in Federal aid.

February 8, 1958: Senator HOMER E. CAPEHART, Republican, senior United States Senator from Indiana, speaking from Elkhart last night, pointed out that during the last 5 years Indiana had received $2 in Federal aid for every $1 she had paid in Federal taxes.

THE FISHES AND THE LOAVES

And after these things Ike went over the budget and a great multitude followed him for they had learned of his miracles from the press.

And Ike went up to the summit and there he sat with his diplomats and the flyover was earnestly discussed with the sadducees.

And when Ike was airlifted home he lifted up his eyes and saw great unemployment, and he sayeth unto Sherm, "Whence shall we buy bread that these may eat?"

And Sherm knowing what Ike would do, but to prove him, answered, "A bit of Federal bread is not sufficient for them, even that every one of them might take a little."

And one of his disciples, Allan, a brother of John Foster sayeth unto him, "There is a lad here, Ezra Taft, who hath 5 barley loaves and 2 scrawny fishes, but what are they among so many?"

And Ike said, "Bid the men relax." And now there was much grass in the place, but none in the streets, as yet, mind you. And so the men relaxed in the grass, in number, many millions.

And Ike took the scant vittles; and when he had given private thanks over TV, he distributed unto the disciples and the disciples unto those as were relaxed and as much as they would.

And when they were filled Ike said, "Gather up the fragments that remain, that nothing be lost, and that we show great economy."

Therefore, they gathered together and filled twice as many warehouses as the Government had before, which remained over and above unto them that had eaten.

Then these men, when they saw what Ike did, said, "This is of a truth the most peerless leader that should ever come into the world."

When Ike therefore perceived that they would come and take him by force, to make him break the third-term rule, he departed unto the Burning Tree Golf Club to be all alone.

Thus far, according to Senator HOMER.

Fortieth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of February 15, 1958, on the occasion of the observance of the 40th anniversary of Lithuanian independence:

LITHUANIAN INDEPENDENCE

It must be irksome to the Soviet Union to have Lithuanian Independence Day celebrated every February 16. This is a grim reminder to the gang in the Kremlin that a day of reckoning is coming because freedom does not die in men's hearts. It lives on in successive generations—forever. Despite the stranglehold it has on Lithuania now, Moscow cannot win; eventually, it must lose. That is the lesson of history.

For 123 years, Lithuania was held in bondage by czarist Russia. Then came the First World War and opportunity knocked for Lithuania. It threw off the yoke and on February 16, 1918, just 40 years ago tomorrow, the independence of Lithuania was proclaimed. The hopes of successive generations were realized and their perseverance in this holy crusade rewarded.

But 22 years later, there was another upheaval with a second world conflagration. Tyranny went on a rampage again and Lithuania was one of the early casualties. It was incorporated into the Soviet Union, ostensibly through a plebicite, but actually by force. With a gun pointed at its head, Lithuania was left without a choice.

To this day, the United States has not recognized the legality of this move. To do so would be to condone an injustice and to be an accomplice in a crime.

So the struggle goes on. Eighteen years have come and gone since the Communist coup. They have been years of terrible hardship for these unfortunate people and of anguish for Americans of Lithuanian extraction and for others who love freedom and detest dictatorship.

But there is a measure of consolation in the knowledge things might have been worse. So long as men and women with Lithuanian blood in their veins carry on, so long as other friends of Lithuania stand by its side, all is not lost.

Today, there is added reason for faith in the future. The entire world is alerted to the menace of communism. Lithuania does not lack for sympathy and understanding. It is not alone in the struggle for liberation.

Good Cause for Bragging

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. HENDERSON. Newspapers of the Nation's smaller communities perform a vital function of informing the people of events which have a direct bearing on the conduct of their local, State, and national affairs. In these days of mass news reporting media, the place which our smaller newspapers hold is often overlooked and unappreciated.

In southeastern Ohio, there are a number of weekly newspapers which are active in the effective reporting of the events in their communities and whose editorial comments reflect a vitality and intelligence that would do credit to some of the great metropolitan daily newspapers. It gives me great pleasure to call the attention of the Congress to the Journal of Caldwell, Ohio, one such newspaper in the 15th Congressional District which will shortly mark its first century of service to its community. It has recently been accorded the deserved recognition of being selected by the Ohio Newspaper Association as first in general excellence among publications servicing communities of less than 2,500.

I am commending to the Congress an editorial from the Marietta Daily Times, of Marietta, which makes comments with which I associate myself. The editorial is as follows:

GOOD CAUSE FOR BRAGGING

"We're not bragging. We're just proud." With these words The Journal, a weekly newspaper published at Caldwell, introduces some editorial comment on the honors it won at a recent meeting of the Ohio Newspaper Association. Not only was it judged the best paper in its class in the State, but it just about cleaned the platter of other awards, receiving five besides the first prize.

In addition to the top award, The Journal was cited for general excellence among newspapers in the under 2,500 population category, taking four honors for news coverage, makeup, advertising, and women's news.

A community service award also was received for its promotion of the John Gray Memorial, the ensuing campaign and the final erection of this memorial at the roadside park north of Caldwell. It was for this service in bringing recognition to Ohio's last surviving soldier of the Revolutionary War that the Caldwell newspaper won Statewide plaudits. In this connection The Journal says:

"In a matter of only a few months, The Journal will be observing the 100th anniversary of its founding and the recognition which was received this year at the annual convention was especially fitting in connection with the founding of this weekly newspaper."

Publishers of the Caldwell newspaper are Clarence J. Estadt and John D. Wheeler and they deserve the recognition that their publication was given because of its general excellence. It is one of the few weeklies that come regularly to our desk, and we have long considered it one of the best of which we have any knowledge. They have every reason to be proud, and we doubt that they will ever have greater cause for bragging.

For those interested in seeing how a good small town newspaper is put together, copies of The Journal are available in my office.

H. R. 8525

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD a copy of a letter sent to me by the Honorable G. Mennen Williams, Governor of the State of Michigan, enclosing a copy of a letter that Governor Williams and Lt. Gov. Philip A. Hart had sent to the Honorable OREN HARRIS, chairman of the House Interstate and Foreign Commerce Committee, opposing enactment of the natural-gas gouge bill of 1957–58.

The two letters succinctly set forth why the bill is not in the public interest, and I hope all Members will read them.

STATE OF MICHIGAN,
OFFICE OF THE GOVERNOR,
Lansing, February 19, 1958.

Hon. JOHN D. DINGELL,
United States Congress,
Washington, D. C.

DEAR CONGRESSMAN DINGELL: The Harris-O'Hara bill vitally affects the welfare of the people of Michigan.

On behalf of the people of the State of Michigan, Lt. Gov. Philip A. Hart and I have written Congressman OREN HARRIS urging that this measure be defeated. A copy of this letter is enclosed for your information.

Sincerely,

———, *Governor.*

FEBRUARY 19, 1958.

Hon. OREN HARRIS,
United States Congress,
Washington, D. C.

DEAR CONGRESSMAN HARRIS: As the Governor and the Lieutenant Governor of the State of Michigan we take this means to again express in behalf of the people of Michigan vigorous opposition to H. R. 8525, the legislation affecting regulation of gas producers which is soon to come before the Congress.

During hearings on this measure in 1957, before the House Interstate and Foreign Commerce Committee, we made known to the committee the deep concern of the people of Michigan that the effect of the passage of H. R. 8525 would be an increase in consumer gas prices. We also sought to impress upon the committee the serious hardship of such an increase on gas users in Michigan, as well as the rest of the country.

Our concern is even greater today.

We oppose this measure, because so many of our residents are customers of the gas industry and will be directly affected by in-

creased rates. It is estimated that 85,000 persons using gas for space heating were added to the ranks of gas consumers in Michigan last year. The total number of users rose approximately 150,000 in 1957, so that we now have 1,403,000 persons using gas for some purpose. This means that a rate increase of 1 cent per thousand cubic feet would cost Michigan gas consumers $2½ million more a year than they are now paying.

Gas consumers have not escaped the drop in purchasing power. Gas is a necessity and unlike purchases of many other commodities, cannot wait until the gas consumer's income reaches a favorable level. An increase in the gas bill compels gas consumers to promptly divert portions of earnings from other purchases in order to heat their homes, to cook their meals, and in the case of industrial users, to keep furnaces going. Moreover, many gas consumers in Michigan have spent considerable sums of money and have shouldered sizeable debt in order to convert homes and businesses for use of gas. All of these persons are "captives" who cannot avoid payment of increased rates.

In our present economic crisis, it is also important that we do not ignore the disastrous effect any increase in the cost of necessities can and does have on the growing numbers of unemployed. The increase in the total number of jobless in the amount of 1.2 million during period from December 15 of last year to January 15, 1958 should make us shockingly aware of this situation.

We have our share of jobless in Michigan, amounting to over 320,000, with 190,000 in Detroit alone. The effect of any increases in consumer prices is to increase the burden on the meager funds of our additional numbers of whom are being added to welfare rolls daily. For some this may create an additional drain on savings; but for most, it means that another chunk must be squeezed from the unemployment compensation check which is already too small to cover the cost of basic needs.

In examining considerations of H. R. 8525 now before the Congress we are particularly impressed with the absence of any claim by the proponents of the measure that its passage will not result in higher rates. We conclude, therefore, that such proponents either are not concerned about the effect of increases or choose to ignore the whole issue. This is economic myopia of the worst kind. Rates now fixed by the Federal Power Commission assure producers reasonable returns and freeing them from the Commission's regulations, as the bill provides, would lead not to just rate increases, but we predict to unreasonable rates.

It is characteristic of utility rates that they be fixed, not by utility owners, but by a regulatory agency guided by law and responsive to the needs of the public. Neither the utility character of gas production nor the need for Government regulation of its rates has changed since such regulation was commenced. Public interest in this industry has multiplied many times as the number of gas consumers has risen to millions. The chain reaction of unreasonable rates by producers would be disastrous today, because of the inflationary effect it would have on the economy.

Gas producers cannot be said to be undergoing any financial hardship. Nor can theirs be the complaint that rising labor or other costs require higher prices. In 1956 alone, they seemed well able to spend sums in promotion of H. R. 8525 equal to almost two-thirds the cost to Michigan consumers of the increase of 1 cent a thousand cubic feet of gas to which we have referred previously. Their willingness to add to such expenditures so generously this year does not bespeak of economic peril in their industry. It does suggest the gains which are anticipated if the bill passes.

The industry, apparently does not intend to call off its drive for the opportunity to gouge its customers. Only the Congress can do what must be done to thwart this attempt. The President has indicated that he is for the bill. We urge that Congress take note of the dire consequences of enactment into law of H. R. 8525 and that, in the public interest, this measure be defeated.

Sincerely,

GOV. G. MENNEN WILLIAMS.
LT. GOV. PHILIP A. HART.

Is More Money the Answer?

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. NEAL. Mr. Speaker, in this day when professional educators and Government leaders clamor for ever-increasing appropriations for teachers and facilities to provide an environment under which our youth may pursue an education, it is well to remind ourselves that our forefathers who were ambitious to acquire knowledge were inspired to exercise their own initiative toward perfecting their education under extremely primitive conditions.

The following description of a one-time typical mountain schoolhouse presided over by a dedicated pedagog served well in its time to instill youthful desires for more learning:

HUNTINGTON, W. VA., *February 15, 1958.*
Hon. WILL E. NEAL,
Member of Congress from West Virginia.

DEAR DR. NEAL: When talking to you on the phone a few days ago I mentioned some of the things that occurred during my primary school days while I resided with my parents at Logan, approximately 70 or more years ago. Principally with reference to the schools, school facilities, and the methods of a specific teacher, you stated you would like to have that information. Here it is:

We had principally the three R's—reading, writing, and arithmetic. We went to school in a one-room log schoolhouse. Floors were crude, rough-sawed lumber. Ceilings, rough-sawed boards laid on top of hewed joists, not even nailed, but laid loosely.

School attendance was on a voluntary basis, not compulsory.

We had a blackboard about 3½ feet by 6 feet placed against the log walls and for heat we had a pot-belly wood-burning stove. The wood for fuel was cut by the boys during recess and noon hours.

For seats we had split pieces of logs with legs (rough wooden legs).

We had for our writing lessons a rough wooden table hung from the side of the wall where logs had been removed. When the weather was bad the table was not dropped down but left to close the opening, thus in bad weather we had to forego our writing lesson and defer it until the weather was more comfortable.

Teachers in those days were very definite and positive in their attitude. They said what they meant and they meant what they said. Failure to obey meant the rod of correction and when our parents learned that we had been thus disciplined they applied the same rod of correction to us at home. Our books were McGuffey Readers, Goodrich History which covered the history of America from the landing of Columbus to the then date, Harvey's Grammar, Mitchell's Geography, and Ray's Arithmetic. This, I believe, was the extent of the books we had to study.

After we had completed the study of these books, if we had mastered them properly, we were eligible to take the teachers examination, even though we had mastered but one-half of them and if we passed such examination we were given a teacher's certificate.

During this period we had a teacher come to county by the name of John L. Puckett. He came to where McConnell is now located. On the very first day of school he placed a motto at the upper left-hand corner of the blackboard, or perhaps you would call it a moral. It read as follows:

"Insolence produces vice—vice produces crime—only by industry and thrift can we thrive."

This teacher, Puckett, taught for the 3 months' term, and on the last day of the term he had a program of recitations at which the students were permitted and requested to recite dialog, prose, poetry, and so forth, which the students may have committed to memory, and at the end of this program, to which their parents also were invited, Mr. Puckett made some closing remarks to both parents and children. These remarks went something like this:

"It has been a pleasure for me to have taught this term of school in Logan County. Generally, I believe every student has improved in his knowledge of the subjects taught. I have been pleasingly entertained in many of your homes; please accept my sincere appreciation of your fine hospitality. It is something I shall never forget. I know not if I shall ever pass this way again. To those of you students who may be fortunate enough to go to normal school I want to advise you to choose the subjects that will likely be most useful to you in your life's vocation. Master these subjects and gain all the knowledge you can from them. Then, upon finishing normal school, should you go to college, follow this same idea. Then, after you have finished school and selected a definite vocation, if it be teaching, try to do a better job than those who may have taught you throughout your period of learning. Should you decide to be a carpenter when you set to build a house use only good, sound material. When you start to prepare the foundation and have mixed the mortar to a proper consistency, add to it a liberal amount of good commonsense and you will then have prepared the first essential of doing a good job."

If we had a little more of the old-time methods used in these pioneer days of the life of America, I feel certain we would longer remain a free and independent country, and in the meantime have fewer nervous wrecks, fewer delinquents, and a more desirable country in which to live.

WILLIAM GUY PECK, Sr.

Poll of the 18th District of California

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. HOSMER. Mr. Speaker, recently a poll of California's 18th District was taken on many important questions of the day. Four different ballots were used. I thought the results would be of interest to my colleagues. They are shown on the accompanying table:

[Percent]

18th Congressional District poll	Yes	No	Don't know
BALLOT NO. 1			
1. Some people say our defense could be boosted by junking our Joint Chiefs-of-Staff system for a German-type Supreme Staff. Do you think it would work?	35	41	24
2. Should the cost of mailing a letter be raised from 3 to 4 cents (along with bulk mail and other postal rates) to help cut Post Office Department deficits?	79	18	3
3. Do you think social-security taxes on employers and employees should be raised, and social-security benefits and coverage increased?	63	34	3
4. Are tight money and high interest rates for awhile, assuming they actually would stop inflation, better than not stopping it?	67	20	13
5. Even though it might drive a lot of small farmers to the wall, do you think we would be better off to drop farm price supports and the soil-bank program?	57	31	12
BALLOT NO. 2			
1. In view of increasing defense demands, do you think raising the $275,000,000,000 United States debt ceiling would be justified?	63	29	8
2. Would a disarmament agreement with the Soviets on weapons of war help toward peace even without other steps to eliminate major causes of war?	19	69	12
3. Are recent Russian "successes" due more to their own hard work and sacrifice of living standards than to so-called United States "mistakes"?	66	25	9
4. Should the Reciprocal Trade Agreements Act be extended another 5 years with authority to lower tariffs another 25 percent?	43	32	25
5. Should a law or constitutional amendment be written to say when and how a Vice President should take over when a President becomes disabled?	86	10	4
BALLOT NO. 3			
1. Defense and other fixed spending take up all but about $20 billion of our $72,000,000,000 budget. Do you think the $20,000,000,000 can be cut substantially?	43	45	12
2. Even if only a few of our allies would help in a showdown with the Reds, is our military aid program nevertheless helping to avert a showdown?	71	17	12
3. Assuming Government employees and pensioners should get raises, should taxes be raised to pay for them if not raising taxes would unbalance the budget?	47	44	9
4. Do you feel we could safely participate in an immediate and unconditional international ban on testing nuclear weapons?	21	72	7
5. Do you favor a multi-billion-dollar civil-defense shelter building program?	19	75	6
6. Do you think more money should be spent on our overseas propaganda efforts?	38	53	9
BALLOT NO. 4			
1. Should economies be made in Government domestic programs helping Americans in order to offset higher defense spending?	58	32	10
2. Do you believe that because of present world conditions we should wait a while before granting statehood to Hawaii and Alaska?	27	61	12
3. Do you think more emphasis on teaching science and math in the public schools would be a bigger factor in improving the education of United States youth than a broad Federal college scholarship program?	74	18	8
4. Do you favor legislation requiring labor unions to have their financial transactions audited once a year and the statements made public?	96	3	1
5. Should World War I veterans be granted a $100 per month pension at age 65?	50	38	12

The Recent Winter Rampage of Mother Nature Enabled the Railroads of the Nation To Add to Their Laurels as the Most Dependable Form of Transportation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. VAN ZANDT. Mr. Speaker, whether the Nation is engulfed in man-made wars that create national emergencies or falls victim to the relentless outbursts of Mother Nature, history records that the country's railroads have always met the acid test in providing uninterrupted service to the American people.

Termed the "arteries of the Nation" the railroads have demonstrated beyond doubt that they are the most dependable form of transportation, having kept pace with developments in that highly essential field from their infancy.

The recent paralyzing series of snowstorms that wreaked havoc and despair in various sections of the country are evidence of the dependability of the Iron Horse to give creditable performance under the most adverse weather conditions. It is a significant fact that the financial condition of the Nation's railroads have been impaired by the loss of revenue due to competing forms of transportation, notably the private automobile. Yet when the public demand for emergency transportation arises, we expect the railroads to have equipment ready for instant service.

The recent period of winter weather that gripped so many States and rendered useless other forms of transportation found the railroads capable of stellar performance despite the various obstacles that have been and are hampering them in their daily operations.

If we have learned any lesson from the recent icy grip of winter, it should be a new-found faith in the durability and dependability of the railroads of the country and the compelling need for expediting the adoption of a new and streamlined transportation policy. Such a national policy is imperative as a means of removing the inequities and disadvantages under which the railroads are now forced to operate, which have been revealed in testimony before the so-called Smathers committee of the United States Senate.

At this point, I should like to conclude my remarks by calling attention to the following copyrighted article by the noted columnist, David Lawrence, titled "The Railroads and Blizzards," which appeared in the February 18, 1958, issue of the Washington (D. C.) Evening Star:

THE RAILROADS AND BLIZZARDS—TRAINS' STATUS AS INVALUABLE STANDBY TRANSPORTATION SEEN PROVED IN STORM

(By David Lawrence)

Man may be talking big about going to the moon, but actually he hasn't conquered his own problems of communication on earth. The reminder comes when blizzards and freezing temperatures in our big cities tie up transportation and paralyze communications so that work stops, stores close, schools suspend, and whole regions take on a primitive aspect not unlike the 1890's.

This is a time when facilities like railroads which have had a hard time competing with newer forms of travel come into their own. Over the weekend when airlines were having trouble landing their planes in many places, buses were running less frequently and individual automobile riders were stalled on the highways, the mainstay of America transportation, the railroads, came through to carry a large section of the traveling public and to maintain the movement of food supplies and mail.

This correspondent on Sunday was on the afternoon Congressional of the Pennsylvania Railroad which usually makes the trip between New York and Washington in 3 hours and 35 minutes. As a result of the snarl in traffic in the rail yards, the train was more than an hour delayed in leaving the station in New York and took about 6 hours to make the trip. The number of people at each stop clamoring for a chance to get on the train was unprecedented. The rail officials allowed passengers to stand in all the aisles and squeezed them into every conceivable space—to give them service. Yet many of these same passengers ordinarily ride buses or their own cars or use the airlines.

Here is a standby means of transportation which America cannot afford to let lapse. The importance of iron tracks which can be cleared for travel in the worst storms, while many autos litter the highways unable to move and themselves blocking other cars cannot be overestimated. As long as there are steel rails to rely on, American people can maintain a semblance of normal life, no matter what happens in the way of weather.

It makes one wonder, incidentally, what kind of life the people of Soviet Russia lead today with such inadequate transportation.

With a population of more than 200 million the Soviet Union has only 72,400 miles of railroad track, compared to America's 220,000 miles. Turning to ordinary highways, the Soviets have only 127,000 miles of paved roads compared to about 2.3 million miles in the United States. This would ring the earth more than 90 times.

As for telephones, there are only 861,000 in the entire Soviet Union, compared to more than 60 million in the United States. This means that, in the Communist empire, people have to spend a lot of time going from place to place to do what a telephone call does for the average American.

So far as automobiles are concerned, the Soviets have only about 700,000 passenger cars, in contrast to about 56 million passenger cars registered in the United States. Yet the Soviets have more than two-and-a-half times the number of square miles of territory to cover.

Communication does substantially affect the opportunity of a people to enjoy a high standard of living. Russia has lots more wintry weather than the United States. What is occasional here in the way of storm paralysis is frequent in Soviet Russia.

There is, in other words, a lot of progress the Soviet rulers have to make before their people can enjoy the earthly things they should have instead of being compelled to see billions of rubles spent on sputniks. It is significant that, of all the published comment that came out of the United States when the first sputnik was launched last autumn, the criticism that all this was at the expense of human suffering in Soviet Russia was singled out for extensive treatment in the Soviet propaganda organs. It evidently got under the skin of the Communists. They have been trying ever since to spread their rebuttals, but these have a hollow sound.

For the people of the vast empire ruled by the Kremlin are, day in and day out, suffering privations which are intensified by primitive transportation and insufficient means of communication. It takes a blizzard or two in America to emphasize what the people of Soviet Russia are up against constantly—and such oppressed people certainly do not want another world war. They do want the right to control their own government, and they'll get it someday—for it's the only way to material well-being, too.

Bread and Butter Voting

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks I include herewith an editorial from the New Era, official publication of the Conference of Eastern Pennsylvania Central Labor Unions:

BREAD AND BUTTER VOTING

Breadlines are an actual fact in Tennessee.

Unemployment is officially at 4,500,000—and probably higher than that by now.

Production declined sharply in January.

What's the administration doing about it? Well, Eisenhower issued a statement that things would get better, soon. Then he left for Georgia to play golf and hunt quail.

What's the Vice President doing about it? Well, he issued a statement that Republicans are betting on prosperity.

What's the Postmaster General doing about it? He's dangling a phony post office building program in front of the public as an excuse for raising postal rates from 3 to 5 cents.

Somehow, all of this has a ring of the 1930's when Republican Herbert Hoover was doing nothing in the White House while the Nation's economy was collapsing under him.

And once again the ruling clique of big-business men in Washington (with Eisenhower as their front man) is trying to pacify the Nation with tranquillizers.

We hear, once more, the familiar Hoover refrain that prosperity is just around the corner.

Back in 1952 Adlai Stevenson and the Democrats had a campaign song entitled, "Don't let them take it away." Republicans poohpoohed the idea and promised even greater peace and prosperity than the Democrats had provided.

Millions of American workers—including many who had faith in the Eisenhower administration—are now discovering that they were misled and deceived.

The Republicans did take it away.

This is an important election year. There is absolutely no point in pussyfooting. Workers want to know the truth and then vote accordingly. We believe that time and misfortune have proved that there is a relationship between your pay envelope and your vote on election day.

A Little Light on Walter P. Reuther

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, on January 20, 1958, Senator BARRY GOLDWATER of Arizona appeared in Detroit, Mich., and explained to the gathering, the political facts of life in that fine State. GOLDWATER apparently struck home with certain of the Socialist liberal element in my State as evidenced by the reaction of Walter Reuther to this well-documented speech.

Five articles written by George Todt of the Valley Times of California explain in some detail the contrast between Senator GOLDWATER's position and that of Walter Reuther, sometime labor leader and sometime politician, but all the time an ambitious, ruthless politician using employees' money, usually collected as dues, to further his own purposes, of which one seems to be the socializing of America. The first of these articles appeared on January 28, 1958, as follows:

REUTHER-GOLDWATER VERBAL TILT

"Insolence is not logic; epithets are the arguments of malice." Ingersoll.

Last Wednesday in Detroit the vice president of the United World Federalists in the United States and an ardent champion of so-called mental health legislation found himself ideologically bankrupt of ideas, so what did he do? In his desperation, he lashed out in the most churlish and despicable manner at his chief opponent—a great United States Senator who is his intellectual superior—and told a captive audience that he was a lunatic.

Unable and fearful to meet Senator BARRY GOLDWATER in honest face-to-face debate, here is the rude and ungentlemanly quote from Walter Reuther that he confided to 3,000 delegates at his UAW convention, and these are his exact words:

"GOLDWATER is mentally unbalanced—he needs a psychiatrist, he needs help."

"Ford, Chrysler and General Motors provided a platform in Detroit for the country's No. 1 political fanatic, the No. 1 peddler of class hatred, Senator GOLDWATER."

Here is the Senator's calm reply to the hatemongering of Reuther:

"This man cannot meet the charges that I, as well as others, have made about him and his drive for political power," said GOLDWATER, "so he now resorts to the age-old practice of name calling. He cannot stand to have the truth told about him. The only defense he can muster is to cry 'foul' or that his opposition are liars. Why doesn't he just hold still long enough to answer our questions about him without seeking to create smokescreens and diversions instead? Why should honest questions throw him into such a frenzy?"

Most of the American people would like to know the answer to that one. Let's analyze the situation. What do we find when we dig down for our facts?

First of all, let it be noted that GOLDWATER is an ideological champion of the Taft wing of the Republican Party and Reuther is a New Deal Democrat who is considerably to the left of Henry Wallace—actually, the closest thing we have to British Laborite Aneurin Bevan in this country today. Reuther once told the Americans for Democratic Action, of which he is also a vice president, that when he came to power in the United States "we would not go back to the New Deal, but from the New Deal." He meant by these words that the New Deal was not extreme enough to suit him—that it would merely be the jumpoff point for our downward plunge into outright socialism if he had his way with us.

Secondly, we may note that Mr. Reuther now begins to refer to class hatred in his diatribe against his opponent. What does he mean by the term "class hatred" in the United States of America? Where are the so-called classes anyway? The fact is that we don't have these socialistic divisions of society in our country, as is the case in Europe—where Mr. Reuther studied once upon a time. Frankly, this is Marxist technique, pure and simple.

But it is in the malicious and unjustifiable reference to insanity against an honorable opponent by Mr. Reuther that all patriotic Americans will see the most fearful kind of threatening handwriting on the wall. For we must remember that Walter Reuther is one of the foremost champions of Marxist world government in our Nation at this period of our history. Many patriotic organizations have indicated from time to time that the methods contemplated by the world government addicts in the United States includes the possible us of mental hospitalization of those who oppose their subversive aims in the future. Calling Adolph Hitler and good old Joe Stalin.

Now I have heard both pro and con sides of this argument, which is raging more or less undercover in the Nation today, and have resisted formulating a hard and fast opinion before more of the facts were in on the case. However, it must be stated, that Walter Reuther's vicious remarks concerning Senator GOLDWATER does much to lend credance to views which I had hoped were unfounded concerning the world government crowd—who idolize Mr. Reuther and all he stands for. Now what does he stand for? What does Senator GOLDWATER stand for? What kind of minds do they have? What kind of Americans are they? Who, in reality, needs the psychiatric treatment, who is mentally unbalanced?

For answer to this fascinating question of judgment, I shall render no decision for you at this time. I will leave it up to my readers to fairly decide the question in their own minds by themselves. I shall provide you in my next two articles with the ideology of both GOLDWATER and Reuther, from their own pens, and you may compare them together.

Examine the political philosophy of both men until you are satisfied. And then I

hope you will let me know who you think may be the No. 1 political fanatic in the country today. You pays yer money and yer takes yer choice. Fair enough? Will you participate in this little ideological contest between two opposing philosophies of Government? Are you willing to choose between good and evil of your own free agency? How about it?

Immaculate Heart College Mosaics on Display at National Housing Center

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 28, 1958

Mr. McDONOUGH. Mr. Speaker, the National Housing Center in Washington, D. C., is currently exhibiting a striking collection of jewellike mosaics which are the products of adult-education students at Immaculate Heart College in Los Angeles, Calif., which is located in my district.

The mosaics are an example of modern form created in the medium of a centuries-old art, and were made under the direction of Sister Magdalen Mary, I. H. M., chairman of art at Immaculate Heart College.

The exhibition of these modern mosaics at the National Housing Center is an important presentation of a form of art which presents new ideas in design for decoration not only in public and commercial buildings, but for indoor and outdoor decoration in the modern home.

The following articles concerning the exhibit at the National Housing Center testify to the importance of the technique of mosaicmaking developed at Immaculate Heart College under the direction of Sister Magdalen Mary:

An ancient art in striking modern form was unveiled today when 20 colorful, jewellike mosaics were placed on exhibition at the National Housing Center.

Made of various domestic and imported tiles, semiprecious stones, beads, glasses, jewelry, and shells imbedded in colored cement, the mosaics are the products of adult education students at Immaculate Heart College, Los Angeles. They were created under the direction of Sister Magdalen Mary, I. H. M., chairman of art at the college. Her students also designed the decorative banners which excited so much comment when they accompanied the exhibit, 100 Years of American Architecture, at the National Gallery of Art last spring.

The mosaics will be on exhibition at the housing center through January and February. Admission is free, and the housing center is open 7 days a week, 10 a. m. to 6 p. m. Mondays through Saturdays and from 1 to 6 p. m. on Sundays.

Both religious and secular subjects form the designs of the mosaics, which range in size from 12 by 16 inches to one that stands 77 inches high.

"The making of mosaics is a centuries-old art, but today it is enjoying a spectacular revival," said Richard G. Hughes, chairman of the board of trustees of the housing center. "In southern California particularly, architects are commissioning local artists to design and execute mosaic murals for public and commercial buildings, as indoor and outdoor decoration. Homeowners are buying small mosaics for wall ornaments.

"The Immaculate Heart College collection includes some of the best I have ever seen, and I recommend this exhibit to anyone interested in new ideas in textures, colors, and design for ornamental purposes, particularly in areas where tile is used. It is little wonder that these mosaics have received such acclaim wherever they have been shown."

Most of the mosaicmakers are nonprofessionals and include housewives, scientists, schoolteachers, laboratory technicians, engineers, secretaries, and nurses.

Mosaics are as old as history. In ancient Egypt, Sumeria, Mesopotamia, Greece, and Rome mosaics were used to decorate furniture, buildings, floors, columns, and fountains. Churches, particularly those in the eastern Roman Empire, featured mosaics for several centuries, but the art declined during the Renaissance, when fresco paintings replaced mosaics as the dominant art form.

At the Immaculate Heart College the technique of mosaicmaking is being used in a number of new ways and carried to a high level of art. After the current showing at the housing center this collection of mosaics will be shown in museums and art centers throughout the Nation.

Mosaics Displayed at Housing Center

For exactly a week now, visitors to the National Housing Center at 1625 L street NW., have come away in a variety of new moods, all of them inspired by some exquisite examples of an ancient art form—mosaics.

On display at the center through all of next month are some beguiling samples of this process, first practiced so long ago that recorded history cannot even approximate a date.

There is good reason to believe that orientals were first to work in mosaics. From them the Greeks learned and perfected it before passing it along to the Romans. In essence, a mosaic is the reproduction or imitation of a painting or design formed generally by means of pieces of opaque glass of different colors.

The examples at the center are the work of students of the Immaculate Heart College, in Los Angeles. There are 20 of them and they run the gamut of subject matter from the religious to the secular. All were executed under the direction of Sister Magdalen Mary, art chairman at the Los Angeles school.

Most of her mosaicists are nonprofessionals, having stepped for the experience from the ranks of housewives, scientists or office workers.

What the ancient Sumerians achieved with gems worth a king's ransom Sister Magdalen Mary's pupils have accomplished with discarded bottles, broken to bits for the purpose, smidgeons of costume jewelry, buttons and lowgrade gems.

Largest of the mosaics on display is Fred Mason's "Our Lady and Queen of the Angels," measuring 48x77 inches. Smallest is Sue M. Mullins' "Head of the Virgin," at 12x16 inches.

The informality which keynotes the absorption of the art under Sister Magdalen Mary is epitomized perhaps in the mimeographed catalogue of the show which refers to Nina Va Ingle's "Lady of the Rosary" as follows:

"It was originally planned as an Indian woman with a bowl on her head, but many people insisted on referring to it as the Blessed Virgin, so the artist added the rosary beads."

Centuries-Old Art Goes Modern in Exhibit Here

(By Jane Kottmeier)

A centuries-old art was viewed yesterday when 20 colorful modern mosaics were exhibited for their first big showing at the National Housing Center.

The mosaics were created by nonprofessional students at Immaculate Heart College in Los Angeles, Calif., under the direction of Sister Magdalen Mary, I. H. M., chairman of the art department.

Her students, who also designed the decorative banners for the exhibit "100 Years of American Architecture" at the National Gallery of Art last spring, include housewives, schoolteachers, secretaries, nurses, scientists, engineers, and laboratory technicians.

Nonuniform Textures

Departing from classical mosaics, this collection illustrates the modern usage of nonuniform textures and values, colored magnesite or cement and varying sizes of tesserae or the little pieces that makes up a mosaic. They have both religious and secular subjects.

Among those particular noted were The Man of Sorrows, a more classical design (the outline is clearly defined as in stained glass windows) in hues of purple and green, and The Music Makers which was developed from handmade tesserae and has a Byzantine reminiscence. Also The Prophet made of Venetian glass in shades of aquamarine and black and the unusually modern Virgin Mary made of colored magnesite studded with pearls, gold chains, and other jewels.

Mr. Richard Hughes, chairman of the board of trustees of the housing center, said the making of mosaics is enjoying a spectacular revival, particularly in Southern California where they are being used as indoor and outdoor decorations for public and commercial buildings, as well as for wall decorations in homes.

AFL–CIO Building Cited

Miss Zoe Apostolides, local artist previewing the show, commented that "many synagogues around New York have abstract mosaics" although few are to be found here. The AFL–CIO headquarters is perhaps the most exemplary building in Washington for its modern usage of mosiacs.

President of the American Institute of Architects, Leon Chatelain, said, "The high cost of mosaics is why they're not used more extensively. It's more reasonable to get them shipped from Italy. It's an old art which has been lost in our way of life when everyone is working for the dollar and the builder wants to save that $25,000.

"However," he added, "you can purchase little kits and do-it-yourself."

The exhibition will continue at the Housing Center, 1625 L Street NW., through January and February. Hours are 10 a. m. to 6 p. m. Mondays through Saturdays and from 1 p. m. to 6 p. m. on Sundays. Admission is free.

Statement of Carter W. Atkins on Tax Revision

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. CRETELLA. Mr. Speaker, it is with pleasure that I am able to include for the RECORD a statement on tax revision made before the Ways and Means Committee on February 7 by Carter W. Atkins, executive director of the Connecticut Public Expenditure Council, Inc.

This organization is a nonprofit one and highly thought of by many in the State of Connecticut and, indeed, the entire country.

I have known personally Mr. Atkins for a number of years and have been gratified in the past to receive his comments and recommendations on various subjects. I find that, like this statement before the committee, they have genuine merit and deserve earnest consideration by this Congress.

STATEMENT ON TAX REVISION TO THE COMMITTEE ON WAYS AND MEANS BY CARTER W. ATKINS, EXECUTIVE DIRECTOR, CONNECTICUT PUBLIC EXPENDITURE COUNCIL, INC., HARTFORD, CONN.

It is my privilege in this statement to speak not only for my own organization but also in behalf of the State taxpayer organizations of other States whose names are appended to this statement. These organizations, from States throughout this country, are supported by thousands of taxpayers in all walks of life. Among them are taxpayers who pay every kind of tax levied by our Federal, State, and local governments.

These organizations have long years of experience in the field of government, experience acquired through year-round devotion to the attainment of their objectives, namely, efficient, economical government and equitable taxes to support such government. Established to give attention primarily to the problems of their State and local governments, these organizations, and the thousands of taxpayers they represent, find that they now must be vitally concerned with the tremendous impact of Federal taxes on those who also support their State and local governments.

It is with this background of interest and concern that we direct your committee's attention to some basic and fundamental principles. They are matters of long-standing nature, and pertinent as they have been in the past, they deserve even greater emphasis today. We bring them to you, not as something offered for the purpose of a particular hearing but as deserving of your consideration and earnest application in all of your deliberations on the Federal tax structure.

Our program for tax revision embraces two highly important principles:

1. An income tax, individual and corporate, that embodies rates and principles which will not handicap this country in achieving and maintaining the greatest economic strength of which our system of free enterprise and individual incentive is capable.

2. A tax structure that leaves to the States and the local governments sufficient areas of taxation and sufficient taxpaying capacity to enable them to finance their needs.

With regard to the achievement of a better income-tax structure, you have before you legislation which would accomplish the objectives. Among the more important proposals are companion bills H. R. 6452, introduced by Congressman SADLAK and H. R. 9119 by Congressman HERLONG. Congressman SADLAK, a member of your committee, has made an exhaustive exposition on what his bill will accomplish, and much testimony in favor of this legislation and its principles has been presented, both to the Congress in the last session and to your committee in these hearings. We would not, in the brief time allotted to us, attempt to duplicate the many persuasive statements. Suffice it to say here that the organizations for which I speak want to see an end to an income-tax rate structure which destroys incentives, retards development, encourages evasion, and acts as a drag on our system of free enterprise.

We address ourselves now to an extremely important aspect of our tax structure which is all too often overlooked and one on which we feel particularly competent to comment. We direct your attention to the extent to which the Federal Government has preempted and usurped, at the expense of the State and local governments, both the area of tax resources and the taxpaying capacity of those resources.

The facts are that 25 years ago, the taxes taken from the American people by the Federal Government were only one-third as much as the total taxes collected by the State and local governments. In 1956, however, Federal taxes amounted to almost three times the total amount of State and local taxes. In the process of increasing its tax take from less than $2 billion in 1932 to more than $72 billion in 1956, the Federal Government not only pushed its tax rates to unprecedented heights, but, at the same time, extended the application of its taxes to include almost every kind of tax resources, the only major exceptions being the property tax and the general sales tax.

Putting it another way, over the past 25 years the Federal tax take has increased 40 times, while State and local tax collections have increased about 4½ times. Undoubtedly, State and local taxing capacity has been seriously and adversely affected by the tremendous rise in Federal taxes. The impact of Federal taxes on State and local taxing capacity is illustrated by comparing taxes with the personal income of all the people. During the 1930's, State and local taxes ran from 10 to 12 percent of personal income. In the 1950's, total State and local taxes had fallen to 7 to 8 percent of personal income. Federal taxes, which averaged 6 to 7 percent of personal income during the 1930's have been running at the rate of 22 to 24 percent of personal income in the 1950's.

In view of this startling transition, and especially in view of the fact that the Federal tax increase has been accelerating with greatest rapidity in the more recent years of this period, it would appear that the Congress has been heedless of the effect of high Federal taxes on the financial resources of State and local governments.

For some time now, we have seen the pressures increase for more Federal grant-in-aid programs and for more Federal money for existing programs. Some of these pressures are undoubtedly the result of resistance to increased State and local taxes, resistance produced in large part by high levels of Federal taxation. Many thoughtful students of this problem have been insisting that the Federal Government not only refrain from undertaking new grant-in-aid programs, but that it cut back as rapidly as possible on those which do exist and, at the same time, reduce Federal taxes to the point where the State and local governments may, if they wish, levy their own taxes for such programs.

There is no need for us to present here an exhaustive treatise on this matter. In the past 10 years, Congress has had the recommendations of authoritative sources including the Hoover Commission and now the Joint Federal-State Action Committee, recommending steps in the direction that we are here urging. There should be no need to belabor further the necessity for getting on with this job. The necessity has never been greater than the present.

Necessity now dictates that the Federal Government concentrate its efforts upon national defense. This is a function which the State and local governments cannot perform. They can, however, perform almost, if not all, of the functions embraced within the range of the Federal grant-in-aid programs provided the tax resources which are best suited to State and local use are not impoverished by the Federal Government.

It is interesting to note that in the years since the Korean war Federal expenditures for major national security purposes have fallen from 67 percent to 59 percent of total Federal expenditures. During the same period, Federal expenditures for other purposes have risen from 33 percent to 41 percent of total Federal expenditures. If the increase in Federal spending had been for defense purposes rather than for nondefense purposes, it seems quite clear that we might well have avoided finding ourselves in the throes of the present frantic program to catch up.

We suggest that the Congress now move to reduce the Federal grant-in-aid programs along the lines of the recommendations which have been made to it, and we recommend to this committee that it propose Federal tax reduction in such areas and in such amounts as will enable the States to pick up those programs. Specifically, we suggest that your committee recommend relinquishing the field of estate and gift taxes and all excise taxes of such nature as can be effectively utilized by the State and local governments as a whole. There are, of course, some taxes where the base is so geographically concentrated as to warrant retention by the Federal Government, and perhaps some others of such nature as to require Federal application for regulatory purposes.

Tax revision, as we propose it here, neither needs nor justifies an overall increase in Federal taxes nor an increase in the Federal debt. Turning back tax resources to the States for their use would be accompanied by corresponding reductions in Federal-aid programs. Any reduction in revenues resulting from revision of the income tax can be fully offset by seriously getting down to the business of adopting more of the long-neglected economies proposed by the Hoover Commission and many others.

We wish it clearly understood that we in no way oppose, and in fact fully support, whatever expenditures may be convincingly demonstrated as essential to our national defense. We are not at all persuaded, however, that our defense dollars are being efficiently spent, that serious effort is being made to eliminate waste and achieve economy, and that we are getting a full measure of defense for our money.

Our position was put succinctly by Senator MCCLELLAN of Arkansas, speaking at the 20th anniversary dinner of Tax Foundation on December 3, 1957, when he said:

"The strength we shall surely need in the long struggle ahead and in the might contest for supremacy in which we are now engaged with the totalitarian world cannot be found nor is it reposed in an insolvent government and a bankrupt treasury.

"The unprecedented obligations and the national debt that our Government has incurred, the heavy tax burden that is already upon our people, and the now exacting demands thrust upon us by world conditions, emphatically preclude and deny to us either the right or the luxury of any waste, extravagance, or nonessential expenditures whatsoever of the tax resources of this Nation."

We would only add that we will not find the strength we need except in a Federal Government which concentrates on national defense as its first order of business and leaves to the State and local governments the essential civilian services which they are best equipped to perform.

From Washington Ahead of the News

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following interesting editorial by Carlisle Bargeron entitled, "From Washington Ahead of the News"—The Commercial and Financial Chronicle dated Thursday, January 30, 1958—in which the farm program and the Secretary of Agriculture, Mr. Benson, are discussed.

While it is entirely possible that Congressmen representing largely the city areas may not understand farm problems as do those Representatives having a majority of their constituents in rural areas, I feel it important that the taxpayers of the cities be remembered in the farm debate. For my part, I have endeavored to study the farm problems as I do all issues which confront us, getting the pro and con, weighing the facts and deciding my vote on the merits of the arguments as I see them. What do we have here in the farm problem? We have the farm groups themselves arguing bitterly with each other, the American Farm Bureau Federation, on the one hand, and the National Farmers Union on the other. What is the Congressman to do as a student of the farm issue in properly representing his constituents who pay twice for the groceries, in the grocery store and with their taxes?

Is there any farm program that would please all the farmers, and for that matter Republicans and Democrats alike?

It seems to me that through our wartime bonuses and incentives which have not been discontinued, we have induced farmers to stay on the farm until now there are too many of them. The free enterprise principles of supply and demand, profit and loss if permitted to operate in the agricultural market would automatically be the balance factor matching farm production to farm products demand. This basic truth, it seems to me, we have not admitted. Hence any program will be unsatisfactory. Of course, we could throw up our hands and fully socialize the farmer with complete Federal regulation and total disregard for the cost to the taxpayers. Is this what the critics of Mr. Benson's policies are advocating?

Secretary Benson has undoubtedly one of the toughest jobs in Government and he is manfully striving to look after the farmers' interest, still endeavoring ultimately to return the farmer to a free market.

The editorial follows:

FROM WASHINGTON AHEAD OF THE NEWS

(By Carlisle Bargeron)

The Republicans have been holding a lot of $100 a plate dinners and while they have been quite successful in selling the tickets there was not much enthusiasm, at least at the Washington dinner. This could have been because there were no real headliners present, the President and Vice President both being away at Chicago and New York, respectively.

Just what is going on out in the country I am not prepared to say, but in Washington the Republican morale is at a low ebb. It is easy to get a Republican to agree that the party will lose at least 20 seats in the House in the next election and several Senators.

Some of this the Republicans, if they were a different breed, could correct. There is, for example, the question of Secretary of Agriculture Benson. The Republicans would do much better to stick with him than, as a lot of them are doing, joining in the chorus that he resign. If he were to resign tomorrow the Republicans would not pick up a single vote. Having gotten one scalp, the Democrats would go after his successor with the same fervor. Furthermore, for him to be forced out of the Cabinet would be an admission on the part of the administration that it had been wrong. If the Republicans who are wringing their hands and saying that Benson is going to carry them down to defeat were to use half of their energy in defending his policies, they would be much better off.

There is really something amazing about the position Benson is in. He is carrying out a program which has the full endorsement of the American Farm Bureau Federation, the largest by far of the farm organizations. Furthermore, the program is mostly supported by the National Grange, the next largest organization, but which is largely a fraternal and insurance organization.

Opposing is the relatively small but militant National Farmers' Union, an out-and-out New Deal organization in which "Baldy" Brannan, Secretary of Agriculture in Truman's Cabinet, is a leading figure. It is mostly active in the Middle West where it has come to own large granaries and thereby is quite prosperous. Not to suggest that its top leadership is Communist in the slightest, it does have a Communist infiltration.

This organization, through the money it makes out of its granaries, to which the farmers in several communities are completely beholdened for the storage and disposition of their products, spends millions of dollars a year fighting Benson and the administration. The administration, instead of fighting back, turns a deaf ear. Benson's personal inclination has been to counterattack, but his advisers insist that he do nothing. The facts are that even if Benson were to adopt the Farmers' Union program in toto they would still dig up issues against him because they are that kind of an organization.

Well, you would say the Farm Bureau which supports Benson's policies wholeheartedly—and there is a question whether the policies didn't originate with the Bureau—is a much bigger organization and can certainly offset the Farmers' Union attack. It could if it would.

But, although, in the Roosevelt administration, the bureau was in New Deal politics up to its neck, it has come in recent years to be nonpartisan and out of politics. Therefore, it does nothing except to tell about the resolutions passed at its national convention, to tell about its program, without any serious advocacy of either, and never saying a good word for Benson who is trying to carry out its program.

Republican candidates have ceased to look to the Farm Bureau for support. Indeed, the bureau never endorses any of them. It just goes along on its high principles. It may be that is the reason it is the biggest organization of them all but, insofar as national farm policy is concerned, it has ceased to have any influence whatsoever. A lot of Republican politicians, on the other hand, looking for aggressive support have tied in with the Farmers' Union, and thereby become bitter critics of Benson. Insofar as the country as a whole is concerned, it would not be a loss if they went down to defeat.

Hon. Cliff Clevenger

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ROONEY. Mr. Speaker, as most of us now know, our distinguished friend, the Honorable CLIFF CLEVENGER, of Ohio, has decided to retire at the end of this 85th Congress after 20 years of painstaking and honorable service in this body. I very much regret that CLIFF has made this decision for I know that we shall all sorely miss him. CLIFF and I have sat together for the past 11 years on the Subcommittee on Appropriations for the Departments of State and Justice, the Federal Judiciary and Related Agencies where he has helped to save many hundreds of millions of dollars for the American taxpayers.

Recently, and on Abraham Lincoln's Birthday, the people of Bryan, Ohio, his hometown, tendered CLIFF CLEVENGER a very fine testimonial luncheon. In this connection I received a letter from a distinguished citizen of Bryan, Ohio, Mr. George Koch, which, under the permission heretofore unanimously granted by the House, I include with these remarks.

The letter follows:

FEBRUARY 12, 1958.

Hon. JOHN J. ROONEY,
Chairman, State, Justice, and Judiciary, Committee on Appropriations, House of Representatives, Washington, D. C.

MY DEAR MR. ROONEY: I believe you will be interested in knowing we, here in Bryan today, not only commemorated the birth of Abraham Lincoln, but also the day was made noteworthy in honoring the sterling, magnificent service of Hon. CLIFF CLEVENGER, upon 20 years' service as our Congressman of the Fifth Ohio District.

We wish it were possible for you to have been here on this occasion.

We greatly lament his decision to retire. His services will be a distinct loss to the district and our country. Many splendid tributes were rendered him. Tears were in many eyes in realizing his leaving the stage of action.

Congressman CLEVENGER has often confided to me of his warm personal esteem and friendship for you. He spoke of the splendid cooperation always accorded him as you worked in the course of duty together these many years.

It a great privilege to know him as a personal friend, and to merit his respect and confidence.

It has been authoratively stated he can trace ancestry back to times of William the Conqueror. This being true, is it little wonder that he has steadfastly measured lances with the enemy within the gates? That he stood firm, when others flee in fear?

Sprung from humble and solid origins, by sheer force of character he achieved, mastery of his own fate, abhorring being a mere chattel of the state. He, like countless other Americans who made this Republic great, to

use the words of Milton, "Preferring hard liberty before the easy yoke, of servile pomp."

We, therefore, of the Fifth Ohio District, appreciate deeply the many courtesies and generous consideration you have always shown Mr. CLEVENGER.

With kindest personal regards, I remain,

Most sincerely yours,

GEORGE KOCH.

Grow Old Along With Me

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. PORTER. Mr. Speaker, as our life span increases, so do our needs. Throughout the United States today it has become apparent that the older citizen has problems undreamed of during the time of our forefathers, or even fathers. The senior citizen of today finds all too often that his savings are insufficient, that his experience is not sought, that his skills are ignored.

In my State of Oregon, a permanent Council of the Aging was established last year by Gov. Robert Holmes. Its 44 members are appointed for terms of 4 years.

The council investigates problems of the aging in Oregon, will provide a consulting service to local communities, and will cooperate with and assist agencies concerned with problems of the aging.

Recommendations from the council will be made to the Governor and, in turn, to the legislature.

This council was authorized during the last regular session of the Oregon State Legislature. My own pastor, the Reverend Wesley G. Nicholson, of Eugene, heads the council. He and the other 10 members of the executive committee will meet monthly in Portland. The entire council meets four times yearly.

The council recently hired an executive secretary, Miss Julia G. Johnson, a woman with considerable personnel experience. An office for this council has been established at the University of Oregon in Eugene.

Let me quote directly now from an article appearing in the Eugene Register-Guard of February 17, 1958:

In an attempt to learn what conditions are for the aging in Oregon, the council is planning meetings in communities of the State. Although the date has not yet been set, the first meeting will be held in Lebanon.

The council is aimed at stimulating programs in local communities and giving aid in helping to solve problems of aging people. Anyone who would like to meet with the council, to furnish information, should get in touch with Miss Johnson.

Much of the work of the council will be handled in subcommittee meetings. Appointed recently as chairman of subcommittees are the following: Employment: Earl Lovell, of the Oregon State Employment Service in Salem; education: James Sherburne, dean of General Extension Division of the Oregon State System of Higher Education, Portland; health: Dr. Jessie L. Brodie, Portland; housing: Mrs. Fannie K. Friedman, Oswego; community services: Mrs. Enid M. Rankin, Medford. Income subcommittee chairman will be announced later.

The entire council will meet four times a year, but the executive committee of 11 members will meet on the first Wednesday of each month in Portland. In addition to the Reverend Nicholson and Mrs. Lauris, of Eugene, others on the executive group include Elizabeth Baldwin, Volney Martin, Dr. Edward E. Rosenbaum, Mrs. Helen Zollinger, and Mrs. Margaret Sharp, all of Portland; C. F. Feike, Salem; William Goold, Lebanon; Henry L. Hess, Jr., and Dr. Donald Wair, Pendleton.

TVA Supplies Power for Army's Jupiter Missile Production, the Redstone Rocket Program, the AEC, and Other Vital Defense Agencies

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. EVINS. Mr. Speaker, despite the efforts of its enemies to detract from its great achievements, the TVA continues to perform its vital service to the Nation ably and efficiently and to win friends by doing so. The Sunday Bulletin of Philadelphia, Pa., one of the Nation's great newspapers, recently took cognizance of TVA's record in a commentary on the editorial page. Because this brief but cogent article so ably gives the facts, I have asked unanimous consent to have it inserted in the Appendix of the RECORD. The article follows:

TVA'S GOOD YEAR

(By Ralph W. Page)

There is one thing that the administration can point to as a signal success during the past year. That is the performance of the Tennessee Valley Authority.

It has added to our prosperity, security and morale at home, and has been widely copied and emulated abroad. Statesmen and engineers from Arcady to the Antipodes have flocked to learn how it works. For this Tennessee river is the only one in the world whose total length and resources are all adequately managed and utilized by one operational agency.

The report covering the annual progress in all its manifold activities lays special emphasis upon the efficiency of the flood control mechanism under maximum stress, and the profit made by the electric power operations, strained to the utmost by the demands of the Atomic Energy Commission.

Last February there came the greatest inundation on the river since 1867. Without regulation this flood would have swamped the city of Chattanooga to the depth of 22 feet. The industrial center would have been a lake, 12,00 dwellings would have soaked or floated off, the population stranded, and business closed. The system actually confined the waters to their channel there and below, saving at least $70 million damage. Adding this to previous losses averted, the flood control operations have saved to date at $132 million—70 percent of the total TVA investment allocated to flood control.

On the electric power front the record was equally praiseworthy. The authority sold 57 billion kilowatt-hours of juice. Of this a major part was provided for the Atomic Energy Commission at low standard TVA rates that saved the Government and the taxpayers millions of dollars.

The net cash profit realized by the sale of electricity was $58,100,000. This represented a return of 4 percent upon the net investment of the Federal Government in these power facilities. Provision for depreciation added another $41,300,000, making a total of $99,400,000 cash available for payment to the Government and to invest in new installations.

Thirty million dollars was returned to the Treasury. With previous payments this amounted to $240 million so repaid—and this is $68 million more than the legal requirement to repay all Federal appropriations within 40 years of their receipt. This left the authority with $69.4 million cash for expansion.

In the light of this financial record it is amazing that the private industries and political sharpshooters can continue to reiterate that taxpayers all over the country are being gouged to provide a sinecure for the residents of the Tennessee Valley.

What is actually happening is that the American taxpayers are gradually acquiring ownership of this vast network of power stations free and clear, with all their investment repaid, and at the same time realizing a great saving upon the bulk of this power, which is sold to their Atomic Energy Commission.

Increase of Postal Rates

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend by remarks, I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Post-Dispatch of Thursday, January 23, 1958, entitled "Postage Should Go Up." This excellent editorial points up the basic problems facing our Post Office Department which necessitates a realistic readjustment of postal rates and the establishment of a congressional policy for the determination of postal rates:

POSTAGE SHOULD GO UP

One recommendation in President Eisenhower's budget message deserves favorable action in this Congress—not to balance the budget, which is probably beyond balancing, but to put a vital public service on a sensible basis. This is the renewed request for an increase in postal rates.

A year ago the administration, led by Postmaster General Summerfield, attempted to increase the letter rate from 3 cents to 4. That failed to pass although the National Association of Postmasters, representing 33,000 postmasters, not only supported the increase, but campaigned for it widely over the country. In St. Louis, Postmaster Dickmann was the leader in the effort.

The Post-Dispatch said then and repeats now that an increase in postal rates—including first-class rates which have not been raised since 1932—is desirable. For the administration to propose a 2-cent first-class increase when it could not get a 1-cent boost last year seems a bit on the unreal side. Perhaps the additional cent is designed as a trading point so Congress may shave the proposal to the 4-cent rate of last year.

Certainly the Post Office Department ought to charge more also for handling mail advertising. So-called junk mail—that addressed to merely "Occupant"—ought either to be eliminated or charged for at higher rates. The mail advertiser does not deserve a subsidy to help him pass out his handbills via the letter carrier's sack.

Neither do second- or third-class mail pay their fair share of postal service maintenance. Despite some recent increases in these rates, some second-class mail still enjoys a subsidy. This is a longstanding policy intended to encourage the education of the public. But today it is largely the means whereby advertising material is circulated at little cost. These rates should be increased gradually so as not to work a severe hardship on worthy publications of meager income. Last year the proposal was for an increase of 15 percent a year for 4 years.

One thing which the Eisenhower administration ought to do and a thing which it has been resisting is to follow the proposals of the Hoover Commission in the elimination of patronage and a continuing measure of spoils in the selection and handling of personnel. This is a basic recommendation which can be put in effect without any change in postage rates whatever.

There is no law that requires the postal service to pay its way and some citizens feel strongly that it ought not to do so. But there can be no serious objection to adjustments in rates which make them more nearly commensurate with the services enjoyed. The cost of handling the mails has gone up rapidly along with other costs, but postal rates have not kept pace. This is the fundamental fact on which Congress should base its study and response to the White House's proposals.

Delete the Dopesters

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. HILLINGS. Mr. Speaker, as in many States, California has a serious problem in the trafficking and use of illegal narcotics.

Our Federal Bureau of Narcotics, under the able direction of Harry J. Anslinger, has been doing a consistently good overall job of dealing with peddlers and addicts.

However, our Federal program cannot succeed without cooperation of the States. I have advocated tougher State laws to deal with peddlers and addicts on the theory that coddling of peddlers and addicts merely encourage them to continue their nefarious and illegal practices.

The narcotics challenge in California is accurately set forth in a recent editorial entitled "Narcotics Challenge California," which was published in the Alhambra (Calif.) Post-Advocate. The editorial follows:

Three recent news reports have brought home to the citizens of this State the seriousness of the narcotics problem.

The 1957 Los Angeles County grand jury said in its final report that Los Angeles' narcotics problem has grown to such proportions that laws and law enforcement agencies no longer can cope with it.

In San Francisco, a State narcotics agent has been indicted on charges of selling dope to an addict.

In San Diego, the State senate narcotics committee heard that marihuana cigarettes and dangerous drugs are easily available below the Mexican border. The committee also heard that children have obtained heroin there.

Numerous laws have been passed to try to stem the evil traffic, to control the addict and to protect children, and new enforcement bureaus have been established. Officials have raised more warning signals.

There has been progress in the fight, but too many human beings still are being ruined by hopeless addiction and by the other contagions which accompany narcotics. Some of these victims are children.

There must be no relaxation in the crusade against dope in all its various forms. Law enforcement officers, educators, religious leaders, lawmakers, parents—all citizens—have to muster strength sufficient to match the seeming power and cunning of the peddler.

We cannot afford even a minor defeat in this crucial conflict.

Statement of the AFL–CIO Executive Council on Education

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ZELENKO. Mr. Speaker, I am pleased to place in the CONGRESSIONAL RECORD the statement on education adopted by the AFL–CIO executive council at its meeting in Miami Beach, Fla., on February 6, 1958:

The failure of the administration to grasp the magnitude of the Soviet challenge is perhaps best illustrated in the way it has acted in the field of education. The President's program for education submitted to the Congress last week is too little and too limited. Let us hope it is not already too late.

While sputniks have dramatized our failures, the crisis in education has been with us for years. Every day of further neglect puts us further behind. America cannot afford to wait any longer. At every level, our educational system must be strengthened. No child should be deprived of the best possible educational opportunities because of lack of school facilities, because of lack of qualified teachers, because of financial difficulties, or because of racial discrimination.

The crisis in education is a national problem, with national survival itself at stake in this space age. The role of the States and the school districts will continue to be crucial, but the magnitude of the crisis is so great that a major national effort is essential. Yet the sad fact of the matter is that the President's proposed budget requests $300 million less for all types of educational activities than he requested in his last year's budget—before sputnik.

This incredible feat—reducing our educational sights in the face of new Soviet challenges—was accomplished simply by dropping completely any recommendations for a school-construction program and by substantially curtailing the 10-year-old program of Federal assistance to school districts affected by the impact of United States Government installations.

America, of course, needs more scientists and engineers. But we also need better trained diplomats and social scientists and language experts. The total war against tyranny depends upon our children's grasp of the humanities as well as the sciences. But neither the physical nor the social scientists will come from a vacuum. Their college and post-graduate training must be based upon a sound grounding in fundamentals at the primary and secondary levels. Yet, the administration has abandoned the school-construction program—with the prospect looming of a 500,000 classroom shortage within 5 years.

The administration's new education program has been ballyhooed as a billion-dollar program. But a billion dollars for 4 long years is just a drop in the bucket. There must be no ceiling on meeting the Nation's educational needs. Educational authorities have declared that America needs to invest billions of dollars more each year in our education system and in America's youth if we are to make real progress.

The AFL–CIO, in accordance with the proud record of organized labor for a hundred years, will continue to press for real support to education at every level and in every field.

We will support a school-construction program that will make a real dent in our growing classroom shortage.

We will support a program aimed at assisting in the recruitment and retention of the best possible teaching force, with adequate wages and decent working conditions assured to our Nation's teachers.

We will support a program of Federal aid to higher education which will make it possible for every American boy or girl who demonstrates ability and interest to complete a college education without regard to his financial condition.

There may be honest disagreement among Americans as to the best types of missiles we should develop, or how many Army divisions we should support. But there can be no disagreement about the need to protect America's most precious asset—its children. There can be—there must be—no limit on what we do to protect and strengthen this asset.

The AFL–CIO calls upon the administration and the Congress to move boldly and quickly. The future of our children and the world they inherit is at stake.

Estonian Independence Day, February 24, 1958

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. REUSS. Mr. Speaker, it is a great honor to join my friends of Estonian descent in commemorating Estonian Independence Day.

More than one chapter in Estonia's history speaks of valiant efforts to wrest political freedom from the clutches of oppression and tyranny. Today we mark her most notable success.

It was 40 years ago, on February 24, 1918, that Estonia proclaimed herself a republic. For years she stood as an esteemed member of the family of free nations. However, in 1940, over American protests, the Soviet Union occupied Estonia.

It is a tribute to their great religious faith, and to their love of freedom, that the Estonian people have not bowed down to the inhumane tactics of their oppressors.

Those noble people prize freedom.

Their actions offer continuing evidence of their bravery.

If Adams Can Rule SEC, What Agency Is Immune?

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. EVINS. Mr. Speaker, the revelations before the Special Subcommittee on Congressional Oversight continues to disturb the people of our Nation not only by the facts revealed but even more by the implication of those facts. The Nashville Tennessean, on Thursday, February 13, commented pointly on these implications in its leading editorial. Under unanimous consent, I include it in the Appendix of the RECORD. The article follows:

IF ADAMS CAN RULE SEC, WHAT AGENCY IS IMMUNE?

Do we have a group of so-called independent Federal regulatory agencies which, though designed to be guardians of the public interest, are willing to jump through the hoop upon orders from the White House?

And how far has this power been abused?

These are only some of the questions that need to be decided by some congressional investigators, but not the House committee which has just fired its chief counsel when he was beginning to reach paydirt. * * *

Since Dr. Bernard Schwartz, retiring counsel, has charged "an unholy alliance between big business and the White House" in wrecking the hearings, there can be no coverup with a whitewash. And now that the ex-counsel's working notes—not the official files—have been turned over to * * * Senator WAYNE MORSE, of Oregon, we do not believe that the exposé can be stopped.

Regardless of what the undisclosed record shows, every Member of Congress knows that Mr. Sherman Adams, the White House spokesman and fixer, did interfere with the Securities and Exchange Commission in June 1955, as a means of hornswoggling the House of Representatives on an important vote pertaining to the malodorous Dixon-Yates deal.

This was brought out by Senator ESTES KEFAUVER as chairman of the Senate Antimonopoly Subcommittee, but not until Mr. Adams and the administration tried their hardest to keep the facts from coming out.

At first SEC Chairman * * * refused to talk when called as a witness but changed his mind under pressure and told how Mr. Adams had called him 2 days before the scheduled testimony of Mr. Adolphe Wenzell and had suggested a brief adjournment.

As a result of that adjournment, which was granted without argument, the House began debate on a $6.5 million appropriation for a Dixon-Yates transmission line connection without any knowledge of Mr. Wenzell's double role as adviser on Dixon-Yates and financial agent of the firm handling the project.

Under false pretenses, therefore, the House approved the appropriation on June 16 and it was on that very day that the SEC resumed its operations. Thus Congress and only some of the public were deceived by the Adams-SEC coalition with suppressed facts when they were needed most.

It becomes important to know how typical was this White House exercise of the big stick, aside from specific individual cases or corruption of which Dr. Schwartz speaks with feeling.

And let it be remembered that the voice of Mr. Adams is the voice of President Eisenhower, even when it appears to be different. For it is the rule that he does not speak unless the boss knows what he is saying, and approves. This has only recently been affirmed by the President.

* * * * *

Having created the regulatory agencies, Congress has a direct responsibility for them. If they have become creatures of the administration to any degree, it is a disgrace. Their only excuse for existence is protection of the public from varied interests and the mere thought that they are pawns of an unholy alliance is intolerable.

Right now the allegation of dirty work within the Federal Communications Commission has priority, but that is only the starting point. The mess is far reaching according to accumulating evidence, and it must be cleaned up.

Resolution Adopted by the Los Angeles Interexecutive Committee of the Armenian Revolution Federation

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 8, 1958

Mr. HILLINGS. Mr. Speaker, one of the most consistent and relentless foes of communism and other forms of oppression has been the Los Angeles interexecutive committee of the Armenian Revolutionary Federation.

I have had the pleasure of meeting with this group and I know the objectives of the committee and its members are in the highest of democratic tradition.

A resolution adopted by the committee clearly sets forth the goal of the Armenian Revolutionary Federation clearly and forthrightly. I know that this resolution will be of interest to all Members of Congress and the text follows:

Whereas the Armenian Revolutionary Federation was founded 67 years ago to overthrow the tyranny of the decadent and murderous Ottoman Empire and to defend the safety and Christian faith of the Armenian people; and

Whereas the ideals of the Armenian people and the Armenian Revolutionary Federation are identical with the hopes and aspirations of freedom-loving peoples all over the world; and

Whereas because of its adherence to the principle of self-determination of small nations, it has bolstered the democratic spirit in the Middle East and in Europe; and

Whereas the Armenian Revolutionary Federation has resisted the encroachments of communism in the Armenian schools, in the Armenian churches of all denominations, and in the Armenian community throughout the world: Now let it be

Resolved, That the five combined committees of the Armenian Revolutionary Federation in the Los Angeles, Calif., area memorialize the people and the Government of the United States of America that Americans of Armenian extraction enthusiastically endorse the policies and actions designed to free the captive peoples of the Union of Soviet Socialist Republics as well as those policies and actions designed to support and strengthen the smaller and younger republics throughout the world; and let it be further

Resolved, That the five combined Los Angeles committees of the Armenian Revolutionary Federation extend their greetings and gratitude to the Honorable PATRICK J. HILLINGS, a Member of Congress from the 25th District of California, for his understanding and encouragement during the celebration of the 67th anniversary of the founding of the Armenian Revolutionary Federation in Los Angeles on November 24, 1957.

Respectfully yours,

ARRA HAIGAZIAN,
Chairman, Los Angeles Interexecutive Committee.

Resolutions Adopted by the Maine Federation of Women's Clubs

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolutions from the Maine Federation of Women's Clubs:

MAINE FEDERATION OF WOMEN'S CLUBS,
Kezar Falls, Maine, February 2, 1958.

Hon. ROBERT HALE,
House Office Building,
Washington, D. C.

DEAR MR. HALE: You will note from the enclosures that the Maine Federation of Women's Clubs took action at their midwinter conference on several matters to come before the present session of Congress.

It will be greatly appreciated by the clubwomen of Maine if you would give your support and consideration to the matters of roadside billboards, humane slaughter of animals, and opposition to pay television. We realize that the billboard bill has been introduced in the House by you. This will register our support to it and hope that it will have a favorable passage.

Thank you for kindness and with every good personal wish for your continued success, I am,

Sincerely,

ELEANOR S. GARNER
Mrs. Allen F. Garner,
President.

Whereas the consideration of the best interests of the greatest number of people has always been of paramount importance to the Maine Federation of Women's Clubs; and

Whereas television vitally affects the interests of all the general public; and

Whereas the pay television promoters propose to invade the frequencies that have been set aside for free broadcasting; and

Whereas the members of the Maine Federation of Women's Clubs fear that pay television would eventually squeeze free service off the air and remove the citizen's freedom of choice in the selection of programs: Therefore be it

Resolved, That the Maine Federation of Women's Clubs, at the midwinter conference, assembled in Augusta, January 23–24, 1958, goes on record as opposing pay television

versus free television service as it now exists; and furthermore be it

Resolved, That this resolution is adopted that a copy be sent to Senators MARGARET CHASE SMITH, FREDERICK G. PAYNE, Congressmen CLIFFORD G. MCINTIRE, ROBERT HALE, and FRANK COFFIN; the General Federation of Women's Clubs; and Mrs. Samuel J. McCartney, chairman of communications in the General Federation of Women's Clubs; and to the Federal Communications Commission.

Whereas the Federal Government is spending $27 billion to build 41,000 miles of interstate highways throughout the United States; and

Whereas there is a probability of pressure groups exerting influence toward the erection of signs and billboards along said highways; Therefore be it

Resolved, That the Maine Federation of Women's Clubs in convention assembled in Augusta, Maine, January 23–24, 1958 recommends that the member clubs demand that prompt Federal legislation be enacted to prevent the erection of advertising signs and billboards along these highways; and further be it

Resolved, That the clubwomen of Maine individually write their State and Federal legislators protesting the erection of signs and billboards along said highways.

Don't Sell the Community College Short

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON,
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DIXON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

DON'T SELL THE COMMUNITY COLLEGE SHORT

"In the conditions of modern life the rule is absolute, the race which does not value trained intelligence is doomed. . . . Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."—ALFRED NORTH WHITEHEAD.

To win our race for scientific, economic, and cultural supremacy, the United States must have better schools and that at the earliest possible date. To my way of thinking the great immediately available power of the junior or community college to help transform the educational picture is being somewhat lost sight of in our haste to strengthen the high school and the university. This new, local, rapidly growing, easily accessible and less costly institution must definitely figure prominently in all State and Federal programs designed for purposes as follows:

First, to prevent wasted brainpower of the top one-half of upper 25 percent of high-school graduates in United States; second to seek out, encourage, and guide the gifted; third, to improve the curriculum in math and science; fourth, to strengthen teaching at all levels by retaining and developing the very best teachers through such incentives as more comparable salaries, the employment of more student assistants on college level, the exemption of money spent in professional improvement from income tax and the exaltation of the role of the teacher; fifth to provide interest-free loans, fellowships, scholarships, work opportunities and other inducements that will aid talented, deserving, and needy students to receive as much education as will result in profit to them and to society alike.

I hold no special brief for the community college. Neither do I appeal for any favors to this type of institution which we cannot accord the high school or the university. I do insist, however, that it receive, in proportion to its size and importance, equal treatment and public recognition.

I am apprehensive just at this time because of two things; first, the junior college and its important role is not being sufficiently recognized in our educational planning; and second, there is some likelihood that it will be left out of some programs as was the case in the initial draft of GI bills wherein only the senior colleges and their students were eligible.

It is my pleasure to include herewith one short segment of an article in February 21 U. S. News & World Report representing Dr. Milton S. Eisenhower's appraisal of the city or junior college.

Question. There has been a lot of talk about city colleges and junior colleges. What do you think about that as a possible partial solution to this problem?

Answer. There are many kinds of junior colleges. Some are a two years' extension upward of high schools. Some are independent institutions controlled and operated in the community. Others are branches of State universities.

I have had experience only with the third type. They are very helpful. You can offer good solid work with the same academic standards as those of the parent institution near the student's home. You save him money for the first two years. The student may then transfer to the senior campus for the last two years of the baccalaureate program.

To the extent that I know the other types of junior colleges—such as in Maryland, Kansas, and California—I can say that they do a good job, too.

Question. Is it a cheaper method of getting those first two years of college education?

Answer. It's cheaper for the student—not for the institution.

Washington Report of Hon. Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my newsletter of February 22, 1958, a weekly report to constituents:

WASHINGTON REPORT

(By Hon. BRUCE ALGER, Fifth District, Texas)

FEBRUARY 22, 1958.—Heavy snow blocked roads, giving Government workers an enforced vacation. No traffic moved without snow tires or chains. As a result, the legislative week was lighter. Texas children would have loved this week in Washington.

George Washington's birthday is commemorated each year in the House by the reading of his Farewell Address, given as he retired from the Presidency. Every citizen could benefit from his counsel in this message. Some Members of Congress recognized a startling contrast to both the form and spirit of our Government today—as represented specifically by the President's foreign-aid message, received Wednesday, and generally by our huge Federal bureaucracy. Washington advised against alliances with foreign powers, partiality toward favorite nations, big public debt, and devices of "small, artful, enterprising minority" to control or change government. He praised constitutional checks, stressed the need of enlightened public opinion, and declared "religion and morality lead to political prosperity." This message suggests that jet aircraft replacing horse and buggy do not change the basic good sense of constitutional principles. They are applicable today. Surface conditions change, certainly, but basic principles endure.

The Yellowtail Dam land-purchase bill slid through the House on a voice vote, but not before the minority views of 10 Republicans on the Interior Committee were heard. The bill proposed to spend $2.5 million of taxpayers' money for the land for another public power and reclamation project, when the land was appraised as worth $50,000. The RECORD shows only one Texan voted to send the bill back to the committee (197 to 151). So the bill passed. Who's for saving the taxpayers?

Tax cuts and increased Government spending are surprising legislative companions and are being mentioned here by some Members. Reducing income and increasing outgo is obviously impractical, but is a part of the unreal economic world of Federal Government and politics. The real danger is the threat to the value of our money through inflation. Unfortunately, as experience shows, government has the power to water the dollar. Could it be the need for some politicians to generate issues that accounts for some trying to scare us into a depression, as stated this week in the CONGRESSIONAL RECORD? (Analogy—demogogs rock the boat themselves to convince others there is a storm at sea.) This is the logical result of government transgressing its legitimate function. Since New Deal days, the Federal Government has taken the lead in economics and economic theory, while politically spending the tax dollars. Naturally, therefore, the administration is optimistic, the opposition party is pessimistic. Somewhere in between is the truth—and it should be the truth, not politically-motivated appraisals, that the public should have. Fortunately, government is not yet so influential on the Nation's economy as some allege it to be—yet it is possible to talk ourselves into recession and it is possible to build Federal Government beyond the point of return to free enterprise. Only the people, in their knowing and studying the truth, can keep government in its proper place.

Disarmament talk on our part as a result of Russia's alleged "desire for a breather" is now creeping into Washington columns and conversations. As one Washington columnist put it, "Russia has industrial and farm problems, needs a respite in competition with the West. From this respite could come better understanding and peace." How gullible can some be? Isn't this carrying Marquis of Queensbury rules a little far? Should we weaken our defenses for Russia's benefit? How can we trust the Communists?

The mutual security message from the President opened the year's controversy over foreign aid. After years of trial and error—the heavy cost to taxpayers, the mistakes and mismanagement, the misunder-

standing with foreign recipients—these and other considerations cause me to view the economic program with distrust. We seem to "dance to Russia's tune." Weakening ourselves economically to help others is not strengthening us or the team. We want respect before friendship. We cherish ideals of freedom and honor before peace and appeasement. It is our strength and example that attracts allies. We can't buy them. "Example is the school of mankind and they will learn at no other," as one homily goes. The United States must be the example. Or as Washington said, "There can be no greater error than to expect or calculate upon real favors from nation to nation." Even some of our military aid can be challenged. Our allies could become "neutrals" in a hurry in a hot war to save their own hides. This is human nature. More about mutual security funds later.

"Light" From the Humboldt Beacon

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SCUDDER. Mr. Speaker, in its leading editorial of January 30, the Humboldt Beacon has shed some bright light on the added tax benefits accruing to Federal, State, and local Governments from the Trinity Partnership Plan.

As the Beacon notes, is it not odd to find legislative opposition to partnership, when citizens from the heart of the Trinity territory come all the way to Washington to speak their case for joint development of Trinity by Government and private enterprise?

It stands to reason these folks know what Pacific Gas & Electric taxes mean to their local economies. Take Trinity County itself. Right now, Pacific Gas & Electric pays into county coffers $161,000 a year. With partnership, this would jump to a total of $397,100 or an increase of $236,100. Trinity depends on this company, then, for nearly 42 percent of its tax income. And with over 70 percent of Trinity Government-owned and tax-exempt, an extra $236,100 is far from chickenfeed.

Let us take Shasta County. Here is a county that depends on Pacific Gas & Electric for over 50 percent of its tax income. The company annually pays out $2,562,000 to Shasta. With partnership, this would be increased by $608,800 or a total of $3,170,800.

At a time when county costs and services are on the rise—when local indebtedness is at an all-time high—when the continuous stream of newcomers to our local communities makes for additional schools, roads, hospitals, etc., how can any area miss out on a tax benefit boon which Trinity Partnership assures to nine northern California counties?

The Humboldt Beacon editorial on this issue entitled "A Curious Comparison" follows:

A CURIOUS COMPARISON

It is a more than curious fact that several nonresident politicians are making their election campaigns against the Pacific Gas & Electric this year while the folks of Trinity and Shasta Counties, who live in the heart of the Pacific Gas & Electric partnership plan, even made the trip to Washington to speak for the big bad private utility which simply pays the bulk of taxes in those two counties.

In fact, with all of the bellowing by politicians, no one has ever contradicted the figures that Pacific Gas & Electric will pay: $62 million in local and State taxes, $88 million in Federal taxes, and $165 million for the use of the people's Trinity water to produce power—water that will again be sold by the Government to the valley irrigation districts for reuse by agriculture.

We have lived in northern California and Oregon now for nearly 32 years and no one will ever convince us that Pacific Gas & Electric Co. hasn't been a good operation for the advancement of this section of the State, nor that it will ever cease to be. We like that kind of partner in any business.

Getting Ready for a Birthday Party in Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. PORTER. Mr. Speaker, "it took colorful men to create a colorful part of the world." These words are not mine. They appeared in a fine editorial in the Eugene Register-Guard of February 14, 1958, and refer to my native State, Oregon. Next February 14 Oregonians celebrate the 100th birthday of their State. During this century, now nearly past, colorful men have brightened the pages of history as it refers to Oregon and the Nation and sometimes the world.

Famous men, these past and present pioneers. Men like the late Jason Lee, Joe Lane, Os West, Charlie McNary. Men like my friends and colleagues in the Senate—WAYNE MORSE and RICHARD NEUBERGER.

The editorial appears herewith:

BIRTHDAY

This is Oregon's 99th birthday. From this day forward, until next Valentine's Day, Old Man Oregon will be in his 100th year, a milestone worthy of remembering. In 1959, which is actually the centennial year, the State will stage a birthday party in the shape of an exhibition which, it is hoped, will draw worldwide attention to this State.

But it is this year, this year before the centennial, that much of the work must be done. Committees will be working hard all year to make the birthday party a success. The rest of us would be well advised to familiarize ourselves with the exciting history of a century of statehood. This is true not only of the schoolchildren, but also of the rest of us.

Individually we could institute reading programs to learn about the great men and women who brought bathtubs and representative government to the frontier. We all need to know more about Robert Grey and John Day and Marcus Whitman and Joe Meek and Jason Lee and Joe Lane. Nor should we ignore the more recent figures that have made Oregon an exciting place to live. We should learn about Sylvester Pennoyer and Os West and Charles Martin and Dick Neuberger and Wayne Morse and Jim Hill and Ben Holladay and Jakie Kamm and Charlie McNary and Harry Lane, Joe's grandson. It took colorful men to create a colorful part of the world.

This summer it would do most of us good if we undertook a "See Oregon First" sort of vacation. Those of us who can should see Oregon's three forgotten corners, deep in Curry County, the vast reaches beyond the Steens and the alpine beauty of the Wallowas. And we should observe the many physical and social features that make this a truly diversified State—wheat and logs, peas and ore, city and hamlet, cowboy and fisherman, tidepool and glacier, desert and jungle.

A year hence we'll be hosts to the world. Now is the year to do our homework.

Art, the Old West, and Montana's Cowboy Artist, Charles M. Russell

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. ANDERSON of Montana. Mr. Speaker, a statue of Cowboy Artist Charles M. Russell will soon move into Montana's space in Statuary Hall in the Capitol.

Charlie Russell portrayed the old West in the days of the open range, the Indian and the cowboy, the outlaw and the vigilante. He was a master of colorful and graphic prose, of dynamic oils, dramatic black and white and vital bronze. He has joined Will Rogers and Bret Harte in Dodge City as one of the first five honored in the Cowboy Hall of Fame.

Next October, the National Gallery here in Washington will have an important exhibit of Russell works. I invite my colleagues to plan to see this outstanding collection.

Dr. K. Ross Toole, brilliant director of the Montana Historical Society, last Friday gave an address here in Washington before the Montana Society, which presented a most interesting and realistic appraisal of Charlie Russell. It was so interesting, scholarly, and thoughtful that I want my colleagues to have an opportunity to enjoy it, and so I ask that it be printed herewith:

CHARLES M. RUSSELL

Myth and legend have a way of clustering around history like pilot fish around a shark. They always will, I suppose. Often, like the story of George Washington and the cherry tree, they are harmless if aprocryphal. Sometimes, however, they are not.

Charles M. Russell as a person has suffered considerably at the hands of the myth makers, because he has emerged as both more and less than he was in fact. I want to talk about Russell, his works, and times this evening, not specifically but generally. Biographical sketches of Russell are available everywhere. So I won't give you a précis of his life. I am not qualified to analyze his works—and besides, Mr. F. G. Renner, of this city, has done that excellently—so I won't deal with his techniques. I simply want to talk about a remarkable man and why, in my estimation, he was remarkable. I think Russell's work will endure and I would like to tell you why I think so. But first I want to dispose of a few other matters.

So great is the emotionalism in Montana about Russell that an all-black-all-white situation prevails. Referring to this situation in a recent issue of Harper's magazine, the famous historian, Walter Prescott Webb, remarked that because of the dearth of artistic activity in our hinterland, because, in short, we have so little else we have elevated Russell to the stature of a Titian. It is hard criticism to take precisely because there is some truth in it.

Art is and must be organic, not static. Like everything else about us, it must change. It must change because, to be good, it must essentially be a reflection of today and what we are today. Great art has almost always been, at its inception, contemporary art. There are, of course, exceptions. But what artists have almost always tried to do since the beginning of time was to interpret their time, not someone else's time, but their own.

The dedication to, and emotionalism about, Russell, in Montana, has first of all led to a kind of corruption of local talent. Of the some 10 or 12 really talented painters in Montana today, the majority are trying to ape Russell. This is a pity because in spite of technical skill the result is essentially fraudulent. This fraudulence, or perhaps I should be more charitable and simply say superficiality, results because a painting to be enduring, must have at least this: It must be the product of a depth of genuine feeling in the artist. It must reflect something of his loves and hates and something of his knowledge. If it doesn't do that, it may be technically good. It can't be enduring.

First of all, then, the overpowering reputation of Russell has led to inordinate imitation and that, while it is a tribute to Russell, is too bad for the creative community in Montana.

Secondly, Russell has been appropriated and deified by a group not only in Montana, but in the West, who are not fundamentally interested either in the man or in his painting. They are solely interested in basking in the warmth of his reputation. These people, and the members of the Montana Cowboys' Association probably lead all the others, have done a great deal to make Russell appear to be the quintessence of the common man. They have done a great deal throughout the years, by the peddling of myth and legend, to make this most uncommon man seem common. These people see Russell as no different from themselves except that he happened to paint. He was, therefore, in no real way remarkable. He was, like them, just an old shoe sort of fellow. Thus creating him in their own image (or they are indeed old shoe) they bask in his prominence. This is the sort of thing that a teen-age lunatic fringe has done with the late James Dean, except that in Russell's case this coterie has assiduously made him less than he was both as a man and as a painter. Today these cowboys affect his hairdo, his dress, his stance, and a surprising number of them even write abominably sentimental poetry about the old days. Those were days they never saw and know little about. There are very few real oldtime cowboys among them.

On the other end of the spectrum there are the long-haired abstractionists whose venom toward Russell is perhaps a great tribute to him. Were they really competent themselves they would have no need to climb into the sunshine of recognition over the ruins of his reputation.

In the middle (and it is always uncomfortable to be in the middle) there are a substantial group of artists and laymen who have a great respect for Russell's art, who have an inkling that in a very direct sense he was a great human being, but who are concerned with our preoccupation with him because it does stifle artistic imagination, it does place a burden on the competent contemporary and it does channel talent into a sterile field.

The fact is the West of Russell is dead—and it is buried. It is stuff for the historian, the antiquarian and the writers of novels. But it is dead. The man who lives on Sixth Avenue, drives a Buick with hydramatic to his studio, keeps a saddle horse in a stable and affects cowboy hats, boots and a twang, but who spends most of his time before the television is a man who, in other words, is very much in the space age. He is simply not going to do much to interpret the Old West in paint. The best he can do is paint documentary stuff based on research. Indeed, he can only be an illustrator. And in the proper, not the loose sense of that word, illustrations simply aren't going to endure.

Thus, having reviewed these various attitudes toward Russell today—and I shudder to think how each will be enhanced when Universal-International comes out with its Charlie Russell Story—let us speculate for a moment about Russell and what he did.

I think it is necessary first to point out that the era of the cowboy was many things—but it was none of the things that the movies and fiction have made it. In the first place, it was the era of the open range. And it was over almost as soon as it had begun. You often hear the phrase today "Oh, he's a real old-time cowman." Well he isn't, or if he is he is indeed a rare and ancient bird. Because the open range was gone by the early nineties. In Montana it hadn't made a significant beginning until the early eighties. At most, in Montana, the West of the real cowboy lasted for only something like a decade. There are variations elsewhere in the West but nowhere did the period last for more than an historical moment.

In the second place, the cowboy had anything but a romantic job and it was anything but a romantic era. All the romance is ex post facto. Most of it dates to Owen Wister's novel The Virginian. The job was hard, monotonous, dirty, lonely, and unrewarding. And in between drives and roundups and riding, this romantic knight of the prairies usually spent his time drunk in a saloon or bedded down in a brothel. He was neither a gunman quick on the draw, a seam-faced range philosopher, nor did he feel himself closer to God than anyone else. It is strange, indeed, that we have chosen these men and this time around which to build perhaps the greatest American romantic legend of all. But we have. And there is, I think, a reason for it.

The United States Census Bureau officially noted the end of the frontier in 1893. It could not find a frontier anymore, an area marked by less than three persons per square mile beyond which there was nothing but country. To a large extent we are still not fully aware that the end of the frontier marked the beginning of a restriction on individual freedom and individualism. Frederick Jackson Turner, an historian of towering reputation, wrote his great works on this theme. And any contemplative view of the past proves him right.

So that the end of the open range, the end of the era of the cowboy, coincided very precisely with the end of the frontier and the end, therefore, of a whole wellspring of American individualism and freedom.

In those days, the nineties, when the frontier as a geographical concept was vanishing, when a whole basic American phenomenon which had held sway since the 17th century was flickering out, there were few, indeed, who marked its passing. It was, in a sense, a lingering death. There were still vast, unsettled spaces. There were vistas where the sky came down the same distance all around, but as a place of free land in unlimited quantities, a place beyond the law, a place where neither Congress nor any power save the power of the individual man himself could reach, the frontier was gone. It didn't go with fanfare or eulogies. It just slipped away. That is why not more than a handful of men in the entire United States (one might legitimately say in the entire world) noted or commented on its passing. The entire artistic production of Charles M. Russell is a commentary on the end of a great and important American experience. That is precisely why his works will endure and, indeed, increase steadily in value. That is why those who insist that he was merely an illustrator demonstrate that they have neither studied his work nor pondered the reason for his startling popularity.

People who love Russell's work doubtless have trouble in explaining precisely why. They say it is because of its fidelity as to landscape or color. Or they say it is because nobody could draw a horse as well as Russell. Or they say it was because he could paint action so well. But they are only really describing incidentals and byproducts. The real power of Russell's work does not reside in technique. It resides in the fact that he felt to the very depths of his being that an era was dying—and that it meant something. He always approached the subject obliquely, but he never strayed far from the theme. He had been a part of the era, not as an observer but as a participant. And he understood it. He chronicled it and its death. And he did so with a mixture of sadness, humor, and violence that no acute observer can miss in his work. And he did it honestly.

Given this depth of feeling, given this understanding and perception about his times, and given real talent with brush and clay, you have an artist, not an illustrator. Now add to these qualities these others: gentleness, geniality, and loyalty, and you have an uncommon man doing an uncommon thing.

You should not, I think, ever judge Russell by 1 or 2 of his paintings or a cursory look at many of them. Nor should you judge him by technique alone. The impact lies in a close look at many of his works.

Known as a painter of violent action you will find, for instance, that some of his most compelling works are compelling precisely because of a startling lack of action. Two utterly motionless mounted Indians, for example, looking down at the tracks of a wagon in the tall grass. Again and again his theme was portend, not action.

As for his humor, both in his paintings and writings, man's inhumanity to man is the core of it. In this regard Russell instinctively understood what Al Capp was talkink about when he said that the root of most humor is to be found in cruelty. Russell also found a root of humor in sadness. Notice how often pathos is an integral part of his humor. Here is a painting of a mounted cowboy on a cold and bleak Christmas Day holding aloft a bottle of booze while Santa Claus and his sleigh appear across the sky in the background. Because of subtle caricature, because of incongruity, your first reaction is to laugh. When you look again it is merely sad.

I, for one, am weary of the glib analysis of Russell and his work, either by the pseudo-abstractionists or by the clay-footed 20th century cowboy. Both use Russell for their own purposes and neither approach him objectively or thoughtfully. But irrespective of his critics on the one hand or his maudlin deifiers on the other, Russell's work will endure and increase in value.

Charles Russell was an immensely fortunate man. Very few of us have the opportunity to live our dreams. Russell did for nearly 20 years. Most of us are truly inarticulate—at least what we feel most deeply we can't express without groping. Not so with Russell. What he felt most deeply he expressed with skill and finality. Most of us cannot stand off and understand our times.

Russell could and did. And very few of us are widely beloved. Russell was.

I think the Russell exhibit scheduled for the National Gallery next October is an important exhibit. It isn't merely that it is good publicity for Montana, it is important in a much larger sense. If that were not true the society of which I am the director could not legitimately justify the considerable expense involved. This is not merely Montana hoopla, but an endeavor to interpret ourselves, the West of which we are a part, and the past of our country to the east. The best conceivable vehicle is an exhibit of the works of Charles Marion Russell, who, better than anyone among us understood the land in which he lived, the people in it, and the strange mixture of the benign and the malevolent, the beautiful and the ugly, the gentle and the violent. And he saw and understood all this contradiction without becoming a cynic.

I have intended none of this as a eulogy and yet I suppose I have eulogized this man. I confess to some prejudice. After all, I am a Montanan and I can't help being eternally grateful for a man who did so much to interpret for all time the country I love.

The Current Economic Situation

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LESINSKI. Mr. Speaker, I have watched the present administration go through its gymnastics of trying to outdo the Democrats. They did a good job, for a good foundation had been laid for a balanced economy. By paying off bankers through bond manipulations and high interest rates, by further depressing the farmers' income so that we in the cities are receiving them in droves, employment was spurted at the beginning. We had the fat years the Bible mentions and now the lean.

I have received a homey letter from a friend of mine back in the district. He to me reflects what the average American thinks. He has had a wonderful life but today finds himself in need.

His wisdom is such that I thought it only proper that all Americans get a chance to read his letter, for the commonsense, down-to-earth reflection is a lot more worthy of consideration than the high-sounding words of some of our highly placed economists, who seem to have lost track of the basic needs and trials of the ordinary human being.

I therefore submit for the RECORD the letter of Mr. George Belle, a man who has lived a full life and knows the facts, and is not misled by the one-sided observations of American newspapers and magazines.

The letter follows:

DEARBORN, MICH., *January 30, 1958.*

Hon. JOHN LESINSKI,
House of Representatives,
Washington, D. C.

DEAR JOHN: Should have written you in answer to yours dated December 16, 1957, but there was no real news, as to the things you tried to place me in. I did have a letter from a Fred Burke, administrative assistant, in the office of John C. Mackie. And, with the forms and other papers to have filled, well, John, I suppose they thought that I was just out of some engineering school and applying for a position. I just did not attempt to answer because to me it was wasted effort, when they saw my age—ha ha. Sure, I appreciate their writing me, but, what I was looking for was just a simple little job, seeing that I had enough practical experience, too, well say, "file a few blueprints, as they should be," or "Belle (George) take these plans over to some project, and see that the superintendent has them in his hands" and such a little job as that, and so forth. A little appointed position (placed on the payroll) knowing that there was dependency, whatever I was told or sent to do. And I realize that its quite hard to place anyone—unless all parties concerned are there—and the deal is made then and there. I'll bet that the Highway Commission has files loaded with such applications that was sent me—and completed too—by the youth coming out of schools and colleges. Mrs. Barc wrote about the jury. She didn't have any word. The other day I stopped to say "Hello" in your office and in our conversation she asked if I had heard anything about the jury. My answer was negative, and she made a note, on her pad to write again, as she was getting out some correspondence. So that's how it stand as of now.

I'm sure that you know that all the precinct delegates in the 16th Congressional District, Wayne County, Mich., were given engraved awards. I received one and very happy about it too. As I do have a small precinct No. 7, and the voters are just plain people, yet give their votes in general to the Democratic Party. And I believe that the Democratic votes will climb—not only in this precinct, but all of them—because so many here in my precinct are laid off. Some with years of service in the motor companies and also those plants who employ them, and as I might call feeder plants to the motor industry. It's not a healthy situation at all, as these people around here depend on each week's pay.

We have a grocer—the only one in the precinct—Mr. Leo Szabla, and in talking to him the other day—he was really worried—as he is carrying quite a few on his books, and in some cases finds it so that he has to place some in the hands of collection agencies (and as he says, "George, I hate to do that"). He tells me that it's impossible to buy from the wholesalers. Meats, groceries, etc., without cash. They demand it—and in some instances—there is a 30-day extension. Meats, he says, "it's strictly a cash basis." So that's just a part of what's going on around here.

Pensions is one of the solutions—very closely related to the economy of our country. I'm just going to scratch the surface of what I think as to this. Now, we, here in America, are living each moment in a fast scientific era. Each morning we arise and find that new things have been discovered. The question arises, "Are we able to absorb all these new things and have steady nerves or will these automated ideas mentally unbalance us?" The pick and shovel days have gone forever. True? And, in those days a man or woman could put aside a little for later years of security. And it was done. Home were bought just through savings from day to day. The dollar was worth its value—100 cents. The sons and daughters of those who came along in the days above mentioned are now in their late forties, fifties, and many in their sixties. Some were fortunate to have families, and other less fortunate. And, in their days, as years approached the dollar began to shrink. Prices as to one's livelihood arose and the layoffs from their jobs became in frequent evidence and to meet their financial obligations their savings were few and far. And the worries began. Loan companies charging high rates of interest lodged amongst many as cancer absorbs the blood cells. The inroads really took their toll. 1929—so well remembered. And, thank God, there was a man who came to our rescue—Franklin D. Roosevelt. Men who had earned $100 or more a week were glad to take up a broom and shovel for $14 and $18 or a little more, each week. Happy to have a job, to help provide for their families and themselves. The WPA—and all the working class of Americans were behind F. D. R. in anything he could do for them. The times improved gradually, people received every red penny that they had in the banks, all through the efforts of Franklin D. Roosevelt. And, on August 14, 1935, the Social Security Act was enacted. The beginning to all that we who have earned and gave a part of our earnings to carry on our Government will be given comfort and financial help throughout our lifetime. As we know that there are close to $18 million each day for 7 days the year around comes into the old age and survivors insurance trust fund. There are about $16 million paid out each day. So there is a decided balance always. Yet, the cost of existence is the same for all of us and there is enough in the fund to make so, that the costs of existence to those over 65 years wil be adequate. And, as of today, it's really not enough. Those men and women who have earned and contributed—too aged now to do any more—should be paid at the rate of $5–$6 each day, or from $150 and $180 per month to provide decent necessities, which in many instances would prevent illnesses through lack of nutritions. And, with these increased pensions, that money isn't saved—it's spent, which we need done, to uphold the economy of our country. Even if it was paid in script—which isn't a bad idea—it would be circulated, only coming from the old-aged pensioner. Aged mental health would improve because of their less worries as to where their monthly allotments, could further themselves with the necessities.

I have been following the sessions quite well in the RECORD and I have been watching each issue since the introduction of your bill—H. R. 9683. It's really worthy of consideration by all Members of Congress, and in reading your introduction of your bill, it should have support. I'm sure that what it takes is to be a very good mixer to gain support. So, JOHN, both Mary and I wish you every success in the second session of the 85th Congress. I note, but have not read it thoroughly, Senator PROXMIRE's bill—S. 3086. I'm sure you saw it on page 723 of Thursday's RECORD. I have read some of his Extensions of Remarks in the RECORD. I wish him, too, every success, as the Democratic Senator from Wisconsin. And I note on TV that the stations are fighting the paid TV, and use Congressman DINGELL's name as against any paid TV. Station WJBK, channel 2, Detroit, sent out a request for votes on paid TV. The return in 1 day was 900 against and 35 for paid TV. It was just a 1-day shot and it shows that it's a good average that people do not want paid TV.

That's about all for now, and hope that all is well with you there in Washington. Mary (Mrs. Belle) has recovered from her attack of the virus flu, and back as one of the Federal department store managers. But, so many of her help being laid off, she says that it's pathetic because some of those sales help need the few dollars that they get to help out in the home. Business is so bad. I read that the repossession of autos is percentwise up at a high figure. JOHN, this administration has really brought on a mental strain amongst families. I refer to families of the man who works in the factory with possibly a $100 weekly pay, and has to budget that for notes on the home, the car, the appliances, clothes for the children, and food. He has nothing for a little recreation. And, now, that man is laid off with a possible $30–$40 a week unemployment check to

take care of the needs that has cost him all of his $100 a week pay and maybe a little more borrowed dollars from his credit union or the like. And all this breeds mental family troubles, and above that, crime waves. And we are really having it here—armed robberies and all that goes with obtaining money. What are the Republicans doing to the country? I mean Republicans. Ha ha. They are really digging their own political graves. Always glad to hear from you, and let me know when the revised Congressional Directory is available for sale and the price. And, in closing, keep working on the old-age pensions—you will have lots of supporters. Mary was telling me that there is a Polish society over on the East Side—all old-age pensioners—who are out for a substantial increase in their pensions. Some one was talking about it in the store and some lawyer is the director. (Name unknown at present.) Remember both Mary and I to the family.

Most friendly, I remain,

GEORGE G. BELLE.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. UTT. Mr. Speaker, you have heard about the tree that grew in Brooklyn. Now I will tell you about one of the bureaucratic trees that grows in Washington. In 1948 the Economic Cooperation Administration, which has had several fancy names, the last of which is the International Cooperation Administration—ICA—had 500 employees. By 1953 it had 4,000. In 1957 it had nearly 13,000, and still appears to be growing.

Last year when Congress cut over a billion dollars from the ICA budget—foreign aid—we were told that this cut would practically put them out of business. However, within a month after adjournment ICA expanded its personnel by at least 1,000 employees. Of course, in last year's authorization there was a sleeper in the form of lending authority to foreign enterprises which, in fact, will turn out to be free grants, for the simple reason that the borrower has to prove that he cannot borrow from private banking concerns nor from the World Bank nor from the Export-Import Bank. Most of the capital for these two banks is supplied by the American Government. Now, if the risk is too great for these two liberal lending institutions, they can apply to ICA for a loan.

The administration's request for foreign aid for the coming fiscal year is around $4 billion. In order to give you some idea as to how much $4 billion is, may I say that it is 4 times the total assessed valuation of Orange County, including our oil, our industries, our farmland, our homes, and Disneyland thrown in. It is equal to one-half of the total income taxes collected from the State of California in 1 year.

Much ado has been made about unmoral lobbyist tactics. In fact, President Eisenhower vetoed the Natural Gas Act of 1956 solely upon the ground of ill-advised lobby pressure, centered around the $2,500 campaign donation offered to a certain Senator. Two weeks ago there was great indignation shown because a certain man in Texas indicated in a letter that some of the money raised at the $100-a-plate dinner in Houston would be used to promote the Natural Gas Act of 1958, and the President and the chairman of the Republican National Committee quickly issued a statement that none of that money would be accepted by the national committee.

Against this backdrop let us take a look at what happened in Washington on February 25, tomorrow. A national committee of 1,500, headed by "one worlder" Eric Johnston, gathered for the express purpose of raising a million and a half dollars of tax-free money for the avowed purpose of lobbying a single bill through Congress which would cost the American taxpayers $4 billion. The jewel of consistency is certainly tarnished. In order to make this committee more palatable, high-ranking Democrats throughout the Nation have been included in order to keep the leftwing commentators from blasting the project out of water. Present at this meeting were President Eisenhower and ex-President Truman, Vice President Nixon and Adlai Stevenson, Secretary Dulles and ex-Secretary Acheson, and so on down the line, with each Republican having his Democrat counterpart.

The tab for this clambake was picked up partially by certain large corporations which would profit immensely through the sale of heavy equipment under the foreign-aid program and partially by the President's contingent fund.

The American taxpayer should condition himself to the greatest "snow job" in history. If, after 10 years and the expenditure of $70 billion on this program, the American taxpayer is convinced that it is not a proper role for our Government to play, why should his intelligence be insulted by such a fiasco? I received an invitation from Eric Johnston—on White House stationery—and the content of this report was my reply. They propose to spend on this lobby job about $9,000 for every million inhabitants in our country. The 28th Congressional District has nearly 1 million population, and I propose to spend at least $5,000 in my district as an offset to this propaganda, and I sincerely hope that the Internal Revenue Bureau will be as gracious with me in allowing this amount as a tax deduction as they were with the Eric Johnston committee.

At least, I will close this report in a lighter vein by resurrecting an old bromide of the Truman administration. The Prince of Monaco was visiting the White House and the President asked him if there were any Communists in Monaco. The Prince replied that there were absolutely none. The President said, "That's too bad; we can't give you any foreign aid." The Prince hurried home to his castle and sent a telegram to the Foreign Minister of France, Bidault, "You've got a lot of Communists. Send me a dozen; I need them desperately." Bidault replied, "I'm sorry; I can't let you have any Communists because I need every one I've got here; otherwise the United States will cut our credit."

Uncle Sam No Longer Model Employer

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. PORTER. Mr. Speaker, the following article which appeared in the Washington Post for January 30, in the Federal Diary column, written by Jerry Kluttz, points up the crisis facing the Federal Government with a strong argument for immediate substantial wage increases:

CALIFORNIA EMPLOYEES' STUDY BLASTS INEQUITY IN WAGE STRUCTURES

(By Jerry Kluttz)

The Federal Government has surrendered its long-cherished position and reputation as a model employer.

It can no longer claim that it treats all employees fairly and squarely.

The Government is unfair, unrealistic, and unreasonable in the salaries paid its white-collar employees. The white-collar worker is the forgotten man in Government.

That stinging indictment of Uncle Sam as an employer and his different, inconsistent and conflicting salary policies is in a report prepared by the Alameda, Calif., Naval Air Station Association.

And the employee group, which conducted the study at its own expense, backs up its charges with convincing and shocking facts.

Representative GEORGE MILLER (Democrat, of California), described the document as exhaustive and painstaking, clearly demonstrating the sorry plight of the classified employee. He said the Government can't continue to ignore the problem.

The Alameda station—with 7,633 civilians, including 6,379 laborers and mechanics (wage board) and 1,254 classifieds (white collar)—is used by the Navy mainly to repair and overhaul planes on Pacific duty. It also has 1,065 military personnel on duty there. So the station has three different salary systems.

Since 1940, blue-collar laborers and mechanics there have received 14 pay raises which have increased their salaries an average of $3,348, or 157 percent.

In the same period, the white-collar classifieds have received only 8 increases that have averaged $1,610, or 70 percent.

Meantime, living costs have leaped 110 percent in the San Francisco Bay area where Alameda is situated.

A laborer-cleaner at Alameda is the lowest paid of the blue-collar workers. His starting salary is now $4,056, compared with $1,248 in 1940—an increase of 225 percent.

And this will jolt you: Of the 1,254 white-collar employees there, 815, or 65 percent, are paid less than a laborer-cleaner.

"Astounding?" the report asks, and then adds, "Yes; but it's true." That should rank as the understatement of the year.

The study observes that a GS-1 classified worker had a $1,260 starting salary in 1940,

which has risen to only $2,690 today. The classifieds' salary would be $4,095 if he had gotten the same increases as a laborer-cleaner.

Now don't conclude that Alameda is a horrible example of poor personnel administration. What's happening there is being repeated in hundreds of other places the world over, including the Nation's Capital.

Classifieds are taking a severe beating and this condition will continue until the pay laws are changed by Congress to insure equal treatment of all Government employees.

Think of this: Alameda is forced to start many white-collar college graduates at $3,670 a year, or $386 a year less than an unskilled laborer-cleaner.

Now Is the Time for Lebanon To Make Peace With Israel

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DINGELL. Mr. Speaker, I recently saw an article in the Lebanese Gazette published in my own city of Detroit, Mich., on Thursday, February 20, 1958, entitled "Now Is the Time for Lebanon To Make Peace With Israel." Mr. Kanaan, the author, is a distinguished newspaperman and respected member of the Lebanese community of the city of Detroit. He is not deceived by the blandishments of Nasser and the Syrian fellow travelers.

I think his article shows the concern over the unity of Egypt and Syria, which all right-thinking men feel. I hope all will read this excellent article.

NOW IS THE TIME FOR LEBANON TO MAKE PEACE WITH ISRAEL

How long will the world remain blind to the realities of the Middle East?

A couple of dictators have formed a partnership, aiming to destroy several nations, and we seem to be fooled.

Wake up, America.

Wake up, leaders of the democracies of the world.

First Nasser and Kuwatly would like to destroy Israel. Then they will seek the destruction of Lebanon. Iraq and Jordan will follow. Then Khrushchev will have just what he wants—control of the Middle East.

Wake up, Lebanon. You are in greater danger than even Israel.

And little Jordan, woe unto you.

But the greatest menace faces the people of Lebanon. It is a Christian country, but the Moslem dictators of Syria and Egypt would like to swallow her up. Then, woe unto our fellow Christians. Their lives will be worthless.

We must beware of the danger and we must act now. This is the time to protect the democratic ideal and to be on guard against the destruction of all human values.

What action is to be taken in this dangerous time for the Middle East and the world?

We urge an immediate peace between Israel and Lebanon. Then the two democracies can work together, they can act jointly in protecting their common borders and they can appeal to the world against aggression.

Then the Christians in Lebanon can be protected.

After that, little Jordan and its puppet king may come along and act jointly with the sensible people in the area to prevent the swallowing up of the area by dictators.

It is important that the facts should be known.

The new union between Syria and Egypt is no more nor less than a Community merger. Two pro-Communist countries got together on orders from Moscow. They must be prevented from causing too much damage.

Here is the warning that was made against the union by the famous columnist, David Lawrence, in the New York Herald Tribune:

"There are no sound reasons for uniting Egypt and Syria. The Egyptians are not regarded as true Arabs and there is no common border between the two countries. The real reason for the move is that the Soviet Union needed two pawns in the Middle East under a single stooge to play her game. The strategic moves of the Soviets in the cold war always have a military purpose. This time it is to gain possession of the very fuel on which the economy of western nations depends.

"While the West reads a series of hypocritical letters from Bulganin on disarmament, and while prominent Democrats in the United States take such missives seriously and make speeches calling, in effect, for peace at any price with the Soviet Union, the Communist dictators benefit from western disunity and naivete.

"Eventually the true significance of the Egyptian seizure of Syria will become clear. It is a move that makes war more likely in the troubled areas of the Middle East. It may prove to be the tinderbox for starting the flames of a world war, just as Hitler's tactics did in the 1930's."

David Lawrence provides ample proof that there is danger from the new merger. He wrote:

"Colonialism—in a more despotic form this time than ever known before—has emerged in the Middle East. Soviet imperialism is in the saddle. Egypt has taken over Syria, and Nasser, paralleling Hitler, is hoping to take over neighboring countries one by one.

"Without a vote of the people and with the aid of Communist infiltrators who will see that the forthcoming plebiscites are properly rigged to ratify the dictator's decision, Syria shortly will lose her independence altogether.

"The term Union of Egypt and Syria is an attempt to fool the world into believing that the two countries voluntarily created a single state. Actually, Nasser, aided by the Communist apparatus, engineered the deal, which in itself has no military importance but, as a source of potential friction can nevertheless be the forerunner of a world war.

"Just as Hitler's move into the Rhineland in 1936 and his later union of Austria with Germany did not immediately awaken the free world to the dangers ahead, so today's events in Egypt and Syria, even though more menacing, are not exciting worldwide concern. Nothing has been done as yet by the United Nations, for example, to inquire into this new form of aggression as the people of Syria are deprived of their sovereignty through the machinations of Soviet Russia.

"For Syria henceforth will be an Egyptian colony. There may be some show of resistance inside the country by the elements that do not want to see their country remain a captive of the Communist empire but, without some aid from the outside, Syria will become the tool of Nasser and of the Communist regime in Moscow.

"Most of the pipelines for the transport of the oil—constituting an alternate route from the Middle East countries to Mediterranean ports—are in Syria. So the coup means that the Communists, having first made sure that they control Nasser and the Suez, now hold in their hands the future of the oil resources of the Middle East.

"As a strategic moye in the cold war the Communists have obtained control over a very important area and now will begin blackmailing the other Arab countries in an attempt to force them into a pan-Arab union. The step constitutes a threat to Jordan and Lebanon, Saudi Arabia, and Israel, as well as to Iran, Iraq, and Turkey.

"So far as the United States is concerned, it is committed to supply military help upon request if the independence of Iran, Iraq, Turkey, or other Middle Eastern countries is threatened by Communist imperialism. This commitment was undertaken through the Eisenhower doctrine. Unfortunately, the Communists got into Syria before the pro-western elements there could assert themselves in opposition to Nasser. Moscow today controls all the radio stations at Cairo and has a large number of technicians of all kinds inside both Egypt and Syria. The annexation of Syria by Egypt will undoubtedly make it harder for the West to help the Syrian people to regain their independence. Certainly as long as Nasser is in command at Cairo, Syria will remain an Egyptian colony."

How long will the world remain silent?

How long will the Lebanese remain blind to the dangers that face them?

We appeal to our kinsmen and coreligionists in Lebanon, especially to the Christians in our former homeland, to act now, to make peace with Israel, to prevent the damage that is sure to come from the "federated union" of Syria and Egypt.

We appeal to the other sensible nations in the Middle East and the Near East, especially to Turkey, Iraq, Iran and Jordan, to stop the devils Nasser and Kuwatly now before it is too late.

Let us have peace with Israel first, then blessing will be poured upon the entire areas and there will be greater security for Lebanon.

Fellow Lebanese, make peace with Israel now.

Hope on Billboards

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 7, 1958:

HOPE ON BILLBOARDS

Senator KUCHEL, of California, has given a fresh spurt of hope to the campaign for curbing billboards on the 41,000-mile Federal Interstate Highway System. Last summer, Mr. KUCHEL voted in committee to kill a mild antibillboard measure. The vote was 7 to 6. But Mr. KUCHEL has had the courage and sense to revise his position and come up with a reasonable proposal of his own to prevent an unsightly ribbon of signboards from scarring the new highways. This affords a chance to get some antibillboard legislation out of committee and—for the first time—before at least one House of Congress for a vote.

The earlier Senate proposal sponsored by Senators NEUBERGER and GORE would have added three-fourths of 1 percent to the Federal contribution of States agreeing to keep billboards out. Mr. KUCHEL suggests the more tempting carrot of a 1 percent bonus—meaning that the Federal share would be 91 percent in States regulating signboards. But the Kuchel bill would somewhat narrow the scope of the prohibition. His proposal would not extend the billboard ban to highways running through incorporated towns, to signs authorized by specific State or local laws, or

to highway rights-of-way acquired before July 1, 1956.

Admittedly, there are gaps in this formula—gaps wide enough to squeeze through at least some hideous placards. Some States, for example, might pocket the bonus money and then violate the bill's intent once the money was spent. But this hazard was also present in the Neuberger-Gore formula, and Mr. KUCHEL's bill has the virtue of forcing affirmative, undisguised action to void national policy. In its essentials, the bill is the same as earlier proposals; it is good that Senator NEUBERGER has welcomed the Kuchel proposal. Something may yet be done. Maybe Mr. KUCHEL's conversion will stir some interest in the House, where Representative ROBERT HALE of Maine is still a lonely voice against billboards in a shamefully mute assemblage.

Oklahoma Salutes Carl Albert

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. EDMONDSON. Mr. Speaker, on last Saturday night, people all over the country were aroused and inspired by the ringing messages of Democratic leaders who assembled at the dinner honoring former President Truman.

Oklahomans who were present, and our State's representation was both large and enthusiastic, were more than proud of the stirring speech delivered by the Democratic whip in the House, the Honorable CARL ALBERT.

The speech delivered by my colleague from the third district in Oklahoma was both a convincing indictment of an administration dominated by an autocratic Bureau of the Budget, and a clarion call for a return to the constructive leadership supplied by the Democratic Party.

The text of the speech follows:

SPEECH BY CONGRESSMAN CARL ALBERT, DEMOCRATIC WHIP, THIRD DISTRICT, OKLAHOMA, AT TRUMAN DINNER, WASHINGTON, D. C., FEBRUARY 22, 1958

The Democratic Members of the House of Representatives rejoice in the opportunity to join Democrats throughout the Nation in paying tribute to one of the great leaders of all time. In our legislative objectives we proudly take our cues from the Truman record. On that guide line and under the magnificent leadership of SAM RAYBURN and JOHN MCCORMACK in the House and LYNDON JOHNSON and MIKE MANSFIELD in the Senate, we will write a legislative record beneficial to the American people and we will chart the course of an overwhelming Democratic victory in November.

It is appropriate that we commemorate the services of President Truman on George Washington's birthday. Just as the Father of our country steered the infant Republic into a new venture in the science and theory of government, so President Truman with magnificent statesmanship guided this Nation into its new responsibilities as leader of the free world in the perilous days following World War II. It was President Truman who met the first threat of Communist expansion after World War II head-on with the Greek-Turkish loan. It was President Truman who defeated the Communist threat in Germany with the Berlin airlift. It was President Truman who inaugurated the Marshall plan and resurrected Western Europe from the ashes of war. It was President Truman who halted Communist aggression in Korea and thereby saved the Korean Republic and made the United Nations an effective, workable institution for world peace and spared it the fate the League of Nations had suffered a quarter of a century before. It was President Truman who conceived the NATO organization and gave to the Atlantic Community a unified approach to the threat of Communist expansion. The point 4 program of President Truman gave new hope to mankind, hope that has added lustre to the American flag throughout the world. This translation of America's generosity and sincerity into concrete programs for the benefit of our fellowmen has done more to advance the cause of world peace and brotherly love than anything else in our time.

When President Truman was in the White House he was President in fact as well as in name. When the President sent his budget to Capitol Hill we in Congress knew that it was his budget. We knew that he and his administration understood it and that they would defend it. The thought never entered our minds that some budget officer would be telling us in a few weeks that it did not mean what it said or that some Cabinet official would dare us to touch it under penalty of having funny things happen to our hair.

When President Truman left the White House he left a vacuum that has never been filled. Not one constructive thing has been added to the Truman accomplishments to meet the cold war threat. Eisenhower's one contribution to American diplomacy has been John Foster Dulles, Sputnik I of the Republican Party, with his "brinks, massive retaliations, and junkets through outer space." There was never a more sterile administration in all the history of this country.

Herein lies our great problem, our principal difficulty. Our trouble at home and abroad is not with our scientists or military leaders. Our trouble is at the summit. It is the lack of effective leadership at the top management level of the Government.

The experts tell us that defense-wise we are in mortal danger. Yet defense since World War II has cost over $400 billion. Our strength or lack of it cannot be measured in terms of dollars spent. The only realistic way to measure our defense is in terms of the power of our potential enemy. The Rockefeller fund panel which measured our defense in those terms asked for an increase in the order of $3 billion. The President's supplemental budget for this fiscal year raises the current defense budget some $1.3 billion above the Wilson level, which Wilson himself claimed wold be offset by the increased cost of inflation. During the last 3 or 4 years warnings have been sounded by scientists, military men, and congressional investigating committees that we were falling behind Russia in the race for ballistic missiles. These warnings failed to jolt the White House or the Secretary of Defense into action.

In 1952 the combined military strength of the United States was greater than that of any other nation. Today we are winning the race for second place. On every single day during the Truman administration the lead time of American arms over Russia was maintained on the side of our own safety. Every day since the Eisenhower administration took over Russia has been closing the gap.

The Roosevelt and Truman administrations developed the A bomb, the H bomb, the atomic cannon, the jet plane, sonar, radar and proximity fuzes. They developed guided missiles and atomic submarines. They made outstanding advances in landing craft and in aircraft carriers which produced such giants as the *Forrestal*.

In 1952 the United States was the undisputed leader of the world in scientific knowledge. Today we find ourselves wearing an international dunce cap, while the rest of the world concludes that our shortsighted policies have almost given the game to the Kremlin.

The budget ceiling has ruled too many decisions. A budget ceiling is important, but if survival is at stake it must be seen in perspective. Our military policy is dominated by the Bureau of the Budget, cloistered and removed from responsibility to the American people. This agency's withholding of funds appropriated by the Congress is the real bottleneck in our defense.

On the home front, the White House has had no control, if indeed, any knowledge of the economic policies of its own administration. These have been controlled in the Departments of Treasury and Agriculture. Hard money, high interest rates, and low farm prices have brought about a depression by design. Under Humphrey and Benson we have seen interest income exceed net farm income for the first time in history. Hard money and high interest rates have drained billions from the purchasing power of the American people while corporate profits have soared to new highs. Small business failures rose from 856 in 1955 to 1,192 in 1957, while giant mergers have increased as never before. No wonder the soup lines are forming. No wonder we have 5½ millions unemployed. Yet they keep telling us the economy is basically sound. They are talking more and more like Herbert Hoover every day. While they are not yet claiming that "prosperity is just around the corner," they are insisting that it is coming in July.

Democrats in Congress have reason to doubt that responsible management can be had from this administration. While Russia is spending more on the development of hydroelectric power projects than at any other time in history, the Eisenhower administration has decreed there will be no new starts in the development of the watersheds of this country. Today when the need for electricity on the farms of this country is greater than ever before the administration is sponsoring a bill which would turn the rural electrification program over to the Wall Street bankers. The Republican Party does not and has never set itself the task of improving the status of ordinary people. As elected officials they fail to represent the common body and follow philosophies prescribed by the select few which they, in fact, represent. Our country and the world can no longer tolerate the subjugation of our common interests by the Madison Avenue-Wall Street combine.

The Eisenhower administration is simply not going to furnish the leadership that will do the job. Indecisive, vascillating, and hand tied by the cliches of the Republican Party, this administration is not competent to cope with the issues of the day. Subservient to the moneyed interests, inimical to the laboring interests, cruel to the farming interests, and indifferent to small business, this administration has forfeited its right to the respect and support of the American people.

This country needs an overwhelming working majority of Democrats in the 86th Congress. This country needs Democrats in public office throughout the land. This is the answer to the Republican crisis in 1958. The Democratic Party and the Democratic Party alone has the formula, the program, and the leadership that will make this country strong and will keep this country free, prosperous, and at peace.

Rev. Horace A. White

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DINGELL. Mr. Speaker, Rev. Horace A. White died suddenly and unexpectedly from an illness not regarded at the time as which could be fatal. The city of Detroit lost a fine man and a devoted servant of the public. He was pastor of Plymouth Congregational Church, much loved by his parishioners. He served as supervisor to the Lapeer Consultation Center and was well known for his work with young men and women. A fine tribute to this wonderful man of God appeared in the Michigan Chronicle of Saturday, February 22, 1958, by Nelis J. Saunders, the Chronicle church editor, who is much respected for fine work in the church and civic communities:

REV. HORACE A. WHITE, ONE OF DETROIT'S MOST OUTSTANDING MINISTERS

(By Nelis J. Saunders)

Religious, fraternal, social, and civic circles will certainly miss the Reverend Horace A. White, who served, unselfishly, in each field for many years.

His participation was not of such that one would forget easily, but was always done impressively, cooperatively, and most of all, in a way, which was best for the whole and not an individual.

Those of us who worked with him directly know that when there were decisions to be made, whether he was involved or not, they were always expressed impartially.

We have listened to the same expression from many people, in all walks of life, who shall miss him as counselor, teacher, preacher, and lecturer.

Members of Plymouth Congregational Church, where the Reverend Mr. White served as minister, mourn not only because he will be missed in the pulpit but they have lost a real friend, who was to some, a father and others, a fine son.

The Reverend Mr. White was selected one of Detroit's 10 most outstanding ministers because of his numerous contributions to Detroit as well as to his own immediate community.

If a mother needed a friend to speak for her son and offer advice either before or after the child had become involved in some kind of problem, she always found that help by merely calling upon the Reverend Mr. White.

Another lady and several men told us of the experience they appreciated with the quiet, but dynamic and affective leader, when there was a need for a home for children, who were not wanted by their own relatives and how he helped to make it possible for the children to receive shelter and clothing.

There were other experiences told about his services when employment or other immediate financial aid was needed.

Still other experiences were told about his ability to coordinate programs, whether local, State, national, or international in scope.

The little man as well as the top men will miss the great leader. The Young Men's Christian Association will miss his participation in the programs during the year, especially the annual membership drives; add the National Association for the Advancement of Colored People, the United Community Services, and the department of mental health, where he served as psychiatric social worker.

He will also be missed by the Lapeer Consultation Center, where he served as supervisor, and members of the housing commission cannot forget that he retired as president in 1948.

Cleveland citizens will also mourn the passing of the Reverend Mr. White because he left many marks of distinction as a result of his untiring efforts during his pastorate at Mt. Zion Congregational Church.

While in Cleveland he also served as social worker for the bureau of homeless men.

We feel that Plymouth Congregational Church will continue to work to carry out the plans of their former leader. Included was the plan to establish classrooms, small auditorium, and recreational area in the recently purchased building near the church on Garfield at Beaubien.

The Importance of Hitting the Moon First

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ENGLE. Mr. Speaker, I read with very great interest the report of William Randolph Hearst, Jr., on his recent trip to Moscow, as well as his subsequent statements on the international situation. I was particularly interested in his editorial in the Los Angeles Examiner of February 16, in which he stressed the great psychological advantage the United States would have in demonstrating a scientific and technological victory, at least in one field, over the Russians, by firing the first rocket to the moon. We need precisely that kind of demonstration, and I am calling the editorial to the attention of my colleagues for their serious consideration.

The editorial follows:

EDITOR'S REPORT: SOME NEED A KICK IN THE PERIGEE

(By William Randolph Hearst, Jr.)

This column took off last week from the launching pad of information received from good and accurate sources in Washington that we have the rocket capability of shooting the moon—right now—but aren't doing anything to translate capability into accomplishment.

The chief reason why the go-ahead is lagging far behind capability is an apparent failure to appreciate the tremendous psychological advantage to be gained throughou the world by sending a rocket to the moon, or some similar spectacular evidence that we have recaptured the lead in space. It is a presputnik attitude in a postsputnik age.

I am back on the same stand today because some strong corroboration has come in to back up my Washington information. This now comes from scientists in the jet propulsion laboratory of the California Institute of Technology at Pasadena. They designed our Explorer satellite, now orbiting so successfully that latest estimates say it will stay up there for four years, so they ought to know.

They say that all we have to do is shoot the moon or send a satellite to circle it, is to add a fifth rocket stage to the nose of the Jupiter-C, the rocket-missile that projected the Explorer.

Dr. Henry Richter, of the Caltech lab, has a provocative name for the technique. He calls it "a kick in the apogee." The part of the Explorer's orbit that carries it farthest from earth is called the apogee. The part of the orbit closest to earth is the perigee. So, naturally, the additional boost to send a satellite moonward should be delivered at the apogee.

I have gone into this as a buildup to the obvious thought that perhaps some of our psychological planners in the Administration and the Pentagon need a kick in the perigee before we can hope for that kick in the apogee.

At any rate, the Caltech lab has formally asked permission from the Defense Department to try to circle the moon with a satellite.

If it can be done as comparatively simple as they say it can, I hope the Defense Department won't assign the request to the considerations of a sub-sub-committee, subcommittee, full committee, and then review it back down again.

Let's get going, boys, let's shoot that moon. First.

A Strong Code of Ethics Is Needed

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. PELLY. Mr. Speaker, again I rise to urge that the House Committee on Post Office and Civil Service schedule a hearing on H. R. 10631. We need a strong code of ethics to spell out what constitutes improper conduct in the executive and legislative branches of the Government.

Under unanimous consent, I include the following editorial from the February 20, 1958, issue of the Tacoma News Tribune for printing in the RECORD which points up the joint nature of the problem of getting such a bill passed:

TOO GOOD TO BE PASSED?

Representative THOMAS B. PELLY, who recently called for a higher standard of ethics for Congressmen, has followed through by introducing H. R. 10631. He calls it the Government Ethics Act. It applies to both the legislative and executive branches.

"It is the purpose of this act to strengthen the faith and confidence of the American people in their Government by promoting high moral standards in the conduct of such Government," states the bill's introductory section.

Strange language for a congressional resolution, isn't it, this suggestion that the people need to have their confidence strengthened? The inquiry into the Federal Communications Commission shows, however, that it is not out of place.

The Seattle Congressman's bill spells out a code of ethics for Government to follow. All Congressmen and executive officials would have to report on all their outside income. Officials could not accept expense money from both Government and private sources. The bill would put a stop to former Congressmen and former Government men returning to their old haunts as lobbyists. It would not permit our Representatives to become "unduly involved, through frequent or expensive social engagements, with any

person outside the Government with whom he transacts business on behalf of the United States." A Member of Congress voting on a bill in which he has a strong personal interest would have to file with the clerk of his chamber a statement of the precise extent of that interest.

It is a strong code, one that would leave no doubt as to what is proper and what is improper conduct.

It deserves to be enacted into law. But will Members care to discipline themselves? That is Mr. PELLY's problem, and ours.

Flood of Filth

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. DOWDY. Mr. Speaker, day by day more people are being made aware of the destructive influence of salacious literature, and how it is degrading our communities, our homes, and our Nation.

The Baptist Standard, which is owned by the Baptist General Convention of Texas, February 15, 1958, issue, devoted considerable space to this question, including an article by Bill Pinson on the Flood of Filth, and several news items, all of which are as follows:

FLOOD OF FILTH
(By Bill Pinson)

A flood of pictorial and literary filth is pouring from many presses in this country. Crime and horror comic books, cheap paperback novels, men's entertainment magazines, true love or confession magazines, exposé publications, pinup magazines, pocket-size picture news periodicals, cartoon and cheesecake booklets, nudist journals, and figure-study periodicals compose a portion of the salacious literature that is filling the racks of our Nation's newsstands and forcing that which is decent off the shelves.

A few years ago such sex-saturated periodicals could be obtained from under the counters of some newsstands. Today, however, anyone, children included, can purchase salacious literature over the magazine counters in neighborhood grocery stores and drugstores, as well as downtown newsstands. People from all walks of life purchase the obscenity. The publications are found in the homes of active church members as well as in the hovels of sex perverts. Much of the obscenity is aimed directly at the curiosity and immaturity of boys and girls who sometimes use their lunch money and allowances to buy it. The present abundance of the filth is evident in the fact that it is a $500 million business a year.

The contents of these periodicals are poisoning the minds of the multitudes of people who read them. The filthy publications picture promiscuity as if it were normal. They cast a slur on decent homelife and picture women as being only sex instruments. Monogamy, chastity, and fidelity are pictured as outmoded ideals. Almost any issue contains stories of seduction. In many, fornication is represented as one of the common, everyday pleasures of life like eating and drinking. Indecent pictures of girls form a major ingredient in all the magazines. According to these periodicals the remedy for all the world's anxieties is the uninhibited release of sexual expression. Their overall attitude toward sex brands them as immoral from the viewpoint of Christian ethics.

According to court and criminal authorities the effects of the flood of filth are appallingly dangerous. A connection is noted between these publications and the growing number of nonsupport and desertion cases and the increase in rape and sex crimes. The magazines degenerate taste, debauch truth, interfere with normal sex life, take away the sanctity of womanhood, and create a craving for more lurid, violent, sexy publications. Salacious literature may be a result of a society that is surfeited on sex. But it is also a contributing factor to the sex mania that is a sickness of our society.

Christian conscience should urge us to be active in opposing the distribution of salacious literature and an examination of the Scriptures should compel us to act. The whole Bible is a basis for opposing the traffic in obscenity in that the Bible always opposes immoral practices. But specifically the Bible teaches that we should strive for purity of body and mind as necessary conditions of true fellowship with God (Matthew 5: 8; Romans 12: 1–2; Ephesians 5: 24; II Timothy 2: 22; II Corinthians 7: 1) and that passions are flammable and need to be guarded and directed (Matthew 5: 28; Romans 7: 23; and James 1: 13–15). Salacious literature flaunts the Scriptures by polluting the mind and inflaming the passions.

Some action has been taken against this trash, but not nearly enough. Many churches have been strangely silent on the problem. The greatest hindrances to effective opposition have been the lethargy of Christian people, due either to lack of information or lack of interest, and the vagueness of the laws dealing with the problems of salacious literature. Texas Baptists can be effective in dealing with this problem. As always, when facing a difficult situation, we should pray for guidance, strength, and wisdom. But then we must also act. By positive action Baptists must strive to create a wholesome mental and spiritual environment. To accomplish this, steps must be taken to shut off the source of the pollution.

The following steps are suggested:

Everyone should investigate the prevalence of salacious literature in his own vicinity and acquaint himself with the local, State, and Federal laws concerning such publications.

Parents should be careful about the kinds of periodicals they permit to enter their homes and should rid their homes of the obscene and salacious.

When objectionable stories or illustrations appear in a standard magazine, the subscriber should register his protest with the editor and back it up with a canceled subscription if the protests go unheeded.

Talk to magazine dealers in your neighborhood and tactfully express your disapproval of obscene publications. Suggest the removal of any that are on his stand. If they are not removed, do your business elsewhere and tell the dealer why you are doing so.

Obtain from local dealers the names of wholesalers and lodge formal protest to them against salacious literature. The larger the group backing this protest the more effective it will be.

Church groups can investigate newsstands and, when sufficient evidence is gathered and a standard of decency established, they can ask the removal of obscene materials.

Churches should suggest wholesome periodicals and books for their congregations. The churches should preach and teach to cure this sickness in our society by proclaiming the Christian concept of sex, home, and marriage.

Church denominational publications must continue to improve their quality so that people are eager to receive and read them.

Petition the State and Federal legislators for more stringent control measures.

Support legislation when it does come up.

Urge local law-enforcement agencies to enforce existing laws and report violations to them.

If every Baptist in Texas will act to eliminate salacious literature, its evil influence on the lives of thousands of young people and adults will begin to cease. Act now in your community. Don't wait, as some have done, for a series of rapes and other sex crimes, or a teen-age orgy, or a number of illegitimate births to shock you.

LEGISLATION AGAINST OBSCENITY

Last week saw important developments in the campaign against printed obscenity in which religious, civic, and legal authorities are increasingly joining forces.

In Washington, D. C., a House Judiciary Subcommittee opened preliminary hearings on legislation designed to stiffen the penalties for mailing obscene matter to juveniles.

Meanwhile, representatives of Protestant and Roman Catholic organizations testified at 2-day hearings on obscenity conducted by the new York State Joint Legislative Committee. Purpose of the inquiry, it was stated, was to determine whether further legislation is necessary to curb lurid publications and material which have aroused public indignation.

The Washington hearings focused attention on two bills introduced by Representative JOHN DOWDY, Democrat, Texas, following a congressional investigation of pornography in the mails which he conducted in 1956. The measures would make mailers of obscenity liable to prosecution in the jurisdiction where the mail is received as well as the place where it is deposited. The other would subject to severe penalties persons who mail obscene matter to persons under 19.

DOWDY has announced that he also will press for action on a third bill. This measure, he said, would add an habitual offender section to the mail laws providing a penalty of 20 years in prison upon a third conviction of mailing obscenity. The present maximum penalty is 5 years.

The Washington sessions marked the first time that so many Protestant groups were represented at such a hearing.

Among the groups were the Churchmen's Commission for Decent Literature, the National Association of Evangelicals, the Board of Temperance of the Methodist Church, the Southern Baptist Convention, the Churches of Christ, and United Church Women, a department of the National Council of Churches.

O. K. Armstrong, of Springfield, Ohio, legislative chairman of the Churchmen's Commission, told the subcommittee "we feel that this legislation will help correct a situation that has permitted an alarming growth, during the last few years, of a tide of pornographic, lewd, and obscene publications."

Clyde W. Taylor, secretary for public affairs of the National Association of Evangelicals, said the bills sponsored by Representative DOWDY cannot be considered censorship measures since they would merely enforce currently accepted standards and would not change present legal definitions of obscenity as upheld by the Supreme Court.

CONCERN INCREASES OVER TIDE OF OBSCENE LITERATURE

Representatives of Roman Catholic and Protestant church groups asked Congress for speeded-up legislation designed to halt the mailing of pornography and other obscene material. The Southern Baptist Convention was represented.

Congress was urged in Washington by the Evangelical Press Association to pass legislation to halt the tide of obscene, pornographic, and indecent literature on the newsstands. Representative JOHN DOWDY, Democrat of Texas, bill would stiffen existing penalties for the interstate sale of

pornography. They also would try offenders at the place where the obscene material is received as well as where it is mailed.

Support for State measures to curb indecent literature has been expressed by the Detroit Council of Churches. Stringent civil and criminal laws to control the sale of literature found to be against public morals was urged by the council. Bills will be introduced in the Michigan Legislature aimed at control of indecent literature.

Immediate Christian action to stem the flood of obscene magazines on the Nation's newsstands was urged at the annual meeting of the Methodist Board of Temperance in Washington, D. C. Board members were told that sex magazines are destroying American family life and casting aside the moral standards of centuries.

Some 500 druggists of the Northern California Pharmaceutical Association have voted to curb selling of lewd and lascivious books and publications.

Police in San Rafael, Calif., cracked down on a newsstand dealer for allegedly selling obscene pictures and other material. Police Chief Frank Kelly said his department "will not tolerate this type of article."

A Roman Catholic priest declared in Albany, N. Y., that 80 percent of the objectionable comics and obscene reading matter flooding this country is Communist-sponsored. He said former Communists had testified to this fact at closed congressional hearings in Washington.

The Irish News Agents Association in Dublin has asked the government to license the importation of books and to impose sanctions against importers who defy the censorship of publications board. Many Dublin booksellers have refused to take any publications of one American publishing house because they consider that some of the books the company has published are indecent.

Mrs. Clarence T. Nelson, of the United Church Women, a department of the National Council of Churches, asked that "teeth be put into legislation against pornography the same as against river pollution."

Billy H. Hood, of Washington, D. C., Churches of Christ evangelist, asked "protection for the Christian home" against "those who seek to destroy it by peddling obscene and immoral publications."

House Legislative Oversight Committee

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD two editorials appearing in the Washington (D. C.) Post and Times Herald of February 21, 1958. The first is entitled "Loaded Dice." The second is a column by Mr. Marquis Childs entitled "The Art of Influence Gains in Cunning."

The country has been following with considerable interest the investigation of the Legislative Oversight Subcommittee. I am sure that everyone in Congress is aware that not only should the various Federal regulatory agencies, the so-called fourth arm of government, be fair, honest, and impartial guardians of the public interest, but that the Congress itself must see to it that these regulatory agencies are, like Caesar's wife, above suspicion.

The disclosures which have come from the House Legislative Oversight Subcommittee have been most disquieting to me. It appears that the climate in the Federal regulatory agencies has deteriorated to a point where vigorous action on the part of Congress appears necessary to restore the faith of the people in these quasi-judicial agencies and to restore what we regard as integrity in Government to these same agencies.

I know that my other colleagues here join me in a desire for a thorough, complete, impartial investigation of these agencies, and I know my colleagues share with me the concern that failure to make an adequate and complete investigation as a prelude to proper remedial legislation will make the integrity of the Congress of the United States open to question.

ART OF INFLUENCE GAINS IN CUNNING
(By Marquis Childs)

At the current investigation into the Federal Communications Commission, with sensational headlines over the business of influence peddling, is in the view of longtime observers here no more than a small sample of practices increasingly frequent in recent years.

The standards of the regulatory agencies, which undertake to police the operations of large aggregates of power and wealth, have steadily deteriorated. The pressures applied by those seeking favors have grown more pervasive and, at the same time, harder to detect.

The likelihood is that the present investigation will stop at what Speaker SAM RAYBURN has called flyspecking when it is the nature of the system itself that should be gone into.

A really courageous investigation, in the view of experienced observers, would tackle the community of interest between politics and politicians and the business interests supposedly under regulation. Such an inquiry would call not only for courage, but for skill and determination. The record shows that business will buy influence when it is for sale as the standards of a regulatory agency decline.

As valuable as are the prizes under the jurisdiction of the Communications Commission—television and radio franchises—the Federal Power Commission exercises an authority equally great over the utility industry. Water-power sites, public versus private development, decisions involving hundreds of millions of dollars—this is the jurisdiction of the five men on the Commission started by Theodore Roosevelt.

One of the big prizes here relates to the regulation of the natural-gas industry and whether gas at the wellhead is subject to regulatory control. For years the oil and gas interests have been trying by every means possible to change the law so that the Power Commission could no longer determine the rate on a commodity used by millions of consumers in the North.

In 1949 President Truman appointed his old friend, Mon Wallgren, former Senator and former Governor of Washington, to be chairman of the Federal Power Commission. Wallgren joined Harrington Wimberly, of Oklahoma, another Truman appointee, and a third commissioner to rule in the case of Phillips Petroleum that the Commission did not have jurisdiction over gas at the wellhead. The Supreme Court later knocked out that ruling.

In 1951 Wallgren retired to an estate near Palm Springs, Calif., where he has date and grapefruit groves. Before he had ruled for the Phillips company, which owns vast reserves of gas, Wallgren had joined two other commissioners in asking Mr. Truman to veto the natural-gas bill sponsored by Senator ROBERT KERR (Democrat, Oklahoma).

KERR had his own oil company and is allied with Phillips Petroleum. It is here, of course, that the rule of "conflict of interest," applied to the executive branch of the Government in one investigation after another, breaks down in the legislative branch. The list of Congressmen with TV and radio ownership is a long one.

Toward the end of the Truman administration the Republicans came up with some Democratic flyspecks—mink coats and food freezers—that were blown up to look as big as a barn door. Coming in as the new broom, the Eisenhower administration had an opportunity to dig into what was behind this petty business—the "mess in Washington" the campaign orators had talked about.

But, as the current inquiry is revealing, the present administration has followed the influence pattern. There have been numerous reports of White House calls to the Federal Power Commission. The Commission awarded the Hells Canyon Dam site—the biggest prize of recent years—to a private company.

There was another precedent. On the Commission some years ago were two men—Claude Draper, named by Herbert Hoover, and Leland Olds, named by Franklin D. Roosevelt—who were dedicated public servants. Although their political philosophies before they came on the Commission had been quite different, they were often in agreement on important decisions. What they agreed on was an interest more and more lost sight of—the public interest.

LOADED DICE

Filing an application for a television broadcast license is, at best, a costly gamble. Extensive and expensive engineering surveys must be made. A site must be purchased before the Federal Communications Commission will consider the application. Elaborate exhibits must be prepared to show the range of service to be rendered and the character of programing projected. Very considerable legal fees must be incurred. Applicants must travel to Washington and spend a good deal of time at hearings. It is a matter of record that one applicant spent $1 million on his application—all of it legitimately—before obtaining a license.

Anyone who takes such a gamble is entitled to expect that the game he enters is not going to be played with loaded dice. He is entitled to expect that the prize will be awarded on the merits of the exhibits and data and surveys and engineering research he has assembled at so much cost—and not on the basis of back-door influence exerted by Congressmen, administration moguls, political fixers or friends of rival applicants.

Oroville Mercury Gives Some Clear Answers

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SCUDDER. Mr. Speaker, in their latest attacks against Trinity partnership legislation, Federal power interests have charged that the Pacific Gas & Electric Co. has been making a "kill" from its purchase of power from the Central Valley project. These slanted attacks are untrue and without foundation. As the

Oroville Mercury notes in its January 7 issue:

The answer by the company that it makes no profit whatever from that power cannot be denied. It is obvious that when a utility's profits are limited to a fixed percentage by a State regulatory body, then it cannot profit by a good contract made with the Government or with any other agency.

But there is another angle to this that should be considered. It is this:

If the P. G. & E. is unable to make a profit from an advantageous deal with the Federal Government, just who does profit from it?

The clear answer is that the company's customers get the profit in rates for power that are lower than they might have been.

The Federal power group maintains that P. G. & E. has been getting most of the Central Valley power. But it fails to distinguish between firm and dump power. The company gets only 10 percent of the firm power and the majority of dump power, power that would be merely wasted without absorption by an integrated company. As the Oroville Mercury describes:

The city of Sacramento is getting the bulk of the firm power. * * * The Government is lucky it has found an outlet for its cheap, off-peak product (dump power).

In its January 22 editorial, Trinity, Shasta Favor Partnership Plan, the Mercury builds its case for joint development. I respectfully request that the following editorial be included in the RECORD:

TRINITY, SHASTA FAVOR PARTNERSHIP PLAN

The supervisors of two counties, Trinity and Shasta, have gone on record in favor of the partnership plan for development of Trinity power. In Trinity County the factor that won favor with the board was that the power company, if it built the power facilities, would pay local taxes.

The answer by the company that it makes no profit whatever from that power cannot be denied. It is obvious that when a utility's profits are limited to a fixed percentage by a State regulatory body then it cannot profit by a good contract made with the Government or with any other agency.

But there is another angle to this that should be considered. It is this:

If the P. G. & E. is unable to make a profit from an advantageous deal with the Federal Government, just who does profit from it?

The clear answer is that the company's customers get the profit in rates for power that are lower than they might have been.

Board members attended the Washington hearing to testify for the plan.

In Shasta County a majority of the board favored the partnership plan, but we do not know why, because the Sacramento Bee, on which we must depend temporarily for news of the action, gave only the arguments of the side in favor of public ownership.

This matter of Trinity power is a proper one for all city and county boards to consider. It will have far-reaching effects. Up for decision is policy whether a few shall benefit from the power byproduct, or many. If the Government owns the power, 7 percent of the people of northern California will get cheap electricity. If the company builds the plant, 93 percent will benefit through the lowering effect on electric energy rates.

We should not let anyone tell us that the profit of low power will go to the company. This simply is not true. The company is allowed less than 6 percent profit. It is making this already. Any cheap power it can pick up must be passed on to the consumers without profit to the company. Everyone in the Oroville area is a consumer of power handled by the P. G. & E.

Institutional Fire Safety—A Paper Presented by Rev. Frank C. Bourbon, S. J.

EXTENSION OF REMARKS
OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. ROONEY. Mr. Speaker, there is an old saying that advises shoemakers to stick to their lasts, and by and large I think this is excellent advice. Not always, however. As an example, I invite attention of my colleagues to a very practical address on the specialized topic, Institutional Fire Fighting, made at the University of Maryland on February 6 by the Reverend Frank C. Bourbon, S. J., who for 3 years taught Latin and English at Gonzaga High School here. Heads of private and public institutions anywhere could profit by the recommendations so practically presented in Father Bourbon's address, which was part of the program of the second annual fire prevention short course conducted by the university's fire service school.

This young priest has an extensive background of practical experience as well as theory in fire fighting. Following several years of institutional work in this field he completed the civilian defense fire fighting course under the District of Columbia Fire Department, and since 1952 has been a member of the District's Emergency Fire Department. During 1952 and 1953 he was civilian defense coordinator for the Washington Archdiocesan Catholic schools and helped to set up civilian defense and fire drills in the schools. He has worked continually with the District Fire Department on fire prevention. At present he is an active member of the Woodstock (Md.) College Volunteer Fire Department, which in addition to safeguarding the college's numerous installations frequently supplements activities of the county fire departments in the Woodstock area.

The paper reads as follows:

INSTITUTIONAL FIRE SAFETY—A PAPER PRESENTED BEFORE SECOND ANNUAL FIRE PROTECTION SHORT COURSE OF THE FIRE SERVICE EXTENSION SCHOOL, UNIVERSITY OF MARYLAND, FEBRUARY 6, 1958, BY FRANK C. BOURBON, S. J.

CIVIL DEFENSE IN INSTITUTIONS

Institutions, by force of circumstances, must lead the way in civil defense preparations. After a major catastrophe of any kind, the institutional buildings which survive are used to house and feed and provide medical care for the helpless and homeless.

What preparations can be made? Once storage space is available (and there is wasted storage space in every institution), many items can be stockpiled. Such items would be canned and dehydrated food, medical supplies, extra clothing and bedding, emergency lighting equipment, and a battery-powered radio. Many of these items are available to institutions at a nominal cost from Government surplus. The Federal civil defense has also been distributing compact large medical supply units for emergency use to institutions in vital areas.

And here the job of educating the institutional residents begins. They must be made familiar with the enemy-attack warning, and how it differs from the fire alarm (e. g., fire alarms sounded on sirens, civil-defense alerts on claxon horns or steam whistles). When they hear the warning, where do they go? The shelter areas inside the building should be designated by men familiar with building construction. (Signs to mark routes to these shelter-areas in the building are available free from civil defense.) Fireproof construction, at least partially below ground level, sufficient exits for evacuating shelter-area quickly, as few window-glass exposures as possible—these are the features to look for in choosing a shelter area. In this area, sufficient chairs and tables should be provided so that all can relax. (In an alert or an attack they may be there for a long time. Plan for entertainment of some kind to keep them from getting restless or panicky.)

Interest in civil defense is best achieved by linking it to fire prevention, and making training in civil defense an integral part of fire prevention. Once done, it is a powerful force in readiness for any emergency. Instead of a creature without ancestry or hope of posterity, it becomes a full-fledged brother of the fire service.

The institutional fire department's biggest job is education—education of the people for whom they are working. It must convince the institutional officials that fire safety is absolutely necessary, as many of them take the attitude it can't happen to us. These officials will either be sold on fire prevention by the institutional fire chief, or by a disastrous fire, which will be costly, and may take many lives. Selling fire prevention is relatively easy in an institution where the officials and residents have the memory of a fairly recent disastrous fire.

Then, too, the institutional resident frequently has an attitude toward fire prevention which is far from ideal. Often this resident does not have the real conviction that the institution where he lives is really his home, even temporarily. So he is tempted to stand aside as a spectator, and let George (George here being the institutional fire chief) carry the whole burden. The changes of personnel and staff in many institutions are rapid, and so the permanence necessary for a stable fire prevention program is often not to be had. It is sometimes difficult to get the institution resident to follow instructions, even in an emergency. He has to take orders and instructions regularly, and he doesn't appreciate the idea of also having to obey those silly fire laws. Many institution residents are unacquainted with fire-prevention fundamentals. They are unacquainted with fire-fighting equipment and techniques. Many have never seen a modern fire department in action. They must be convinced that learning to protect themselves can be interesting.

So the institutional fire chief needs: interest, training, confidence, and personality. He needs the qualities of Dale Carnegie.

WHAT ARE THE PROBLEMS?

Many institutions are housed in old buildings, some of which have been modernized, and others have not. Unfortunately, some of the structural improvements have continued or increased existing fire hazards. Some institutions are housed in buildings converted from other purposes. Many religious and nonprofit communities are housed in converted mansions, which are not ideally suited for their purposes, and are extreme fire hazards in the bargain. These dangerous features can be eliminated, but they are costly, and so the officials of these institutions must be convinced that such alterations are necessary for the protection of lives.

We will take a glance at some of these classes of institutions, and the fire-safety problems they present.

Hospitals and nursing homes are institutions which present tremendous fire-safety

problems. They are often crowded, and house ill and feeble persons, who are incapable of helping themselves in an emergency. They are frequently understaffed, also.

Combined school and residence institutions, such as boarding schools and seminaries, often house large numbers of students, and they too present substantial fire danger. Scientific and laboratory equipment, overloaded electrical circuits, careless use of chemicals and cleaning fluids, and last, but not least, smoking in bed, are some of the dangers.

The third general class of institutions would comprise mainly schools, places of public assembly, and churches and church-connected buildings. The two biggest problems for these institutions are the peculiar structural features of some of them, and the difficulty of rapidly evacuating large numbers of people from them, without panic, in the event of fire.

Briefly, we will consider for each of these types of institutions the following points:

(a) What dangers do their individual situations present?

(b) What is the overall job of the institutional fire department, and what fire equipment is necessary?

(c) How can the fire department prepare occupants for an emergency?

(d) What is the precise job of the institutional fire department, once fire has started?

FIRE PREVENTION IN HOSPITALS AND NURSING HOMES

Nothing should be left to chance in such institutions. Fires must be prevented, because with so many sick and disabled persons the life hazard is extremely serious.

In these institutions every staff member should have a definitely assigned and clearly defined duty in the event of fire. Occasional drills (at least two a year) should be held. All staff members should participate, and the drills should be supervised by the local fire department. In some of these drills, personnel of local engine companies and ladder companies should, if possible, participate in the actual evacuation. This will familiarize firemen with methods of handling sick and crippled persons, and with the layout of the buildings themselves.

If, for any reason, it is necessary to keep doors leading out of residential areas of such buildings locked, the fire department should be carefully informed as to where, and from whom, the keys can be obtained. Some institutions demand that such keys be in the possession of at least three staff members on duty. Every moment the fire department has to spend on forcible entry means added time for the fire to spread, and added danger for the occupants.

A coded interior building alarm is a vital necessity in such buildings, so that staff personnel will know what section of the building must be evacuated first, and what stairways, elevators, and escape routes can be used to move the patients. This coded interior alarm should be so devised that it will trip a master alarm connected with the fire department.

Anyone interested in detailed information as to what one major hospital has done by way of complete fire-prevention planning should contact Mercy-Mercy Timken Hospital in Canton, Ohio. According to Fire Engineering magazine, one of the interesting things which this hospital has done is to mark with strips of luminous tape all windows which lead into clear areas. This is done to aid firemen entering the buildings. Complete maps of every floor of this building are in possession of nearby fire companies.

What should be done can best be illustrated by what was not done in one nursing home. As a result, this home burned completely in 1956, killing 72 persons, injuring many others:

The buildings were 65 years old, converted from other purposes, of brick and wood-joist construction. One hundred and forty-nine patients, mostly bedridden; only four regular attendants. All bed patients were located on the second floor. There was no interior alarm system; no sprinklers; no outside fire escapes or slides; no firewalls dividing the buildings; only 3 stairways, all unenclosed; only 3 exits from the main building on the ground floor (2 double width, and 1 single width); nothing in the building was flameproofed; the attendants had no training in mass evacuation or fire fighting.

FIRE PREVENTION IN COMBINED SCHOOL-RESIDENCE INSTITUTIONS

Many are housed in old buildings, perhaps of stone or brick construction. From the outside, they look fairly safe from fire. But don't let that fool you. Step inside. Between the inner plaster walls and the outside stone wall, there is a continuous opening from cellar to ceiling. Once a fire has entered this space, only prayer is likely to save the building. To further complicate matters, the sections of the interior of the building which have been modernized have another interior plasterboard wall over the old plaster, and a new hardwood floor over the original rough softwood flooring. The halls are generally not divided into sections and many of the stairways are open all the way up and out onto every floor. Additional rooms have been obtained by hanging a false ceiling from the building roof, and using these attic spaces for storage and living quarters. One thing they always love to do is polish floors, and so all the floors are oil soaked, and itching to burn. As new wings are added to the original buildings, firewalls are pierced to connect up interbuilding facilities, such as water and steampipes, and electric conduits. And some helpful soul is always propping open the self-closing fire doors. The original sprinkler system is overloaded, and in many cases, does not cover the whole building. The interior fire alarm is not coded, and so, when it sounds, the location of the fire is anyone's guess. To have things handy, paints, wax, and polishing oils are sometimes stored in the basement of the residence building.

Sounds grisly, doesn't it? Well, few institutions will fit that horrible description perfectly, but I have observed every one of these items in buildings with which I am familiar.

What should be the basic approach to fire prevention in such institutions?

First, try to choose a fire chief who combines the qualities of Einstein, Dale Carnegie, and Billy Mitchell. He should find out clearly from the institution president what authority, and how much support, moral, and financial, he will have. Then, let him find himself a crew of willing workers. He should made a complete inspection of the fire facilities of the institution, making complete maps of each floor and its equipment. These maps are extremely important. They should be clearly marked, and should include the locations of the electric, gas, and water shutoffs, as well as the main steam valves and sprinkler controls. The location and amount of water stored for emergency use should be noted. In his training sessions, he should familiarize every member of his crew with these items. A word here about the dangers of trying to run a one-man crew. The chief may, as he sometimes thinks, know everything. But, the fire may choose to start when he is not around. So, if he wants a cooperative crew, let him consult his crew, before setting up any program, and also inform them of any changes he makes. They are the ones who are going to have to do the work, anyhow, so why not let them know from the start what they are in for?

He should insist that a complete sprinkler system be installed, protecting every part of the building. The interior fire alarm should be coded, and every member of the fire crew familiar with the code, so that they can respond directly to the fire scene. He should have small, simple signs posted in every room, with instructions for occupants, when the fire alarm sounds. (Sample: "In case of fire alarm, rouse the occupants of the rooms on each side of you, close your windows and doors, and go immediately to the designated assembly spot outside the building.") One man on each corridor can be designated as an auxiliary fireman, to check his whole corridor, and then guard one exit, to see that no one gets inside, except members of the fire crew, and await further orders of the fire chief.

The fire chief should see that there is a 50 foot length of intact-cloth hose attached to each hall standpipe. He may find that most of the hand fire extinguishers are the soda-acid type. He will probably find that for purposes of maintenance, these might well be replaced by the air-pressure type. In each area where there is any electrical machinery, he should add CO_2 and dry-powder extinguishers. One large CO_2 and air-pressure-water extinguisher on wheels would be helpful on each floor. Once an interior alarm has been sounded, one member of the fire crew should take over the telephone switchboard, and handle all calls for help, according to the orders of the fire chief. If mobile fire apparatus is possessed by the institution, one fire-crew member should be assigned as driver and told to report to the hydrant nearest to the fire location and hookup.

The institutional fire chief should be consulted when plans for new construction are being considered. It is his job to point out the necessity of adequate firewalls between building sections; standpipes of sufficient diameter; adequate sprinklers and alarms; completely enclosed stairwells; self-closing and fusible-link fire doors; panic-bar doors leading to the outside; sufficient outside fire escapes; and sufficient hatches giving access to attic spaces and the roof. He should ask that a few lightweight ladders be hung on walls in the basement corridors, and reserved strictly for emergency use. Also, he should store at least a few large tarpaulins in a convenient place, for use as salvage covers. It should be his job to see that adequate first-aid equipment be installed in kitchens and powerplants and machine-shops (including blankets and bandages, and ointments, for treatment of burns). He must also insist that supplies of combustible materials of any kind be stored in a separate building by themselves.

At times, the institutional officials may look upon the institutional big chief as a big pest, but it will take only one major emergency to convince them that he is a very necessary evil.

FIRE PREVENTION IN CHURCHES, SCHOOLS, AND PUBLIC ASSEMBLY PLACES

Churches present a peculiar problem with regard to fire prevention. They are heavily crowded for a few hours each week, and then are almost empty for the rest of the week. They are huge enclosures, with few interior divisions or walls. They are high, and have sharply slanted roofs and inaccessible towers and lofts. Many are old-construction, with overloaded electrical systems and heating plants. They contain almost priceless treasures in church vestments and ornaments, statues, stained-glass windows and organs. And, incidentally, they are usually located in areas where valuable surrounding property will also be endangered, should they catch fire. Yet, in new church construction, relatively little attention is paid to fire protection features.

It is almost as though we were building our churches to burn. The fire losses to churches in this country in 1956 and 1957

were terrific. When a community loses a church through fire, something very beautiful and spiritually valuable has gone out of the lives of the people of that community. What can be done to protect the sacrifices and labor and love of God that these churches represent?

When modernizing an old church, the first things to be tackled are the electrical systems and the heating plant. The majority of church fires start here. An adequate detection system is absolutely necessary, since the church is closed a good part of the time. Complete sprinklering, and automatic alarms (such as rate-of-temperature-rise indicators), are essential, especially in the more inaccessible parts of the church. Since candles and open-flame lamps are often used in church services, flameproofing of all church hangings and decorations is important. Few churches have sufficient exits to clear a large crowd quickly, without panic. The fire team during church services must be the ushers. The pastor should insist that every usher be trained in mass evacuation and in the handling of ordinary fire equipment. He should ask the local fire department to supervise an evacuation of the congregation during church services, at least once a year. This will reduce the element of panic, if it ever has to be done for real. (Make it near the end of the service, as a certain proportion of the congregation are not likely to return until the following week.) The pastor should take the local fire officials on a tour of the church building, and map and point out for them the objects of special value, such as organs, statues, stained-glass windows, or altar-vessels, which should be removed immediately to a place of safety in the event of fire.

FIRE PREVENTION IN SCHOOLS

Most jurisdictions today are very strict and thorough in their school fire inspections. Even if, in some places, the law does not require such frequent drills, a fire drill once a month is practical. This, if carefully supervised by school officials, is valuable disciplinary training. The school authorities should have brief fire-drill instructions posted, and then enforce them rigidly. A well-run school fire drill is an interesting spectacle. If the school officials make it perfectly clear that they are dead serious about fire safety, the students will be dead serious about it, too. All staff personnel should be required to take part in every drill, and each shoud be assigned a definite job. The school fire official should personally check on their performance. If it can possibly be done, have a demonstration put on occasionally by the local fire department, during the fire drill. This will heighten the interest on the part of all. As an example: In a Washington, D. C., high school where I formerly taught, one Wednesday afternoon, during assembly period, we had a combined fire safety, civil-defense lecture program in the school auditorium. Battalion Chief Grunwell represented the District of Columbia Fire Department. In a half-hour talk, he explained the hazards of using cleaning fluids, smoking in bed, wiring up hotrod cars, etc. His interesting talk and demonstrations held the undivided attention of 600 teenage boys. (If there are any high-school teachers in this group, they know what an accomplishment that is.) He was followed by Mr. Joseph Chambers, the then Deputy Director of Federal Civil Defense, who explained the plans of the civil defense for working with other emegency agencies in the event of a natural or a manmade disaster. His interesting presentation, plus the decorations which he had received from his country, made it impossible for the fertile minds of his teenage audience to wander. On the following morning, a school fire drill was held, and the District of Columbia Fire Department responded just as they would in the event of an actual fire. They put their hose lines and aerial-ladder pipe in service in the schoolyard, while Chief Gruenwell explained the operation to the assembled students over a public-address system.

The reactions to this program were very interesting. For many of the students, and for most of the faculty members, it was the first time they had seen a modern fire department in action. Most of them had seen engine and ladder companies on the move, but they had no clear idea of what the detailed job of each unit was. Students and faculty alike were amazed to find that the firemen and the chief had a detailed knowledge of the layout of the school buildings. Preassigned locations for each unit; radio communications between units; aerial-ladder water towers; fog applicators, etc., were news to many of them. The fire drill was no longer a chore; it became something interesting and almost enjoyable. Everyone now knew why they had been instructed to do the things they were doing.

There are many other things which can be done to make fire prevention interesting and memorable for the young. The secret lies in getting a man who is really convinced of the necessity and the possibilities of fire-prevention education; and then giving him a relatively free hand, and the necessary cooperation.

FIRE PREVENTION IN PLACES OF PUBLIC ASSEMBLY

Several almost unbelievable tragedies which have occurred in the past several years in places of public assemblage make clear to us what has to be done in this area.

In auditoriums, all stage curtains and inflammable properties can easily and inexpensively be sprayed with flameproofing chemical. Many cities require the installation of a fire curtain, which can be dropped quickly between the stage and the body of the auditorium in the event of fire. Usually it is required that there be one standpipe installation, with a 50-foot hose extension, on each side backstage. Fire departments will gladly send a man to check fire equipment in an auditorium or theater before a production starts. Many municipalities will require that he remain until after the performance is over. At all events, check the extinguishers and standpipes, and see that all of the exit doors are unlocked and unobstructed. It would be helpful if battery-powered lights were mounted over each exit, as well as ordinary electric exit lights. In the event of power failure, these lights, plus the flashlights which the ushers carry, will be a partial insurance against panic. Never allow extra seats to be set up in an assembly hall or auditorium, so that the aisles are even partially blocked. This would make a speedy evacuation more difficult, cause injuries, and heighten the danger of panic. Also, a portable battery-powered public-address system would be a wonderful investment for a theater manager.

In halls where tables are set up for dinners, or for the inevitable bingo, try to assure that there will be room enough for two people to walk side by side between each table, after everyone has been seated. Separate the kitchens of such halls from the main body of the hall, if possible, and provide large CO_2 and dry-powder extinguishers in the kitchen for protection against grease flash fires. All exit doors should be of double width, and unobstructed by coatracks, or concessions, or storage of chairs. It would be well if off-duty or retired firemen could be hired as special policemen for such events. These precautions will not prevent small fires and emergencies from developing. They will, however, prevent them from reaching panic proportions.

CONCLUSION

In summary, institutional fire-safety precautions must be devised to fit the individual institution. Available financial and manpower resources will determine the completeness of the program. However, I have tried to touch briefly on those features which can reasonably be adopted in the majority of institutions. If the man responsible for supervising fire-prevention is interested and active, he needn't fear making a few mistakes. His interest in his work, and the interest in other people which he thereby demonstrates, will win for him cooperation from others, and indulgence for his occasional mistakes.

Defending Our Courts: The Duty of the Legal Profession—Charles S. Rhyne, President, American Bar Association

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased and honored to present what appears to me a very pertinent article by the distinguished president of the American Bar Association, to wit, Charles S. Rhyne, of Washington, D. C. This same article by this distinguished American lawyer appeared in the American Bar Journal for February 1958:

DEFENDING OUR COURTS: THE DUTY OF THE LEGAL PROFESSION

(By Charles S. Rhyne, president of the American Bar Association)

("Judges, not being wholly free to defend themselves, are peculiarly entitled to receive the support of the bar against unjust criticism and clamor." This sentence is from canon 1 of the Canons of Professional Ethics. In this article, Mr. Rhyne calls attention to this cardinal rule of professional conduct, pointing out that lawyers must always distinguish between criticism of judges' decisions (which is often a professional duty) and criticism of judges. In times like ours, when the Ship of State is sailing in stormy waters, men often disagree with decisions of the courts, and violent disagreement leads to impassioned personal attacks upon judges. It is this sort of attack, Mr. Rhyne declares, from which lawyers ought to defend courts. The article is taken from an address delivered before the State Bar of New Mexico last September.)

Our system of government is no stronger than our courts, and our courts are no stronger than the strength of the public's confidence in them. The ever-rising tide of criticism of judges and our courts makes this a most appropriate time to remind lawyers of their duty to uphold public esteem for our judiciary so as to maintain public confidence in our courts as an institution of government. Some of this current criticism is of such character as to lead to disrespect and loss of confidence in all law, all courts, and all lawyers.

The preamble to the Canons of Professional Ethics as promulgated by the American Bar Association provides:

"In America, where the stability of courts and of all departments of government rests upon the approval of the people, it is peculiarly essential that the system for establishing and dispensing justice be developed to a high point of efficiency and so maintained that the public shall have absolute confidence in the integrity and impartiality of its administration."

Our Government was established with three separate branches specifically to create a balance of power. The checks which each of these branches has on the others are our best insurance that the absolute power necessary to form a tyranny will never vest in any one branch. If the American public loses its respect for our courts, one third of our governmental system of checks and balances will be stripped of its power. This is axiomatic, for no organ has power absent either respect or fear; and fear has never been an arm of democracy. If one of our 3 branches of government may be destroyed, none is safe. Unless our court system can maintain its position of dignity and respect in the eyes of our public, the foundation of our way of life is in danger. The truth inherent in this reasoning is sufficiently grave to merit our thoughtful, objective consideration. Personal reactions and judgment as to any individual recent decision must be laid aside and the grave problem of the current situation considered.

It is deeply disturbing that the nationwide attack on our courts has gone beyond criticism of individual decisions to the hurling of personal insults and vilification at judges and that this type of attack has reached the point where the confidence of the public in our courts as an institution of government may be impaired. Defense of our judiciary as such an institution must not and should not interfere with or impair the right and duty of any man to express reasoned criticism of any decision of any court he believes to be erroneous.

The American people have not hesitated to rebuke powerful and popular Presidents who struck out against the courts and especially the Supreme Court of the United States, and our people are not likely to be swayed by the hysterics of the lunatic fringe. But there is danger indeed, when the courts are assailed by sensible and well-intentioned citizens who have let their disagreement with individual decisions lead them into irresponsible criticism of the courts as an instrument of government.

In discussing this subject one would be less than frank if he did not face up to the fact that while other coutrs have been criticized, the major target of the current criticism is the Supreme Court of the United States. But there are attacks on other courts, and recently an article by a nationally known newspaper columnist made a violently vicious attack on all lawyers and all courts. So while the Supreme Court of the United States is used as an illustration, the problem herein discussed is by no means limited to that Court.

Certain issues which have come before the Supreme Court recently have been highly controversial. The segregation cases, regardless of their resolution, were bound to offend the convictions of an appreciable portion of our population. The internal security decisions grappled with the basic conflict between the rights of the individual and the necessary powers of the sovereign. Again public opinion was bound to be divided. But what case in the Supreme Court is not highly controversial and highly important? There are no easy cases in the Supreme Court of the United States. The more important the case, the more nicely balanced the conflicting interests involved, the more essential it is that criticism and debate concerning the decision be conducted on a high plane.

THE ERIE CASE—A SCHOLARLY OPINION

There is certainly nothing wrong with criticism of judicial decisions. Many great advances in our jurisprudence have stemmed from the reasoned criticism of judicial decisions by lawyers and scholars. It is well to recall the opening sentence of Mr. Justice Brandeis' landmark opinion in *Erie Railroad Company* v. *Tompkins*. "The question for decision," he wrote, "is whether the oft-challenged doctrine of *Swift* v. *Tyson* should now be disapproved." Whether you agree or disagree with his conclusion, you must concede that Mr. Justice Brandeis' scholarly opinion was a tribute to the constructive criticism and searching historical evaluation to which the doctrine of *Swift* v. *Tyson* had been subjected.

Thus, it is not at all disturbing that large numbers of intelligent persons should disagree with the legal reasoning of the Court, the authorities cited, or lack of them or the ultimate decision. But it is extremely serious that personal insults are now hurled at members of the Court in place of criticism directed at their decisions. One may disagree with an opponent, and yet respect him and his motives. Disagreement is a sure sign of intellectual activity—the freedom of thought which is essential to democracy. But when that disagreement runs rampant in the form of malicious charges directed toward undermining and smearing the opponent, this is cause for freedom-loving men to become alarmed. For this type of attack cares little for the virtue of truth.

All of us are somewhat familiar with the history of the Supreme Court of the United States. In its decisions one can trace most of the significant social, political and economic trends and developments of our Nation. The Court began its role as a resolver of great national issues in the classic case of *Marbury* v. *Madison*. The majority opinion by Chief Justice John Marshall stated that conflict between a Federal statute and our Constitution must be resolved in favor of the Constitution, the supreme law of the land. Although this declaration was actually mere dictum, it was widely accepted as controlling on the power of the Court to rule on the validity of Federal statutes.

Opponents lashed out at the language of the opinion. Many eminent men, among them President Jefferson, were extremely critical. They took the position that each branch of the Government had the exclusive power to pass on its own authority. Rational grounds were advanced for this argument. Certainly many persons must have considered the decision that the judiciary could overrule the legislature to be a violent misuse of judicial authority. Yet, now we look upon *Marbury* v. *Madison* as the very cornerstone of constitutional law. Absent this review of the constitutionality of Federal legislation, the basic rights and freedoms we prize would be unprotected. The "gross usurpation" of 1803 is the "genius of John Marshall" today.

McCulloch v. *Maryland* introduced a line of decisions in which the Court established the supremacy of the Federal Government in certain areas of power. Each infringement of States activity and each addition to Federal powers brought forth a new barrage of criticism. So vehement and bitter were the feelings that several plans were suggested to limit or transfer the appellate jurisdiction of the Court where the validity of statutes was involved. A number of eminent persons, including Senators and Representatives, joined in this crusade; but, fortunately, wiser heads prevailed. We now recognize the value of most of these decisions. All sections of our great Nation have pulled together in time of emergency. Our commerce has not been hampered by duties, taxes or retaliatory measures between our States. The Court's interpretations of our Constitution, even in the face of violent opposition at the time when made have made us nationally strong today. And I say this as one who respects and advocates States rights and deplores the ever-expanding octopus of the Executive Branch of the Federal Government. While not a legal matter strictly, it is only fair to insert a footnote here that State inaction in meeting modern needs and problems has contributed largely to that expansion.

THE DRED SCOTT CASE—THE ATTITUDE OF LINCOLN

The equality of man has always been a contentious issue. Every American reads in grade school how the Supreme Court returned Dred Scott to slavery. The hue and cry which arose from the abolitionists then was equal to any modern attack by segregation forces. President Lincoln was extremely displeased with the decision. But he made a statement which we would all do well to ponder:

"We know the court that made it has often overruled its own decisions and we shall do what we can to have it overrule this. We offer no resistance to it."

This was the position of a man willing to shelve his personal disappointment rather than lead an attack as he said against "our whole republican system of Government—a blow which if successful would place all our rights and liberties at the mercy of passion, anarchy, and violence." This must be the position of our legal profession. We must take the lead in upholding respect for our judicial system. Fight particular decisions if you believe they are erroneous. Endeavor to have them overruled. But we must not disparage the status of our courts as an institution of Government by blanket attacks upon the courts, or even a particular court.

It is needless to continue tracing the history of the Supreme Court in support of the thesis herein stated. It is well known to all. Never a decade has passed that some great controversial economic, political or moral issue has not been resolved. Time has proved many of the decisions to be not only correct but brilliant. Others were later seen to be shortsighted or shallow and were overruled. But would we have it otherwise? Would it be better to have as our High Court of Justice a board of nine pacifiers whose chief function is to concede some basic value here and wtihhold a little justice there in an effort to appease a minimum of, say, 90 percent of the public? Or would we have nine legal minds, men, not gods, who wrestle with the great judicial issues of our day and resolve them to the best of their ability? Is our first concern that every decision be correct, important as this is? The answer is clearly no. It is more important that we have independent judges, free to decide unfettered by outside pressures. If unpopular decisions can result in loss of appellate jurisdiction or impeachment of judges, how can we hope that fear of consequences of decisions—or what is even worse, political corruption—may not seep into and rust the scales of justice?

Never forget that there were lawyers to present both sides of every great issue before our courts. The Court is persuaded or urged by lawyers to the decision it announces. Few indeed are the issues that are so one sided that all will agree on the ultimate decision.

We lawyers are part and parcel of this judicial process, and we are the only participants who can perform the public service here proposed. Our clients are not equipped to do it. Self-imposed judicial ethics and tradition forbid any response by the judiciary to attacks upon it, no matter how false or unwarranted those attacks may be.

Canon No. 1 of the American Bar Association's Canons of Professional Ethics provides in part:

"It is the duty of the lawyer to maintain toward the courts a respectful attitude, not for the sake of the temporary incumbent of the judicial office, but for the maintenance of its supreme importance. Judges, not being wholly free to defend themselves, are peculiarly entitled to receive the support of the bar against unjust criticism and clamor."

Judges of our courts speak publicly only in the discharge of their judicial function. They must bear criticism, even irresponsible and vicious criticism, in silence. These men

have given up the right to criticize in order that the rest of us might be secure in that right. But we of the bar have no such restraint upon us. It is, therefore, up to us, the members of the bar, to speak up in defense of our courts as an institution of government. Our duty is to assume leadership here and see to it that our people have the correct facts and a proper appreciation of the place of the courts in our system of government. We cannot be content merely to note the comforting fact that an institution which has survived the petulance and displeasure of a Jefferson, a Jackson, and two Roosevelts—to say nothing of the tirades of lesser men—almost certainly has the strength and vitality to survive present attacks. The bar has its own obligations to discharge, and it is important to all of us that we do not fail in those obligations.

It is not my purpose either to defend or to criticize any particular decision of any court. The basic point is that we of the bar have a duty and a responsibility to perform in maintaining the confidence of the public in our courts. Such confidence is the foundation of our whole system of government, and we must never allow it to be impaired or destroyed. We as a people may talk loud and strong of rights and liberties, but rights are as nothing without a redress and protection in the courts. Chief Justice Marshall so truly said:

"The judicial department comes home in its effects to every man's fireside, it passes upon his property, his reputation, his life, his all."

Recall also that the preamble to our Constitution recites that one of the purposes for which it was created was to "establish justice." Certain it is that the judiciary as one of the three great branches of our Government has always played a basic role in the lives of our people. Our people have a right to justice, soundly and properly administered. And we of the bar have a duty to make the people secure in their rights. We perform that duty by defending the courts against unjust attacks.

Do not forget, either, that the prestige of the bar depends in large part upon public confidence in, and esteem for, the courts as an institution of government. When we are guilty of irresponsible criticism of judges and the courts, we are striking a body blow at our own standing in the estimation of the public. We are in effect fouling our own nest.

These are critical times. The forces of communism are constantly trying to undermine our institutions. One of their principal goals is to create distrust and dissension within our Nation—to make us doubt our way of life. Certainly this is no time for our own people to add impetus to the Red attack. For no institution in our Government is so directly opposed to the concept of a supreme state as our courts. The rule of law and the supreme state cannot coexist.

A PRICELESS HERITAGE—FREEDOM UNDER LAW

As lawyers and officers of the courts, we, of all Americans, are best able to appreciate our priceless heritage of freedom under law. In our daily life we see the great principles of democracy applied by our court system. We tend to take them for granted. But whenever we stop and think, we must recognize that not one of our priceless freedoms—speech, religion, press, even criticism of government—would be safe without the final safeguard of the courts. Our whole future as a Nation and as a people depends upon the maintenance of our independent judiciary to preserve the rights of our people.

It is well to stress again that our court system is not above censure. No organ of government is. None of our institutions are perfect. As Mr. Justice David Brewer of the Supreme Court said in 1898:

"It is a mistake to suppose that the Supreme Court is either honored or helped by being spoken of as beyond criticism."

But there is a vast difference between criticism stemming from constructive analysis of particular decisions and the uninformed, misleading statements and insults which are currently being hurled. As President Lincoln suggested, time spent in ranting and raving would be better used working to establish the fallacy of the unpopular holding. But no degree of disagreement justifies degrading the foremost protection of our finest heritage—freedom under law—a protection only the courts can guarantee.

The American people have traditionally been ready to respect their courts and to look to them as the ultimate guardians of their liberties. "Justice," as Daniel Webster said, "is the greatest interest of man on earth. It is the ligament which holds civilized nations together. Wherever her temple stands, and so long as it is duly honored, there is a foundation for social security, general happiness, and the improvement and progress of our race."

To insure justice in our land, we lawyers must do all in our power to preserve the respect of the public for our courts. We are dually obligated as dedicated servants of the public and as officers of the courts to speak forth on every occasion to maintain confidence in our courts.

The stake of the public at large in this matter is tremendous. A respected and strong judiciary and a respected and strong bar are essential to maintain our system of freedom under law. Maintenance of that freedom is essential to the continued liberty of our people, and the continued liberty of our people is essential to the future of free peoples everywhere.

Dearborn Township Board Condemns Gas Gouge Bill, H. R. 8525

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DINGELL. Mr. Speaker, as you can recall, the proponents of the gas bill have time and again told us that they presume to speak on behalf of the consuming public in this country.

I am sure that the membership of this House recalls that no consumers were at any time consulted in the drafting of the present natural gas bill, H. R. 8525. To show the concern of true representatives of the consumer I again insert into the CONGRESSIONAL RECORD the views of elected representatives of consuming families. This time it is a resolution of the Dearborn Township Board, one of the real local units of government in the State of Michigan. These citizen representatives, concerned over the impact of the gas bill on the consuming public in their constituencies, passed a resolution condemning the gas gouge bill, H. R. 8525. I hope all Members of Congress will read this resolution and will understand that passage of H. R. 8525, the gas gouge bill, is not in the public interest.

DEARBORN TOWNSHIP,
Inkster, Mich., February 14, 1958.

Resolution presented by Thorne and supported by Canfield:

"Whereas the Harris-O'Hara bill to remove gas producers prices from Federal control will be heard shortly in the House of Representatives; and

"Whereas natural gas is a natural resource and as such is the property of the people of the United States; and

"Whereas it has been estimated that if this bill passes householders cost in the Detroit area will rise approximately $25 million;

"Whereas if this bill passes no existing agency will be able to police the pricing policies of natural gas: Therefore be it

"*Resolved*, That the Dearborn Township Board at a regular meeting held Tuesday, February 11, 1958, hereby urges each of you to do everything possible to defeat this measure and be it finally resolved that a copy of this resolution be sent to President Eisenhower, all Michigan Congressmen, both United States Senators, the Utilities Commission, House of Representatives and a copy be spread on the minutes of this board.

"Yeas: Bullinger, Thorne, Canfield, Caples, Greenlaw, and Warner.

"Nays: None.

"Motion adopted."

I hereby certify the above is a true copy of a resolution adopted by the Dearborn Township Board convened in regular session February 11, 1958.

WILLIAM H. THORNE,
Clerk, Township of Dearborn.

Fortieth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. GARMATZ. Mr. Speaker, it has been 40 years since Lithuania was proclaimed an independent country, ending 123 years of Russian rule. What joy and happiness there must have been in that nation at that time! And what progress they made in every area, after their freedom from Russian domination. The Lithuanian people people proved that they were ready and able to assume their place among the free and sovereign nations of the world. But, unfortunately, this independence, this progress, this happiness was shortlived. In 1940 the country was again invaded by Soviet troops, and up to this time is still under Soviet control.

As an American, I am grateful and proud that our Government has never recognized the present Lithuanian regime as representative of the people and has not accorded it diplomatic recognition. But I feel we must do more than that. We must take positive action. Through the United Nations, we must support a firm policy to help Lithuania and all the other captive nations of eastern Europe to regain their freedom and independence.

We must make it possible to bring more refugees from these countries to the United States. The Americans of Lithuanian descent have added much to

our culture and will continue to do so if given the opportunity. We must do everything possible to assist in safeguarding the cultural heritage of Lithuania, whose language and literature are among the oldest in the Western World. On February 15 the Council of Lithuanian Societies of Baltimore again observed Republic of Lithuania Day, and it was my privilege to attend. At this gathering, the following resolution was unanimously adopted:

Resolution unanimously adopted after due deliberation by American citizens of Lithuanian descent, of the city of Baltimore, at the commemoration of the 40th anniversary of Lithuania's independence held under the auspices of the Council of Lithuanian Societies of Baltimore at Lithuanian Hall on the 15th day of February 1958:

"Whereas 40 years have elapsed since February 16, when the Council of Lithuania at Vilnius proclaimed to the world the determination of the Lithuanian people to become an independent nation; and

"Whereas during its brief period of freedom the Republic of Lithuania capably managed its own affairs and successfully and progressively raised the economical, cultural, and educational standards of its people; and

"Whereas as American citizens, we are proud of the fact that the United States Government publicly condemned the flagrant Soviet acts of aggression and violence against Lithuania, Latvia, and Estonia, and still recognizes their independence; and

"Whereas freedom-loving people everywhere are placing their hopes, their destinies and their future in the steadfast and unconditional adherence by the free democracies to the principles of justice and humanity: Now, therefore, be it

"Resolved, That we Americans of Lithuanian descent, being fully aware of the graveness of the international situation and concerned over the fate of the Lithuanian Nation, urge the Government of the United States to continue to combat the forces of aggression until true and lasting peace is achieved."

Both the mayor of Baltimore and the Governor of Maryland issued special proclamations, which read as follows:

PROCLAMATION BY MAYOR THOMAS D'ALESANDRO, JR., DESIGNATING SUNDAY, FEBRUARY 16, 1958 AS REPUBLIC OF LITHUANIA DAY IN BALTIMORE

Whereas every year, on February 16, the Lithuanian colonies throughout the Nation gather together to commemorate the Independence Day of Lithuania, now temporarily under the domination of a ruthless dictator nation, whose armed might has for the time being crushed all opposition on the part of the freedom-loving people of Lithuania and other nations who eagerly look forward to the day when liberty and justice will prevail throughout the earth; and

Whereas despite cruel and tyrannical suppression, the freedom-loving people of Lithuania never cease to work and pray for liberation from the bonds of enslavement, and look forward with earnest yearning to that happy day when all of Lithuania will be able to enjoy the blessings of peace and contentment; and

Whereas the city of Baltimore is justly proud of the many citizens of Lithuanian birth or ancestry, who have made many important contributions to the civic and industrial welfare of our community, and who have been able to enjoy the freedom denied their compatriots in Lithuania.

Now, therefore, I, Thomas D'Alesandro, Jr., mayor of the city of Baltimore, do hereby proclaim Sunday, February 16, 1958, as Republic of Lithuania Day in Baltimore, and do urge all our citizens to give serious thought to the many cultural and economic contributions made to the welfare of the world by Lithuanians of the past and present, and to join with the people of Lithuania here and in their native country in prayers for the return of peace, so ardently desired by freedom-loving humanity.

In witness whereof, I have hereunto set my hand and cause the great seal of the city of Baltimore to be affixed this 5th day of February, in the year of our Lord, one thousand nine hundred and fifty-eight.

THOMAS D'ALESANDRO, Jr.,
Mayor.

EXECUTIVE DEPARTMENT, ANNAPOLIS, MD., GOVERNOR'S PROCLAMATION, REPUBLIC OF LITHUANIA DAY, FEBRUARY 16, 1958

Lithuania is enslaved, her people have been deported and mass-murdered, religion is ruthlessly suppressed and freedom obliterated.

But it is not easy to shackle a liberty-loving nation. It is doubly difficult when that nation has known the great experience of freedom.

Lithuania has known and gloried in that experience.

We—as Americans—cannot ignore these yearnings for our own basic beliefs. We share the struggles of Lithuania to break the Kremlin yoke.

Showing their faith in a free future, Americans of Lithuanian descent continue to celebrate this day—February 16—as Lithuania's Independence Day.

In recognition of the courage of the Lithuanian people and in support of all men who fight for freedom, I, Theodore R. McKeldin, Governor, proclaim February 16—the 40th anniversary of Lithuania's independence—as Republic of Lithuania Day throughout Maryland.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, this 15th day of January, in the year of our Lord, 1958.

THEODORE R. MCKELDIN,
Governor.
CLAUDE B. HELLMANN,
Secretary of State.

The group was honored by the presence of the Honorable Joseph Kajeckas, Chargé d'Affaires ad interim of Lithuania, who addressed them in the Lithuanian language. A translation of his remarks follows:

This anniversary of Lithuania's independence is out of the ordinary. It is the first such anniversary in many years without the late Minister Povilas Zadeikis among us. We grieve at this, but we realize that although the time of his service is past, the aspirations of the country he served remain unchanged, because their source—Lithuania's glorious past, undying rights and national tradition—remains likewise unchanged. Let us open the curtain somewhat on the glorious past.

According to Prof. Clarence Manning, of Columbia University:

"The Lithuanians had established a powerful and independent state in Europe during the Middle Ages. They were able to check the German drive to the east for centuries. They protected Europe against the Mongols and the Tatars. They furnished a power and a government behind which the Eastern Slavs could live in peace and safety with a freedom that was unknown in Muscovite Russia. They blessed their subjects with more human freedoms than in the neighboring countries. They encouraged education and toleration, and they played their part in the general development of European civilization."

We know, however, how the greed of powerful neighbors overwhelmed the progressive, humanistic state of Lithuania, the darkness of a seemingly endless night descending on Lithuania. That night continued until the momentous February 16 that we commemorate today.

Four decades have passed since that day when a group of Lithuanian patriots in Vilnius proclaimed Lithuania a free and independent state, thus fulfilling the prayers and aspirations of many years. Let us recall the path of suffering that was traversed: Unsuccessful insurrections to restore Lithuania's honor; the period of the suppression of the press, accompanied by the smuggling of books into Lithuania; the school of suffering, when mothers secretly taught their children while at the spinning wheel; the exile of persons to Siberia for the use of prayerbooks and texts in the Lithuanian language; the persecution of Muravyov; Kraziai; impressment into military service; Russification; economic subjugation; and even the erasing of Lithuania's name from the map. Such was the fate of Lithuanian sons and daughters, deprived of their ancient state. Such was the sad tale of Lithuania's subjugation.

"Let Lithuania be darkened and silent," the oppressor had said.

But with the Act of February 16, the chains of slavery were broken. Lithuania's breast sighed its relief as the weary nation took on its new life, as Lazarus come from the grave. With the Act of February 16, she turned the imposed shameless page of her history, the story of her suffering, and dedicated herself to the work of reconstruction. Fortunate were those who lived to see that day, but how many were there who closed their eyes on life with the sight of their nation's plight still before them.

One of those who died such an untimely death is the man whose 100th anniversary we celebrate this year, Vincas Kudirka. During the years of freedom, I was fortunate enough to have been able to visit his tomb on the banks of the Sesupe, and during this jubilee year, I remember that visit with pride. That man, besides his numerous writings and the composition of the national anthem, left for his countrymen the advice, "My Lithuania, when your enemies sink their teeth into you, you will survive only if, as a hydra, you grow several heads when one is severed." Today more than ever, the systematic extermination of the Lithuanian nation goes on. Thus, it is appropriate for us to keep Kudirka's warning in mind. At the time when Lithuanian heads in the homeland are being cut off by the enemy's slaughtering, it is at least possible for Lithuanians abroad to help save the situation. Their heads and hearts can be saved for the Lithuanian cause; they not only can, but should be saved, since Lithuania's cause is also the cause of the whole free world. If the light of liberty is extinguished anywhere in the world, the prospect of peace and freedom for all nations is made just that much darker. John Donne rightly said "Ask not for whom the bell tolls: It tolls for thee."

"As many as the dying leaves of autumn," fell Lithuania's sons in defense of her freedom. Let us especially remember on this occasion the brave men who were the signers of Lithuania's Declaration of Independence. Most of them have either passed away or were killed, and to honor their memory and in general to honor all those brave men who gave their lives for Lithuania, I now propose a minute of silent prayer. (* **)

I will not enumerate the blessings of Lithuania's freedom. There are too many among you who have been witnesses to those blessings, and you know them full well. Neither will I detail the darkness and cruelty of Lithuania's present enslavement. Between Lithuania's past freedom and present enslavement, the contrast is enough to sadden the hearts of all men who cherish human dignity and the beautiful and good acts of a brave nation.

On February 16, though, we remember past celebrations, when people having decked their homes with the tricolored symbols of their country, rejoiced in the proud displays and songs of the Lithuanian Army on parade. In villages and towns, men, women, and children of all ages joined their hearts in happy song, while organizations came in bands to the house of prayer to thank their God for the blessings of His peace and the fruits of liberty under the independence won through so many centuries at such a price; they came in throngs to the Tomb of the Unknown Soldier to honor his heroism and of all those who fell in loyalty to his own cause; they went to the public halls to enumerate their achievements, to feasts, toasting a nation reborn in freedom. The invalids of the wars of independence were proud of their sacrifices for the fatherland. That day was always the greatest of occasions for a Lithuanian: The day of his rejoicing and the day of his honor.

So it was in the days of freedom. And now? The conquered banner of our country has been furled; either it is cruelly mangled by the invader's boot, or reverently hidden by men who still keep its faith. Going to church together in organized groups is prohibited. The Lithuanian anthem, during the jubilee year of its composer, is silenced. Lithuania's military uniform is no longer seen, and the soldiers' happy song has died. Silence holds its dominion over the Unknown Soldier's sarcophagus: A cruel and alien hand has scattered and desecrated its honored stones. The enemy's sacrilegious power left no room for the crosses which once stood by that holy shrine, but has irreverently plucked out the symbols of a brave nation's suffering. The bugle's tribute to the colors at this tomb is no longer heard at sunset; the liberty bell, like America's own, that Lithuanian-Americans had given their country, no longer tolls its angelus in accompaniment to the soldiers' prayers as our nation's flag began its descent. That pregnant moment at the sunset when Lithuania's amber, green, and red gave over its domination of our country's rolling fields and peaceful plains to the stillness of night is gone now, and lives only in the memories of men whose burning faith in a once strong, grand, and proud national heritage can never leave their hearts.

The ugliest side of present-day imperalistic communism consists in the fact that they justify the murder and extermination of innocent people, innocent Lithuanians, as being virtuous. If the annihilation of a person or of a nation serves communism, then, in their jargon, "that is good and to be praised." If the trampling on of solemn treaties serves communism, in their dictionary, that is good and meritorious. If lying serves communism, then one can lie as much as possible; the more you lie, the better Communist you are. To serve their purposes, the notions of freedom, independence, democracy, coexistence, peace, colonialism, etc. are distorted beyond recognition.

Let us glance briefly at the record of imperialistic communism's lies, violence and treachery. With Lithuania, the Kremlin had numerous well-written and valid treaties, among them the treaty of nonaggression, but it trampled on these treaties with the clearest of consciences. Stalin isn't blamed for this by his successors; the undertakers of Lithuania's freedom, Molotov and Dekanozov, did not suffer because of the violation of those treaties: they were punished for something else; for the cruel deportation of innocent Lithuanians and Baltic people in general to Siberia, Serov also was not punished. He remains even now firmly entrenched in the Kremlin's upper echelons.

The Soviets speak of the creation of a neutral zone in Eastern Europe. Long ago, such a zone existed in the Baltic States without the helping hand of the Kremlin. The Baltic States freely declared themselves neutral on the eve of the last world war. What better conditions for peaceful coexistence could one dream of? However, such conditions were nat suitable of the Kremlin's carnivorousness.

This month, there is being distributed in the United States a Soviet propaganda magazine in which Moscow praises itself for a new discovery in economics. They supposedly have done away with unemployment in Lithuania, and for this they seek credit. We give them that credit, but it cries to heaven for vengeance, after having killed Lithuanians, after having deported hundreds of thousands of them, after having sent countless other as volunteers to labor in their virgin lands, after having frightened away tens of thousands of Lithuanians as refugees to the western world, they praise themselves for having gotten rid of unemployment. But brains aren't necessary for such a discovery: all one needs is a guitless thirst for blood, and the discovery produced is called barbarism. The Soviet version of their discovery is understandable, however, when we remember that lies and deceit were and are now the Soviets' sputniks: fellow travelers.

Gen. Mark Clark, who negotiated with the Communists for about 10 years, was right when he stated that "There is no decency in the Communists. They'll cheat, they will lie, they will murder, they will do anything to attain their end of world domination, and they will sign a solemn pledge today, fully intending to abrogate that pledge the next day."

Albert Camus, the 1957 Nobel Prize winner, said that "the Hungarian revolt blew to bits the biggest lie of the century: a lie that tried to pass off a regime of police tyranny as a proletarian revolution."

But let us return to our commemoration. Let us, on this solemn occasion, give thanks to those who so much deserve it. First, let us give thanks to the suffering Lithuanian nation. She, by her perseverance, safeguards the aspirations of the Lithuanian people, which aspirations created the basis for the act of February 16. She is preserving those aspirations also at present for a future resurrection of the nation. We are grateful to the signatories of the act of February 16; we especially wish that the three living signers of that act may live to see it renewed in a new birth of freedom. We give thanks to the Lithuanian Army, thanks to which we enjoyed 22 years of independence.

We are grateful to the Government of this country, especially President Eisenhower and Secretary of State John Foster Dulles for their nonrecognition of Lithuania's occupation by force, and for their numerous meaningful statements in that regard, together with the statement that Mr. Dulles made on this particular commemoration this year.

We thank the governors of the several States and mayors of cities of this country for their highly esteemed proclamations throughout the years; also we thank numerous Senators and Congressmen for their many stirring speeches supporting the aspirations of the Lithuanian nation and sympathizing with her plight.

In general, we thank all friends of Lithuania and the great-hearted American people for the various ways in which they have supported Lithuania's cause.

Finally, we thank all our own countrymen and Lithuanian-Americans: those who organize in liberation efforts; federations; alliances; organizations; sponsors of Lithuanian-language radio programs; the reverend clergy; writers and journalists; teachers, especially the sisters in our Lithuanian schools, and all those individual persons who in one way or another have rendered their aid toward Lithuania's liberation, the easing of her plight, and the raising of Lithuania's good name above her great sorrow.

The Lithuanian nation will remain eternally grateful for such wholehearted and noble efforts. She has a long memory as regards her benefactors in the hour of misfortune. Today, Lithuania is stepping into the 5th decade of proclaimed independence, but is also finishing the 18th long year of slavery. She has not yet reached the crest of her Golgotha. One can still not see the end of her way of the cross. But in her suffering and anxiety, she is greater than the so-called Man of the Year for 1957, just as Nero's persecuted Christians were greater than the Emperor who was powerful enough to hold the lives of men in his balance. In the first road of suffering to Golgotha, the long arm of the Roman law was required to force a bystander, Simon of Cyrene, to help carry Christ's cross.

Lithuanians need no police power to help carry the cross of their suffering nation: a Lithuanian heart is sufficient. Thus, especially in this jubilee year, which is also the jubilee year of our country's patron, St. Casimir, let us be determined to bring down the cloud over Lithuania's horizon, to light the fire of freedom once more in her sky, to ease the suffering of Lithuania, to help it keep and persevere in the hope of freedom until the Easter morn and the resurrection of that oppressed nation. For rise it must: it cannot have suffered so much in vain. God bless our common efforts to this end.

In this connection I would also like to insert in the RECORD a translation of a message broadcast by Mr. Kajeckas to the Lithuanian nation, over the Voice of America program, on the 40th anniversary of Lithuanian independence.

Fellow countrymen, free Lithuanians are well aware of your thoughts which you hide from the occupant on February 16th. We are members of the same body, and we feel in unison. Therefore, while observing this anniversary, we are mourning your lot, and deeply sympathize with you.

This year we are also observing the memory of Vincas Kudirka. This is the centennial anniversary of his birth. On all the continents, free Lithuanians are singing his anthem which is banned in his own homeland.

Three days later is the 20th anniversary of the death of Adomas Jakštas. A great many of you remember him. According to Vaižgantas, he was the third pillar of the Lithuanian nation, beside Basanavičius and Kudirka. He escaped exile to Siberia only because he happened to die on the eve of Lithuania's dusk.

A free Lithuanian today renews his determination to work and to make sacrifices for the sacred rights of Lithuania, and a brighter tomorrow. We firmly believe in that morrow. You must believe, also.

Lithuanian day is celebrated in America en masse and in solemnity. Gratitude is voiced to the United States Government for not recognizing, until this day, the act of violence against Lithuania. The Lithuanian tricolor waves proudly above the Legation of Lithuania in Washington, to remind of your rights and of the injustice done to you. This tricolor waves proudly and freely, just a few blocks away from the Embassy of the oppressor of the Lithuanian people. The Lithuanian Legation receives visitors, fellow nationals and others, who call to pay respects to the representatives of a free Lithuania, your representative, and to wish for his people freedom, and an end to suffering.

Captive brothers and sisters, I greet you most sincerely on this honorable anniversary. I wish you undaunted hope and perseverance in your trial. I also voice my thanks to you. You and your parents have preserved the nation's aspirations which formed the basis for the act of February 16th. By your suffering under the injustice and by your perseverance you continue to attest to the world that the Lithuanian people's aspira-

tions remain alive and that the nonrecognition of the occupation correctly reflects your will.

During this anniversary year of independence and Kudirka, let us seek strength from Lithuania's past: Let thy sons seek strength from thy past.

Let us take strength and solace also from the other honorable anniversary—that of St. Casimir. This year is the 500th anniversary of his birth. His interceding for Lithuania to God is influential and certain. Lithuania is closest to his heart.

May God protect you during this jubilee year, and bring closer to you the dawn of real freedom, so well earned by your suffering.

Secretary of State Dulles, on the 40th anniversary of the declaration of Lithuanian, Latvian, and Estonian independence, issued the following statement, which I believe should be included in the RECORD:

This year marks the 40th anniversary of the declarations of national independence of the peoples of Lithuania, Latvia, and Estonia. Although in 1920 the Soviet Union recognized their independence, renouncing forever all sovereign rights in the Baltic States, in 1940 the Soviet Government forcibly incorporated Lithuania, Latvia, and Estonia into the Soviet Union. This action was quickly denounced by the United States Government.

The United States remains convinced that relations between all nations must be governed by the principle of equality and guided by justice and law. It believes that the peoples of Lithuania, Latvia, and Estonia have a firm right to choose their own political, economic, and cultural systems. Determination, industry, and love of freedom characterize the peoples of these Baltic States. These qualities have enabled their kinsmen here to make a valuable contribution to the development of the United States. The United States Government is confident that the same qualities will carry the peoples of Lithuania, Latvia, and Estonia successfully through the present tragic days and enable them to regain the rights of which they have been unjustly deprived.

Mutual Savings Banks Threatened

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 18, 1958

Mr. MULTER. Mr. Speaker, I am again calling attention to proposed legislation which would be most unfair to mutual thrift institutions, their members, and their depositors. Mr. Edward P. Clark points out this unfairness in his statement before the House Ways and Means Committee on January 27, 1958, as follows:

SUMMARY STATEMENT OF EDWARD P. CLARK ON BEHALF OF MUTUAL SAVINGS BANKS' COMMITTEE ON TAXATION BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, JANUARY 27, 1958

My name is Edward P. Clark. I am president of the Arlington Five Cents Savings Bank in Arlington, Mass. I appear on behalf of the country's more than 500 mutual savings banks and their depositors. We appreciate the opportunity of appearing before you.

We have filed a full statement of our views, and I respectfully ask that you make it part of the official record of these hearings. In the brief time I have, I can only summarize briefly our views. We strongly urge you to take no action which would reduce our allowable reserves for losses or limit our deduction for interest to savings depositors.

Mutual savings banks have no stock or stockholders. They are operated solely for the benefit of their depositors. They do not engage in a general banking business, as do commercial banks, and are not obliged to use part of their earnings as dividends to stockholders.

Savings banks are operated under strict State supervision. All earnings are distributed annually to depositors, except for amounts required for necessary reserves. All distributions to depositors are taxable.

For more than 100 years, our principal function has been to promote thrift and encourage personal savings. As the President indicated in his Economic Report, personal savings are vital to the future of our country. We now have savings deposits of more than $31 billion in some 21 million separate accounts. More than 2,400,000 of our accounts are held by school children. The average deposit on July 1, 1957, was $1,431.26.

Another important function of mutual savings banks has been to provide home financing. On September 30, 1957, we had about 60 percent of our assets, or $20.8 billion in mortgage loans, mostly residential. We have furnished funds for homes not only in our own 17 States, principally in the Northeast, but in the South and West as well. As of November 30, 1957, we held about $3.6 billion in mortgage loans in nonsavings-bank States. These States include Arkansas, California, Florida, Louisiana and Texas.

The $31 billion-plus of savings deposits must be protected against the losses which are inevitable in poor times. Since mutual savings banks have no stockholders, they must protect these deposits by retaining a portion of their earnings as surplus, undivided profits and reserves. To do any good, these moneys must be accumulated in advance of losses. The importance of retained earnings to the savings banks and their depositors is a vital point on which they differ from all stock corporations. It is also the only point on which their tax treatment is in any way different from that of stock corporations.

When Congress repealed the exemption of mutual savings banks in 1951, it recognized that the safety of the depositors' savings and the continued existence of these mutual institutions depended on their ability to accumulate adequate surplus as reserves. Accordingly, it provided that if their total surplus, undivided profits and reserves were less than 12 percent of deposits, they might add any or all of their taxable income to a bad debt reserve until the surplus, undivided profits and reserves equaled 12 percent of deposits.

These tax-deductible additions to bad debt reserves can be used only for losses. If used for other purposes, they become subject to tax. When total surplus, undivided profits and reserves equal or exceed 12 percent of deposits, no further earnings may be retained without payment of tax.

H. R. 8737 would reduce the 12 percent to 5 percent. The record of the 1930's shows that at least 12 percent is necessary. In 1929 the mutual savings banks had book reserves of 11.5 percent. They survived only because they were able to reduce interest rates to depositors faster than their earnings declined so that a substantial portion of the losses could be met from current income. In some instances interest to depositors was reduced from 4½ and 5 percent to 1 percent. This is bad because interest is needed by depositors during tough times.

There is a mistaken impression that the bad-debt reserve allowance of mutual savings banks gives them an advantage over commercial banks in competing for savings deposits. This is not the case. Amounts placed in bad-debt reserves can be used only to protect deposits against losses. They cannot be used to pay more interest to depositors and thus attract more deposits.

The real complaint of commercial banks is that they pay more corporate income tax than mutual institutions. But this is not the result of the mutuals' reserve provisions. The reason commercial banks pay more corporate tax than mutual banks is that they have stockholders. For every dollar they pay in dividends to stockholders, they have to pay a dollar in tax. This corporate tax burden will not be reduced 1 cent by changing the 12 percent figure to 5 percent. As a matter of fact, a substantial number of mutual savings banks (51 out of 128 in New York State alone) have more than 12 percent in surplus, undivided profits, and reserves accumulated long prior to 1951. The Internal Revenue Service has ruled that institutions in their situation are not entitled to a bad debt reserve, and cannot have a deduction for additions to bad-debt reserves. To that extent the commercial banks have a tax advantage over them. Even so, they pay less corporate tax than commercial banks, because they distribute the bulk of their earnings as interest to depositors and do not pay dividends to stockholders.

Though commercial banks pay more corporate income tax than mutual banks, the mutuals and their depositors furnish the Treasury with the same revenues per $1,000 of assets as the commercial banking industry. The attached exhibit I shows revenue of $4.86 generated per $1,000 of assets in the savings bank industry in 1956 as compared to $4.87 in the commercial bank industry.

In 1956 savings banks paid out 68.11 percent of their gross earnings as interest to depositors. In the same year, insured commercial banks paid out only 15.1 percent of their gross earnings as interest to depositors and cash dividends to stockholders. These figures show that mutual savings banks place a much higher percentage of their current earnings in the tax stream through their depositors than commercial banks through their depositors and stockholders. Commercial banks place net retained earnings in free surplus, which can be used to pay dividends to stockholders or to increase the value of stock which can be disposed of at capital-gains rates. No savings bank depositor can derive any capital gain from retained earnings. The sole function of these earnings is to protect the savings.

Mutual savings banks must margin new deposits by 12 percent in order to protect them. A bank whose deposits have increased by $2 million must be able to set aside $240,000 for their protection. Otherwise, the safety of all existing deposits will be diluted, and the trustees would likely decide under these circumstances to limit the acceptance of new deposits. This would have the effect of reducing funds available for home financing everywhere, and particularly in nonsavings banks States, including Arkansas, California, Florida, Georgia, Louisiana, and Texas, in which mutual savings banks have in recent years invested approximately $3.6 billion.

Congress determined in 1951 that 12 percent surplus, undivided profits, and reserves were required as a total reserve to protect depositors. Since then there has been no test of the adequacy of such reserve. In New York State the minimum statutory reserve is 10 percent of deposits; to this must be added other reserves determined by the supervisory authorities and trustees to be necessary. In Massachusetts the minimum statutory reserve is 7½ percent, and the maximum 15¼ percent of deposits. The supervisors in the principal savings banks States advised Congress in 1951 that surplus, undivided profits, and reserves of 13 to 15 percent of deposits are required. These authorities are in the best position to determine what constitutes adequate reserves. Such reserves can only be accumulated through retained earnings.

In addition to exhibit I showing a comparison of probable revenues from the two industries, I have several other exhibits attached to my statement, all of which are very important.

Exhibit II is intended to correct an important misunderstanding, to wit, the confusion between adequacy of a bad debt reserve and adequacy of a bank's capital. Some commercial bankers imply that mutual institutions are allowed a bad debt reserve of 12 percent of deposits while commercial banks are allowed only 1 percent. It is erroneous to say that mutual savings banks have a 12 percent bad debt reserve. When these banks became taxable in 1952, the surplus, undivided profits and reserves constituted part of the 12 percent. If a savings bank's surplus, undivided profits and reserves exceed 12 percent, it is fully taxable. If they are under 12 percent, the bank can retain tax free only such earnings as are added to qualified bad debt reserves and then only until the total of its surplus, undivided profits and reserves equal 12 percent of deposits.

Exhibit III compares the growth of savings deposits of mutual and commercial banks from December 30, 1950, to September 25, 1957. It shows there has been no great disparity in the growth of savings accounts during that entire period. Exhibit IV, dealing with the period December 31, 1956, to September 25, 1957, shows that the growth of savings deposits in commercial banks has greatly exceeded that in mutual savings banks. There is no factual basis for the charge that commercial banks have been handicapped by our reserve provisions in the competition for savings.

H. R. 8737 would also limit the deduction of mutual savings banks for interest paid to depositors to 3 percent. Today all taxpayers, including individuals and business corporations, are allowed to deduct in full interest paid, and there is no reason for any deviation from this general rule in the case of the banking industry. Mutual savings banks are required by law in most States to pay out all earnings to depositors, except amounts required for reserves. If any ceiling on interest paid by banks is desirable, it should be set by the supervisory officials, and then only in an emergency.

Traditionally mutual savings banks have paid more interest than commercial banks. This is shown in exhibit V, a table of interest rates paid by mutual savings banks and commercial banks from 1935 to 1956, inclusive. This is because they do not have to appropriate any income for stockholders.

Exhibit VI contains pertinent information which will enable the committee to evaluate the statements which Mr. Athur T. Roth presented to this committee on January 23, 1958, relative to the taxation of mutual savings banks.

We therefore urge that no action be taken by your committee on H. R. 8737 or any other similar proposal.

Exhibit I

Comparison of tax revenues per $1,000 assets of insured mutual savings banks and commercial banks for 1956

	Insured mutual savings banks	Insured commercial banks
Total assets Dec. 31, 1956	$25,282,000,000.00	$216,145,000,000.00
Interest to savings depositors	609,000,000.00	806,000,000.00
Dividends to stockholders	0	617,000,000.00
Total interest and dividends	609,000,000.00	1,423,000,000.00
Federal income taxes:		
Estimated taxes paid by savings depositors and stockholders [1]	122,000,000.00	285,000,000.00
Taxes by institutions	1,000,000.00	770,000,000.00
Total Federal income taxes	123,000,000.00	1,055,000,000.00
Total Federal income tax per $1,000 of year-end assets	4.86	4.87

[1] Estimated tax liability is based on minimum tax rate for 1956.

Source: Annual Report of the Federal Deposit Insurance Corporation for 1956. See tables 107, 108, 115. All amounts have been rounded off to the nearest million.

Exhibit II

Capital accounts as a percentage of deposits—commercial banks compared with mutual savings banks as of September 30, 1957

(There has been much misunderstanding about the so-called bad debt reserves of mutual savings banks. The bad debt reserve so-called of 12 percent for the mutual savings banks is in fact the entire capital fund which has been accumulated by them for years by way of surplus and undivided profits. The so-called bad debt reserve, which is an incorrect designation, should be compared with the capital accounts of commercial banks plus their bad debt reserve in the following table.)

ALL COMMERCIAL BANKS

	Percent
Capital, surplus, undivided profits, and reserves other than bad debt reserves, approximately	[1] 10
Adjusted to include commercial banks' bad debt reserve of about 1 percent of deposits	1
Adjusted to include suggested additional 4 percent of deposits for commercial banks	4
Total allowance of tax-free capital and reserves	15

MUTUAL SAVINGS BANKS

	Percent
Surplus, undivided profits and reserves (includes bad debt reserves), approximately	[1] 11
Ceiling on tax-free accumulation of surplus, undivided profits and reserves under present law	12

[1] The above figures are derived by calculating the ratio of capital accounts to deposits of commercial banks, as shown in the Federal Reserve Bulletin of November 1957 and the ratio of surplus, undivided profits and reserves to deposits of mutual savings banks, as shown in reports of the National Association of Mutual Savings Banks. The figures so derived, 9.1 percent and 9.9 percent, respectively, were then adjusted upward by about 1 percent in each case to allow for the higher valuation placed upon bank assets under Treasury regulations than in published bank statements, which by banking law and tradition includes writeoffs which are not recognized for tax purposes.

It is perfectly apparent that if the commercial banks obtain an orthodox bad debt reserve of 5 percent of deposits (which would be an increase from about 1 to 5 percent), they would not be subject to taxation for some years until this maximum accumulation has been reached, except such amount as might become due as they appropriate earnings to pay cash dividends to their stockholders.

Exhibit III

Comparison of growth of savings deposits in mutual savings banks with commercial banks from Dec. 30, 1950, to Sept. 25, 1957, inclusive

(Much has been said about the competitive disadvantage of the commercial banks in obtaining savings accounts but the table below shows that they have not lost ground in the savings field. In the early 1950's many large commercial banks evidenced little interest in savings deposits.)

Savings deposits in—	Dec. 30, 1950	Sept. 25, 1957	Percentage increase
Mutual savings banks	$20,009,000,000	$31,190,000,000	55.88
Commercial banks	36,503,000,000	55,420,000,000	51.82

Source: Federal Reserve Bulletin, November 1957, p. 1245.

Exhibit IV

Comparison of growth of savings deposits of mutual savings banks and commercial banks from Dec. 31, 1956, to Sept. 25, 1957

(This table illustrates that during recent months, after many commercial banks raised their interest rate to 3 percent, the savings accounts in commercial banks increased at a much faster rate than those in mutual savings banks.)

Savings deposits in—	Dec. 31, 1956	Sept. 25, 1957	Percentage increase
Mutual savings banks	$30,001,000,000	$31,190,000,000	3.96
Commercial banks	50,908,000,000	55,420,000,000	8.86

Source: Federal Reserve Bulletin, November 1957, p. 1245.

EXHIBIT V

Comparison of interest rates on savings deposits paid by mutual savings banks and insured commercial banks, 1935–56

	Mutual savings banks	Insured commercial banks
1935	2.60	2.01
1936	2.53	1.72
1937	2.43	1.62
1938	2.36	1.55
1939	2.26	1.43
1940	2.12	1.30
1941	2.05	1.20
1942	2.02	1.10
1943	1.93	.93
1944	1.85	.87
1945	1.80	.87
1946	1.74	.84
1947	1.83	.87
1948	1.87	.90
1949	1.97	.91
1950	2.07	.94
1951	2.19	1.03
1952	2.48	1.15
1953	2.59	1.24
1954	2.67	1.32
1955	2.75	1.38
1956	2.85	1.58

EXHIBIT VI

STATEMENTS AND TESTIMONY OF ARTHUR T. ROTH

Mr. Arthur T. Roth, president of the Franklin National Bank of Long Island, which advertises itself as "the dominant bank" of Greater Long Island, testified before this committee on January 23, 1958, as the self-appointed representative of the commercial banks. Mr. Roth's testimony is part of a New York legislative struggle over a proposed amendment to the banking laws to allow savings banks to have branch offices in the suburbs, which, if successful, would break down the protective wall of his dominant position. Mr. Roth filed with this committee large excerpts of a report of the New York State Bankers Association (in the drafting of which he had an important part) submitted to the New York State Legislature. We do not desire to trouble this committee with a recapitulation of the arguments which have raged in Albany for the past few years. We therefore direct this appendix principally to the points in Mr. Roth's verbal statement.

COMPARISON OF TAXES PAID

Mr. Roth has dramatically, with the aid of an artistically prepared graph, pointed out that his bank paid more in Federal tax in 1955 than all insured mutual savings banks, and has related this figure to deposits. This comparison is misleading. In the first place, he has compared the savings deposits of mutual savings banks with the combined savings and demand deposits of his bank. Franklin National paid no interest on the demand deposits and made most of its taxable profits through the use of the interest-free demands deposits. In the second place, his bank paid taxes because it retained earnings for stockholders. Mutual savings banks have no stockholders. Franklin National's payments of interest to savings depositors, like those of the mutual savings banks, were made before tax.

In evaluating Mr. Roth's figures as to the taxes paid by the Franklin National Bank and the mutual savings banks, it should be noted that in 1955 the insured mutual savings banks paid out $536,256,000 in interest to depositors, which at 20 percent would have produced from the depositors $107,251,000 in taxes, while the Franklin National paid no cash dividends to stockholders and only $3,573,620 as interest on deposits, which at 20 percent would have produced $714,724 in tax from the depositors. As a proportion of assets, Franklin National generated in 1955 $7 in tax per $1,000 of assets, while the insured mutual savings banks generated $4.62 per $1,000. Although the tax generated by the Franklin National exceeds that of the mutual savings banks, the difference in revenue realized by the Treasury from the two operations is nowhere as large as Mr. Roth would have this committee believe.

Franklin National kept large sums out of the tax stream by paying nominal amounts of cash to its stockholders, $2.85 per share for the entire period from 1950 to 1957, inclusive. During the same period it distributed very large stock dividends which were not taxable in the hands of its stockholders. These stock dividends were as follows:

	Percent
1950	9.3
1951	101.60
1952	6.62
1953	34.26
1954	4.9
1955	3.87
1956	30.23
1957	2.5

Moreover, in 1955 there was a stock splitup of 2 shares for 1.

Parenthetically, it should be added that these facts make it obvious that Mr. Roth's bank has suffered no competitive disadvantage by reason of the reserve provisions of the mutual savings banks.

OUT-OF-STATE LENDING

In fighting the mutual savings banks in New York State, Mr. Roth has seized on every issue he could use to protect his dominant position. He has objected strenuously to the savings banks' sending New York savings funds to southern and western States for home loans. He has favored restrictions against out-of-State lending by New York savings banks.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate cleared for President bill to increase debt limit and took up bill on postal rates.

Senate

Chamber Action

Routine Proceedings, pages 2213–2236

Bills Introduced: 15 bills and 3 resolutions were introduced, as follows: S. 3332–3346; S. J. Res. 154; S. Con. Res. 67; and S. Res. 264. Page 2218

Bills Reported: Reports were made as follows:

S. 1438, to amend the U. S. Code relating to the bonds of U. S. Marshals (S. Rept. 1300);

S. 2239, 2493, 2613, 2691, 2718, 2819, 803, 2712, 2538, 2621, 2650, 2657, 2733, 2818, and 2849, private bills (S. Repts. 1301–1315);

S. 213, to confer jurisdiction on Court of Claims to render judgment on customs employees' claims to extra pay for overtime services performed after August 31, 1931 (S. Rept. 1316);

S. Con. Res. 67, private bill (S. Rept. 1317);

S. 3341, to extend the special school milk program for 3 years (S. Rept. 1318);

S. 3342, to extend for 3 years the dairy products program for the armed services (S. Rept. 1319);

S. 3343, to extend the brucellosis eradication program for 2 years (S. Rept. 1320); and

H. R. 5836, to readjust postal rates and to establish a congressional policy for the determination of postal rates, with amendments (S. Rept. 1321). Page 2217

Bill Rereferred: Committee on Banking and Currency was discharged from further consideration of S. 2594, to transfer certain property and functions of the Housing and Home Finance Administrator to the Secretary of the Interior, and the bill was then rereferred to the Committee on Interior and Insular Affairs. Pages 2222–2223

Private Bill: Senate cleared for President's signature S. 1714, private bill, after concurring in House amendments thereto. Page 2230

Nevada Land: Conference report on S. 1568, conveyance of certain public land in Nevada to Colorado River Commission of Nevada, was adopted. This action cleared the bill for the President's signature. Page 2267

Debt Limit Increase: Senate passed without amendment and cleared for President H. R. 9955, to increase temporarily the public debt limit by $5 billion. Prior to this action, Senate rejected by 12 yeas to 74 nays, Cotton motion to recommit the bill to Committee on Finance, and rejected by 27 yeas to 56 nays, Lausche amendment to confine the debt limit increase to $3 billion instead of $5 billion.

Motion to reconsider the vote passing the bill was tabled. Pages 2236–2239, 2243–2249, 2252–2261, 2272–2273

Postal Rates: H. R. 5836, to readjust postal rates and to establish a congressional policy for the determination of postal rates, was made Senate's unfinished business. Page 2273

U. S. S. *Arizona* Memorial: H. R. 5809, to provide for a U. S. S. *Arizona* Memorial at Pearl Harbor, was displaced as Senate's unfinished business when motion was adopted to consider H. R. 5836, postal rate bill. Pages 2243, 2273

Nominations: Nomination of John M. Allison, of D. C., to be Ambassador to Czechoslovakia, and three judicial nominations, were received. Page 2275

Program for Tuesday: Senate recessed at 6:33 p. m. until noon Tuesday, February 25, when it will consider H. R. 5836, postal rate bill. Pages 2273, 2275

Committee Meetings

(*Committees not listed did not meet*)

PRICE SUPPORTS

Committee on Agriculture and Forestry: Subcommittee on Agricultural Production, Marketing, and Stabilization of Prices continued its hearings on proposed legislation dealing with price supports, today on supports for milk and dairy products. Testimony was received from Senator Proxmire; Gordon K. Zimmerman, director of research, National Grange; and Herbert W. Voorhees and Frank K. Woolley, both of American Farm Bureau Federation.

Hearings continue tomorrow.

Appendix

Concentration on Colleges of Education Aid Proposals

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Leading Education Aid Proposals Concentrate Largely on Colleges," written by George W. Oakes, and published in the Washington Sunday Star of February 23, 1958. Mr. Oakes is a special writer for the Star. He is one of the most competent men in the field of education. He has given the subject much study, both at home and abroad. I believe that what Mr. Oakes has to say will be of great value to Members of the Senate in their consideration of the numerous legislative proposals covering the field of education which will undoubtedly come before the Senate during the course of this session.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEADING EDUCATION AID PROPOSALS CONCENTRATE LARGELY ON COLLEGES

(By George W. Oakes)

The congressional search for a politically practical Federal aid-to-education program now appears to have narrowed to two major approaches—the administration plan and the Hill-Elliott bills. There are many other bills, of course, but these are the ones receiving the most attention and likely to receive the most support.

Proponents of an all-out aid program are far from satisfied with either bill, declaring that they deal only indirectly with two major needs—additional school facilities and higher pay and quality standards for teachers. But they are inclined to go along with the proposals in the belief that politically they are the best that can be obtained at this time—and with the secret hope that expansion of their provisions can be accomplished during consideration in House and Senate.

Both the $1 billion administration plan and the $3.5 billion Hill-Elliott bills are similar in two basic respects—each attacks the educational problem mainly at the college rather than the school level and each puts the greatest stress on the sciences and mathematics. The problem of raising the quality and standards of school teachers—generally recognized as fundamental to any real improvement in American education—receives secondary though important attention in both pieces of legislation.

FIGURES SHOW PROBLEM

A few facts from the Office of Education based on the current school year show how critical the school problem is:

1. Enrollment increased by 1.3 million full-time students in public elementary and secondary schools for a total of 32.9 million pupils—an increase of 4.3 percent over a year ago.

2. There were 91,200 full-time teachers with substandard certificates—an increase of 1,800 or 2 percent over a year ago.

3. The number of pupils in excess of normal capacity in public elementary and secondary schools was reported by the States as 1,937,000—of which 70.9 percent were in elementary schools.

4. The States reported that a total of 140,000 additional classrooms were needed in the fall of 1957.

The chief ways in which the administration and Hill-Elliott bills would tackle these problems is through proposals to increase the number and quality of teachers. Senator Hill states that $1.2 billion of 40 percent of the total funds recommended under his proposal will provide Federal assistance for programs directly benefiting secondary and elementary schools.

These include fellowships for graduate study, an expansion of teacher summer institutes and extension courses and funds for other devices to improve the standards of school teachers.

However the Hill-Elliott and administration bills only include small amounts for the most serious single problem school teachers face—inadequate pay. Federal funds for teachers are considered politically explosive at the school level because of integration and at college level because denominational and some private institutions might fear indirect Federal control.

SCIENTISTS BACK HUMANITIES

Despite the fact that both the administration and Hill-Elliott bills stress the sciences and mathematics, the scientists themselves are the most ardent opponents of legislation that would give undue preference to these subjects. Their voices are the loudest for aid to both humanities and science even if the aim is simply to produce outstanding scientists.

Research scientists like Dr. Isidor Rabi and scientific educators, such as President Fred Hovde of Purdue University, emphasize that the broad approach is the only wise one in attacking our educational problem. House and Senator committee members plan to call for testimony from leading scientists and scientific educators in order to dramatize this point. In fact, the prospects are that Senator HILL would be prepared to broaden his bill to give greater scope to the humanities in relation to the sciences.

College scholarships at a cost of $160 million per year are perhaps the dominant feature of the Hill-Elliott bill. At present it is estimated that 60,000 to 100,000 of the top 10 percent of the Nation's high school students do not go on to college mainly for financial reasons.

VARYING SCHOLARSHIP TOTALS

Although both the National Education Association, which favors an annual Federal education appropriation starting at $1 billion now and rising to $4.5 billion per year in 4 years, and the American Council on Education both support federally-financed college scholarships, each organization only proposes 20,000 per year whereas the Hill-Elliott bill would establish 40,000 annually. The administration bill would provide for about 10,000 scholarships.

As presently drafted, the Hill-Elliott legislation would not include the factor of need in granting these scholarships. The authors recognize that unless both need and ability determine the awards, many who can afford to pay for a college education will obtain it at the Government's expense. Therefore they are likely to make their bill conform to the administration's in this respect.

But neither bill takes account of the fact that nearly all college students cost more to educate than they pay in tuition fees. College presidents are pointing out that Federal funds for facilities, equipment, etc., should acompany any large-scale scholarship program.

Regardless of any Federal scholarship impact, college facilities will have to be doubled by 1970 mere to meet the needs of an expanding population. For this reason the American Council on Education urges that an initial amount of $375 million in Federal grants and loans be made available for construction of academic facilities not provided for in either administration or Hill-Elliott bills.

This would be in addition to the present college housing loan program which the administration proposes to increase. But Senator HILL would postpone action on Federal funds for college facilities until the first steps now being recommended are enacted.

CONSTRUCTION ISSUES

Last year school construction legislation, favored then but not now by the administration, failed by a handful of votes in the House, killed by the integration issue.

Both major proposals now before Congress were drawn up on the assumption that school construction cannot be enacted in this session primarily because integration, effective as a guillotine before Little Rock, would be more devastating today.

They fear that insertion of a school construction plan would again split supporters of aid to education over the integration issue.

It's quite possible that the business recession may present a compelling argument for such public works programs as school construction and college buildings. Already some governors and Senators are calling for schools rather than post offices.

If the normal spring pickup in employment should not be substantial, this new factor may turn out to overshadow traditional objections to Federal aid and may even revise the political strategy of such vigorous supporters as Senator HILL. The PWA in the 30's, using mostly Federal funds, built thousands of our present schools throughout the country.

Emergency Public Works Grants

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. GORE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a resolution adopted by the Tennessee Municipal League, which urges a public works program to provide employment opportunities for those who are now unemployed.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON EMERGENCY PUBLIC WORKS GRANTS BY FEDERAL GOVERNMENT ADOPTED BY BOARD OF DIRECTORS, TENNESSEE MUNICIPAL LEAGUE, FEBRUARY 10, 1958

Resolved, That Mayor Ben West of Nashville be requested to confer with members of the Tennessee congressional delegation concerning a PWA-type Federal program of emergency grants for State and local public works projects;

Resolved further, That any such program should incorporate the principle of direct city-Federal relationships in grants for projects under municipal jurisdiction, and similar direct contacts for projects under State or county jurisdiction;

Resolved further, That any such program enacted by Congress should include grants for the following types of public works facilities: public buildings, fire halls, etc.; streets, sidewalks, curbs, and bridges; drainage; parks and playgrounds; schools; docks, and harbor facilities; hospitals; sewerage, and water systems; incinerators; refuse disposal equipment; airports; and similar projects.

It is believed that in lieu of establishing a new public works agency to achieve the fastest economic relief to distressed areas, the authorization of funds to the Army Corps of Engineers and Bureau of Reclamation for water resource development will give the best results.

Such a program could be carried out as follows:

1. Institute widespread program of local flood prevention and drainage projects to provide maximum employment by use of hand labor for channel clearing, brush removal, snagging, etc. Much of this could be put underway in a short time because of small amount of engineering needed. This is best for rural areas. (See following list for representative examples.)

2. Replace funds deleted by Bureau of the Budget from Corps of Engineers and Bureau of Reclamation fiscal year 1959 construction program and add to this any additional funds which can be efficiently utilized for continuing projects or new starts in original fiscal year 1959 program.

3. Urge passage of omnibus rivers and harbors bill by House resolution to provide authorization for new, well-justified projects.

4. Provide funds for any worthwhile projects already authorized but in deferred status or in the new omnibus bill.

5. Urge passage of bills authorizing municipal and industrial water supply, recreation, etc., to be credited as monetary benefits.

6. Urge passage of a bill which would revise criteria for establishing benefit-cost ratio to permit crediting of economic benefits to regions caused by impact of the project on both construction employment and future industrial development potential.

CONGRESSIONAL RESPONSIBILITY

The responsibility for the authorization of Federal projects, and of controlling the funds appropriated for their construction, rests with Congress.

The Bureau of the Budget is infringing upon and thwarting the authority of Congress by selecting projects for construction and allocating funds appropriated by Congress for such specific projects.

We are opposed to these practices of the Bureau of the Budget and recommend that Congress now reassert its constitutional authority and responsibility and direct that the funds appropriated by Congress be expended for the specific purposes for which the appropriations are made, and that Congress prevent attempts by the Bureau of the Budget to exercise control over the mandates of Congress.

BENEFITS

We urge Congress to establish a formula which will assign an economic value to all benefits, direct and indirect, resulting from water resource projects, including domestic and industrial water supply, irrigation, pollution abatement, enhanced land values, recreational advantages and economic benefits associated therewith, as well as those benefits presently recognized, and that such values be used in computing the benefits-to-cost ratio of all such projects.

Public-works improvements available for immediate construction—Clearing, channel improvement, or levee projects for flood control

Mr. GORE. Mr. President, I wish to point out in connection with this matter that on yesterday President Eisenhower delivered an address, as reported in the New York Times of February 25, 1958, before the National Food Conference.

I ask unanimous consent that there be printed at this point in my remarks three paragraphs from the President's address, as reported in the New York Times.

There being no objection, the excerpt from the address was ordered to be printed in the RECORD, as follows:

But I beg of you, let's don't be trapped into expenditures that have no useful purpose except to hand out something—that have no useful purpose except that of helping a man exist for the moment.

Let's do it by the means of doing things that need to be done in our country.

Naturally, we have to provide for our own security, but we have today on the shelves of Government all sorts of worthy projects, some of which have been already approved by the Congress—or indeed where annual or partial appropriations have been made. If those things are useful—and we know that they are because they have been approved both by the Congress and by the executive studies—then let's use this time of slack employment to push these projects. When we have full employment, that is no time, as I see it, to be pushing Federal projects to compete with private industry. It would be far better to push these projects when there is the time of slack employment. I think it's just ordinary horse sense. I think all of us agree. So let's do that.

Brotherhood Week

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made recently in connection with Brotherhood Week.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHN MARSHALL BUTLER, REPUBLICAN, OF MARYLAND

Brotherhood Week is dedicated to the purpose of bringing together Christians and Jews in a bond of brotherhood and good fellowship. It serves to remind all of us that we are children of God seeking to carry out His will in our journey through life. It reminds us that we are all brothers and as such we must learn to live and work together in the interest of all people regardless of religious or political faiths. It reminds us that prejudice and hate can destroy us and each thing we hold dear. The emotion of hate is an emotion we cannot entertain and enjoy mental and physical health. It festers with us and grows like a cancerous tumor to bring eventual destruction of our soul. Prejudice is akin to hate and ultimately builds up to hate. It has no place in the teachings of God.

Today godless communism threatens the liberty of free men and their right to worship God as they see fit. It acknowledges no difference between the faith of the Christian and the faith of the Jews. In fact all faith in a Supreme Being is outlawed in the Communist philosophy. We all know the answer to such godless dogma. We know that all of us who believe—Christians and Jews alike—must unite in brotherhood. So strong can such a brotherhood become that we can defeat the evils of communism, preserve our religion and our belief in the dignity of man.

Such a brotherhood composed of God-fearing people throughout the world is our refuge against Communist domination. We must in these hours of trial turn as one to God. For then we shall find salvation.

Brotherhood Week is a sincere effort to bring good people of all faiths together in a spirit of understanding and in the tradition of good neighbors. I am indeed proud that

in my own small way I am permitted to make a contribution to this noble purpose.

It is my prayer that the seeds that we have sown will blossom into full flower. That in our time we will come to witness the elimination of war and hate through the brotherhood of man. This is as God intended it. When we achieve brotherhood we can truly beat our swords into plowshares and peace and good will will cast a permanent ray of sunshine on the earth. And then God in His heaven will smile on us and we shall feel His nearness as never before.

Custodian for Supreme Court

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Supreme Court, Custodian of Law, Stands in Need of Own Custodian," from the February 19, 1958, issue of the Augusta (Ga.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPREME COURT, CUSTODIAN OF LAW, STANDS IN NEED OF OWN CUSTODIAN

If there existed anywhere a modicum of doubt as to Senator RICHARD B. RUSSELL'S feelings on States rights, the Supreme Court, and integration, the Senator certainly must have dispelled it Monday in his speech before the Georgia General Assembly.

Addressing the body for the first time since he relinquished the governorship a quarter century ago, the distinguished solon minced no words, pulled not a punch when he termed world communism, the Supreme Court, and integration the greatest threats to the American way of life existing today.

The Georgian leveled his fiercest fire at the Supreme Court for its power seeking and its efforts to establish a judicial oligarchy to impose its own peculiar doctrines to mold the United States into a creature of their own liking.

RUSSELL also roundly condemned the Eisenhower administration for being so preoccupied with enforcement of the Court's integration decree as to give Russia a virtually free hand in its drive for world domination. But at the same time, he made it crystal clear that he regards the Supreme Court—supposedly a bastion of the American way—as the chief villain.

He does so rightfully. In its pursuit of its indeed peculiar doctrines—based upon bits of esoteric sociology rather than upon the foundations of constitutional law—the Court has come to mollycoddle communism on the one hand, actively abet interracial strife on the other. The Court's record in these respects needs no recitation. It is known to the country and to most of the world. It speaks openly for itself—and against the Court.

RUSSELL'S speech—though it did not broach the subject—made just as crystal clear the need for a curb upon the Court. From his address it is all too apparent that the Nine Old Men have made not a grab for, but a deep salient into, the lawmaking provinces of Congress—and in this has had either the active or tacit backing of the White House.

Unless such a curb is placed upon the Court, and so long as it remains as presently composed, it will deepen that salient.

The means of applying just such a restraint upon the Court are ready at hand. Indeed, they have long existed in the Constitution itself. And a year ago, Senator JENNER, of Indiana, called for legislation to place such a curb upon the Court by limiting its appellate jurisdiction in certain cases—among them essential rights of Congress, the executive branch, and the various States.

But unlike Midwest Republican JENNER and most southern Democratic Senators and Representatives, the rest of Congress has remained apparently unaware of their danger. They have been reluctant to act on JENNER'S S. 2646, which would restrain the Court.

Instead Congress philosophizes.

The Greeks, who also were philosophically minded, had a word for it—but the realistic, law-giving Romans had a phrase for it:

Quis custodiet ipsos custodes? Who shall keep the keepers themselves?

The Supreme Court, the appointed custodian of the law, itself needs a custodian. We can suggest none better than Congress.

Second World Bank Proposed by Senator Monroney

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. PROXMIRE. Mr. President, the junior Senator from Oklahoma [Mr. MONRONEY] is one of the most brilliant students of international finance in this country. He has recently made a wise and constructive proposal for the establishment of a new kind of world bank. His proposal is discussed in an editorial in yesterday's New York Times.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial on Senator MONRONEY'S proposal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 24, 1958]

THE MONRONEY BANK

When the United States exports at the rate of $21.8 billion a year and imports at the rate of $13 billion a year, as it did in 1957, the slack has to be taken up somehow. We have tried to do this by giving away money, by lending on easy terms and by investing at market rates. Various forms of foreign aid have provided us with what we may truthfully call profitable investments, measured in terms of international security. We have lent some money directly and some through the World Bank, and we have tossed a relatively few million dollars into the operations of the United Nations. We have backed cautiously away from that enticingly named project called SUNFED (Special United Nations Fund for Economic Development), though we have recently dipped into our petty-cash drawer to offer $20 million to enlarge the United Nations technical assistance program.

Now comes Senator A. S. MIKE MONRONEY, of Oklahoma, with a plan, scheduled to be presented today, for a new international agency to make long-term, low-cost loans. We would take 30 percent of the proposed billion-dollar capital stock, leaving the rest for the other 59 members of the World Bank. The Monroney bank would lend where the World Bank cannot, without a government guaranty. Sometimes it might take part of a loan as a sort of second mortgage, with the World Bank taking the rest. It would deal with the hard currencies when these were needed and with soft currencies where they would suffice. Unlike SUNFED, which has been expected to deal largely in grants, the Monroney bank, like other banks, would expect to get its money back someday. It just wouldn't be quite as sure about this as the World Bank is.

Some ambitious thinking—part of it wishful, perhaps—has gone into this project. In time the Monroney bank might grow to the point where large grants through other agencies wouldn't be so necessary. Certainly this device would be a relief to some recipient countries whose inhabitants are tired of being regarded as poor relations. If the neoprotectionists did not put roadblocks on our imports these investments might in time stimualte a flow of trade between developed and underdeveloped countries that would not be so dangerously favorable.

Senator MONRONEY has talked with the experts here and abroad and seeks support on both sides of the aisle. Something useful might come of his suggestion.

Segregation in Little Rock, Ark.

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. THURMOND. Mr. President, the board of trustees of the public school system in Little Rock, Ark., has asked the United States district court to suspend its racial integration order pertaining to Central High School in that city. It is an acknowledged fact that the quality of education in this school has been impaired by the conditions brought about by the court order last September and the subsequent order by President Eisenhower sending paratroops into the city.

I ask unanimous consent that an editorial touching on this subject from the Greenville News in Greenville, S. C., entitled "The Courts Owe Children Relief" published in the February 24 edition, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE COURTS OWE CHILDREN RELIEF

Events of the past months have clearly shown that Central High School in Little Rock is, in the existing circumstances, wholly incapable of performing its prime function—the education of its students.

For that reason, the request made by the school's board of trustees that racial integration orders be suspended should be granted immediately.

The board making that request is the same one which drew up the original plan of integration. Whether the course of events that followed were the inevitable result of that plan or whether they were deliberately and

gratuitously designed to frustrate it is a question that will be argued forever.

But the hopes that some solution could be worked out, and the educational process continued, dimmed when Governor Faubus ordered National Guard troops to keep the Negroes out and vanished when President Eisenhower ordered paratroopers to enforce their admission.

Since that time, Central High School has been a battleground. Racial incidents among students have been almost daily events. Threats and false reports of bombings have been as frequent.

One of the 9 Negro students, a girl, was recently expelled after participating in many troublesome incidents. On Saturday, it was announced that 2 white boys had been suspended for 2 weeks for carrying cards reading "1 down and 8 to go," an obvious reference to the Negro girl's expulsion.

These are the extreme, publicized cases. Can anyone doubt that beyond them, and beneath the surface, there lies a smoldering dissension that makes education impossible? How can teachers teach in such surroundings? What can be accomplished other than further aggravation of an already festering sore?

The board of trustees attributes the opposition to integration to flammatory propaganda, and makes an indirect bid for further Federal force to help it solve its problems. Since it was the author of the integration plan in the beginning, this attitude is perhaps to be expected. An admission now that perhaps it had moved too far and too fast would be hard for the board to make, human nature being what it is.

But the board did frankly admit that it cannot now have integration without impairment of the quality of education it is capable of providing under normal conditions. And it asked the court to suspend the integration order until such time as the deliberate speed required by the United States Supreme Court can be further defined and legal procedures worked out.

In short, the board admits the situation at Central High is intolerable and it asks for some relief.

The courts owe that relief to the innocent children at Central High School.

How Long Will This Recession Last?

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. SPARKMAN. Mr. President, in an article entitled, "How Long Will This Recession Last?" written by the very fine economic commentator, Sylvia Porter, and published in the Birmingham News of February 18, we find some most interesting facts and some very provocative suggestions. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW LONG WILL THIS RECESSION LAST?

(By Sylvia Porter)

How long will this recession last?

Unless you're living in a vacuum, it's no secret whatsoever to you that our country is well into the third important recession since the end of World War II, well into the 25th business slump of the past 100 years.

Unless you're a member of the school that believes the way to meet the challenge of a business decline is to pretend the decline doesn't exist and to avoid reading anything about it, you are fully aware that the economic landscape has been splattered by minus signs in the past several months.

You know that production of goods in our land has been sliding, joblessness has been mounting, failures have been soaring, profits have been dropping, incomes have been falling, etc.

Since you are reading this column, I'm assuming you are not living in a vacuum and you know the dismal statistics.

And I have an idea you have often asked yourself and others just the question with which I started this report: When will we begin to pull out of this?

One possibly profoundly significant clue may lie in the history of past business downturns. Specifically: Only one business down spiral during the 20th century—the catastrophic depression of 1929–33—has lasted more than 2 years.

The downward phase of every other business cycle since World War I has been over in a year or a little more than a year.

In the past 75 years there hasn't been a business shakeout which has lasted more than 18 months.

The period from the top to the bottom of the 1948–49 recession covered only about 9 months and the period from the top to the bottom of the 1953–54 recession covered only about 12 to 13 months.

Now let's get to the present:

While some economists date the start of the current decline as far back as December, 1956, the most authoritative sources figure the late boom topped out in July 1957. This is the formal view of the National Bureau of Economic Research, the Nation's leading authority on business cycles.

This also appears the official judgment of the Federal Reserve Board, our country's powerful central bank.

In short, the conservative opinion is that the 1957–58 downturn has been going on for 7 months.

What does this imply?

If you use history as a basis for forecasts, it suggests that the odds are at least even that we'll hit the bottom of this recession by August.

It suggests that if the decline is still persisting in August, the odds will be mounting every week thereafter on a quick end to it.

The foregoing is a key reason why so many economists are members of the so-called mid-year club—are going on the line with predictions that this recession will be turning into stability and recovery by mid-1958.

Let's be even more specific.

The bust of 1920–21 lasted a little over a year. During that slump, industrial production, measured by the Federal Reserve Board's index, plunged 33 percent.

The collapse of 1929–33 lasted 45 months. During that panic production crashed over 50 percent.

The slump of 1937–38 lasted a year. During that rough period production fell a full one-third.

Then came World War II and the war boom.

The first postwar downturn of 1948–49 lasted 9 months, cut production about 10 percent.

The second postwar downturn of 1953–54 lasted about a year and 1 month, also cut production about 10 percent.

The third postwar downturn is on now, is 7 months old, already has cut production about 8 percent.

We're in it, we're going to stay in it awhile and, as this summary has emphasized, even short slumps can be painfully steep.

But, if history does repeat, we're in the latter stage of downturn.

And if history does repeat, prompt, proper antislump actions, plus our basic strengths, should cushion the drop and end it before 1958 has run its course.

Adequate Funds for Support of National Cancer Institute

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. NEUBERGER. Mr. President, a thoughtful and stirring letter from the noted American writer, David L. Cohn, appeared on the editorial page of the New York Times for February 23, 1958. The letter voices a powerful and moving plea for far more adequate funds in the vital and urgent field of cancer research.

This letter by Mr. Cohn is certainly forceful support for my legislative proposal to have the Congress appropriate half a billion dollars to support the research projects and grants of the National Cancer Institute.

I ask unanimous consent that the letter, headed "Funds for Cancer Research," be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FUNDS FOR CANCER RESEARCH

To the EDITOR OF THE NEW YORK TIMES:

Recently Lawrence G. Derthick, United States Commissioner of Education, told Congress that we have "less information about our children than we have about our hogs." Then Senator NEUBERGER, of Oregon, aired his findings.

He had found that cancer—aside from accidents—is the greatest killer of American children. He had learned that cancer eventually strikes 2 out of every 3 American families, and unless some cure is found 16 people in every 100 are destined to die of cancer. The humane Senator proposes that Congress appropriate $500 million for cancer research; a sum adequate perhaps to the need.

It just happens to be equal to the sum we annually spend for popcorn and potato chips. It is somewhat less than the sum we spend annually for repairing television sets, but since those who own the sets are also those who eat the comestibles, it hardly seems fair to ask them to do more. Certainly few in Washington believe the Senator will get his money, what Dr. I. S. Ravdin, chairman of the Board of Regents of the American College of Surgeons, aptly calls venture money, in cancer research.

The reason for the inadequate appropriations for cancer research is demonstrably clear; it may be insurmountable. It is that men are not hogs, alas.

No one in his right mind decries hogs. They have extraordinary qualities. Thus they alone, as I heard in my Mississippi childhood, can see the wind. And even when grown to dowager estate they move gracefully on ballet-dancer's feet. But their most beguiling quality to those who grow them is that they are mortgage lifters, while their conversion of grain into meat makes corn our most valuable crop.

DEATH RATE

Suppose, then, it should appear that 16 of every 100 hogs were destined to die of can-

eer, the rate projected for us. The country would face a huge economic loss. The Middle West economy would be dislocated and much of our whole economy. Consumers would wail sharply about sky-high meat prices.

Under the circumstances, would Congress then debate whether it could afford to appropriate enough money to solve the problem? Would it not, rather, tell scientists: "Estimate how much money you need to find the cause and cure of pig cancer and we'll appropriate it."

A few years ago Congress spent millions to eliminate hoof-and-mouth disease among Mexican cattle. Joint Mexican-American teams slaughtered thousands of heads of cattle, compensated their owners, and burned the carcasses. Whatever the cost we would not run the risk of a dread disease crossing the border and imperiling our huge investment in beef animals.

We have apparently concluded as a people that if there is not enough money to go around for research into diseases of animals and diseases of men it is better to keep our hogs healthy and let our children die.

DAVID L. COHN.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me commemorating the 40th anniversary of Lithuanian independence.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHN MARSHALL BUTLER COMMEMORATING THE 40TH ANNIVERSARY OF LITHUANIAN INDEPENDENCE

When we speak of Lithuania, we refer to more than a country—we have in mind a brave and gallant people whose fine qualities contribute to the traditions of many other nations in which they may live. It has been said that one of the most important factors of America's success has been its ability to accept and preserve the rich heritage and culture that the forefathers brought with them from their homelands across the seas. America at its greatest reflects the traditions of other lands just as our history records the many brave and gallant deeds and the manifold contributions of peoples of many national origins.

The people of Lithuania have made a notable contribution to America. Although Lithuania is not a large nation, its peoples' deep religious faith, reverence for freedom and independence, tenacity and gallantry, and resistance to oppression have kept this nation among the most important in Europe for countless centuries. We in America, as well as the people of the other nations of the world, are greatly indebted to Lithuania.

It is, therefore, most appropriate that freedom-loving people throughout the world pause to do homage to Lithuania upon its 40th anniversary of independence.

During the early days of governmental development in Europe, Lithuania set the pattern of noble principles which henceforth would be the mark of the Lithuanian nation. Indeed, this early period from 1200 to 1450 is often referred to as the golden age of Lithuanian history. Unfortunately, the glories, the prosperity and the freedom of these days were not to last. Union with Poland, the rise of Prussia and Austria compromised Lithuanian independence in the centuries to come. Finally, in 1795, Lithuania, along with Poland, suffered the tragic fate of being partitioned among the then powerful nations of Europe and it was Lithuania's unhappy lot to be annexed to the Russian Empire.

Imperial Russia throughout the 19th and 20th centuries was no less oppressive that the dominance of Soviet Russia today. The harshest policies were invoked to crush and destroy the Lithuanian people. Patriots were deported, heroes executed, and schools and universities closed. The national language was outlawed and the name of Lithuania was even removed from all maps. However, with steadfast devotion to their high principles, the Lithuanian people carried on under adversity and on the 16th of February 1918 asserted their independence.

Ranking among the great tragedies of history are those dark days in 1939 when, without provocation, Soviet Russia seized Lithuania by military force. Once again the freedom, independence and democracy cherished by the Lithuanian people became both a memory of the past and a dream for the future. The tragedy of world events during the past two decades brings remorse and sadness to the hearts of all of us. The merciless depravity of the Communist dictators, their never-ending cruelties and relentless pressure to stamp out every trace of Lithuania's great national heritage continue without pause. As in the past, however, these efforts have been totally unsuccessful. Lithuania is neither broken nor discouraged by the stark realities of the present. The will to resist grows stronger with every outrage committed against them. While the future remains to be told, one factor has been established for all time—the undying will of the Lithuanian people to be free.

We in America, as well as her countless friends throughout the free world, will also remain true in our struggle to free Lithuania and the other freedom-loving nations of Europe which are now under the Communist yoke. We shall take courage from the valor of the Lithuanian people of today and of the past. We shall be sustained by their devotion to our common cause. We shall continue to struggle with every resource at our command to overcome the Communist conspiracy which would enslave the entire world and which now has gallant Lithuania within its grasp. We will be steadfast in the principle that all peoples can live in peace, at liberty and with honor.

I salute the people of Lithuania and join with free people throughout the world in praying that liberty and independence will soon be restored to them.

Soil-Bank Blunders

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Government Liable for Benson's Folly," from the February 19, 1958, issue of the Atlanta (Ga.) Constitution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT LIABLE FOR BENSON'S FOLLY

Inexcusable blunders that have characterized administration of the soil-bank program reached their worst stage in the handling of applications from cotton farmers this winter.

First of all, Congress must shoulder its share of the blame for authorizing the program and then failing to provide sufficient funds to finance it.

Next, Secretary of Agriculture Benson and his armchair farm advisers showed their usual disregard for farmers in the haphazard way in which provisions were set up to receive applications.

Thanks to the stupidity of the United States Department of Agriculture, long lines formed in the cold of night in front of county Agricultural Stabilization and Conservation offices on the eve of the opening of the application period.

The signup period, announced as extending from January 13 through March 7, was shut off after 4 days. Funds were exhausted. Senator TALMADGE reports he has been informed 11,332 Georgia cotton farmers are on the waiting list.

The ASC State committee's ruling to stick to a first come, first served basis for allotting soil-bank acreage takes care of those at the head of the lines and leaves the others out in the cold. The committee had a final choice of doing that or prorating the acreage, which officials said would have meant a maximum of not more than 6 acres per farm.

Either way it was a bad situation but it does seem much fairer to have divided the acreage than to pay some at the front of the line as much as $3,000 each and others nothing.

The only logical way for the Government to clear up the mess, mainly created by Benson through mismanagement, is for Congress to appropriate more money for the program in line with a bill introduced by Representative PAUL BROWN, of Elberton.

The expenditure can be charged off to Benson's folly and if it costs him his job, it will be a good bargain for the Government.

Herbert Ravenel Sass

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. THURMOND. Mr. President, on February 18 Mr. Herbert R. Sass died in the city of Charleston, S. C.

Mr. Sass was one of the foremost literary figures of his generation. He was known as a spokesman for the southern point of view on national, social, and political problems; as a writer on wildlife in the Carolina low country; as a distinguished historian; and as a contributor to the Charleston News and Courier for more than 50 years. He was a lifelong resident of Charleston and a descendant of some of the most distinguished families of that part of South Carolina.

He was a man of rare intellect, broad culture, and with a great talent for the written word. I ask unanimous consent that there be printed in the Appendix

of the RECORD two editorials memorializing Mr. Sass. One is from the Charleston News and Courier of February 20, 1958, entitled "Herbert R. Sass," and the other is from the State of Columbia, S. C., for February 21, 1958, entitled "Herbert Ravenel Sass."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) News and Courier of February 20, 1958]

HERBERT R. SASS

Both in his writings and in his personality, Herbert Ravenel Sass embodies the best of what has come to be known as the Old South. A new generation of southern writers has mocked the term until even some of those who know and revere the Old South have begun to wince at the mention of it.

While there is no denying that the world moves on and people with it, we do not believe that the heritage of an era dies within the limited life span of its sons and grandsons. Something remains always from the more distant past. It is up to succeeding generations to screen out the good from the bad.

Mr. Sass was one of a few in his time endowed with the gift to make the selection and interpret it for his readers. He fitted the political and social theories of John C. Calhoun to the requirements of another century. Though he seemed to look back to glory, in the phase that became the title of his best known book, Herbert Sass by no means was a dreamy dweller in the past. He was thoroughly aware of the present and had foresight for the future.

Trained in assessing the flow of current events by long service in a daily newsroom, Mr. Sass never lost the newspaperman's sense of the urgency of tomorrow's headlines. Yet he also had the perspective of the historian who is familiar with the course of human events, and the naturalist, who studies the physical character of the earth and the wildlife on it.

A man of intelligence, of good humor, of broad culture, and above all of unshatterable integrity, Herbert Ravenel Sass fortunately also had the eloquence of expression to share his gifts with a wide audience. For 40 years his books and his magazine articles have been known for quality.

His associates of the News and Courier for half a century respected him as a craftsman. His friends welcomed his company. His fellow townsmen rejoiced in his eminence. All these and many more have reason today to mourn his death and to cherish his memory.

[From the State, Columbia, S. C., of February 21, 1958]

HERBERT RAVENEL SASS

The death in Charleston of Herbert Ravenel Sass removes from our midst a man not only beloved by many, but who stood as a pillar of our society in all its phases.

Editor, scholar, historian, patriot, lover of the lesser creatures, poet, and novelist, Mr. Sass was a man of many parts. To his associates he was universally known by the casual name, incongruous to his scholarly dignity, of "Hobo," given him by the urchins of his beloved Charleston because of his gangling 6-foot, 5-inch frame and unruly shock of red hair. While Mr. Sass undoubtedly did not relish the title he gracefully tolerated it.

Mr. Sass' writings of wildlife must have deepened human appreciation of the animal kingdom, and throughout his long and full career he never forgot these—his first loves in the literary field. He likewise provided a scholarly and searching article on the South's position on the race question in the Atlantic Monthly 2 years ago. His historical novels dealt with subject from Indians to the society of the Old South, Look Back to Glory being judged by some as better than Gone With the Wind. In some respects it was more frankly realistic. It was long considered for filming, but unfortunately, came out simultaneously with Margaret Mitchel's opus, and was finally laid aside. We always considered the title subtly misleading of the hard realities which it detailed.

Despite his full career Mr. Sass was never too busy for the little amenities of life, and unfailingly answered every communication from friends so long as his strength permitted.

South Carolinians lost a stalward citizen who came close to being an institution.

Federal Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. PROXMIRE. Mr. President, much has been said and written recently about the conduct of the independent regulatory agencies. Because of its importance to good government, however, I do not hesitate to offer something further on the subject. The Milwaukee Journal published a thoughtful editorial in its February 21 issue which ought to have wide circulation.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed, as follows:

EVERYBODY'S DOING IT—MAKES MESS EVEN WORSE

In 1951 the Civil Aeronautics Board, seeking to protect the judicial character of its proceedings, published a regulation that reads:

"It is improper that there be any private communications of the merits of the case [currently before the Board] to a member of the Board or its staff or to the examiner in the case * * * [by] any person, either in private or public life, unless provided by law."

In other words, it is improper to bring pressure on the judge. Yet outside influence on regulatory agencies, pressure by fixers, interference by sources as high as the White House itself are old stuff in Washington. It's common knowledge.

Some commissioners on regulatory bodies invite private influence, or create the appearance of it, by accepting favors from those they regulate or those who seek to benefit by official decisions. This is substantiated by the still toddling investigation into regulatory agencies by the Subcommittee on Legislative Oversight. One example: The acceptance by Chairman John Doerfer of expense money, honorariums, and house guest invitations from persons whom his Federal Communications Commission regulates.

"This procedure," Representative TEWES, Republican of Wisconsin, said in Milwaukee, "is followed by every regulatory agency. You can't indict anyone for doing what is established policy."

Why can't you? For some persons it's established policy to chisel on income taxes. That doesn't make it right.

An example of White House interference is also at hand. Subcommittee records show correspondence between Sherman Adams, the President's right hand, and Murray M. Chotiner, formerly Vice President NIXON's campaign manager, about intervention in an airline case before the CAB. One letter, from "Sherm" to "Murray", said: "I went over carefully the North American case with the Acting Chairman of the Civil Aeronautics Board." And it offered further "assistance."

Chotiner was charged by Senate investigators in 1956 with having clients who were interested in him because of his connections high in Government. He lost his job with NIXON as a result. What was his interest in the North American case? Hardy K. Maclay, the attorney of record in the airlines case, says: "Chotiner's sole function was to determine the attitude of the Republican administration."

And Chotiner was able to go right to the White House and Sherman Adams for his contact. Chotiner also went to CAB Commissioner Harmar D. Denny, then Acting Chairman, but Denny says: "I would not have talked to him about the case." It would have been improper. Yet Sherman Adams wrote that he did that very thing in Chotiner's behalf.

Surely enough has been seen in the early funmblings of the subcommittee to demand a full investigation of the regulatory agencies, the chumminess of some Commissioners with those they regulate, and interference by outsiders, including the White House. Surely there's a new mess in Washington.

Foreign Aid to Enemies

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Squandering Our Money," from the February 19, 1958, issue of the Griffin (Ga.) Daily News as written by its talented and distinguished editor, Hon. Quimby Melton, Jr.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SQUANDERING OUR MONEY

Egypt, Syria, and Yemen have formed an antiwestern, anti-American union.

This is bad enough. What makes matters even worse is that Uncle Sam has poured millions of dollars down those ratholes. The money was yours and mine, taken from us in taxes to give away to foreign nations which are our avowed foes. The Central Government in Washington has dipped its sticky fingers into your pocketbook and into mine to give our own money to our enemies.

When Egypt, Syria, and Yemen formed their union, we asked Senator HERMAN TALMADGE to secure information on how much money Uncle Sucker has given them. We received his response today in the form of a report from the Legislative Reference Service of the Library of Congress.

It shows that from July 1, 1945, through fiscal 1957, the United States poured $129,219,000 into Egypt and another $1,319,000 into Syria. For some delightful reason which we do not know, Yemen failed to get anything. The only explanation we can offer is that Yemen is a very small country, and the

spendthrifts in Washington may have overlooked it.

Furthermore, the above figures do not include military expenditures. The Legislative Reference Service's report has this on it, "Note: These totals do not include any military assistance as country totals are classified."

So anybody's guess is as good as anybody else's as to how staggering the true total is.

Now bear in mind that we have given this money to what have become enemy nations, countries which have ganged up and jumped headlong into the Russian orbit. And bear in mind that it is money which the central Government in Washington has taken from you in taxes.

There is no doubt in our mind that some foreign aid was necessary. It was Christian as well as expedient to help rebuild the ravaged nations of the world immediately after World War II. And it was expedient to assist Greece and Italy and France to help keep them from turning communistic.

But it has been foolhardly in the extreme to squander taxpayers' money and to throw millions into every nation in the world at the expense of the American taxpayers. As Senator TALMADGE has pointed out time after time, you can't buy friends. Nor can the American taxpayer bear the world's financial burdens alone.

Now, when we hear the incompetents and the spendthrifts beat the drums for more foreign aid, let us remember the more than $130,500,000 which we have poured down the ratholes of Egypt and Syria.

Then let us insist that the American taxpayer at least get a chance to catch his breath before we return to the fools' game of throwing money to the winds.

QUIMBY MELTON, Jr.

Letter of Committee for Collective Security

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to the President of the United States on November 20, 1957, by Mr. Goodhue Livingston, Jr., chairman of the policy committee of the Committee for Collective Security.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE FOR COLLECTIVE SECURITY,
New York, N. Y., November 20, 1957.

The PRESIDENT OF THE UNITED STATES,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: The free world is confronted today by the greatest threat to its security that it has ever faced—far greater than it recognized several months ago. The ingenuity and daring that the Russians have manifested by their recent achievements in the field of missiles and satellites emphasizes the gravity of the menace. All peoples who support the concept of a free world should join in a declaration of interdependence and should mobilize their total political, military, economic, and scientific resources in the interest of their collective security.

The Committee for Collective Security therefore urges the immediate creation of an intimate working association among the 42 nations who have allied themselves to defend the free world. They are the members of the North Atlantic Treaty Organization, the Southeast Asia Treaty Organization, the Organization of American States, and the Baghdad Pact.

To effectuate this proposal we urge that each of these groups convene an early meeting to draft a program for collective action to mobilize the total strength and resources of the free peoples. Once a practicable program is developed, the four groups should meet jointly to translate it into action.

We urge the United States at the coming North Atlantic Treaty Organization meeting in Paris to promote this proposal for rebuilding the confidence and the strength and the determination of the free world to face the threat of the Soviet Union, Red China and their satellites.

Sincerely yours,

GOODHUE LIVINGSTON, Jr.,
Chairman, Policy Committee.

Widening Private Markets for Foreign Debt Securities

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. WILEY. Mr. President, I am pleased to serve as a cosponsor of Senate bill 3318 with the distinguished chairman of the Senate Foreign Relations Committee, the senior Senator from Rhode Island [Mr. GREEN]. Our purpose is to bring before our committee, and hereafter, the Senate, this proposed legislation, which has been recommended by the administration, for extension of the Mutual Security Act of 1954, as amended.

Within the 20 pages of the bill are to be found the usual wide variety of authorization and amendment proposals which will, of course, have the intensive consideration of our colleagues in extended hearings, prior, no doubt, to considerable amendment of the bill. I particularly commend, for the consideration of the Senate, the provisions of Senate bill 3318 bearing upon the development loan fund.

Today, however, I should like to talk about a parallel economic activity; in this instance, the expanding role of private bonds floated by European countries in the American security markets.

Last Sunday's New York Times contained a most interesting article pointing out that new borrowing by the Dutch port of Amsterdam, in The Netherlands, represents the fourth such floating of foreign bonds in the United States since the end of World War II.

The previous bond issues were by Norway; Belgium; the European Coal and Steel Community; and, in 1947, The Netherlands government, itself.

As I have frequently expressed on the floor of the Senate, I welcome the increased activity of sound foreign debt securities, just as I welcome the increased role of sound foreign equity securities. I emphasize, as in all previous instances, the word sound.

We are interested in having foreign governments stand soundly on their own feet. We are interested in having private enterprise, the system of risk taking, shoulder as many of the burdens as possible, rather than have the United States Federal Government bear burdens which are increasingly difficult, in view of our own national budget problems.

We are anxious, however, that the American investor be treated fairly.

We can hardly fail to remember the bitter record of default on many foreign bonds which marred the era between World Wars I and II.

It is in the interest of sound international relations and it is in the interest of the free enterprise system that every effort be made to maintain financial integrity in stocks or bonds floated at home and abroad.

When handled soundly and managed in a way faithful to the terms of their prospectuses, such securities can be great instruments for man's progress and prosperity.

When abused, mismanaged, or defaulted, the contrary becomes true; and then ill will, economic stagnation and reverses, and loss of international confidence result.

Sound banking practices by central governments, by central banks, by private banks, by private corporations, or by quasi-public corporations are at the heart of international economic development.

I send to the desk the text of the New York Times article and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE MARKETS LIKELY TO PLAY LARGER ROLE IN WORLD FINANCING

(By Paul Heffernan)

The pending borrowing by Amsterdam, the Netherlands, in the United States market bears out recent signs that private markets for debt securities are likely to play a larger role in the international flow of capital in the years just ahead.

The Dutch port and financial market has never before borrowed in the United States and only once before—in London in 1931—has it borrowed outside of the Netherlands. It is the first European city to offer bonds here since the securities laws were adopted in the 1930's.

It is the fourth European governmental entity to offer bonds in the United States since the end of World War II. The others have been Norway, Belgium, the European Coal and Steel Community and the Netherlands Government.

The Netherlands loan, which totaled $20 million and was floated here in 1947, was the first postwar requisition on the United States market by a foreign government. It was paid off last year. Belgium and Norway also have repaid certain of their postwar borrowings.

The Amsterdam loan will total $15 million and will raise funds for the city's electric utility system. The Dutch port is going abroad for money because the Netherlands capital market is hard put to meet the heavy demands being made upon it by corporate and municipal borrowers. The Bank for Netherlands Municipalities, a financing vehicle for municipal borrowers, had to pay 6 percent on its latest financing at home.

The Amsterdam loan here probably will bear an interest coupon of 5¼ percent.

So far, Cuba is the only Latin-American nation with a record of default to have marketed new dollar bonds on the basis of restored credit. Probably it is only a question of time when other Latin-American names, or those of the enemy axis of World War II, will be linked with new issues in the public market. In the Latin American field, either market yields from such investments would have to fall substantially from present levels or the borrowers would have to pay interest rates—be they 6, 7, or 8 percent or more—that truly reflect the rank their names command in the free market.

Volume of trading in foreign dollar bonds on the public exchanges is light compared with the market of the 1920's, but the gradual way in which the market is being rehabilitated cannot be judged only by the volume of transfers.

Since the 1920's, much of the whole public bond market has become institutionalized—that is, has become the interest chiefly of financial institutions rather than individual investors. A consequence has been for much of the volume trading to be done on a wholesale basis away from the public exchanges.

The New York Stock Exchange is now trying to get some of this business back to the public auction market. The exchange tries hard not to forget that in 1928 more foreign bonds were traded in on the New York Stock Exchange on one day than in a whole month now.

The restoration of the foreign bond market is going forward perceptibly, if only gradually, on several fronts. Some instances follow:

Since the end of World War II, nearly $400 million of foreign dollar bonds, not counting those of Canada, have been floated in the United States market. Borrowers other than Canada and top-credit European nations were Australia, Cuba, and South Africa. The biggest borrower was Australia, whose purpose was largely the refunding of dollar obligations coming to maturity.

The defaulted bonds of former enemy nations of World War II—Germany, Japan, and Italy—have been restored to good standing with but minor exceptions and are selling at yields comparable with the returns of many domestic corporate obligations of investment kind.

Latin American nations, whose defaults on external debt did much to discredit the foreign dollar bond market in the 1930's, are gradually wiping the slate clean. Except for Bolivia, all of the Latin American obligations are paying interest on dollar debt. Most of these nations, Brazil is an outstanding example, are cutting back sharply external debt service commitments by repatriating substantial blocks of bonds each year through sinking fund purchases. Over 15 years, Brazil has reduced dollar-bond debt from more than $300 million to about $75 million. Of this, about $24 million are 3¾-percent obligations without stated maturity, a debt likely to be brought to an end within the next 3 or 4 years through sinking fund payments.

The International Bank for Reconstruction and Development (World Bank) is exercising a constructive influence for restoration of the public market. The bank's own dollar bond issues traded in here run to more than $1 billion. Moreover, the bank's policy is not to lend money to a debtor in default on his obligations to private investors. The bank also tries to share its loans with private investors. Sometimes a borrower from the bank will float a loan in the private market at the same time, as Belgium did last year. Often commercial banks and other financial institutions take parts of the loans negotiated by the World Bank. At the end of 1957, private financial institutions had put up more than $375 million of the money figuring in credits negotiated with the bank, most of it without any guaranty from the bank.

SOME WIDE VARIATIONS

Obligations of the well-seasoned investment names of Europe—Belgium, Norway, Germany, Denmark, and Italy—run for the most part from 4 to 5 percent. Wide yield variations are often to be found between the obligations of the same issuer, the differences stemming largely from tax advantages related to low-coupon bonds selling at big discounts from principal value.

Farther afield from Europe, bonds of Japan, Australia, and South Africa—good investment names—are yielding about 5.6, 5.8, and 4.5 percent, respectively.

The most speculative interest-paying bonds are those of the Latin-American nations. In the Brazil list, Rio de Janeiro, the State of São Paulo, and the State of Rio Grande do Sul have outstanding 2-percent bonds due in 2012. The Rio de Janeiro issue is selling at 38, the Rio Grande do Sul at 51, and the São Paulo at 92.

What Is the Law of the Land?

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Law of the Land?" from the February 21, 1958, issue of the Nashville (Tenn.) Banner.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAW OF THE LAND?

Who makes the law of the land?

How is it made? By judicial interpretation, or by congressional enactment?

These are valid and challenging questions just now; and they need competent answer before recklessness under pressure's wild momentum—and without the brakes of study and reason—carries the country to the point of no return.

Actually, the Constitution is—originally—the law of the land. It hasn't been amended in any of the particulars today distored into invasion of basic rights. Nor has Congress officially forfeited the rights of exclusive legislative powers. Where the Supreme Court encroaches upon that domain, Congress can act to redress the grievance of invasion.

For example: In June 1950, the Supreme Court reversed the judicial rulings of a century—which under present theory had been the "law of the land"—to divest coastal States of their tidelands rights. It held on that date that the Federal Government has paramount rights to the tidelands.

Supposedly then that became the law of the land. And every subordinate court would be expected to deal accordingly with any case before it.

Congress did not accept that. Congress was of the opinion that the issue was one for legislative determination. A little under 3 years later, Congress did act on the question, and overwhelmingly. It enacted a law restoring tidelands title to the States, to the extent of their historic boundaries.

Only Congress can deal adequately and authoritatively with the present issues, insofar as Federal responsibility is concerned.

It has that obligation—primarily to assert just where the lines of authority fall; and they fall exactly where the Constitution drew them. Otherwise the law of the land is a nebulous instrument, subject to capricious change without benefit of legality—an item of confusion, abuse, and danger.

Justice to American Indians

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. NEUBERGER. Mr. President, as we near the time when the Senate Subcommittee on Indian Affairs must reach a decision on the thorny Klamath Indian question, I feel that all possible evidences of major public opinion should be brought to the attention of my colleagues.

An excellent and thorough editorial, entitled "Justice to Indians," was published in the February 17 issue of the Roseburg News-Review, of Roseburg, Oreg., under the byline of Charles V. Stanton, editor and manager, of that daily newspaper.

I particularly commend Mr. Stanton's editorial to other Members of the Senate because, although I do not agree with every item included in the editorial, I believe that Mr. Stanton has emphasized most effectively our shabby record in the past of injustice, indifference, and even exploitation toward our Indian wards.

I am pleased that Mr. Stanton has concluded his editorial with this sentence:

Senator NEUBERGER, in my opinion, is on the right track in demanding that a coordinated management plan be set up by Federal purchase of the reservation assets.

Mr. President, I ask unanimous consent that this informative editorial appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUSTICE TO INDIANS

(By Charles V. Stanton)

Frequently—and often quite violently—I am in disagreement with United States Senator RICHARD NEUBERGER'S political policies and actions. I am remiss, I know, in being so habitually critical without mentioning the time when I am in agreement. He is to be commended for his work in conservation and I have agreed with nearly all of his activities in that field. Like most people, however, I haven't given commendation when I should, but seldom have missed an opportunity to criticize.

Without knowing too much of the issues involved, I am, with what limited facts I possess, in sympathy with the Senator's proposals for handling the troublesome problem of the assets of the Klamath tribe of Indians.

There are, I know, a good many factors concerning which I am ignorant. The problem, I also am aware, has some political aspects. But from what I know of the situation, and from what I have been able to learn through study, I believe Senator NEUBERGER'S insistence that the assets should be purchased by the Federal Government provides the logical answer.

Congress has passed legislation that would terminate Federal guardianship over the

Klamath Tribe of Indians. The Klamath Indians own a very rich reservation with a substantial income from timber sales and grazing fees. Termination of guardianship requires that the Indians be paid for their tribal assets.

MANY VALUES INVOLVED

One of the plans advanced is that the forest lands, consisting principally of ponderosa pine stands, be sold to private interests, provided the purchasers were pledged to sustained yield management of the timber.

The Klamath Indian lands, however, have many values other than timber stumpage.

The forest lands have an important bearing on the water supply of the area. The reservation has high recreational value, particularly hunting and fishing. Grazing lands should be managed in such manner that their productivity will not be destroyed, as so often happens when greedy interests permit private range to be overgrazed.

If the reservation is sold piecemeal, it will be extremely difficult to preserve all the resources tied to the lands as a whole.

It is very true that purchase of the reservation will require a substantial piece of change, something in the neighborhood of $125 million. But is that a large investment to preserve resources for future generations, when we match it against the billions of dollars being spent in developing engines of destruction, or the millions we are sending abroad to win friends and influence people?

DUTY TO INDIANS

The way Indians were treated provides one of the black pages of American history. We conquered the original inhabitants through superiority of manpower and weapons. Many thousands of Indians were deliberately murdered. We often killed men, women, and children indiscriminately. We made treaties in which we recognized rights of the Indians to certain lands, then callously broke the treaties when the land was found to contain mineral or other wealth. We pushed the survivors onto reservations, then subjected them to a guardianship which has done little to advance their social or economic status.

At approximately the same time Indians were being placed on reservations, we freed the American Negro from slavery. The Negro was tossed out into a hostile society, left homeless and destitute. Yet today the Negro has become a powerful minority, is solidly entrenched in business, industry, and profession. No racial minority in the world's history has come so far and so fast as has the American Negro. Yet his advancement has come almost solely through his own efforts and in the face of widespread opposition.

On the other hand, the American Indian, supposedly given the protection of a beneficient white father, is as bad off as when he was first made captive on the poorest lands that could be found for him. Those who left the reservation and entered society have, in many cases, done well, but the reservation Indian, except for those few places where tribal assets have produced large incomes, have made virtually no social or economic advancement since being made the wards of the Federal Government.

The contrast between the Negro and Indian is one that should be carefully studied by those people who tend to follow the line of socialism.

The Federal Government in terminating its guardianship over the Klamath Indians has a grave responsibility, in my opinion. That responsibility is to see that the assets of the tribe are disposed of at proper value and that rightful distribution is made of funds.

That will be hard to achieve, it would seem to me, unless the Federal Government itself takes over the reservation to be administered as a whole under the management plans of the United States Forest Service or Bureau of Land Management.

Senator NEUBERGER, in my opinion, is on the right track in demanding that a coordinated management plan be set up by Federal purchase of the reservation assets.

Problems Involved in Scientific Education

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. BEALL. Mr. President, of late, there has been much discussion in the public press, and, indeed, on the floor of the Senate, concerning the need in this country for advancement in our technical education.

Yesterday evening, in Philadelphia, the Honorable Theodore R. McKeldin, Governor of the State of Maryland, spoke at the annual banquet of the Presbyterian Social Union at the Bellevue-Stratford Hotel. His remarks are most timely, and are indeed appropriately to be read by those whose interest extends to the recognition of the problems involved in the promotion of scientific education.

There being no objection, the address was ordered to be printe in the RECORD, as follows:

WHAT IS MAN, THAT THOU ART MINDFUL OF HIM?

(Address of Theodore R. McKeldin, Governor of Maryland, Presbyterian Social Union annual banquet, Bellevue-Stratford Hotel, Philadelphia, Monday, February 24, 1958, 6:30 p. m.)

The increasing emphasis upon education is one of the most striking developments in American politics during the 20 years in which I have had a direct, professional interest in the study of that science—or, if you prefer, that art. For much longer than that it has been the largest item of expenditure of State and local governments; and today the President of the United States is urging upon Congress a large increase in Federal appropriations for the support of schools. A business so large has inevitably been the subject of debate since time immemorial.

But very recently—within the past year, in fact—a new note has been struck in the discussion, a note of urgency almost amounting to desperation. It has been demonstrated in startling fashion that in technology, a field in which we had thought our system of education especially strong, it is in fact weak; and that has raised suspicion of the whole structure. We are reviewing every phase of public education intensely, sometimes frantically, and the question in our minds is neither its cost, nor its extent, but its purpose.

We have realized at last that education is a basic element of national defense, so both its cost and its extent are now academic questions. Whatever its cost, we must have it, and we must educate to the extent of student's ability to learn. The question in the forefront of our minds at present is what we shall teach.

It is obvious that we must bring our technological training, both in quantity and in quality, abreast of the most advanced nations. This implies a sharply increased emphasis on the teaching of science. On that there is general agreement. But the weakness exposed in technology has raised suspicion of weakness in other fields. Indeed, as regards modern languages it is no longer a suspicion—we know that our system is dangerously weak in that department. Nor does a day often pass without our hearing from some quarter a denunciation of the quality of American education in general.

The result is such a clamor of conflicting opinions as leaves the layman dazed and confused. Yet the layman, like it or not, is a participant in this debate. In the final analysis this issue, like all important issues, will be decided by public opinion. State and Federal departments of education may influence it; the National Education Association and the American Association of College Professors may influence it; presidents of State universities and of the Ivy League may influence it; but the deciding vote will be cast by the people who pay the bills. It is incumbent, then, upon every intelligent citizen to make up his mind for he may be called on to act sooner than he expects.

I do not mean that you and I should adopt any fixed position on details of educational policy. Nothing is more foolish than for untrained persons to interfere with details of the management of complicated enterprises; and education is as complicated as anything with which we have to deal. But it is possible for us to make up our minds as to what we want to achieve; and when we have done so, we have a yardstick by which to measure any specific policy that we may be urged to support. As between two policies, both of which measure up, let the experts decide; but when anything is proposed that cannot be shown to contribute to the main achievement, it is our right and our duty to refuse to consider it.

How, then, can one state an ideal of education that all intelligent men can accept? The idea that the purpose of education is to enable the student to get ahead in the world is widely accepted, but it is a low ideal. Wealth, power, social success are desirable, certainly, but a man who has no higher aspiration deserves none of them. The idea that education enables a man to serve his generation is better, but it relates to the student, rather than to the mature man whose school days are over. I have sought diligently for a principle that would cover all these, and yet a great deal more; and I believe I have found it in the place where wise men look for the summation of any great ideal—in the Holy Bible.

In the eighth Psalm the poet David asks a question, and to my mind finding an answer to that question is the aim and ultimate end of all worthwhile education. The question is this: "What is man, that thou art mindful of him?"

Every great spiritual religion—not Christianity alone, but Judaism and Islam as well—agrees that the Creator is mindful of man, and none of them claims that it is on account of man's own worth and dignity. His body is one with the beasts of the field, and even his reasoning power seems to be an extension and development of that of the higher animals. But in man alone of all living creatures his Maker has planted a spark of His own divinity; and for that He is mindful of him. To fan this spark into flame is the highest human achievement; and the education that contributes to that achievement is the only schooling worth all the effort and expense we can give it.

We are told in Genesis that the Lord gave to Adam dominion over the earth and all that is in it. Science is the means whereby man exercises that dominion, so I believe that the study of science is one of man's duties. But the Lord also laid upon him the duty of mastery over himself, and this is not achieved by science alone. To know

the universe is excellent; but to know our own place in the universe is even more imperative, and education that neglects that side of our development will inevitably produce a warped mind and a distorted soul.

This generation has had an appalling demonstration of what that means. Three generations ago German education, fascinated by the tremendous success of scientific training, fell into the error of believeing that it was all of education; and the fruit of that error was Hitlerism, a return to the bestial.

The Communist regime in Russia is repeating the mistake of the Germans. I am not here to defend the orthodox church of the Czars. I believe in the separation of church and state, and if they had been content to separate the two the Communists would have been right. But they were not content with that. They have tried to eliminate the very idea of God from their political system. The result is that they have erected a system that is dedicated to death and that has spread fear and horror throughout the world.

"When I consider thy heavens," sang the psalmist, "the work of thy fingers, the moon and the stars, which thou hast ordained; what is man, that thou art mindful of him? and the son of men that thou visitest him?"

The visit of God is the thing that purely materialistic education neglects. It can see Hitler buried under the ruins of his own flaming capital and ascribe that event to nothing more than the strength of his earthly foes. It will not believe that a system built upon lies, cemented with cruelty and injustice, bathed in innocent blood, was certain to be visited by a God who is not unmindful of man.

"For thou hast made him a little lower than the angels, and hast crowned him with glory and honor." So to reduce him lower than the beasts and to crown him with shame and crime is more than a wrong done to man. It is also an insult to God.

Any system of education that fails to take this into account is worse than useless, it is a guarantee of ruin. I do not mean that we should turn all our schools into theological seminaries devoted to religious instruction. The church and the home are the proper places for direct instruction in the creed. But I do mean that our schools should bear in mind the whole truth and in all their teaching make it clear that there is a distinction between man and the brute that the microscope cannot detect and the mathematician cannot calculate.

"The proper study of mankind is man," said the poet, but the word he used was "man." He did not say a vertebrate, genus homo, species sapiens, although that is man, regarded scientifically. But the proper study is more than scientific; it includes an examination of the spirit, as well as the body, and without that examination it is not only incomplete, it is misleading, it leads in the end to ruin and death.

That kind of education we cannot, must not tolerate, and any scheme that proposes it should be rejected instantly. It is all very well to teach the rising generation the triumphs of the human intellect, but it must be no less carefully taught the triumphs of the human spirit. Newton and Einstein, our youth must know, but not without also knowing Socrates and Homer. Long before our engineers launched a satellite into an orbit around the earth, Shakespeare and Milton had carried the spirit of man into the company of the stars.

Only thus can we maintain the position of dominion that the Maker of heaven and earth designed for us, for only thus can man retain rulership over himself, which is his ultimate victory. For "thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet."

Processsing of Soybeans in Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. THYE. Mr. President, I ask uanimous consent to have printed in the Appendix of the RECORD an article entitled "Mankato Firm Is States Biggest Soybean Processor," written by Leonard Inskip, and published in the Minneapolis Sunday Tribune of February 16, 1958.

The story is interesting not only from the standpoint that it involves a successful Minnesota business firm, but also from the standpoint of the use of soybeans and the extensive shipment of soybean oil overseas.

It is obvious that the executives of this firm have been successful in finding new uses and markets for an agricultural commodity which has become important to Minnesota.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANKATO FIRM IS STATE'S BIGGEST SOYBEAN PROCESSOR

(By Leonard Inskip)

MANKATO, MINN.—You walk up to a small white frame house on the south side of Mankato.

The house, located beside a railroad track and with some huge, blue storage tanks immediately behind it, bears little resemblance to the offices of most Minnesota companies.

Inside the front door, a pretty receptionist is almost too busy answering the phone to notice you.

"No, he's on long-distance," she says into the phone, "but can you hold for 5 minutes," apparently to a second long-distance operator.

A voice in another room says: "I want to put through a transatlantic call in an hour."

A teletype machine grinds out a message; a ticker tape reels off some soybean quotations from the Chicago market; a girl in a white sweater chalks some figures on a blackboard.

This is the bustling nerve center of Honeymead Products Co., the biggest soybean processor in Minnesota.

On Tuesday, the alert young company closed its second $3-million deal in recent months for shipment of edible soybean oil overseas.

The new order will involve shipment to Turkey in February and March of 8,800 tons of oil processed at Mankato from Minnesota-grown soybeans.

The earlier order, shipped in December and January, went to Spain.

On Wednesday, not content with just having closed the Turkish order, the company's young executives were deep in negotiations for another possible order with a European country.

These executives include Lowell W. Andreas, 36, president; James L. Maslon, 31, vice president, both located at Mankato; and Dwayne O. Andreas, 41, chairman of the board. Dwayne, Lowell's brother, lives at Lake Minnetonka.

Lowell Andreas and Maslon share a small office with other executives. On one wall is a big blackboard listing the latest Chicago quotations for lard, corn, soybeans, soybean oil, and soybean meal.

Andreas follows the blackboard closely, because he makes most of the decisions involving futures trading.

Each day, he jots down purchases of soybean futures and sales of oil and meal futures in three separate columns, to keep the company's buying and selling of futures in balance.

Maslon, son of a Minneapolis attorney, has charge of plant operations and sales.

The two young men take their business very seriously.

As a result, lunch hours are short (about 20 to 30 minutes at a nearby restaurant, and punctuated with transferred phone calls), but sales are long.

Sales in the current fiscal year probably will be about $40 million or more, compared with $33 million in the last fiscal year, which ended August 31.

"We're processing about 40,000 bushels of beans a day," said Andreas, "and in the next 12 months we hope to be up to 50,000."

This compares with 1,300 bushels a day when Honeymead acquired the plant back in 1947. Sales that year were about $1½ million.

The soybean operation has two roots.

In 1937, local Mankato people purchased a defunct tile plant and converted it to soybean crushing. During the war it was sold to a Washington State cooperative, from which Honeymead purchased it in 1947.

Honeymead Products Co., itself, was founded in Iowa, also in 1937, by the late R. P. Andreas, a former farmer who had gone into the elevator business and later into feed manufacturing.

Several small soybean crushing operations were established in Iowa to provide meal for its Honeymead's feed products.

In 1941, R. P. Andreas, father of the 2 present officers of Honeymead, sold the business to Cargill because 4 of his 5 sons were of draft age.

In 1947, Honeymead resumed operations with the purchase of the Mankato plant for about $350,000.

Since then the plant has been expanded, almost every year, with new equipment—until now it is a multi-million-dollar investment.

The company has 75 employees, most of them at Mankato. The employment figure is not big because operations of the giant processing plant are largely automatic.

Honeymead's expansion has taken several forms.

For one thing, there has been a continuing diversification within the area of soybean processing. Last year the company installed a refinery which enables it to produce edible soybean oil, the type currently shipped overseas. This oil is used in margarine, shortening, and salad oil.

Three years ago, Honeymead began producing soybean flour for industrial uses, such as in glue. Now it is also moving into the area of edible soybean flour.

Two years ago the company purchased the Henry Weis Manufacturing Co., Elkhart, Ind., a 100-year-old concern making toilet and shower partitions. It employs 250 workers and has sales of about $3 million a year.

Andreas says that to be successful the company has to grow, and that diversification into other lines is one way to do this.

"We're looking at this from a security standpoint, also," Maslon added. "Some year the return from the soybean business might be poor."

The Elkhart firm, a wholly owned subsidiary, now accounts for about 20 percent of Honeymead's total profit, although most of the Elkhart earnings are being plowed back into that business to improve it.

This year, Honeymead will process about 14 million bushels of Minnesota-grown soybeans, or about one-fourth of the State's crop. This is the equivalent to the output of about 700,000 acres with a cash value to farmers of about $30 million.

Principal owners of the company are the Andreas brothers and the Maslon family.

Address by Hon. John Stennis, of Mississippi, Before the Southern Regional Meeting of the American Bar Association

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. TALMADGE. Mr. President, on Friday, February 21, the able and distinguished junior Senator from Mississippi [Mr. STENNIS] addressed the southern regional meeting of the American Bar Association, held in Atlanta, Ga. His subject was Federal Judiciary Selection: The Letter—But the Spirit?

The address—eloquent, erudite, and grounded in the Senator's outstanding record as a trial judge himself—is of great interest to all who value the Nation's judiciary and wish to see it fulfill its appointed constitutional role.

I ask unanimous consent, Mr. President, to have the text of the address of the junior Senator from Mississippi as delivered on that occasion printed in the appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL JUDICIARY SELECTION: THE LETTER—BUT THE SPIRIT?

(Remarks of United States Senator JOHN STENNIS, of Mississippi, southern regional meeting, American Bar Association, bar activity section, selection of Federal judiciary, Dinkler Plaza Hotel, Atlanta, Ga., February 21, 1958)

First, let me heartily commend, as well as thank, the American Bar Association for your long, patient, and painstaking effort to improve the system of selecting members of the Federal judiciary. You have been concerned. You have worked hard. Your labors have borne some fruit. You must continue your good work.

CONSTITUTIONAL BACKGROUND

When the Constitution of the United States was drawn, approved, and ratified, it represented the best thinking of great men of stature. It has endured; its fundamental principles have withstood the test of time. It has served us well through the unparalleled growth of our country during its history, until we are now a nation of 172 million people.

Great care and detail was used in framing the provisions of this charter, but two latent defects have become apparent in recent years. At the time of the Constitution's adoption, these omissions were considered points of strength contributing to the independence of the Federal judiciary. These points are:

1. The Constitution does not undertake to restrict in great detail the jurisdiction of the Federal judiciary.

2. It does not prescribe qualifications for holders of judicial offices.

The prevalent belief at the time of the Constitutional Convention was that the judiciary was the least dangerous branch of government, having neither the power of the purse available to Congress nor the Armed Forces controlled by the executive branch. The emphasis was on making the judiciary independent. Some thought the bench would go begging.

Further, debates on the Constitution at that time clearly show that it was thought only a limited few highly trained lawyers would ever be considered for service on the Supreme Court; it was thought that only those most experienced and learned in the law would ever be appointed.

WARNINGS BY GEORGE MASON

In the constitutional debates Elbridge Gerry and George Mason and others warned that there was no limit of judiciary power and that it could absorb and destroy the judiciaries of the several States. Alexander Hamilton rejected such arguments and asserted, "The supposed danger of judiciary encroachments * * * is, in reality, a phantom." He said that the members selected would be chosen with a view to those qualifications which fit men for the stations of judges. His arguments prevailed.

In 1958 it is apparent that the Federal judiciary is neither weak nor helpless; the judicial self-restraint so relied on by Hamilton and others is greatly open to question. I am not here to condemn nor to criticize. I believe a new system of selecting members of the Federal judiciary is a constructive step and an essential step in strengthening this branch of our Government.

TWO RESTRICTIONS

This great document, which established the separation of powers in Government, is replete with regard to checks and balances, has only two restrictions relating to the Supreme Court.

The first is that justices were to be nominated by the President and, by and with the advice and consent of the Senate, appointed to the Court.

The second is that Congress was designated to regulate the appellate jurisdiction of the Supreme Court.

The only reference to judges of inferior courts to be established by Congress relates to protection of their salary and tenure while serving in office.

In the process of selection of the Federal judiciary, the letter of the Constitution is followed now except for one interesting departure, which will be discussed later. But the question I pose here today is whether the spirit of the Constitution is followed in the present process of selecting Federal judges. And further, has not his problem grown beyond the personal grasp of any Chief Executive, and therefore does it not require the combined effort of many minds of those isolated at least in part from other public affairs?

PRESENT METHOD OF NOMINATION

First, let us examine the process of nomination now employed. The role of confidential adviser to the President is filled by the Department of Justice. Among the factors considered are: (1) The experience of the individual; (2) his character; and (3) political affiliations and activity. It is ironical that this latter consideration, which often appears to control judicial appointments, actually eliminates many good men who are eminently qualified as to character and particularly as to experience.

When the idea of political reward dominates the selection process it automatically eliminates many sitting Federal judges and many extremely capable State jurists of many years of experience who have forgone political activity because of their devotion to duty on the bench. Thus political experience is often inconsistent with judicial experience, yet all too often the former prevails as the criterion upon which the selection is made.

After considering the recommendations of the Department of Justice, the President personally makes the nomination, but the actual screening or narrowing the field of selection of eligibles has already been performed through the resources of the Department of Justice. Except in rare cases, the President does not have and cannot have personal knowledge of the individual, much less his judicial capacity.

The Department's other duties frequently call for it to be the agency of Government which hails American citizens into our Federal courts. In the majority of Federal cases the citizen is the defendant. When he is involved in a suit against the United States he is forced to appear in a United States court; against United States attorneys selected and employed by the Department of Justice; before a United States judge who owes his appointment to selection by the Department of Justice. This judge is sometimes a candidate for promotion, dependent on recommendations of the Department of Justice. Many defendants are bound to feel that the cards are pretty well stacked against them.

Independence of the judiciary and public confidence in the independence of the judiciary are not always the same but they are equally important. Public confidence in the impartiality of Federal judges is absolutely necessary. The people must not feel that the Department of Justice may influence the outcome of decisions by methods other than those based on legal merit. In order to bolster public confidence in impartiality, the process of selection of Justices should be removed from the Department of Justice.

The process could be changed by law, but such a course is not absolutely necessary. It could be accomplished by unilateral action of the Executive. In either event, it will be changed only when the sustained force of public opinion against continuation of this practice is manifested throughout the country.

ADVISORY COMMISSION

The Congress could by statute prohibit the Department of Justice from filling this role and establish an advisory commission to perform this service for the President. The commission could and should be composed on a nonpartisan basis of outstanding individuals, both lawyers and laymen, who would make selections on a nonpolitical basis. I believe that any step in this direction would be an improvement in the present process of nomination. I believe that some such step is absolutely essential in modern government. This is not intended as any criticism whatsoever of the present Attorney General.

—SENATE SHALL "ADVISE AND CONSENT"

Let us now turn to the other side of the coin, the process of confirmation. The Constitution provides in article II, section 2, that (the President) shall nominate, and by and with the advice and consent of the Senate shall appoint . . . Judges of the Supreme Court. * * *" Careful reflection on the words of this constitutional mandate leads to the logical conclusion that two separate duties are imposed on the Senate by its terms: to give "advice" and to "consent."

The phrase "advice and consent" has an ancient and honorable English and American constitutional history. It comes down through Magna Carta. It was used in the Second Charter of the Massachusetts Bay Colony in 1691. In 1787, those who cham-

pioned a strong Executive and those who championed a strong Legislature chose these historical words when they agreed certain powers should rest with the President with "the advice and consent" of the Senate.

At the present time—and it has been the practice since Washington's second term—the Senate as an instrument of Government merely gives consent to the nomination. Confirmation is consent. There is no advice officially given although the duty and responsibility are plain.

This advice which the Senate has been so reluctant to give could be, and probably should be, given by Senate resolution or Senate rule establishing minimum qualifications for appointments to the Supreme Court.

This I have sought to do by resolution introduced in the 84th and 85th Congresses, as follows:

"*Resolved*, That from and after the date of adoption of this resolution, at least one of each two successive nominees confirmed by the Senate for the office of Associate Justice of the Supreme Court shall, at the time of the confirmation, have had at least ten years of judicial service. For the purpose of this paragraph, 'judicial service' means service as a justice of the United States (as defined in sec. 451 of title 28, United States Code), a judge of a court of appeals or district court, or a justice or judge of the highest court of a State or of any other State court having general jurisdiction."

The proposal has gathered islands of support. But its chances for early passage are doubtful so long as the bar and public generally do not bring the sustained support of informed public opinion behind this proposal. The only objection which has been offered is that it interferes with the Presidential prerogative and power of nomination. I personally view it only as an exercise of a long neglected Senate responsibility. I believe that the language and meaning of the constitutional provision are clear and that a knowledge of history and the facts will sustain this point of view without additional legalistic arguments.

Thus, in Congress I believe that two steps should be taken to improve the selection of the Federal judiciary:

REMOVE DEPARTMENT OF JUSTICE

1. Removal of the Department of Justice from its role as chief advisor on judicial appointments. Substitute instead an advisory judicial commission, bipartisan and objective, who might solicit qualitative recommendations from local individuals, members of the legal profession and associations and other groups, on a confidential basis.

The appointment of Federal judges is another instance of a highly important Presidential function that is now entirely beyond the possibility of personal attention of the President due to the overwhelming demands of his office created by our new role in world affairs and the increased burdens of the Federal Government in domestic affairs. A new method is absolutely essential.

Frankly, I think the selective processes must be placed largely in the hands of persons who are not directly connected with the Federal Government. We cannot imagine a condition any time soon where any Federal official could equal the statement made in America in 1947 by the lord chancellor of England, Viscount Gowitt, whose prerogative it was to name men to the English bench when he said, "I am able to tell you * * * that I have never let political considerations weigh with me to the slightest degree in trying to get the fittest man. I have never appointed, incidentally, a member of my own party."

SENATE STANDARDS

2. Establishment by United States Senate action of very high standards for confirmation of Supreme Court nominations. I have already enlarged on this in connection with my remarks on the Senate resolution that I have introduced. Personally, I would apply the test of judicial experience to 1 of every 2 of the appointees and a minimum of 10 years of actual courtroom practice to 1 of every 2 of the appointees.

In the same manner, the United States Senate could set up standards for approval of nominations to the Circuit Court of Appeals, in which case I think the requirements for trial practice should be at least 10 years experience or at least 5 years of judicial experience. And by the same method, standards could be established for the approval of nominations to the district courts, which should include 10 years of actual courtroom practice and trial experience.

All these recommendations follow the letter and spirit of the Constitution and would give greater independence to the Federal judiciary as well as restore public confidence that future appointments are made from those best qualified.

ULTIMATE POWER STILL THE PRESIDENT'S

In conclusion, I want to emphasize above all other things the absolute necessity of a new outlook, a new sentiment, and a new method for making the selections of all Federal judges and Justices of the United States Supreme Court. This can be done without changing the ultimate power and responsibility of the President of the United States, the highest elective official in our form of government. We thus insure protection against any new menace arising from a new system. The ultimate responsibility of actual final nomination should remain with the President. It is the method that must be changed to meet practical conditions.

In all events, an informed and a sustained public opinion is essential in order to have a change for the better. Among other hazards, unless we improve the system, life tenure and other independence for members of the judiciary are seriously threatened.

Tribute to Fred Pabst

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. PROXMIRE. Mr. President, one of Wisconsin's leading citizens was lost to our State with the death of Fred Pabst. I think the editorial, One of Our Noble Men, in the February 21 issue of the Milwaukee Journal, is a fitting tribute to a man whose life contributed much to his community and to the State of Wisconsin.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE OF OUR NOBLE MEN

No need to write in praise of Fred Pabst's two distinguished business careers as a top national figure first in brewing and then in cattle breeding. His death Friday at the fine old age of 88 brings forcibly to mind instead what an attractive and lovable person he was, an honor to our civilization.

One is tempted to use terms that unfortunately sound derogatory to most ears today. He was an aristocrat, for instance, but only in the true and best sense of being a cultivated and courtly gentleman, ever thoughtful of others and with a high instinct for duty, living graciously but not preening himself on personal wealth.

He was a beer baron, if you will—not with any connotation of ruthless quest for riches, but as one of the handful of men who built a great industry and made Milwaukee its world famed center. One term that does not come to mind is gentleman farmer. No dabbler, Fred Pabst ran a successful farm enterprise with consummate studiousness and skill, evincing a deep love of the land that was one of his most endearing qualities.

The colonel—a title without meaning except that some friends thought it an apt mark of affection—actually was a gentle, shy man, kindly and generous. It was genuine interest as well as duty that found him always helping to serve the cultural and charitable needs of his community. He practiced the rule of brotherhood because he really felt that way.

In Fred Pabst, Wisconsin will remember one of its noble men.

Importance of a Liberal Foreign-Trade Policy

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial by Life International, which was published as an advertisement in this morning's Washington Post and Times Herald. It states succinctly and most persuasively the case for a liberal American foreign-trade policy.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

LET'S TALK SENSE

This session the Congress faces a major decision on reciprocal-trade legislation.

It is a decision in which millions of Americans have a personal stake, because their jobs depend on it.

It is a decision in which every American has a large stake, because the well-being of our economy depends (to a greater degree than is generally realized) on a healthy international trade.

Right now our booming export trade is serving as a significant stabilizer for our economy, while activity is slow in the domestic sector.

During the past 3 years, the volume of foreign trade done by private United States businessmen has grown twice as fast as their domestic trade. Items reported last month by the Department of Commerce:

The ratio of export to domestic sales of nonelectric machinery, having climbed slowly but steadily since 1953, reached an alltime high in the third quarter of 1957.

Exports of construction, excavating, and mining machinery, which during 1953-55 were about one-fourth of domestic sales, became over one-third as large as domestic shipments in 1956 and in January-September 1957.

The number of commercial planes delivered to foreign airlines in the second and third quarters of 1957 was virtually one-

half the number completed for domestic customers.

The number of locomotives exported in January–September 1957 was nearly 50 percent as large as the number of new locomotives installed in domestic service.

In the case of cotton, the 23-year high of 7.5 million bales exported in the 1956–57 season permitted a reduction of over 4.7 million bales in Government-controlled stocks, notwithstanding the fact that domestic consumption was off by over one-half-million bales from the rate of the previous year.

In January–September 1957 exports of manufactured steel products rose by 1 million tons. During the third quarter, the ratio of net exports of steel products to domestic sales climbed to the highest rate in recent years.

Some chemical export sales (e. g., pesticides and antibiotics) have become as large or larger than domestic sales.

In contrast to domestic use of wheat, which declined steadily during the past 4 seasons, exports moved continuously upward over the same period.

Since exports are so patently important to our economy, and since other nations cannot buy our goods unless we buy theirs also, the minimum course indicated for Congress is to extend the Reciprocal Trade Agreements Act under which international trade is now flourishing.

But this is no time for minimum courses. It is an ideal time for Congress to take a giant step worthy of our stature by sweeping away entirely the walls of trade restrictions between us and the friends on whom we depend.

We repeat here what Life, Life International, and Life en Espanol have said editorially to more than 30 million readers the world over:

"The American contribution to world economic development can only be in terms of the institutions Americans know best: i. e., the free-enterprise system. We suggest that this system, which some regard as a golden goose in the American barnyard, is instead a first class political weapon of intercontinental range.

"We propose that this weapon be employed in the following drastic manner: That the United States declare its traditional protectionism at an end, open its shores to the free enterprisers of all nations and embark on a new policy of free trade. The purpose of this dramatic move would be to strengthen alliances and set new standards of world prosperity to which communism can never aspire.

"Fortunately the free world has been enjoying a long boom, sparked largely by free enterprise. But this boom threatens to dwindle before it has begun to satisfy the world's unfilled need for trade and investment. Nor has the United States, the supposed headquarters of free enterprise, done nearly what it should to stimulate this boom toward its incredibly greater potential.

"A defensive United States trade policy represents a failure of leadership. The challenge to the United States now is to take a giant step and put its trade policy on the offensive. For that, the time is riper than ever.

"This step is to adopt the policy of complete free trade. The United States should declare it toward all countries willing to accept certain minimum standards under which free enterprise can work. The gains to America from such a deal would be immense, the costs small.

"Defense? Let the Armed Forces name the items they cannot trust to free trade and subsidize their domestic production openly instead of by tariff. Readjustment? Not more than 100,000 United States jobholders are vitally dependent on tariff protection; they could easily be assisted in their transition to new ones.

"Sentiment? Americanism? We are here proposing a new sentiment, a new Americanism, which sees its interest as identical with that of all free people who want the enormously higher living standards that will accompany a fuller international division of labor."

Labor Should Be Free in Our Republic

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Labor Should Be Free in Our Republic," which I prepared for the American Mercury for March 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR SHOULD BE FREE IN OUR REPUBLIC
(By WILLIAM F. KNOWLAND)

Long ago I learned that one of the penalties of public life is that abuse and deliberate misrepresentation of one's views and actions too often take place. It is one reason many able men and women will not offer themselves for public elective office. I have, however, great faith that the people can see through the political smog created by designing partisans and will separate fact from fiction. I want to outline some basic principles in which I believe.

As a free people we must always be on guard against the concentration of excessive power in government, industry, or in labor.

After much suffering and sacrifice, our basic American freedoms were achieved. We were able to establish and maintain, up to now, the concept of a government by consent of the governed. Power without responsibility is detrimental to the individual and to the preservation of the free way of life. The Constitution of the United States, with its guaranties of religious, economic, and political freedom, was instituted by men who knew that the power of government had to be diffused by men who knew that checks and balances were necessary if freedom for the individual was to be preserved.

At the turn of the century, as a matter of national policy, it became necessary to limit the expansive power of big industry. The passage of the Sherman and Clayton Antitrust Acts established traffic signals along our economic highway to protect the American people.

There has been much misrepresentation of my views regarding labor-management relations by those who seek to confuse rather than to inform. I believe that the right of an individual to join a labor organization should be protected by State and Federal law. I have supported such legislation both as a member of the California State Legislature and in the Congress of the United States. I believe in collective bargaining. It is, and will remain, protected by law. The right of collective bargaining calls for responsible conduct on the part of management and labor. It calls for negotiation in good faith. Collective bargaining should not, and must not, degenerate into coercive bludgeoning.

No group in industry or in labor should have the power to strangle the economic life of 170 million Americans. This is too much power for responsible leaders in industry or labor to want, and far too much power for irresponsible men to be allowed to have.

Just as monopolistic power in government cannot be countenanced by a free people, so it is true that monopolistic industrial or labor-union power cannot be allowed unchecked control over a vital segment of our national life. Neither industrial nor labor organizations should be above the law or be given powers which no nongovernmental agency should have.

The unons of the Scandinavian countries are based on voluntary and not compulsory membership. The late American labor leader, Samuel Gompers, supported voluntary and not compulsory unionism.

We are all concerned, or should be, regarding the rights of American citizens under our Constitution. Our right of employment is a basic civil right of the first magnitude.

Compulsory unionism denies the worker a freedom of choice.

1. It denies to millions of men and women the opportunity to earn a living except by agreeing to pay dues, initiation fees and assessments, and to submit to the discipline of a private organization.

2. It makes captive those of the membership who may oppose the economic or political policies of the union or may violently object to the coercive methods or the corruption of the leadership, yet cannot resign without losing their ability to work for a decent livelihood.

What American would want to live in a community without churches? Yet who would want to join a church except by free consent? To contribute except by voluntary action? To remain a member if his convictions dictated otherwise?

So it is with civic, veteran, farm and fraternal groups. The type of leadership, the benefits spiritual or material, the social or recreational assets of the organization are the criteria upon which free men and women should make their voluntary determination to join, to remain, or to leave. Why should industrial or business workers be denied the same freedom of choice? Compulsory membership, in effect, passes the taxing or disciplining power of a sovereign government on to a private organization.

Those who do not contribute to the United Crusade, Red Cross, cancer, or tuberculosis societies or belong to 1 of our 2 great political parties, benefit nevertheless. To that extent they are free riders. But would we want to substitute compulsion for voluntary giving and participation?

The disclosures before the special Senate Labor and Industry Investigating Committee were shocking to the previously uninformed public and to the membership of many labor organizations. It was shown that there are both labor and business leaders who will not of their own free will or morality, abide by rules of fair play.

I believe the rank and file of the members of labor organizations need additional protection, and toward that end I am having congressional legislation prepared. Such legislation, which I call labor's bill of rights, will include the following points:

1. The membership should be able to elect its officers by secret ballot and to have votes so cast be the only ones that are counted.

2. When their officers have become incompetent, have shown lack of integrity in the handling of union funds, or for other reasons the union members have determined that the officers should no longer represent them, the membership should have the power to recall the officers by secret ballot.

3. The rank and file of the membership of a labor organization should not be taken out on strike except by a majority secret ballot of the membership. Certainly, the economic consequences to the worker, his wife and family, to the community, the State, and the Republic can be of such serious consequences

that the members should have the power to make that determination by secret ballot.

4. The administration of the welfare funds of the union members should be protected in the same way that bank deposits and insurance funds are protected.

5. The initiation fees, dues, and assessments of members should be fully protected and handled with the most strict accountability and integrity.

All union financial transactions should be audited, and a full accounting should be made to the membership.

6. Union members should have the power to correct arbitrary and unlawful acts of union officials without fear of retaliation. Minority members should have the same kind of safeguards secured as for minority stockholders in similar situations.

7. National officers should not have the power to take over local unions without membership approval, except for limited periods and under adequate safeguards to the local membership. Nor should they, by creation of paper locals or extensive setting up of trusteeships over local unions, be able to perpetuate themselves in power.

These are issues of concern to the public at large as well as to the individual worker. They need to be raised and met.

Because I have raised these issues of voluntary union membership and a bill of rights for labor I have been marked by some for political liquidation. If I never hold public office another day of my life I shall not cease to bring this issue before the people of my Republic and my State.

In the meeting of the problems of our generation, we must show the same courage and commonsense as the men who gave us our Republic and, in the past, have helped to maintain it. As Republicans, Democrats, or independents we can all join in subscribing to the oath of Thomas Jefferson when he said:

"I have sworn upon the altar of God eternal hostility to every form of tyranny over the mind of man."

Necessity for Peace Between Israel and Neighboring Arab States

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. MORTON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter written by Mr. Clarence E. Pickett to the President of the United States under date of December 3, 1957.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CLARENCE E. PICKETT,
Philadelphia, Pa., December 5, 1957.

The PRESIDENT OF THE UNITED STATES,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: To establish political and economic stability in the Middle East it is essential that a peace treaty be negotiated between Israel and the neighboring Arab States. To this end agreement on the following issues is basic:

1. The problem of the Arab refugees should be resolved by permitting a limited number to resettle in Israel, and by offering equitable compensation to all of them for property lost or left behind. Resettlement of the refugees, both of those who return to Israel and of those who decide not to return, should be facilitated by an international loan administered through a United Nations agency.

2. Definitive borders between Israel and its neighbors should be established straightening the lines between the borders recommended by the United Nations in 1947 and those established by the armistice agreements of 1948.

3. The city of Jerusalem and the surrounding villages should become an internationally administered territory under the trusteeship of the United Nations in accord with the recommendation made by the General Assembly in 1947, both the Arab States and Israel participating in the administration.

4. Once peace is established, special consideration should be given to economic development projects for raising the standard of living of the entire region for the benefit of all its inhabitants. One of these projects is the harnessing and utilization of the waters of the Jordan River.

5. To achieve such a peace the United States should initiate in the United Nations an effort to obtain a consensus including all the principal powers.

Respectfully yours,

CLARENCE E. PICKETT.

Editorial Letters by Seymour E. Harris

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. HUMPHREY. Mr. President, during the fall months four significant letters written by Seymour E. Harris, chairman of the department of economics at Harvard University, to various newspapers and periodicals in this country, have come to my attention. Because I believe they merit thoughtful consideration by my colleagues, I ask unanimous consent that the letters be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

To the EDITOR OF THE NEW YORK TIMES:

In two successive editorials, the Times has criticized the recent statements of the Democratic advisory council. In the first, the Times points out that the objectives of the two parties are similar; in the second, that inflation is the product of the Democrats, not the Republicans.

The Democratic foreign policy statement stresses the deterioration of the foreign position of the United States, the loss of prestige, the weakening of our military position, the ascendancy of economy-minded Republican leaders, inclusive of President Eisenhower and Secretary of the Treasury Humphrey, over the requirements of the military, the imposition of military aid when it was not wanted or could not be used.

The folly of cutting $10 billion of military outlays in 1954 and the recent cuts in research expenditures even as our foreign position becomes more and more vulnerable, are enough to condemn Republican military and hence foreign policy. Or consider the fact that in the midst of a struggle to win allies and in the midst of a rapidly worsening situation foreign aid under Eisenhower has become about half as important relative to gross national product as under the Democrats.

But perhaps the most dubious part of the Times editorials relates to its comments on the inflation problem. Here let us grant that the intentions of the administration were good. But deeds, not intentions, count.

They failed to keep their budgetary expenditures within their promises of 1952 by $15–25 billion, depending on how they are measured. (Perhaps it was fortunate that they failed or our defenses would largely have been gone.)

Through their credit agencies they continued to lend and guarantee vast sums of money even as in 1953 and 1955–57 the Treasury and the Federal Reserve were inducing tight money.

They showed little hesitancy about spending when the additions were not reflected in budgetary figures. A good investigation of how accounting methods and spending practices have changed under the present administration is in order.

They talked about anti-inflationary policy at the same time that the President and Secretary Humphrey repeatedly showed that they did not understand the most modern weapons of anti-inflationary policy, namely, fiscal policy. They would only cut taxes in prosperity and hence inflate further, not in depression when tax cuts were needed to stimulate the economy.

Above all, the Times is wrong when they hold that the Democrats in recent years were the party of inflation. If the Times editors would examine the price history of 1932–52 and eliminate the war and demobilization years, then they would find that price rises per year were 6 times as great under the Republicans in the last 2 years as under the Democrats in 20 years. Even Secretary Humphrey, in the recent BYRD hearings, admitted that comparison of war and peace years was not fair. Yet the Times considers the rise of prices immediately following World War II, certainly an aftermath of the war, and also the rise related to the Korean war and compares these with the Democratic record. Note that from 1948 to 1950 consumer prices were unchanged at 102.8, suggesting the Democrats had stabilized prices before the Korean war.

If the Times wants to compare war records, then I submit that inflation, relative to resources going to war, was 14 times as great in the last large war run by a Republican (Lincoln) as in World War II, run by Roosevelt and Truman.

The Democrats condemn the Republicans, in short, for bringing on the disease which they like to associate with Democratic policy; for trying to contain it through the use of clumsy and contradictory policies; and for introducing a tight money policy which has failed of its objectives, which has been unfair in its incidence (as Secretary Humphrey admitted), which has failed to take account of the limitations of monetay policy (cf. the frank admission of impotency of the Governor of the Bank of England), and which associates, in a simple-minded way, money and prices. Above all the Republicans through their restrictive policy are jeopardising the stability and growth of our economy.

SEYMOUR E. HARRIS,
Cambridge, Mass.

To the EDITOR OF THE WALL STREET JOURNAL:

In a recent editorial, the Journal attacks the Democratic national council for

its criticisms of the Eisenhower monetary policies. The gist of the Journal's position is that the Democrats demand more money; and that means more inflation and higher, not lower, interest rates.

Unfortunately, the Journal misinterprets the Democratic position and also does not seem to comprehend the issues.

The Democratic council wants the administration to abandon a monetary policy of restriction which has failed to stop the inflation and which has been most inequitable in its incidence and which has contributed toward recession. That is not exactly taking a position for expansion of monetary supplies and inflation. (But the signs are now increasingly that an expansionary policy may be needed.)

Unfortunately, the Journal is wedded to ancient theories of economics. The way to increase savings and hence to cut interest rates and raise investment is not by reducing monetary supplies and income but by increasing incomes through reasonable monetary policies. Savings depend above all on the level of income.

Finally, the Journal has followed the Federal Reserve in supporting a scare campaign in re inflation. Indeed, when prices rise 1,000 or 100 or even 10 percent per year, interest rates may well tend to rise. But these are developments under galloping inflation, which is not an issue here. That the rate of interest has risen phenomenally in the last year or two has been the result not of inflation but of monetary restriction. In less than 2 years the Eisenhower administration has undone the great achievements of Roosevelt and Truman over 20 years in getting rates of interest down and hence stimulating investment—a needed ingredient of anti-inflationary policy.

SEYMOUR E. HARRIS.

CAMBRIDGE, MASS.

To the EDITOR OF NEWSWEEK:

In his column of November 11, Mr. Hazlitt criticized the Democratic Advisory Council statement on inflation and labels the Democrats the party of inflation and their statement as a fraud.

But to prove his point Mr. Hazlitt compares the price experience of 1945–52 with that of the Republicans from 1952 to 1956. This is grossly unfair. Mr. Hazlitt includes the 2 years immediately following the war, which with decontrol reflected the major part of the rise of prices associated with wartime inflation; and he includes the years 1950–52 of the Korean war. Had he compared the non-war years of the Democratic control, he would have found an annual rise of prices one-sixth as great under Eisenhower in the last 2 years. And in 1948–50 the Democrats had stabilized the price level.

It may be Mr. Hazlitt's view that the Democrats repudiate the only appropriate attack on inflation; namely, monetary policy. But it is not the general view of economists who insist that other weapons are more potent. The Republicans seem to be interested only in fighting inflation (and unsuccessfully); the Democrats, in monetary stability as well as growth, full employment, and equity.

SEYMOUR E. HARRIS.

CAMBRIDGE, MASS.

HARRIS ON SLICHTER ON KEYNES

In the anniversary number of the Atlantic, my distinguished colleage, Sumner Slichter, as usual has written a provocative and original piece on our economy. But as one who has done his share toward a spreading Keynesian economics in this country, I am disturbed both by the title of Slichter's article, The Passing of Keynesian Economics and also by the statement that "but Keynes' theory has turned out to have been wrong in all its essentials."

If the last statement is correct, then I find it difficult to understand Slichter's article. His stress on the consumption function (the relation of consumption and income) and investment as the crucial factors as well as his continued emphasis over the years on the need of more debt and money are Keynesian, not classical. The fact is, as a careful reading of this article will reveal, that Slichter is a great admirer and even follower of Keynes.

Indeed, Keynes may have underestimated investment possibilities and the place of consumer credit. But, in re the stability of the relation of consumption to income which was fundamental in his system (aside from cyclical variations), history has proved Keynes to be substantially right. In the peak years, 1929 and 1956, consumption was 95 and 93 percent of disposable personal income. Despite the great expansion of consumer credit, consumers' relative contribution declined, if anything.

Slichter does not prove his point by emphasizing the excess rather than the deficiency of demand. Keynes' point after all was that the private economy needed support of more government spending and even some planning. When the governments of this country spend $105 billion a year and the losses of World War II have to be recouped by both public and private spending and western Europe diverts funds to investment through Government planning, then the solutions are Keynesian. Where would we be with the $10 billion of Government spending in 1929 instead of the $105 billion of 1956? Consider the fears engendered today by the minor defense cuts. It is still to be proved that private enterprise can carry the economy without Government support.

SEYMOUR E. HARRIS,
Chairman, Department of Economics,
Harvard University.

Threat to Dairy Industry

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. PROXMIRE. Mr. President, yesterday one of the organizations of the Pure Milk Products Cooperative of Fond du Lac, dairy farmers in my State, presented a splendid statement to the Committee on Agriculture and Forestry concerning the severe blows that have been suffered by dairymen during the past 5 years, and warning of the terrible consequences that will follow if the cut in dairy income that is now proposed by the administration is allowed to go into effect. This statement is so full of important factual information that I want every Senator to have a chance to read it at once. Therefore, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PURE MILK PRODUCTS COOPERATIVE, FOND DU LAC, WIS., TO THE SENATE COMMITTEE ON AGRICULTURE AND FORESTRY, FEBRUARY 24–25, 1958

Pure Milk Products Cooperative is a bargaining association of more than 15,000 active dairy farmers located throughout Wisconsin and parts of Illinois and Michigan. Their milk is sold through some 160 dairy plants. About one-third goes to grade A fluid markets, while the other two-thirds goes for such manufactured dairy products as condensed and evaporated milk, butter, dry-milk products, and numerous types of cheese.

Pure Milk Products Cooperative urges prompt enactment of legislation of the type proposed in Senate Joint Resolutions 149 and 150 to hold milk prices in the coming year at not less than the $3.25 per hundredweight level of the 1957–58 marketing year. It is not in the interest of either dairy farmers or the national economy as a whole to cut prices in the manner proposed by Secretary Benson, which would result in a decrease of some 8 percent in the gross income of dairy farmers selling milk for manufacturing purposes.

Dairy farmers are in no financial position to withstand additional income losses in an economy in which dairy farm operating costs continue to skyrocket upward. While our membership is made up entirely of dairy farmers, it is not difficult for us to understand the effect of lower prices on other types of farmers. We believe it is imperative that legislation of the nature proposed by Senators HUMPHREY, AIKEN, and SYMINGTON be given prompt consideration to maintain farm income at not less than the levels of the current marketing year.

Agriculture has suffered from a serious cost-price squeeze in recent years, while the remainder of our economy has prospered, with the result that the seriously depleted reserves of farmers can ill afford further price cuts. Following is a comparison of total personal income for the United States, together with gross and net farm incomes.

Comparison of United States personal incomes and farm incomes, 1945–57

[In billions of dollars]

	Total personal income [1]	Realized gross farm income [1]	Realized net income from agriculture
1945	171.2	25.8	12.8
1946	178.0	29.3	15.0
1947	190.5	34.0	17.2
1948	208.7	34.6	15.9
1949	206.8	31.6	13.7
1950	227.0	32.1	12.9
1951	255.3	37.1	14.8
1952	271.8	36.7	14.3
1953	286.0	35.1	13.9
1954	287.4	33.7	12.2
1955	305.9	33.2	11.6
1956	326.9	34.4	12.1
1957	342.9	34.8	11.9

[1] 1958 Economic Report of the President.

Comparing the above figures, it becomes apparent that the net farm income from agriculture during the past 4 years has been down sharply from 1951–53 levels by about one-fifth and is running 30 percent below the 1947 level. On the other hand, personal income in the United States has gone steadily higher. Personal income for the Nation has increased each year by more than the total annual net farm income in the United States. In fact, total personal income has increased during the past 4 years by twice the average annual total gross farm income.

Wisconsin farmers have fared equally bad in recent years. Figures available from the

USDA indicate that from 1949 through 1956, net farm income in Wisconsin, a specialized dairy State, has decreased in a manner that places dairy farmers in a serious financial position.

Wisconsin farm income and production expenses

[In millions of dollars]

	Cash receipts from farm marketings and Government payments [1]	Farm production expenses [1]	Difference between cash farm income and production expenses
1949	931.7	613.3	318.4
1950	947.9	637.0	310.9
1951	1,142.1	722.5	419.6
1952	1,151.9	750.5	401.4
1953	1,071.3	721.1	350.2
1954	1,000.3	714.5	285.8
1955	984.8	719.2	265.6
1956	1,025.3	745.8	279.5

[1] Farm Income Situation,, September 1957, U. S. Department of Agriculture.

Wisconsin's net cash income has declined 34 percent from the peak 1951 level, and in the past 3 years has averaged only three-quarters of the 1949–53 average.

On the matter of national milk production, official figures show that milk production has not increased nearly as rapidly as population in recent years. In the past 10 years, our national population has increased about 20 percent, or about 2½ times as much as milk production. We have met our needs and maintained our small excess by outting deeply into that reserve milk production which was formerly kept on the farms.

The amount of milk used on farms has decreased from 20 billion pounds to 14 billion in the past 10 years, and of that milk sold by farmers we have increased the percentage disposed as whole milk from 77 to 88 percent. Even with this change in farm use and disposition of milk, we have sold from our dairy farms only 4 or 5 percent more milk than our domestic needs.

Manufactured milk is produced to a large extent in those areas having the least alternatives in farming. Such farmers are not likely to reduce their farm milking operations in response to lower prices. They will have to try to increase their output to meet increasing fixed expenses and to support their families. Cutting prices will not in our opinion decrease production in the specialized dairy States. The loss of rural income is more apt to cause serious financial problems for the entire community as farmers are unable to meet expenses and continue to make normal replacements of buildings, fences, machinery, and appliances.

Farm costs continue the rising trend of recent years even though milk prices have declined. In the past 10 years, while manufactured milk prices have dropped 12 percent, farm wage costs increased 33 percent, farm machinery prices advanced 67 percent, taxes climbed 85 percent, and interest rates skyrocketed 115 percent. Dairy farmers have been able to only partially combat this cost squeeze by increased production. Rural trading centers are already feeling the effects of a farm depression and its influence of farmers' ability to buy the products of our factories.

Although much publicity has been given the surplus of dairy products, we have had very little to spare in proportion to our total needs. We seldom realize that our daily diet includes nearly as much milk in our various dairy products as meats, vegetables, and grain products combined. The USDA reports of 1955 urban consumption per person shows a milk equivalent of 9.2 pounds per week as compared with 4.4 pounds of meat, poultry and fish, 3.9 pounds of vegetables, and 2.6 pounds of grain products. Our 4 or 5 percent reserve (misnamed surplus) of dairy products has been less than enough to have provided a per capita consumption equal to that of either 1947 or 1950, and would in all probability again be in serious shortage in case of a national emergency.

A 25 cents per hundredweight cut in milk prices will cost dairy farmers nearly $300 million, but will save the Government only about $13 million on costs of support purchases. It is not likely to have much influence on dairy products consumption if one accepts the findings of USDA Technical Bulletin 1168, a report well supported by other scientific research. This publication reports demand for dairy products to be very inelastic to the extent that we can expect only about 3 percent greater sales to result from a 10-percent decrease in resale prices. Such an increase might be offset to a considerable extent by the increased efforts of specialized dairy farmers attempting to meet their expenses. Furthermore, it's doubtful if producer price cuts will be reflected in consumer prices.

We further urge as a long-range approach, the enactment of the self-help dairy stabilization proposal of Senate bill 3125, sponsored by Senator HUMPHREY, of Minnesota, and both of our Wisconsin Senators, PROXMIRE and WILEY.

It is imperative that the present support level for dairy products be maintained until an alternative dairy program may be enacted and made effective. Our Nation cannot afford the chaos and hardship that will be felt by dairy farmers and their trading centers if we lower our present support level prior to the enactment of a long-range alternative program such as self-help programs that are before Congress for consideration.

The seriousness of the condition of our national economy has been emphasized by recent reports of the sharp increase to about 4½ million in our unemployment. This situation has become so serious that President Eisenhower recently recommended the expenditure of $2 billion for post-office modernization. Certainly there can be no justification for pulling down the level of the agricultural segment of our economy which has already been in the weakest financial position, when other steps are at the same time being taken to bolster the economy as a whole. We must take immediate steps to prevent further financial loss to the farmers supplying the most important factor in our livelihood—food.

We urgently request the earliest possible approval of Senate Joint Resolutions 149 and 150. These will provide for maintenance of farm income until you, as Members of Congress, can give consideration to sound long-range programs, some of which are before you already.

WM. C. ECKLES,
General Manager, Pure Milk Products Cooperative, Fond du Lac, Wis.

Key Religious Leaders Back Foreign Aid; Refute Charge That Economic Aid Promotes Materialism and Is Destructive of Religious Values

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following statements by outstanding religious leaders of all faiths, supporting continuation and constant improvement of our mutual-aid programs as powerful evidences of American concern for the well-being of all peoples as our brothers under God:

KEY RELIGIOUS LEADERS BACK FOREIGN AID: HOLD ITS CESSATION A SIN

"For the United States to discontinue or cripple its mutual-security program would please the Communists more than any one thing I can think of," declared Dr. Norman Vincent Peale, minister of the Marble Collegiate Church, New York, in a statement released today by the Foundation for Religious Action in the Social and Civil Order (FRASCO), of which he is a national sponsor. "Wherever I have traveled, I have found," Dr. Peale continued, "that thoughtful nationals feel American aid constitutes a serious and sincere effort to help them undergird free institutions."

This and other statements on mutual security from the standpoint of ethics and religion by leaders of four major faiths—Protestant, Catholic, Jewish, and Eastern Orthodox—were released today by FRASCO in the midst of the growing discussion which will reach a climax early next week in the White House Conference on Foreign Aspects of United States National Security. In view of recent controversy over whether foreign aid is or is not in accordance with religious principles, a number of key religious leaders have been pooled by FRASCO. Quoted below are some of the statements received in addition to the one by Dr. Peale.

A Catholic spokesman, Rev. James L. Vizzard, S. J., vice president, National Catholic Rural Life Conference, said: "All people of informed Christian conscience recognize in the mutual-security program our Nation's answer to a religious and moral imperative. Technical assistance and economic aid are the American way of fulfilling the injunction taught each in its own way by all great religions: Thou shalt love thy neighbors as thyself."

In similar vein, Rabbi Norman Gerstenfeld, minister, Washington Hebrew Congregation and a FRASCO sponsor, said: "The heart of western heritage of faith is the love of a righteous and merciful God and the love of man—because all men are the children of God. This love must express itself in acts of loving kindness, in aiding our fellow men so that they can solve the problems of poverty and disease, of slavery and tyranny. Foreign aid is not only good religion but enlightened self-interest, for the men we help will become allies in the building of a just world."

Dr. Paul S. Rees, minister of the Covenant Church, Minneapolis, Minn., and past president, National Association of Evangicals, said: "My observations abroad convince me that the discontinuance of foreign aid would be a disservice alike to our own country and to the free world. Weakness in administration should be corrected but no countenance should be given to any proposal for doing away with this arm of helpfulness in a world of need."

A second Catholic spokesman, Harry W. Flannery, president, Catholic Association for International Peace, stated: "It is my humble opinion that if the full significance of foreign aid could be brought home to the American people, they would be ashamed to realize how little of our national wealth is being devoted to its cause. We have been letting the people in underdeveloped countries believe that our interest in them is derived only from our struggle with the Soviet Union. We should give aid primarily, in accordance with our traditions, in the spirit of justice, and because we have a moral responsibility to do so."

Two Eastern Orthodox clergymen of Washington, Rev. Demetrios Kalaris and Rev. John Tavlarides, issued the following joint statement: "We Eastern Orthodox clergymen firmly believe that, in the interest of man's welfare and the manifestation of our Christian charity, special support should be given the policies of foreign aid of the United States. We believe that it is in the spirit of brotherhood under God that our country has provided for the needs of people throughout the world and not as some would have us believe, primarily because of selfish motivation or expediency."

In view of these statements, and many more that are of public record, declared Dr. Charles Wesley Lowry, chairman of FRASCO, there can be no doubt that attempts to attack economic aid as materialism and as destructive of our religion, our way of life, and the Constitution as recently charged by former diplomat Spruille Braden, find no support among American religious leaders.

"The contrary," Dr. Lowry went on, "is the case. Our economic programs abroad represent a wise combination of political enlightenment and spiritual sensitivity. In administering them it is important that mistakes be corrected and that our public servants be held accountable for their stewardship. To propose, however, to stop these programs because some mistakes have been made is to throw out the baby with the bath, with a vengeance. To do so would be the height of folly as well as a sin and a shame at this time when the atheists of the Kremlin are paying the American foreign-aid program the supreme compliment of rushing to imitate it."

FRASCO is an all-faith organization, founded in 1953, to oppose communism and all forms of totalitarianism with spiritual weapons and at the same time to mobilize Americans to strengthen the moral and religious bases of our own democracy. Its national headquarters are in Washington at the DuPont Circle Building. FRASCO's co-chairman is Dr. Edward R. Elson, minister, National Presbyterian Church. On its national advisory council are such national figures as Rev. Billy Graham, Catholic Bishop John J. Wright, Rabbi Edgar F. Magnin, Rt. Rev. H. St. George Tucker, Rt. Rev. Athenagoras, Rev. John F. Cronin, S. S., Dr. Ralph W. Sockman, Hon. Herbert Hoover, Henry Ford II, Charles Edward Wilson, and George Meany.

More Specific Aim in Education Urged

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on American education, delivered by Leonard Orlando, head of science department at the Revere High School, which appeared in the Revere Journal, Revere, Mass., on February 20, 1958:

[From the Revere (Mass.) Journal of February 20, 1958]

TEACHER TELLS PARENTS—MORE SPECIFIC AIM IN EDUCATION URGED

The aims stated for American education were called gentle, nostalgic musing of a melancholy poet by Leonard D'Orlando, head of the science department at the high school, in discussing what parents can do to help elementary pupils during a meeting February 12, of the Shurtleff School PTA.

He said that the aims expressed by the United States Office of Education as freedom, peace, and the fullest development of the individual were a stream of pretty words reflecting a sort of willing of the wisp allegorical connotation to goals.

He called for a return to the very specific goals which were to create responsible American citizenship based on self-reliance, patriotism, industry, and the ability for independent action.

"Its main concern," he said, "was to equip the individual with the knowledges and skills essential to making his own way in the world at whatever level of activity his talent permitted and with a character imbued with God-given virtues.

"The goal was clear and there was no pussyfooting about the means of reaching it. Strict discipline, self and otherwise, hard work stimulated by a burning ambition, inspiration, and concrete down-to-earth ideas about right and wrong.

WERE SPECIFIC

"Our fathers, for example, expressed their goals for freedom in terms of responsibility, a word most of us have ignored so long, we have all but forgotten its meaning. They further expressed this goal by their faith and reverence for God. They had few material comforts. They lived on the edge of want, were cold, hungry, and lonely, but they were freemen. Free to worship, to speak their minds, to criticize, and to vote for the man of their choice. They were willing to endure untold hardships for the privilege of enjoying this freedom, because they knew there was no other way to keep it.

"Can we afford to do less, and still keep our freedoms? I think not."

D'Orlando compared the statement of United States aims in education with that of Russia, which was stated after an analysis to be to train the child and youth to be an obedient, industrious, enthusiastic, and highly competent servant of the state, thoroughly prepared to perform the functions required by a state bent on stepping forward as the premier industrial and military power of the world.

"One can vehemently disagree that this should be a goal, but surely no one can accuse the Russians for lacking goals. They definitely know what they want and are certainly not wasting any time getting there," D'Orlando said.

OUTLINES PROGRAM

Outlining a program of action for parents, D'Orlando said:

"We must teach our offsprings from earliest childhood the nobility of hard, honest labor. We must make them understand that education is a painful process, a very hard job, and cannot be met by playful people in a playful way. We must at every opportunity teach them to have faith and reverence for God. For as St. Augustine once said: 'Without reference to God, there can be no purity, no stability, and no progress in anyone's life.'

"We must give our children our deep abiding love, and through it a positive sense of security which they instinctively crave. We must ourselves clearly realize that all of us live in a world of cause and effect. If failures in school is the effect, we must insist that our children know the causes which brought about these failures without passing the buck. We must hold our children strictly accountable for all their conscious acts. We must teach them to look for the tremendous spiritual satisfaction which comes to one as a result of a job well done, and to understand the twin corollary that he must not look for tawdry rewards in anything unless he's first prepared to work for such rewards as though his very life depends upon it, and well it might.

FIRM FOUNDATION

"In our anxiety to make sure that our children get a little more out of life than we ourselves were able to get, we must not overindulge them and relieve them of the fatigues essential for the attainment of real success in life. Without a firm foundation in integrity and responsibility not much of a superstructure can be expected in the stature of our growing children.

"If perchance our children should sometimes decide to become 'monsters,' we must make them know that there will be sudden and certain retribution for such conduct.

"We must not be overawed by the pet theories of crackpot psychoanalysts and thus withhold administration of just discipline when it is needed for fear that such repression may establish a long line of inhibitions.

"Sooner or later our children will have to live with all kinds of repressions and prohibitions. Civilized society is topheavy with all kinds of legal prohibitions. Our legislative bodies grind them by the ton load every year. Organized society depends for its very life on legal instituted repressions. If this were not so then there would be a snarling jungle of elemental brutish forces mutilating each other out of existence. Is that what we want for our children and for our beloved America?

"Let us remember that to be worthy parents to our children is a 24-hour job, 365 days a year. It is a task full of hazards and much travail, but if it is conscientiously done, it can well be the dawn of a very beautiful era, for ourselves, for our very precious youth and for all the distraught world everywhere."

Recital by Sidney Harth, American Violinist

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. MORTON. Mr. President, I had the opportunity last Friday night of hearing Sidney Harth, who is now the concert master of the Louisville Symphony Orchestra, give a very impressive violin performance at the Polish Embassy. He was accompanied on the piano by Robert Below, a talented young artist who is a native of Louisville.

As a Kentuckian, I was proud of the magnificant performance of these two talented artists. I am particularly grateful to the Polish Ambassador and Mrs. Spasowski for their hospitality on this occasion.

I ask unanimous consent that an article by Howard Taubman, appearing in the New York Times and discussing the event, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLES PRESENT SIDNEY HARTH, UNITED STATES VIOLINIST

(By Howard Taubman)

The Polish Embassy tonight gave Americans a lesson in the proper way to take pride in their own artists. It disclaimed any intention to make propaganda, but it could not have succeeded better if it had tried.

The Polish Ambassador, Romuald Spasowski, and his wife presented Sidney Harth, American violinist, in a recital in honor of

his second prize at the Wieniawski International Competition in Poznan, Poland, last December. Mr. Harth will repeat his program tomorrow night at the Polish Embassy.

These are paid engagements, and they are giving Mr. Harth an opportunity to be heard in the Nation's Capital before distinguished audiences. Among the invited guests were leaders in diplomatic, Government, social, and artistic circles. Rarely has an official representative of a foreign country, particularly one in the Russian bloc, paid so graceful and practical a tribute to a young American musician.

The irony of the occasion lay in the relative indifference of his own countrymen to Mr. Harth's accomplishment. Louisville, where he is concertmaster of the orchestra, is an exception. He is appreciated in the Kentucky city because in the last 4 years he has been a force for good music through his playing, conducting, and teaching.

It was Louisville, indeed, that made possible his trip to Poznan. The orchestra board contributed $500 for his traveling expenses to Poland, and the Poles provided living costs and return passage. Louisville hailed Mr. Harth on his return.

But other Americans, particularly people influential in the music business, seemed to care little. On his way back from Warsaw Mr. Harth stopped in New York. He tried to get appointments with several leading concert managers but failed.

He could recall wryly the consolatory words of David Oistrakh, world-famous Russian violinist, who had served on the Poznan jury and had himself taken second place in this contest in 1935. As far as engagements were concerned, Mr. Oistrakh had said, second prize would be as useful as first. And Polish and Belgian agencies had offered Mr. Harth a 6-month tour in Europe. But things are different in the United States, though in all fairness it should be pointed out that the managers have more gifted violinists than they can sell.

Mr. Harth showed tonight that he is exceptionaly gifted. The Cleveland-born 32-year-old violinist has a glowing personality and a sweeping style. When he plays the Wieniawski Concerto No. 2 in D minor, with which he dazzled Polish audiences, he belongs in the grand romantic tradition. His tone is big, his phrasing rhapsodic, and his freedom of interpretation irresistible. Here is a musician with imagination and individuality, who is not afraid to say something personal with the music he undertakes.

In two movements from Bach's E minor Sonata for Violin Alone, Mr. Harth played not only with technical assurance but also with a freshness of feeling that gave the music immediacy. Nardini's E minor Concerto had both brilliance and warmth; the slow movement was particularly impressive. With his wife, Teresa Testa Harth, who is assistant concertmaster of the Louisville Orchestra, Mr. Harth gave a crisp and perceptive reading of Prokofieff's bristlingly difficult Sonata for Two Violins, Op. 56.

At the Polish Embassy, Mr. Harth had a colleague from Louisville, Robert Below, as his accompanist. In Poland he had had to adapt to strangers during the preliminary rounds while the 3 Russian competitors, who finished among the top 6, had brought along their own pianists. Even so Mr. Harth missed the first prize by only 3 points out of 900, and knowing observers thought that he deserved at least a tie with the winner, Rosa Fain, of Russia.

Safety Program of the Boy Scouts of America

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 25, 1958

Mr. NEUBERGER. Mr. President, as a member of the Senate Public Roads Subcommittee, I am particularly concerned about safety. Indeed, this has been one of the main reasons why our subcommittee has sponsored the $33 billion interstate highway program, to try to eliminate accidents on the open road.

One of the best statements I have ever seen on street and highway safety has been printed in a pamphlet entitled "Safety," which is published by that outstanding organization, the Boy Scouts of America. Although many Scouts themselves are below the age when they can legally drive a motor vehicle, the Boy Scouts of America nevertheless have a direct interest in trying to save lives on the highways, because the innocent victims of so many tragic and unnecessary accidents are young people.

I think it would be beneficial for all of us if the pamphlet on street and highway safety, as taken from the 1958 edition of the "Safety" booklet of the Boy Scouts of America, were reprinted in the Appendix of the RECORD. I ask unanimous consent, Mr. President, that this be done.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

STREET AND HIGHWAY SAFETY

The motor vehicle, the car, the streets and highways it travels on—these make up our country's biggest, most serious safety problem: traffic safety. This traffic safety is your problem, your parents' problem, the problem of safety experts, everyone's problem, the year round. It is not something you can tuck in your pocket and pull out when it's convenient. It's a real, everyday problem.

We're making headway in meeting the problem. Yes, more people are killed and injured in traffic accidents today than ever before. But more people are also driving than ever before. Fewer people are killed today per mile traveled than 20 years ago. Progress is being made. But we need more progress—faster progress.

What can you do about death on the highways? Certainly you've thought about it.

We ought to make the speed limit 50 miles per hour on all highways.

You've probably heard that suggestion. It might help and it might not. Actually, driving at high speeds causes fewer accidents than failure to follow other safe practices. A better idea is for everyone to become safety conscious—the pedestrian, the cyclist, the passenger in a car, and the driver. That's where you can help. By practicing safety, by knowing and obeying the laws, you will help reduce accidents. You can help reduce accidents by learning the causes of traffic accidents, then following the practices and advice given in this chapter.

PEDESTRIAN SAFETY

Failure to obey traffic rules and regulations; people in a hurry—these are the two major causes of pedestrian accidents on our streets and highways.

In a hurry, people cross the street between intersections and against traffic signals. They walk from behind parked cars, cross intersections diagonally, play in the street, and hitch rides on vehicles.

Some pedestrians are stubborn, defiant, and show very little or no courtesy. Stand on a busy corner in your community and watch pedestrians purposely walk in front of a car making the driver slow down. See how many pedestrians cross against the traffic light figuring they can get across before an oncoming car will reach them. They obviously don't think or realize what will happen when 3,200 pounds of metal hit 165 pounds of flesh and bone. Many pedestrians don't realize how long it really takes a driver to stop a car. Cars will not stop on a dime.

Good pedestrian safety measures to practice are:

Look in all directions before crossing a street.

Obey traffic signals, crossing on green light or the walk signal.

Do not cross streets diagonally.

Stand on curb or in safety zone when waiting to cross the street.

Go directly to opposite curb—don't fool around while crossing.

Give the driver the benefit of the doubt—he may not be able to stop as soon as you think.

Play in areas away from the street—do not dash into streets.

Walk and hike on the left side of the highway or the shoulder, facing oncoming traffic.

Watch out for passing cars when walking along the highway. Stop and stand back until they pass.

White at night—wear it or carry it when walking on roads and highways.

Carry packages and umbrellas so they do not obstruct your view.

Stop, look, and listen at railroad crossings even when you think you know when trains are due.

Obey railroad signals.

Stay off railroad cars and property. Walking along railroad tracks is, according to law, trespassing.

Look where you are going and obey traffic lights when crossing a street.

Wait in safety zones or on sidewalks for buses.

Get out of all vehicles on the curb side.

After getting out of any vehicle, wait until you are sure the way is clear before crossing the street.

Do not try to hitch onto moving vehicles.

Do not insist on your right of way.

BICYCLE SAFETY

Do you ride a bike? If you do, you are a driver right now. You drive in the streets and on the highways. As a bike driver you should stop for red lights and at stop streets. You have road rules just as the motorist does. Some cyclists even have licenses. Unfortunately, they also have and cause accidents.

Some 500 cyclists are killed every year. Enough cyclists are injured every year to fill 26 1,000-bed hospitals. Twenty-five percent are killed or injured when making an improper turn. Another 17 percent of the

accidents are due to cyclists riding through red lights and stop streets. Carrying extra riders results in many accidents. About 1 out of 10 bike riders involved in accidents doesn't have the right of way. Weaving in and out of traffic causes accidents. Other causes: Defective bicycles, running into parked cars, riding abreast of other cyclists, hitching onto motor vehicles, riding against traffic, showing off, parking improperly. Like automobile drivers, some cyclists go too fast and end up in trouble.

The cyclist isn't always at fault. In fact, half the motor vehicle-bicycle accidents are caused by motorists. Drivers open car doors without looking for cyclists first. Turning without signaling, not stopping at a stop sign, and passing on the right are other bad driver habits that result in bicycle accidents. Watch for these careless practices.

Remember that as a cyclist you are a driver—a driver of a 2-wheel bike today, a driver of a 4-wheel car tomorrow. Use these cycling safety rules:

Obey all traffic laws, signs, and signals.

Ride single file, close to right-hand curb. Ride with, not against, traffic.

Ride in a straight line—don't stunt, race, or weave in and out of traffic.

Look, then signal before turning or stopping. Use motorist arm signals.

Don't carry passengers.

Give pedestrians and motor vehicles the right-of-way.

Slow down and look carefully before crossing intersections.

Walk bike across railroad crossings, streetcar tracks, and busy intersections.

Don't hitch onto cars and trucks.

Don't shoot out of blind driveways and alleys.

Be alert for other vehicles, especially for cars pulling out from curbs and driveways.

Keep your bicycle properly equipped and repaired. Ride sensibly.

Don't try to squeeze in between cars and trucks.

Ride with both hands on the handle grips.

When riding at night, have a headlight and red rear reflector. For added protection use reflective strips.

Be sure your bike has good brakes and a warning bell or horn.

Don't pass moving vehicles on hills, curves, or at intersections.

Carry packages in carirers—not in your arms.

Ride at a reasonable speed. Don't coast down hills at high speed.

Park bicycle in safe areas, out of the way of vehicles and pedestrians.

Keep bike in good mechanical condition.

Be a courteous cyclist. Respect the rights of other cyclists, of drivers, and pedestrians.

PASSENGER SAFETY

Bees or bugs in the car have caused accidents. You may have read about them. They aren't the only passengers, though, that have taken a driver's attention from the road long enough for him to pile into a pole. Some people passengers distract drivers and cause accidents, too. They do it by arguing and jumping around in the back seat. They do it by carrying on a constant conversation with the driver while in heavy traffic or on dangerous roads. And they do it by clowning around in the car.

Other passenger-caused accidents result from crowding too many into the front or rear seat; putting head and arms outside the car; standing instead of sitting.

You'll probably be a passenger in someone's car today or tomorrow. How are you going to act? What kind of safety sense do you have? Follow these safe practices:

Make sure doors are properly closed.

Sit, don't stand. Stay put.

Let the driver do the driving. Don't distract his attention with unnecessary conversation and clowning, especially in heavy traffic and on dangerous roads.

Keep head, hands, and arms inside the car.

Obey the driver.

Get out of car on the curb side.

Never ride on the outside of a motor vehicle.

While on a bus, obey rules about not touching emergency door; keep aisles free of trash and personal belongings; hold onto seat or hand support when leaving seat; use handrail when getting off bus. After getting off bus, cross road with others at proper locations; look both ways before crossing.

DRIVER SAFETY

When you take seriously what you've read so far, when you practice being a safer pedestrian, a safe passenger, a safe cyclist, you will be taking a giant step toward solving this country's biggest safety problem. Suppose everyone had the safety sense you will have when you put what you've learned into practice!

But you still have the big step to take. You have to become a safe driver. And you don't have to get behind the wheel to do this, either. You can enroll in a driver education course at school. You can learn the basic driving facts right now, right here. You can learn to recognize dangerous traffic situations now; you can learn the causes of the accidents that take 38,000 lives every year.

Accidents happen everywhere, on back roads in the country and on Main Street in the city. They happen most often on curves and hills and at intersections. Time is an accident factor. Most accidents take place between 4 p. m. and 8 p. m. The next most fatal period is between 8 p. m. and midnight, followed closely by the midnight to 4 a. m. period.

Analyze 1 accident and you'll find more than 1 cause. Driving too fast for conditions is a common cause. More than half the drivers involved in fatal accidents violate a traffic regulation at the time of the accident. Other causes: driving under the influence of alcohol, bad weather conditions, failure to give right-of-way, failure to keep to right of center line, improper passing, disregarding traffic signal.

Some drivers think that traffic regulations are unnecessary or too stiff. This and other poor attitudes cause accidents. Lack of courtesy causes accidents; lack of driving skill causes accidents; unsafe condition of the car, physical handicaps, and many other factors are involved in accidents.

Driving is a privilege. It can be taken away if you don't behave right when driving a car. When you learn to drive, practice courtesy—there is no substitute. Along with courtesy, the following safe driving practices are important:

Keep your car in good mechanical condition.

Don't drive without a driver's license or permit.

Adjust seat and rearview mirror before starting car.

Make sure street is clear before backing out driveway.

Drive on the right side of the road.

Obey traffic officers and traffic signs and signals. Stop on red, go on green, slow down and proceed with caution if light is yellow.

Drive at reasonable speeds—at or below speed limit if weather and road conditions are good, slower if they are not.

Keep in right lane if driving slow on a highway.

Stay about one car length for every 10 miles per hour of your speed behind the car in front of you.

Don't weave in and out of traffic.

Pass cars on their left, on a straightaway, not on curves or near the crest of a hill.

Don't fight others trying to pass you—let them pass.

Signal properly when you want to turn, stop, slow down, or pass.

Don't jump a red light or try to get away before the other driver.

Keep both hands on the wheel.

Observe right-of-way rules.

At night:

Use low-beam lights when meeting other cars and when following another driver.

Slow down—don't drive as fast at night as in the daytime.

Keep windshield and headlights clean.

On long trips:

Ventilate car. Fresh air is a must.

Don't drive it drowsy. Park and take a nap.

Park car off road frequently, get out and walk around.

RIGHT-OF-WAY RULES

When approaching an intersection, give right-of-way to cars in the intersection.

When two cars enter intersection at same time, car on left yields right-of-way to the car on his right.

When you are in an intersection and want to turn left, yield right-of-way to cars coming in opposite direction if they are in or close to the intersection.

Give right-of-way to pedestrians at intersections and crosswalks.

Don't insist on your right-of-way.

II: More About Reuther—A Little More Light Explaining Walter P. Reuther's Ambitions

---

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, here is a little more light explaining Walter P. Reuther's ambitions, as seen by George Todt, in the Valley Times of California, January 29, 1958:

GEORGE TODT'S OPINION—MEN JUDGED BY THEIR UTTERANCES

"Inspiration and genius—one and the same."—VICTOR HUGO.

A couple of years ago, Senator BARRY GOLDWATER of Arizona expounded on The Fallacy of Common Man at the Robert Taft memorial dinner in Boston—and it was one of the most thought-provoking addresses I have ever read.

Here is GOLDWATER at his intelligent and pro-American best. I will quote a few revealing excerpts from his speech. Hold on to it and compare it with Walter Reuther's political and social philosophy for our people when it appears tomorrow.

This brilliant effort by the young Arizonian blasts the New Deal and excoriates the common man of socialism and in it Mr. GOLDWATER asked for the return of our people to the principles of the uncommon man who made America great in the past—with emphasis upon individual liberty, responsible freedom, and enlightened capitalistic free enterprise.

Listen to Senator GOLDWATER and judge his lucidity and sanity for yourselves:

"The preachers and prophets of gloom in our country—those despairing individuals who believe that we have reached the zenith of freedom's opportunities and must now revert to an antiquated system of slavery and

regimentation—have long leaned heavily, in the name of liberalism, upon the theme of the common man.

"They have employed the tyrant's tactic of division and disunity by appealing to the lingering prejudices of a system of ranks and classes which pure freedom does not recognize. When they speak, they speak not to all Americans as Americans, but rather they set labor against management, farmer against worker, black against white, Jew against gentile, Catholic against Protestant, rich against poor.

"In other words, they classify Americans according to race, color, religion, and occupation, and they say to each group that they are the common men who are being oppressed by the privileged few. The privileged few, of course, in the eyes of the socialist-minded pseudo-liberal is anyone who has enjoyed a measure of success and prosperity that is greater than that of the particular group of which he is speaking.

"Secretary of Labor James Mitchell called attention of this tendency of the New Deal's Social Democrats to turn our people into common men in an address at Flint, Mich., on January 20, 1956, when he said: 'The keepers of this doctrine were interested not in individual men but in collective man, massed man. For them social problems were quite simple. One merely had to determine what was good for collective man and then shove it down his throat like castor oil. The Government was of the people, for the people, but by the social planners.'

"A similar view is expressed by James B. Conant in his latest book, The Citadel of Learning, where he says: 'We in the free world, through our schools, colleges, and universities, seek to perpetuate that tradition of western culture which emphasizes diversity, controversy, and tolerance.'

"So where are we to find the common man the Social Democrats are always talking about? Is he of the Anglo-Saxon, Scandinavian, Germanic, Latin, Slavic, Celtic, or the score of other races which make up our population? Is he English, Irish, Scotch, German, French, Italian, Norwegian, Swedish, Czech, Polish, or among any of the other three score and more nationalities which people the United States? Do we find that our common man is a Catholic, Methodist, Unitarian, Presbysterian, Baptist, Jew, or any of the hundreds of other religious sects which flourish among our people?

"Is he the business executive, the city or rural lawyer, the office clerk, the shop manager or foreman, the factory worker, the school principal, the teacher, the corner grocer and his wife, the chainstore manager, the garage owner or mechanic, the department store clerk, the army officer or private, the housewife, or in any of the other thousands of occupations which make up our working population? We have over 67 million employed persons in all occupations today. Where is the common man in this total?

"They show one thing above all else: That there is no such thing as a common man in the United States. Every man and woman is an individual, with talents, interests, needs, hopes, and dreams of his or her own. Each person seeks freedom to live his own life, to develop his own personality and a fair opportunity to get ahead in the game of life on his own merits.

"America is the land which urges us to hitch our wagon to a star, to plan and to build on the rich foundations of our freedom and heritage of those who came before us and provided for us, and for the generations of Americans yet to come, the opportunities we have had, as well as inspiration to move ahead to yet undiscovered frontiers in this sanctuary of freedom.

"We need—desperately need—the uncommon men of our Nation. We need the courage and unquenched spirit of adventure which inspired the freedom of these United States. We need to encourage in all Americans the qualities which guided Bob Taft—Senator, statesman, and uncommon American."

This, then is the American Senator whom Moscow-trained Walter Reuther has labeled the country's No. 1 political fanatic, the No. 1 peddler of class hatred and has ranted that he is mentally unbalanced—he needs a psychiatrist, he needs help.

Tomorrow we will compare Senator GOLDWATER's ideology with Mr. Reuther's. Shall we all take a good look for ourselves at that time?

The Milwaukee Public Library Shows the Way to Public Understanding and Entertainment

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. WILEY. Mr. President, yesterday I placed in the RECORD a resolution of the American Library Association pointing up the continuing need for library service in rural areas.

Offhand, some persons, especially those who live in our largest cities, might not realize—because they have taken it for granted—just how important library service is.

The fact is, however, that the American public library represents one of the great cornerstones of the American free way of life.

The libraries accessible to almost every one of us—for example, the library right here in the Senate, the public libraries of the District of Columbia, the libraries in schools and colleges, the libraries of trade associations and scientific groups, and the libraries of myriads of other organizations—represent part and parcel of the American heritage.

Learning is available to all. Library books in the United States are not locked up, as in some Old World countries. Here, they are right on the open shelves, where the seeker of truth, aged 6 to 60 or beyond, can find his own answers, according to his interests, his desires, his curiosity, and his tastes.

So, too, we want the same service to be expanded in the rural areas, where far too many millions of Americans are still denied access to this great repository of man's experience.

I was reminded of these facts when I glanced through one of the recent splendid bulletins issued by the Milwaukee Public Library. On the four pages of this bulletin are shown a cross-section of what a forward-thinking, civic-minded library system can do for an entire community.

On page 1 is a bibliography in connection with last week's celebration of National Brotherhood Week. On page 2 is a list of civic events in greater Milwaukee. On page 3 is a list of library, radio, and TV programs. On page 4 is a continuation of references to the noble concept of brotherhood.

This is a sample illustration, therefore, of the diverse contributions of library systems in serving actively as spearheads of civic enlightenment and entertainment. I may say "incidentally" that smaller communities may not be able to afford this particular type of broad bulletin service, but I know there are likewise literally scores of Wisconsin communities where libraries staffed by dedicated public servants do perfectly wonderful jobs with modest financial resources.

I send to the desk the text of this bulletin, and I ask unanimous consent that the sample Milwaukee Reader may be printed in the Appendix of the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

BROTHERHOOD OR EXTINCTION

(By Paul Gratke)

The 25th call to brotherhood has been issued by the National Conference of Christians and Jews. The call is to men of good will everywhere to work together for understanding and peace among men. The call is also to men whose prejudice, intolerance and hatred have blocked them from working and living in equality and justice with men of other religions, color or political point of view.

The question of brotherhood involves governments, business and education but its implications to the individual man, the citizen—in his relationships neighbor to neighbor, worker to worker, student to student—are of immediate concern in Brotherhood Week scheduled for February 16–23, 1958.

In helping people to prepare for this launching of a new year for brotherhood, the Wisconsin office of the National Council of Christians and Jews has issued a list of big ideas which—when men grow to recognize them and live according to their implications—can make life happier and more secure for all.

1. America is a land of many peoples, a country pledged to opportunity for all. When we deny any citizen his basic rights in employment, education, health care, recreation or housing we deny and betray the American dream.

2. Differences of national origin, status in life, religious conviction, color of skin or place of residence do not imply either inferiority or superiority of any person. Science finds no evidence that any racial group is biologically, intellectually, emotionally or morally inferior or superior. Differences which exist are the result of differences in opportunity.

3. In our world, where two-thirds of the human family are colored, the white minority can not expect to continue to dominate. Therefore, mutual understanding, respect, and cooperation are essential for survival.

4. No human is born with prejudices, but most of us learn at an early age the prejudices of those around us.

5. Today's rapid population shifts require development of better human relations, skills by all persons, especially those of intergroup understanding, cooperation and friendliness across racial and religious lines.

The recent warning by Adlai Stevenson that civilization faces brotherhood or extinction, which gave us the title of this article, has also been recognized by the authors whose books and pamphlets are listed:

Forbidden Neighbors, a study of prejudice in housing by Charles Abrams; the rise and spread of prejudice in housing in the United States with suggestions for a program of government and citizen action.

Man's Most Dangerous Myth by Ashley-Montague; shows the falsities upon which the myth of race is founded.

Books Are Bridges, American Friends Service Committee pamphlet; a list of books recommended for children.

Human Relations: Concepts and cases in concrete social science, by Hugh Cabot; 33 case studies including a hospital, a fraternity, and a family. Intended to give a foundation for group discussion.

Blessings of Liberty, by Zechariah Chaffee; analysis of fundamental personal liberties in our America for the past 40 years.

A Manual of Intergroup Relations, by John P. Dean and Alex Rosen; outlines techniques which produce changes in the status quo of majority-minority relations.

The 14th Amendment and Civil Liberty, by Richard A. Edwards, Carrie Chapman Catt Memorial Fund, Inc. Pamphlet; a brief survey of some aspects of the 14th amendment, protection of civil liberty with emphasis on the relationship between the 14th amendment and the Bill of Rights.

Race and Nationality in American Life, by Oscar Handlin; traces the origin of prejudice, and reveals some of the problems in correcting bias seated in historical inaccuracies.

People Come First; a youth guide to human rights in the community youth advisory board, Governor's Commission on Human Rights, Madison, pamphlet; a plan for human rights at home, in the school, church, club, and neighborhood.

Groups in Harmony and Tension, by Muzafer Sherif; by means of historical events and social psychological studies the author studies relationships both within and between groups. The influence which brings about harmony or tension in these settings is identified.

Racial and Cultural Minorities, by George Simpson; the causes and consequences of tensions between groups in the social structure.

Hundred Desires, by Eleanor Estes; a simple story which has become a classic in the children's literature of human understanding.

One God, by Florence Fitch; a description of three ways of worship, both objective and reverent, for children's understanding.

People Are Important, by Eva (Knox) Evans; differences and the reasons for them in this interesting and informal presentation for young people.

WHAT'S GOING ON IN MILWAUKEE

(Week of Monday, February 3, through Sunday, February 9, 1958)

Monday, February 3: Mental Attitudes in a Frightened World; Dr. Ralph Sockman (Town Hall of Milwaukee) Milwaukee Vocational School Auditorium, 8 p. m. No admission charge.

Chicago Symphony Orchestra concert, Carlo Maria Giulini, conductor, Pabst Theatre, 8:15 p. m.

George Axelrod's, Will Success Spoil Rock Hunter starring Ann Corio (Drama, Inc.) Fred Miller Theater, 8:30 p. m. Matinees Wednesday and Saturday, 2 p. m. (through Saturday, February 22).

Exhibit of Charivari Prints, by Honore Daumier (through February) Fioretti Studios, Alverno College. No admission charge.

Tuesday, February 4: Discussion groups; world politics, Llewellyn Neighborhood Library; American Democracy, Central Library; American foreign policy, Charles Allis Art Library (first of 10 consecutive meetings), 7:30–9:30 p. m. Registration fee.

Inter-personal Relations in Marriage; Dr. Ervin Teplin, lecturer (young adult institute and young adult group) Jewish Community Center, 8 p. m. No admission charge.

Baroque Music, Jack Wilson, lecturer (MacDowell Club) Merrill Hall, Milwaukee-Downer College, 8:15 p. m. No admission charge.

Wednesday, February 5: Madison String Sinfonia, Mount Mary College, 10:30 a. m. No admission charge.

Discussion groups; world politics, Nicolet High School and Finney Neighborhood Library; American foreign policy, Wauwatosa Adult School and Shorewood Opportunity School (first of 10 consecutive meetings), 7:30–9:30 p. m. Registration fee.

John L. Diedrich, World Wide High Lights (Museum Lecture Series) Milwaukee Public Museum Lecture Hall, 8 p. m. No admission charge.

11:30 a. m. WISN–TV (12): The Woman's Way, with Jane Doud; spotlighting the Central Youth Library with Miss Norma Rathbun, coordinator of youth services.

Thursday, February 6:

Discussion groups Russian foreign policy (first of 10 consecutive meetings) Central Library, 7:30–9:30 p. m. Registration fee.

6 p. m. WMVS–TV (10): Let's Talk It Over, with Nolan Neds and a panel of teen-agers discussing How Important Do You Consider Grades?

Friday, February 7:

Aubusson Tapestries, Two Worlds of France and Playgrounds of France (film program), Charles Allis Art Library 8 p. m. No admission charge.

All the King's Men, with Broderick Crawford, Joanne Dru and John Ireland (Museum Films of Contemporary America) Milwaukee Public Museum Lecture Hall 8 p. m. No admission charge.

Opening of the Ralston Crawford Exhibition (through March 9) Ralson Crawford, speaker. Milwaukee Art Center 8:30 p. m. No admission charge.

Booth Tarkington's Seventeen, Marquette Players Teatro Maria, 1210 W. Michigan St. (same time Saturday and Sunday and the following weekend), 8:15 p. m.

1 p. m. WTMJ–TV (4): Woman's World, with Beulah Donohue. Out of the Sea and Sky during the IGY Library Guests, Julien Pontier, and Lawrence Medley, Central Library.

LIBRARY, RADIO AND TV PROGRAMS

Saturday, February 8:

Young Tom Edison (museum young people's film program) Milwaukee Public Museum Lecture Hall, 10:30 a. m. and 2 p. m. No admission charge.

Little Lee Bobo (North Shore Children's Theater) Shorewood Auditorium, 2 p. m.

Robert Davis, Sicily, Island of the Sun (museum lecture series) Milwaukee Vocational School Auditorium, 3:30 and 8 p. m. (same time on Sunday). No admission charge.

Jose Greco and his company of Spanish dancers, Pabst Theater, 8:15 p. m.

8:45 a. m., WTMJ–TV (4), Your Library Story, Blue Nose. Storyteller, Janet Eggum, Finney Neighborhood Library.

10:30 a. m., WXIX–TV (19), Billy's Quiz, with Billy the Bookworm and Mrs. Alice Krahn; panel members from the Shorewood Public Library.

11:05 a. m., WTMJ, Young Moderns and Authors Talk Books; guest, Marie Mudra discussing her book Look Beyond Tomorrow.

11:30 a. m., WTMJ, What's New, with Esther Hotton highlighting the library's calendar of events.

3:30 p. m., WTMJ–TV (4), Young Moderns Talk Books; guest, Mrs. Victor Hamm discussing Robert Taliant's Evangeline and the Acadians.

Sunday, February 9:

Eric Pavel, Argentine Smiles Again (Shorewood travel and adventure series), Shorewood Auditorium, 3 p. m.

La Verne Gertrude Scheffler, soprano (youth in music concert series), Wisconsin College of Music Concert Hall, 4 p. m.

St. John's University Men's Chorus of Collegeville, Minn. (Cardijn Center), Alverno College, 8 p. m.

Music lecture, Philip Aaron and his quartet (young adult department), Jewish Community Center, 8 p. m.

3:30 p. m., WITI–TV (6): An Open Book, with Gene Halboth and readers reviewing the life and works of Guy de Maupassant.

4:30 p. m., WITI–TV (6): Public Conference, the President's Economic Report; guests, Roderick Riley, Ralph Ellis, Prof. Robert J. Barr, prof. Donald Schwartz; library discussion leader, Peter J. McCormick; moderator, Bruce Kanitz.

CONTINUING EVENTS

Exhibits:

Museum Artists at Work (Milwaukee Public Museum), Charles Allis Art Library (through February).

Printing in Milwaukee (Graphic Arts and Advertising Guild of Milwaukee), second floor, Central Library (through Saturday, February 15).

Israel: Contemporary Paintings, Jewish Community Center of Milwaukee (through February 23).

Modern Design in Printed Textiles (lent by the Scalamondre Museum, New York), Milwaukee-Downer College (through February).

Paintings and drawings by Jean Pichotta Gross, Marian Studio, Mount Mary College (through February 14).

Foreign Aid and Reciprocal Trade

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mrs. KEE. Mr. Speaker, two of the most controversial issues which Congress will face this session are now before the House. They are: First, a proposed $4 billion foreign-aid program; and second, the Reciprocal Trade Agreements Act.

The debate on these two issues will be long and at times bitter. There is renewed determination on the part of an increasing number of House Members to force changes in the tariff-cutting reciprocal trade-agreements program to insure adequate protection for domestic industries. West Virginia people know from bitter experience what unfair competition from imports means. Other sections of the country are now experiencing the same economic hardship as a result of the program and Representatives from these areas can be expected to join the fight.

The foreign-aid issue was put before the House in a message from President Eisenhower. The arguments he used could well have been lifted word for word from messages on the same subject sent to Congress by former President Truman 10 years ago. Essentially, they are the same scare words, threats of defections by our friends if we do not continue aid on a massive scale and of a larger draft.

It is obvious, from talking with other Members of the Congress, that something more than rehashed arguments were expected. We have heard a great deal of talk from administration sources about a new look in the aid program. The truth is we are asked to approve the same old program.

It is safe to say that the House is going to take a long, hard look at the President's request. The administration's reluctance to take positive action to alleviate conditions of chronic unemployment in a growing number of sections or to act in a bold manner to reverse the current downward drift in the economy only serve to emphasize the size of the request for assistance overseas.

Many Congressmen are asking this question: "If it is wise and desirable to help other countries build sound economies, why is it not just as important to enable all sections to participate in prosperity at home?" These Members are not necessarily opposed to foreign aid. They are, however, determined that in times of mounting unemployment and economic recession more attention be paid to domestic problems.

This is not an unreasonable request. I am sure this point will be brought home to the administration in a most forceful manner before the debate on foreign aid is over.

It was only 2 years ago that President Eisenhower and Secretary Dulles assured Congress that the time had arrived to cut back on foreign aid and to work toward its gradual elimination. Now they are saying just the opposite. They want Congress to increase the appropriation and to spread our commitments even wider.

The President's economic-aid message poses many serious and grave questions. Before I try to answer them, I want to hear what Mr. Dulles and other administration witnesses have to say to the House Foreign Affairs Committee and to study all other testimony before reaching any definite decision.

A Synchronized Three-Point Farm Plan

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. LECOMPTE. Mr. Speaker, considerable is being said about the farm problem, and I think it must be agreed that with all the efforts in Congress we have not as yet found a permanent satisfactory solution of the problem that seems to be present with every administration.

A successful and industrious young farmer in Iowa, Mr. Hollis Haskell, of Seymour, has given a great deal of thought to the subject and has worked out what would seem to me a plan that would have elements of success in it. The essential provision of his plan would be for the payment by the Government of support prices or soil-bank payments in kind; that is, paying a corn farmer for taking land out of production in corn at the current market price.

Mr. Speaker, I submit a brief statement from Mr. Haskell for the benefit of my colleagues who are eager to do what should be done with respect to this ever-present problem:

A SYNCHRONIZED THREE-POINT FARM PLAN

Every farm should have a soil map made in cooperation with the Soil Conservation Office and have a 5-year rotation crop plan. The corn base for each farm would be established from this plan.

From the production ability of the farm and the farmer, with the cooperation of the ASC personnel, the rate of rental per acre for the land put into the soil bank would be established.

No. 1: If the farmer wishes, he should be allowed to put all his corn base or any part of it into the soil bank and draw rental per acre which has been established for his farm, to the value of the number of acres put into the soil bank, the pay to be in money or corn from the sealed-stock supply. The cost of the corn should be market price at his local elevator at the time he receives the corn.

No. 2: If the farmer wishes he should be allowed to put all his corn base into corn or grain sorghum, harvest it for grain, and seal it to the Government at an average cost of production plus a reasonable profit figure.

In addition, he should be allowed to grow grain sorghum for farm use specifically for fodder or ensilage.

No. 3: The farmer who is at an age of retirement and wishes to do so, should be permitted to rent the whole of his farm to the Government (this also could be applied to all other phases of agriculture such as the cotton, wheat, and tobacco farms, etc.) at a nominal price so that he can pay taxes, other upkeep, mowing weeds, etc. Or, if he has his land rented, it could fall in the No. 1 or No. 2 categories.

Four Chaplains

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. RODINO. Mr. Speaker, the editorial which appeared in the Jersey Journal, Tuesday, February 18, 1958, entitled "The Four Chaplains," comments on my resolution (H. R. 5089), which would award posthumously the Congressional Medal of Honor to the four chaplains.

I believe it significant that the editor in describing the heroic act of the four chaplains indicates that it would be a perfect climax to Brotherhood Week if Congress would enact this legislation. For the act of the four chaplains in giving up their lives was, in the highest sense, an act of brotherhood. I might also point out, Mr. Speaker, that the American Legion legislative department of New Jersey in its statement to the New Jersey congressional delegation on Tuesday, February 18, 1958, recommended legislative proposals for the consideration of Congress, among which was the adoption of legislation awarding the Congressional Medal of Honor to the four chaplains.

Under leave to extend my remarks, I include the editorial on the four chaplains:

THE FOUR CHAPLAINS

It would be a perfect climax to Brotherhood Week if Congress could find a way to award the Medal of Honor posthumously to the 4 chaplains who gave their lives 15 years ago so that 4 doomed soldiers might have a chance to live.

Two Protestant ministers, the Reverend George L. Fox and the Reverend Clark V. Poling, Rabbi Alexander D. Goode, and a Jesuit, the Reverend John P. Washington, gave their life preservers to four soldiers as a torpedoed transport sank. Then the chaplains clasped arms and prayed together until they were engulfed.

Because of a narrow interpretation of the conditions for awarding the Medal of Honor, they were passed over. It is given only for heroism in action and someone decided they were not in action. Just how much more a chaplain could be in action in the face of the enemy, is unclear. West Hudson's Representative PETER W. RODINO, JR., has introduced legislation to loose this narrow view.

The clear courage of their faith and the tremendous example of sacrificing themselves for their fellow man for the love of God, shine so beautifully in their noble act that a Medal of Honor can add nothing to its grandeur.

Awarding them the medal only would acknowledge our Nation recognizes it can learn from their example—learn a lesson it is striving so hard to teach itself by word and slogan this Brotherhood Week—a lesson they taught with their lives.

Lynn, Mass., Clergy Ask for Recognition of Deeper Meaning of Brotherhood

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am most happy to include messages from three faiths which appeared in the Daily Evening Item, Lynn, Mass., on February 19, 1958:

MESSAGES FROM THREE FAITHS—LYNN CLERGY ASK FOR RECOGNITION OF DEEPER MEANING OF BROTHERHOOD—REV. RICHARD A. WOLFF, REV. JOHN W. LYNCH, AND RABBI HARBURG DRAW LESSONS FROM OBSERVANCE

The Daily Evening Item tonight publishes three messages on brotherhood prepared by Lynn clergymen of three different faiths.

February is Brotherhood Month, observed throughout the United States, and this is Brotherhood Week. Mayor Thomas P. Costin, Jr., in a formal proclamation, has asked for a general recognition of the occasion by Lynn citizens.

The three messages which follow will give readers material for meditation on the significance of the observance.

(By Rev. Richard A. Wolff, pastor, Central Congregational (United Church of Christ))

Text, Isaiah 59: 2: "But your iniquities have separated between you and God."

Americans are famous bridgebuilders. We have spanned great rivers, built high trestles and superhighways that cross each other. We have not been so successful in bridging the gaps between nations, racial and religious groups.

In these areas, there are great gulfs which still need to be bridged. Why haven't we been successful? For the same reason that we have not been able to bridge the gap between God and ourselves.

Isaiah said that "your iniquities have separated between you and God." Yes, the iniquities of man—pride, selfishness, fear, ignorance, prejudice, and hatred—have separated us from God. When these barriers are bridged over, man comes close to God and when these barriers are bridged over, man can come close to his fellow men. It is precisely these same barriers that have separated us from other nations, races, and religions. Let us then bridge the gap between ourselves and God and become bridgebuilders for humanity. Thus, we shall build real brotherhood among men of all types and conditions.

In this Brotherhood Week, there is nothing more creative that we could do for the welfare of all humanity than to become bridgebuilders in the field of human relations.

1. Let us become bridgebuilders between nations. How we need to learn this art now when nations are divided by fear, suspicion, and military rivalry. The chief barriers to international cooperation are national pride, national self-righteousness, and a feeling of national superiority. World brotherhood must begin with the conviction that God is the Lord God and Ruler of all nations and He is the Creator and Father of all people. If we believe this is true, then we can believe that all men are equal and we can work together as brothers.

2. Let us become bridgebuilders among races. Just as God is the Creator and Father of all national groups, so He is the Creator and Father of all races. The yellow, white, black, and red are all equal in the eyes of God. The great sin of America is the sin of racial pride, the feeling of racial superiority which says that the particular race to which we belong is superior and, therefore, by implication, all other races are inferior. To believe in the fatherhood of God is to believe in the brotherhood of man. Yes, the brotherhood of the white man and the black man in the South, in the North, in this Commonwealth, in this city, and on our street. To bridge the gap between races is to lay the only real spiritual basis for democracy.

3. Let us become bridgebuilders, not only between nations and races, but also between religions. At this point, there is always the danger of being bigoted on the one hand or superficially tolerant on the other. In bridging this gap, let us not fall into either error. To say that one man's religion is as good as another's is false, for the test of man's religion is his character. "By their fruits ye shall know them." We know that there is a vast difference in the characters of men. To say that it makes no difference what a man believes is also a falsehood, for one's beliefs are the basis of his character, are the sources out of which character issues. We can, however, say that each man is entitled to the right of private judgment. This does not mean that all private judgment is right but it does mean that, if a man uses his best conscience and highest intelligence interpreting the word of God, his religious convictions are to be respected, whether they coincide with ours or not. Religion is a search for the truth. If a man is sincerely and openmindedly searching for the truth, then he is a religious man. We need to remove the barriers between ourselves and God ("But your iniquities have separated between you and God") that we might remove the barriers between ourselves and our fellow men. Thus, we can become champions of brotherhood between ourselves and our fellow men. Thus, we can become champions of brotherhood and good will, and become good bridgebuilders between nations, races, and religions. It is our unity under God which is the basis of all other unity.

(By Israel Harburg, rabbi emeritus, Temple Beth El)

Lincoln's birthday is observed annually throughout the country as a holiday which symbolizes the spirit of brotherhood. This theme of brotherhood, which is voiced all through the month of February, represents America at its best. The genius of democracy made it possible for the United States to become a Nation of many people, of various racial and geographic backgrounds. This theme of Brotherhood Month, though inherently American, is now understood and appreciated by freedom-loving people everywhere.

Millions of people, the world over, are now tired of the many years of hostilities; they are earnestly hoping and praying for an era of renewed world peace. Despite the clashes and the confusion of our day people are becoming aware of the fact that there is one world brotherhood and that the Creator of the Universe is the Father of us all. It is all so simple, yet it is not as simple as it sounds.

WILSON'S DREAM

Four decades ago Woodrow Wilson expressed his belief in the eventual formation of one world, composed of free nations, working side by side, conscious of a common destiny. Today these hopes sound more utopian than they did 40 years ago. At that time the Wilsonian ideals reflected the aspirations of many people who did visualize the possibility of just such a world, a world of mutual respect and of mutual trust.

Today, unfortunately, this whole theme sounds to many of us like a voice from another world. Day in and day out we hear of the aggressive despots of the Far East, of the intrigues in the Near East, of the depraved people behind the Iron Curtain and of the unreliability of some of our allies in Europe.

However difficult a cycle we go through in world affairs there is one thing we must guard ourselves against, if we want to retain our faith in the brotherhood of man. We must guard ourselves against the prevailing tendency to bestialize in our own mind the people of countries whove governments may not be in accord with ours at the moment. History has shown, time and again, that hostility and bigotry against one country or one race can soon be diverted to another and another. As soon as we dehumanize in our own minds groups of people abroad we can readily learn to become inhuman to neighbors at home. We have to learn to understand that prejudice is wrong, not because it is unkind or unfair, but because it eventually brings with it spiritual and national decline.

UNIVERSAL OUTLOOK

Students of American history are in accord that our most vigorous men of thought, including Abraham Lincoln, were those of universal outlook in the truest sense of the word. To be sure they all loved their country and their people and cherished the American way of life; but they were at the same time free from bigotry at home and from prejudice abroad.

One dares say that by and large the peoples represented in the United Nations, if only given a chance would cast their lot with those of us who seek world cooperation and world brotherhood. However, we should not delude ourselves in thinking that the United Nations Organization, or any other body, can effect and maintain world harmony while we sit back and enjoy our favorite prejudices. Moreover, this work of brotherhood cannot be accomplished merely through good-will activities. If it had been that easy we would have had world brotherhood a long time ago.

It is no simple task to undo the mental and spiritual ravishes wrought about by wars, by civil unrest and by race exterminations. To denounce the evil of prejudice is not enough. The first thing we have to do is to eradicate it in ourselves. That is very difficult. If we are at all candid we will confess that none of us are together free from bigotry. In the words of the poet, each and every one of us should say to himself: "What I have to do is to see, at any rate, that I do not lend myself to the wrong which I condemn."

(By Rev. John W. Lynch, Catholic chaplain, Lynn Hospital)

It is a lamentable situation that in a century wherein such astounding scientific progress has been made that the understanding and assimilation of the true values of life are so sadly ignored, or at least relegated to the status of the irrelevant. This erroneous evaluation of the purposiveness of life reflects itself in man's mutual association with his neighbor as an individual member of society and among nations as collective social entities whose reciprocal relations are in a sorry state in our time.

In a feverish desire to advance the transitory and ephemeral values and thus admittedly to elevate the standard of living of contemporary society, the modern attitude renders mere lipservice to the basic unchangeable fact that the destinies of man, his origin, his conservation in existence during his early pilgrimage, and his status in eternity, are in the hands of a worshipfully wise and infinitely intelligent Artificer.

NOT MERE BALM

There is an annual announcement to the effect that among books, the Holy Bible is the world's best seller. Yet, I fear, that in an era dedicated to the glorification of the effects of man's quest for an earthly paradise, the sacred Scriptures constitute a mere tranquilizer or soporific for the mind frenzied with unsatisfactory reactions and anxious disquietude after each plateau of advancing discovery has been explored and conquered.

The modern man must once for all time realize that the word of truth of an unchangeable and absolutely perfect deity furnishes not merely balm for tired minds, but a divinely inspired textbook on the purpose of existence of the one creature the wisdom of God saw fit, as the Scriptures relate, to receive dominion over all subordinate creation. For it was such a lofty prerogative that was vested in man alone. It was man and only man that was fashioned by the eternal plan of God to His own personal image.

The inspired author of Genesis relates that God completed all that He created in 6 days. As to the actual duration of these days of creation we are uncertain. Suffice it to say, the Scriptures are silent. The point is that on the seventh day "God ended His work which He had made and He rested on the seventh day from all that he had done." Modern man must emulate the Divine example of His Lavish Benefactor and turn the pearl of great price, the jewel of his very being, his intellect, to the true purpose of his existence.

Little wonder in mid-20th century world affairs, that the day of the Lord, the day for spiritual inventory, is occupied all too frequently with the extension of worldly pursuits or merely the soothing of the scars encountered in the perpetual conflict with passing problems.

ALL MEN EQUAL

The basis of man's enmity and antagonism toward his fellow man is rooted in his personal pride. But the sacred Scriptures tell us that God has molded man to His own

image and likeliness and that in the mind of God all men are equal. The antidote to pride is humility. Modern man, however, eschews humility and erroneously scorns it as weakness and indecision. The solution to the problem is not difficult; it is man who has made it appear so. Each one must sear into his soul a deep understanding and a dynamic desire to make his own the practice of the law as the Lord God expressed it, when He made answer to the learned doctor's query to simplify the law of God. The Scriptures relate "Thou shalt love the Lord thy God with thy whole heart, with thy whole soul and thy whole mind. This is the greatest and the first commandment, and the second is like to this, thou shalt love they neighbor as thyself."

Love has only one true definition and that is, speaking simply, to give. The command (and there is something final about that word) is to love God and similarly to love the crown of God's visible creation, our neighbor, or our brother. Who is our neighbor or our brother? Our neighbor or our brother is every other being fashioned by God in a manner like to our own.

CLEAR COMMAND

Thus the essence of brotherhood is deeply rooted in the cryptic and clear command of God to love Him and because of the infinite stamp of likeness to God in each man, to evidence similar sentiments to the universality of mankind for that very reason. May the understanding we have reached of true brotherhood derive its motivation from the irrefutable and inspired textbook of the Lord God according to these words found therein, "Let us therefore love God because God has first loved us. If any man say I love God and hateth his brother, he is a liar. For he who loveth not his brother whom he seeth, how can he love God whom he seeth not. And this is the commandment we have from God that he who loveth God loveth his brother."

Let each individual apply this antidote by a firm and determined recalling of God's fundamental law, so clearly enunciated in the great commandments of love. Love of God for His unspeakable excellence and love of our brother, who is everyone other than ourself, for "He Who Is" has so commanded us.

The divine blueprint of brotherhood is clear and lucid, the individual interpretations of men have been miserably inaccurate. May we look again and look long with an elevated mind and interpret this blueprint more faithfully.

A Miracle if Congressmen Start Policing Themselves

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. PELLY. Mr. Speaker, under unanimous consent I include an ediorial which appeared in the February 19, 1958, Bremerton Sun and which speaks for itself:

THE RIGHT IDEA, BUT—

There isn't a thing wrong with Congressman TOM PELLY's bill for disclosure of income by Members of Congress and Government officials paid more than $10,000—except one thing. It will be a miracle if the Congress adopts it.

It should. The Bainbridge Island Congressman makes much sense with it. It is a very simple bill. It says that the income of all those officials be made public, not only as to amounts to money received but from what sources.

That bill, if adopted, would fry a lot of folderol and without the necessity for a lengthy mass of congressional investigations with their contradictory statements by chest-thumping politicians who protest too much.

PELLY's bill simply would require every big inhabitant of the Federal goldfish bowl to state his income and its source. The voters would do the rest. It isn't difficult to imagine what would happen to a Congressman who voted to give the natural-gas boys higher rates if the Congressman's income statement showed a fat contribution from those gas gentlemen.

As PELLY said in presenting his bill, "The rules have been conspicuous by their absence" in the case of a high standard of conduct for officials and particularly for Congressmen.

That's the trouble. It will be surprising if Congressmen suddenly decide to start policing themselves.

Manila Found the Answer

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. GATHINGS. Mr. Speaker, it is with distinct pleasure that I look forward to receiving in my mail copies of the newspapers published in the First Congressional District of Arkansas, for these newspapers carry the news of a continuation of industrial development and balance of economy that will bring more employment to the people of Arkansas and assist them in combating the low level of economy imposed by falling farm prices. The February 21 issue of the Crittenden County Times, published at West Memphis, Ark., was of special interest—for it carried on its editorial pages an excellent statement of the industrial growth of the city of Manila, Ark., outlining how the fine citizens of that community joined together to bring to their area an excellent new industry.

On the front pages of the Crittenden County News of that same date the headline reads, "Dover Will Locate Plant Here." The article concerns the location of the Dover Elevator Accessories Division plant in West Memphis, to occupy an 8,000-square foot industrial building for the manufacture of elevator passenger cabs and accessories—the first industry of its kind to locate in the Mid-south area.

This is an indication of the rapid development of industrialization in the Arkansas delta area, and its is a pleasure to include with these remarks the editorial which appeared in the News as an indication of the manner in which Arkansas citizens are working together to improve their economy:

MANILA FOUND THE ANSWER

West Memphians and other Arkansans can find a perfect example of the power of community effort in the little northeast Arkansas city of Manila.

Last winter, Manila's citizens rolled up their sleeves, worked together, and got themselves an industry. The story of how they landed a plant by using the old smalltown barn-raising spirit is told in the current Arkansas Industrial Development Commission advertisement being run by newspapers in the State as a public service.

A manufacturer of womens' sportswear, Stanley Manufacturing Co., was interested in Manila. But in order to land the plant, Manila had to have a building for the plant. There was a vacant building that was basically what the Stanley people needed. It had once been an old auction barn and at another time a skating rink. And it needed a lot of work before it could be used as a plant.

Manila didn't have the money to have the necessary work done on the building, so the people decided to pitch in and do it themselves. Doctors, lawyers, farmers, electricians, ministers, merchants, everybody worked. The ladies wanted to help, too, so they kept the workers supplied with hot coffee and food. Almost overnight, the old building had been transformed into a suitable plant for Stanley.

There was still a need for financial help to cover taxes, insurance, and interest on the building. To cover this, 40 men pledged to pay $5 per month for 5 years. Part of this money was also used to buy whatever materials weren't donated.

And on January 21, a proud Manila turned the keys to the plant over to the Stanley people. It was a plant that hard work and community cooperation had built—a plant that would provide employment for 100 people in the area.

Some small towns continually ask, "What chance do small towns have? What can we do?"

The answer can be found in Manila.

Protest Drop in Dairy Price Supports

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. KNUTSON. Mr. Speaker, under unanimous consent, I insert in the RECORD protests of two groups of spokesmen for farming and industry in my district, the Beltrami County Board of Commissioners and the Blackduck Civic and Commerce Association. These are the people who have to "live with" the administration's farm policies:

Resolution requesting corrective legislation to maintain present price supports on dairy products

Commissioner Martin offered the following resolution and moved its adoption:

"Whereas the United States Commissioner of Agriculture advocates the lowering of price supports on dairy products from 82 percent to 75 percent, which is the basic minimum; and

"Whereas Beltrami County, Minn., is one of the counties in this area that derives much of its income through the dairy industry; and

"Whereas the lowering of the dairy price supports will affect the family farmers throughout the area: Therefore be it

"*Resolved*, That the County Board of Commissioners of Beltrami County urge corrective legislation be enacted to maintain the present price supports on dairy products; be it further

"*Resolved*, That copies of this resolution be sent to United States Senator EDWARD J. THYE and to United States Senator HUBERT H. HUMPHREY and also to our Representatives in Congress."

The foregoing resolution was seconded by Commissioner Pool and, upon being put to vote, was unanimously carried.

STATE OF MINNESOTA,
County of Beltrami, ss:

I, A. D. Johnson, county auditor of Beltrami County, Minn., do hereby certify that the foregoing is a true and correct copy of a resolution adopted by the Beltrami County Board of Commissioners at their annual meeting January 8, 1958.

Witness my hand and official seal this 10th day of January 1958.

A. D. JOHNSON,
County Auditor, Beltrami County.

BLACKDUCK CIVIC & COMMERCE ASSOCIATION,
Blackduck, Minn.

"Whereas the dairy industry is one of the major industries in the Blackduck area and in Minnesota; and

"Whereas the Commissioner of Agriculture advocates the lowering of price supports on dairy products from 82 to 75 percent which is the basic minimum; and

"Whereas the economic effect on the Blackduck area would mean the loss of approximately $29,000 per year income to the farmers and business places on main street; and

"Whereas the family farmers were in drastic need of financial aid prior to the lowering of dairy price supports: Be it

"*Resolved*, That the Blackduck Civic & Commerce Association urge corrective legislation be enacted to at least maintain the 82-percent support for dairy products; be it further

"*Resolved*, That copies of this resolution be sent to United States Senator EDWARD J. THYE, United States Senator HUBERT H. HUMPHREY, and our Representatives in Congress and other interested."

The above resolution was presented by the agriculture committee of the Blackduck Civic & Commerce Association and, upon being put to vote, was unanimously carried.

Dated in Blackduck, Minn., January 6, 1958.

PRESTON H. ANDERSON,
Secretary.

Attest:

C. GULSETH,
President.

Senator Byrd and Staff Will Continue To Serve

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. HARRISON of Virginia. Mr. Speaker, the citizens of the Commonwealth of Virginia, and those throughout the United States who share his convictions as to the guiding principles of sound government, were cheered today by the announcement of Senator HARRY F. BYRD that he had bowed to insistent pleas and, with the acquiescence of Mrs. Byrd, had decided to stand for reelection.

While respecting the strong personal considerations which had prompted his original decision to retire from public life, Senator BYRD's admirers had hoped he would find it possible to continue his outstanding service to Virginia and the Nation.

It is reassuring, now, to know that Senator BYRD's staff in the Senate Office Building will remain on the job. This includes Administrative Assistant M. J. Menefee, known to thousands of Virginians as Peachy, who, through the years, has placed the public business ahead of personal welfare. Although rarely free from the pain of cruel wounds sustained in action in World War I, Peachy repeatedly has dared his disabilities to take him out of the Washington combat with bureaucratic redtape. He has carried on, providing personal service to Virginia citizens.

Also contributing to the high efficiency standards maintained in Senator BYRD'S office are Miss Meda Dick, the Senator's personal secretary; Mrs. Mildred Sime, Miss Martha Cropp, Mrs. Doris Bradshaw, and Mrs. Louise Miller Vaughan of the secretarial staff, and J. Heywood Bell, legislative assistant.

Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Page News and Courier, of Luray, Va., before Senator BYRD reconsidered his retirement decision:

SENATOR BYRD AND PEACHY MENEFEE

The decision of Senator HARRY F. BYRD to quit the Senate is a shock and surprise to his many friends and supporters but there are few who do not sympathize and understand his motives for doing so. His frank statement of the situation which he faces emphasizes the sterling character and deep regard for duty which in our book makes HARRY BYRD one of the great men of the century.

When the editor came to Luray we only knew Senator BYRD from what we read about him in the newspapers and magazines. But what we knew we liked. We have seen him grow into a national and international personality. There have been those who have said that we have supported him for one reason or another, but we can say that we have supported him not so much because we liked him as a man or for other reasons, but because he represents what we believe to be genuine Americanism as we understand it.

Perhaps this type of Americanism has been outmoded but the fact remains that America has come a long way under its banner, and Senator BYRD has been one of its ablest conformists and most effective standard bearers. For the good of our country we hope that his retirement from the Senate does not mean that his influence and good judgment will be withdrawn from the halls of Government.

One good thing about the Senator's retirement is that it will, no doubt, mean the return of Peachy Menefee to Luray. His experience, congenial personality, and flair for getting things done, assures this community of a welcome addition to community life.

Menefee is probably the best known and respected senatorial secretary in Washington and as such has been a valuable friend of the people of Page County. Regardless of political affiliation he has at all times had an ear for any problem which affects the welfare or personal lives of Page County citizens. Through his good offices the Virginia Oak Tannery was given a big lift in resuming operations and he has been importantly identified with other successful community enterprises.

Senator BYRD and Peachy Menefee have made a great team in public life. It has been a strain which has put Peachy to bed over the weekends but he has stayed with it with uncommon determination, primarily because of his warm personal regard for the Senator and a deep interest in BYRD's purposes and political objectives. With such mutual regard we are sure that Senator BYRD and Peachy Menefee will continue to make a fine contribution on their return to activity in their home communities.

Virgina has had outstanding representation in the United States Senate in Senato BYRD and his official family. They have the applause and good will of the great majority of Virginians and fellow countrymen. They have earned a much deserved rest and we extend to them our good wishes and hopes for a long and rewarding career in their home communities.

Recommendations for Legislative Action to Alleviate the Perils of Unemployment

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. RODINO. Mr. Speaker, the New Jersey State Congress of Industrial Organizations, through its president, Paul Krebs, addressing the New Jersey congressional delegation at a conference called today for the purpose of considering methods of alleviating the perils of unemployment and to inspire full employment in the Nation and State, offered a two-pronged campaign to meet the situation.

Significant recommendations covering a short-term program and a long-range stability program were presented to the New Jersey Members of Congress.

The State CIO said the short-term program is designed to assure immediate help to those currently suffering hardship as a result of unemployment and to create new jobs as quickly as possible. Such measures will not merely help relieve immediate problems, but can be used to meet similar situations in the future, and in addition, some of them will provide a substantial cushion to protect the economy against spiraling recessions, which tend to grow from the losses of purchasing power suffered by laid-off workers.

The specific short-term recommendations include the following:

First. Immediate action by Congress to enact minimum Federal standards of unemployment compensation to assure that all States will provide adequate un-

employment compensation benefits and duration, and other reasonable eligibility requirements, including a provision to limit disqualifications because of strikes to 4 weeks.

Second. Provision for Federal supplementation of State benefits until the States have had time to bring their laws into conformity with the minimum Federal standards.

Third. Legislation to protect laid-off workers unable to make payments on home mortgages by a Federal moratorium for the period of their involuntary unemployment.

Fourth. Consumer purchasing power should be stimulated by increasing the personal income-tax exemptions from the current $600 to a minimum of $800. This will be immediately reflected in higher take-home pay checks due to reduced withholding taxes and will enable low- and middle-income families to increase their spending, thus providing employment. It will also provide large families with the most dependents with the most help.

Fifth. Telescope production schedules on defense contracts currently in production in distressed areas to provide maximum employment with a minimum of delay.

Sixth. Construction schedules on public works in distressed areas for which contracts have already been let should be telescoped to provide maximum employment opportunities immediately. Other projects planned for such areas should be gotten under way with a minimum of delay.

In presenting its recommendations for the long-range stability program, the State CIO council stated that "it is not sufficient to concern ourselves only with the immediate crisis. There are numerous measures which should be undertaken with a view to strengthening the economy and helping to prevent repetition of similar unemployment crises in the future, as well as policies designed to insure swifter and more effective action if unemployment should threaten."

The long-range stability program included the following:

First. Federal financial aid to municipalities to clear property of obsolete plants and to replace them with new, modern, and diversified facilities to provide new employment opportunities.

Second. Increase the purchasing power of millions of low-wage workers by amending the Fair Labor Standards Act to provide a minimum wage of $1.25 an hour, with extended coverage.

Third. Raise Social Security Act pensions to levels adequate to provide an American standard of living to retired workers and their dependents, extend coverage to groups not presently covered and provide pensions for disabled workers regardless of age.

Fourth. Present policies in the allocation of defense contracts should be liberalized to permit effective use in counteracting unemployment. The remnants of the policy of industrial dispersion, completely senseless in the era of the H-bomb, must be ended so that work can be made available to areas where there are idle workers already housed and already provided with essential community facilities.

Fifth. Speed implementation of Federal programs for highway construction.

Sixth. Federal aid for the construction of schools to wipe out the current deficit of 300 classrooms and to build the additional 265,000 classrooms which will be needed by 1960.

Seventh. Federal aid for the construction of hospitals to wipe out the current deficit of 838,000 beds and to provide additional beds required by our expanding population.

Eighth. Federal aid to assure construction of 2 million housing units per year, including middle-income, as well as low-income housing, to provide good homes in healthy neighborhoods for all Americans.

Ninth. Grants and long-term low interest loans to States, counties, and municipalities for the construction of public buildings, airports, and other public facilities.

Tenth. Establishment of a permanent Commission on Technological Change composed of representatives of labor, farmers, management, and Government, to keep under constant review developments in automation, atomic and solar energy, and other innovations and to make appropriate recommendations to Congress and the President to assure that the fruits of technologcial advance are fairly shared and full employment achieved and maintained.

Eleventh. Federal aid to education to provide scholarships, increased salaries for teachers, and adequate funds for research.

Twelfth. Immediate restoration of farm-price supports to 90 percent of parity, more extensive use of farm surpluses to relieve hunger both at home and abroad and development of a new and sound farm program.

Thirteenth. Liberalization of Government lending policies to help small business and stricter control over the exercise of monopoly power by mammoth corporations.

Fourteenth. Vigorous prosecution of the Kefauver subcommittee's investigation of wage-price-profit relationships to expose the reasons for existing high prices and to deter further inflation.

Fifteenth. Legislation to impose public responsibility on the exercise of vast power of the Federal Reserve Board to throttle business activity and employment by cutting off the supply of money and credit.

I believe, Mr. Speaker, that recognizing the sense of urgency that exists to meet this grave problem which faces America, all Members of Congress should seriously consider the above proposals.

The Threat of a Depression in the United States

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, February 25, 1958

Mr. CASE of New Jersey. Mr. President, New Jersey's senior Senator [Mr. SMITH] and I each received yesterday similar letters from Mr. Harry B. Haines, publisher of one of New Jersey's fine newspapers, the Paterson Evening News. In his letters to us, Mr. Haines spelled out his real concern that, in effect, America is worrying itself into a worse economic situation than is actually the case. With the same letter, Mr. Haines forwarded to us an editorial from the Paterson Evening News which appeared on February 25 urging the proclamation by the governor in every State of a Believe in America Week from March 23 to March 29.

The motivation of the Paterson Evening News is surely to be commended, and I know that our colleagues in the Senate will be very much interested in this proposal which, after all, affects all our States.

I ask unanimous consent to have printed in the RECORD Mr. Haines' letter, the editorial, and the public statement which I made when I was asked to comment on this proposal.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

THE PATERSON EVENING NEWS,
Paterson, N. J., February 22, 1958.

Hon. CLIFFORD P. CASE,
United States Senate,
Washington, D. C.

DEAR CLIFF: There is no more important problem before the Nation today than our economy which is threatened more by a psychosomatic illness than by an actual malady. Americans are talking themselves into what could easily become a major depression.

I have been giving serious thought to the matter and have come up with a program that I think can put an end to the defeatist attitude which is permeating the national scene, and, restore once again inherent American sanity, courage and progressiveness.

I enclose a reprint of an article which will appear on the first page of the Paterson Evening News on Tuesday, February 25, and I urge you to read it thoroughly. I especially direct your attention to the summation in which it is proposed "that every Governor in every State of the United States proclaim Believe in America Week from March 23 to March 29.

You will note that the essence of this page one editorial discussion is the grave impact on our economy by the negative attitude Americans have taken which has lead to a chain reaction of a suspension of necessary buying in all phases of everyday life. Our proposal is that Americans be galvanized into an affirmative attitude and that during

this week of Believe in America, the trend will be changed as a result of which there can very speedily be restored great facets of reemployment in industries which are now so sorely beset.

Immediately upon receipt of this letter would you please be kind enough to acknowledge to me what you hope to be able to do in the United States Senate; in the Department of Commerce, Labor and other agencies which might be affected by a movement of this kind?

Emphatic public pronouncement by yourself and by other statesmen and leaders whose interest you may be able to stimulate will serve to bring this matter into proper national focus and I am supremely confident that thus, in a dramatic stroke, we will be able to turn the present-day tide of doubt and fear into one of courage and optimism.

As one deeply concerned about our great country, I appeal to you for your energetic enlistment in what I think you will agree is a paramount cause before the country.

With every good wish, believe me to be

Sincerely yours,

HARRY B. HAINES,
Publisher.

[From the Paterson (N. J.) Evening News of February 25, 1958]

A PLAN TO END DEPRESSION TALK IN THE UNITED STATES

No cause, no purpose, nothing is of avail unless there is a deep and abiding belief in it.

A country is only so strong as its people are willing to be strong—and its progress and growth and strength are measured by the dedication of its citizens.

America was born of a principle—the right to the pursuit of life, liberty, and happiness. The Pilgrims crossed what were then still uncharted, foreboding seas, to come to a land of wilderness, to found a land of freedom.

So this is America, greatest country in the world, principal bastion of freedom, around which radiates the hope of millions upon millions of people against the slavery of despotism and dictatorship.

Men and women have died by the millions to preserve America, to keep it thriving, pulsating.

Must we die—should our only willingness to fight for these United States be in the blood of our young pouring out in battle? Should we not fight just as courageously to maintain a happy life?

These are days different than when Washington lived. Now we have two kinds of war—the war on the battlefield, in the air, of the atom, and the rocket and the cold war. Each is devastating in its finality.

THE CHALLLENGE TO THE UNITED STATES

A country like the United States, steeped in democracy and willing to free deadly Communist spies just to preserve our own priceless free-speech heritage, must be on the alert 24 hours a day, 365 days a year, against the deadly preachments and onslaught of conniving communism.

The Machiavellian Soviet leaders, aware of our penchant for freedom and protection of it in all its connotations, don't want a killing war.

But they do want to keep the cold war aboiling, to mix a metaphor. They send up a sputnik, and in 24 hours, a nation that was economy-bent suddenly goes panicky and is ready to spend billions to counteract it. The Commies proclaim the newly discovered virtues of their wonderful school system in which every boy and girl is a budding scientist ready to discover some new and frightfully superior wonder to envelop America. So liberty-loving and fun-seeking Americans panic all over again—more schools, more universities, more colleges—make everybody a scientist.

How mixed up can we get? Are we rock-and-roll crazy? What about American resourcefulness, ingenuity, determination, knowledgeability?

Have we lost it all?

Do we have to have a depression because the propagandists say conditions are bad?

Of course conditions aren't the best. You can't tell a man who's out of a job that he's making good pay. Just as you can't convince the fellow who has a headache that he's in tiptop shape.

WE CAN TALK OURSELVES INTO IT

But by the same token, we can talk ourselves into being sick. A fellow will walk down the street feeling tops, all's well with the world. Another will come along and tell him he doesn't look well. By golly, within 30 seconds, the clouds are in the skies, the poor victim is beginning to feel sick to his stomach and in 5 minutes, all's wrong with the world.

Doctors call this condition psychosomatic. The illness is more mental than physical.

A person with nothing wrong can overnight become a real patient with an illness as bad as if it weren't fancied. You're as sick as you believe you are.

America is now in the throes of a psychosomatic slump.

The more we talk about depressions and about how bad business is, the worse we shall become.

The disease is contagious. People who are doing well, perhaps better than ever, begin to worry. They reason: Maybe conditions are bad.

Better retrench. Won't buy that new car we had planned; make last year's suit do; cancel out the new clothes, forget about a new refrigerator, or gas or electric stove, was gonna buy a new heating system for the house, or pick up an air conditioner in anticipation of a hot summer.

Cancel all these things out. Better warn Sister Josie, Counsil Emil, have a chat with those nice neighbors next door.

Depression: The cry begins to echo through the land. The politicians, those hearty fellows who love to spout and maybe thus hurt the fellow in the other party, make the halls resound with their mournful wailing. Their bellies are full, they're continuing to reap their own harvests.

But their pitiful cries about the plight of the Nation add to the heart-rending scene.

So people stop buying. Business slows down in the stores. Clerks are laid off.

MANUFACTURING A DEPRESSION

The stores stop buying, cancel their orders in the factories. So factories shut down.

Auto dealers are loaded with cars because the people who could buy aren't. They've heard about a depression. So the auto factories shut down.

No autos? No refrigerators? No gas stoves?

So the steel mills shut down.

Thus is a depression born.

Well, Mr. and Mrs. America, we've got enough built-in safeguards against depression in this country to make it unlikely to happen.

If there is a depression, it will be man-made, made by all of us.

So we propose that something be done about it.

Let's start believing in America.

If all over this land of ours, those of us who need things and have postponed buying them, were to start buying what we need, stores would hum, mills would start booming, and the unemployed would in short order be back on the job.

America can be as healthy as its people want it to be.

BELIEVE-IN-AMERICA WEEK

We propose that every Governor in every State in the United States proclaim Believe-in-America Week, say from March 23 to March 29.

Believing in America will only be translating into tangible action the inherent, abiding faith of our Founding Fathers and of our people since the United States came into being—that this is the greatest country on earth.

The Communists would love a depression in the United States.

So what's not to the liking of the Commies is what's good for us in this country.

To every governor in these United States, we are sending this message of Believe-in-America Week, in the solemn and deep feeling that the best answer to a threatened depression is to prevent it.

And the best way to prevent it is to adopt the antidote. The best antidote is to do something about it instead of waiting for the ailment to creep up on us.

Believe in America?

Well, say so—and make your word count with action.

STATEMENT BY SENATOR CLIFFORD P. CASE, NEW JERSEY, ON BELIEVE-IN-AMERICA WEEK, MARCH 23–29, PROPOSED BY PATERSON (N. J.) EVENING NEWS

The Paterson Evening News one of New Jersey's fine newspapers, has highlighted an extremely important aspect of America's economic strength—our confidence in America and in ourselves.

Surely, this most commendable effort should be supported to the hilt. At the same time, all those in private life and at the State and local as well as the national level of government—must give our unremitting attention to discover and carry out specific measures to spur an upturn in economic activity and in employment, with particular attention to the distressed areas which exist in New Jersey and other parts of the country.

What Is Parity for the Farm Housewife?

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. COOLEY. Mr. Speaker, the farm families of America have no greater champion than our distinguished colleague, Mrs. COYA KNUTSON, of Minnesota. Mrs. KNUTSON is a devoted and dedicated American servant and is at all times interested in the well-being of those who till the soils of her State and Nation. She is the only woman ever to serve on the House Committee on Agriculture. As chairman of that great committee I have daily observed her in the performance of her duties. She is a tireless and effective worker and is at all times especially interested in the welfare of the farm housewives of the Nation.

Last week Mrs. KNUTSON addressed the 20th annual National Farm Institute at Des Moines, Iowa, on the subject What Is Parity for the Farm Housewife? I think that many people who have the interest of agriculture at heart will want to read this speech. I, therefore, have asked unanimous consent that the text be printed in the Appendix of the RECORD:

What Is Parity for the Farm Housewife?

(Speech presented by Congresswoman Coya Knutson, 9th District, Minnesota, before the 20th annual National Farm Institute, Des Moines, Iowa, February 14–15, 1958)

Last fall I talked to women in my district who told me about some very surprising changes taking place among farm women.

Their searching eyes, asking and looking for answers in my face to their problems when they told me for the first time since they had lived on the farm the past 25 to 30 years it was necessary for them to seek employment outside the farm home. This was not easy since in my district there are very few opportunities for jobs.

However, in this particular area was a lefse factory. Lefse is a flat, Norwegian potato cake—a good way to use leftover cold mashed potatoes at home—which is becoming a favorite commercial product.

The women were employed for $5 a day but it took them out of the home all day and the children, after school, came home to an empty house. This appalling disease of home absenteeism has invaded even the rural people of our land. It will be difficult to measure until sometime in the future, what effect this kind of exodus will have on our farm families.

Farm women know more about parity than we realize. They have learned about it the hard way—by doing without electricity, by doing without running water in the home, by raising families without central heating. They learned about parity by doing without modern kitchen and laundry equipment for many years after they were common in the urban home.

Millions of farm women now breathe a prayer of thanks for REA every washday or oftener as they use electricity to lighten their household tasks. As recently as 23 years ago only 11 percent of the farm families enjoyed central station electric service.

Hundreds of thousands of housewives are now drawing running water at a kitchen sink as a result of the improved parity position of agriculture in the 1930's, 1940's, and 1950–52. But there are still too many farm wives who cannot enjoy that labor-saving luxury.

When farm income falls below parity, farm women and children suffer even more than the men who operate the farms.

Farm-production expenses and farm investments come first. The farm housewife and her family get along with the income left after paying the farm bills. Today her husband obtains a return for his labor which approximates only 40 percent of the hourly wages of her urban cousins.

If you men in the audience will pardon me this morning, I want to talk particularly to the women. I know farm women are much more interested in dollars than in percentage ratios, so I am going to talk about farm parity in terms of family income.

May I give you some plain figures. In 1956 families on the 2.2 million commercial farms received $5,415 as family income. Over half the farms, the 2.7 million low-income farms were eliminated to obtain this figure. And how does this compare with income of nonfarm families?

In 1956, all nonfarm families, including those on "skid row," public relief, and social security averaged $6,900 or 27 percent higher than those on commercial farms.

Let me name a few more income comparisons which bear on the parity position of the housewife: Roughly one-fourth of the farm family income on commercial farms came from nonfarm sources in 1956. Since 1947–49 family incomes from farming on commercial farms have dropped 19 percent while the incomes of nonfarm families, again including those on skid row, have increased 41 percent.

And before we leave these income comparisons let me point out that the average commercial farm family had a large investment in farmland, livestock, and machinery which a nonfarm family does not have. If one deducts interest on his farming investment, families on commercial farms received incomes in 1956 of $3,615 or only 52 percent as high as the average of all nonfarm families—again including those on social security and public relief.

Friends, I come from a district where most of the farms produce for commercial markets and my farm families are not at all happy with the disparity between their incomes and those of their urban relatives. They are disturbed by the reports in the press that farm groups and Members of Congress representing rural districts are badly split on what should be done about our low farm income while nonfarm income is booming.

They are very much disturbed by the continued attacks on existing farm programs and the "sweep sirup" about increased farm income just around the corner if only the Secretary of Agriculture is given authority to lower price support levels.

Farm families in my district think this is economic nonsense. They believe it will take stronger medicine than this to restore farm income to a parity position. I am told that polls taken in your State indicate a similar lack of confidence in the effectiveness of simply lowering price supports.

Contrary to popular belief, farm-minded Members of Congress are not widely split. Commodity groups are not at war with one another. If there ever was a day when one commodity group tried to solve its problems by dumping them on other farm groups, that day is past. A united approach of agricultural commodity groups appears strong enough to pass comprehensive farm legislation this year. Thirty-five commodity groups have set up six different committees for study. Some Republicans are talking of having enough votes to override a veto of the farm bill, providing compensatory payments are included to get industrial Democrats' votes. They all agree on the parity-income concept to replace price parity in their approach to farm legislation. This concept is actually in the Agricultural Adjustment Act of 1938, section 301 (a) (2). However, present bills are designed to clarify and make specific this section.

There are more differences within commodity groups than between groups as to the type of Government assistance desired.

Those of you who are dairymen know how difficult it has been for you to agree on specific programs. Feed-grain and livestock producers find it especially difficult to agree on a program. I am told that even the peanut growers are having some difficulty in agreeing on a new approach to their price and income problems.

But the pressure of economic events is forcing these commodity groups to reach agreements. Some of the largest commodity groups such as producers of sugar beets, sugar cane, wool, cotton, wheat, rice, and dairy products are largely agreed on desirable programs for their commodities.

There are wide areas of agreement between the leaders of these commodity groups. All agree that each commodity has unique marketing problems—that each commodity should be treated on the basis of its needs. The common purpose of each proposed program is to promote orderly production and marketing and to improve the bargaining power of the producers when they take their product to market.

It is evident from recent meetings of the House Committee on Agriculture that there is no split in the farm bloc providing we consider all commodities at the same time and give equal attention to the producers from the different regions.

The experience of both the sugar and wool producers indicate that a commodity group can agree on a program—and if it is a reasonable program, farm minded Members of Congress will get together and pass the desired legislation.

Nonfarm people have shifted in their thinking about the desirability of reducing farm price supports. At first they were all for farm price support reductions. They expected food prices and expenditures for farm programs to drop.

They have been bitterly disappointed in both respects—retail food prices reached an all-time high in August 1957 in spite of a 16 percent drop in farm prices since 1952. Expenditures for farm programs in the year just closed also reached an all-time high and promises to continue at about the same level in the immediate future.

Now that unemployment is increasing in most of our urban areas more and more nonfarm Congressmen are saying we must hold the line on farm income supports and not allow a further reduction in farm income to create even more unemployment.

Remember that farmers are laboring people's best customers, buying steel, rubber, appliances, automobiles, machinery, and great amounts of gasoline, oil, and electricity. By the same token, laboring people are the farmers best customers. They have common interests and common goals.

The premise on which every bargaining takes place between labor and management is that laboring people should have parity income. That is the basis of the cost-of-living automatic pay increases in some collective bargaining agreements. Farmers as well as other workers deserve this insurance and full employment, or at least a steady income with which to buy labor's products. In this way, labor is not thrown out of work because of farmers' inability to buy and the whole exchange continues on an even keel.

You are all familiar with the theme song that past farm price support programs have wrecked our markets and are a millstone around the necks of farmers. Using the misleading figures supplied by our own Secretary of Agriculture every city newspaper has carried stories on the high cost of farm price support programs. But neither the city nor the farm papers have carried comarable stories citing the benefits of these rograms either to farmers or to other groups such as our school children.

Why hasn't our Secretary of Agriculture prepared a summary of the benefits of farm-price support programs comparable to his sommary of costs? When he does I am confident he will have to tell us that on a year-to-year basis farm price support programs have increased farm income $2 to $3 for each $1 of Government expenditure—in addition to accelerating technological advances.

Why hasn't our Secretary of Agriculture told you that each year for the past 4 years farm price support programs have removed from $1.8 billion to $3.2 billion of farm products from commercial markets and either distributed these products outside regular trade channels or kept them in storage?

Why hasn't he told you that except for this removal of products from commercial markets farm income would have dropped even further since 1952?

With net farm income already down to the $12 billion level isn't it reasonable to suppose that in the absence of these price support programs it would have dropped at least another 25 percent? Many think the drop would have been even greater.

We have heard again and again that the way to achieve parity for the farmer and his wife is to lower price supports and expand markets.

Surely we must expand our markets as rapidly as possible. But why hasn't our Secretary of Agriculture told us that in spite of all the promotional efforts of producer groups, food processors, retail food

distributors and the Government, United States farmers received fewer dollars for the larger quantities of food delivered to consumers in this country in each of the last 2 years than they received for the smaller quantities they delivered 5 years earlier?

When talking about market expansion, he should have told you that the farm value of the food consumed by United States civilians in 1956 and 1957 was only $18.8 and $19.5 billion as compared with $20.1 and $19.0 billion in 1952 and 1953. In 1956–57 as compared with 4 years earlier, farmers incurred sharply higher costs and delivered 14 percent more products to consumers who had substantially higher incomes, yet received fewer total dollars for them. Frankly, I think these official USDA figures make the prospects for farm family income very poor indeed if plans for its improvement depend on lower price supports and market expansion.

But we canot continue existing programs indefinitely. Under indifferent and confused administration they are merely reshuffling our surpluses. Feed grains are now at record levels and still increasing. Existing programs also are costing too much. They are not adapted to meeting the problems of agriculture today.

It has been suggested, but not by me, that one method of reducing costs is merely to give the Secretary of Agriculture authority to lower price supports. It is costing about $3 to $3 billion a year to maintain supports at current levels. These costs can be eliminated by reducing price supports to free market levels. But farm income would drop even more than the price support costs. This can best be illustrated right now where Mr. Secretary of Agriculture wants to lower dairy supports by April 1. The lowering of supports from 83 to 75 percent will cost the dairy farmers a $200 million to $250 million loss of income to save the Commodity Credit Corporation about $100 million. This is the point that is passed over in painting the rosy picture of lower price supports, greater flexibility and more freedom in agriculture.

But this is not the only road open to United States farmers and their wives. Commodity groups are developing plans and proposals which will lower government costs, increase producer flexibility, yet bettering farm income.

These groups know that they are faced with still lower incomes in the immediate future if the Secretary of Agriculture is given more authority to lower price supports. They know they are faced with lower incomes if they do not devise new programs to replace the old ones which are proving to be ineffective and too costly. Sliding-scale parity worked fine when the farmer raised his own horsefeed 20 years ago. It does not work when he feeds expensive "gasoline."

These commodity groups realize that they have common interests even though each must take a different road to reach its goal of orderly production and marketing with improved bargaining power for its members.

I did not come to this great National Farm Institute to bring a message of gloom and doom. In this connection I am reminded of the conversation I had with a farm woman in a poor agricultural area a few years ago. She said, "Mrs. KNUTSON, do you know what parity means to the farm women in this community? It means moving the little house out back up next to the bedrooms."

For the farm women in this great Midwest, parity means even more than this. Perhaps it means family progress such as was reported by Johnnie after visiting his urban cousins who had moved from the rural community two years earlier. Returning home from his visit, Johnnie's mother asked the normal question, "How are Aunt Jane and Uncle George getting along?" Johnnie's reply was, "Oh, just fine, but they have moved their bathroom inside and are eating out of doors now."

I take pride in the progress made in modernizing the farm homes in the 1940's and early 1950's. I am joining efforts with farm leaders and with those Members of Congress who are trying to develop a farm program which will maintain farm family incomes at levels which will permit the repair and replacement of these modern conveniences as they wear out.

We also would like to see farm family incomes reach a parity where they can enjoy as many leisure hours each week as urban families. We are greatly encouraged by the developments in recent weeks. In view of all the factors in the situation I can assure you there is basis for optimism that a good farm program can be developed in this session of Congress. By a good farm program I mean one which will make it possible for farm families to make economic progress comparable to that of nonfarm families.

I know that it is coming. I know the grassroots sentiment. I know this sentiment is seeping up through commodity groups and through the congressional representatives. Therefore, there is no split in the farm bloc. If it isn't recognized by farm representatives, we will see a terrific revolution this fall in farm areas.

Long-Range World Textile Analysis Urged

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very illuminating and educational article on our textile industry by Mr. Harry Riemer, editor of the Daily News Record, New York, N. Y., which appeared in that issue on January 16, 1958:

LONG-RANGE WORLD TEXTILE ANALYSIS URGED
(By Harry Riemer)

What is our textile industry worth to our country:

1. In national security?
2. In employment?
3. In the important part it plays in clothing us all, and thereby giving us dignity and self-respect?

These sound like stupid questions, because the answers are all so obvious.

Yet from all we read and hear, these are questions that should receive attention at top levels in Government, as well as by our industry leaders.

UNITED STATES TEXTILE SURVIVAL?

Taking the world picture into consideration, we must ask ourselves today—how much of our textile industry can survive without proper protection, during the next 25 years?

What is needed now—and what should be started without much further loss of time, is the study of the economies of practically all countries in the world.

This is being written only from a textile viewpoint—but there may be other industries equally interested in such an international study, because they may be in a position similar to that in which textiles now find themselves.

How many of the nations of the world will become aggressive textile competitors for all of us here in the next 25 years can only be surmised.

However, to anyone who has had firsthand contact with many of the areas where such potentialities exist, there is an appreciation that intercompetition all over, in textiles, can reach a point that can overwhelm us.

To cry for higher tariffs—and even for quotas, is not the answer.

International ill will and antagonisms result from protective plans—unless they are based on the fullest competitive studies of economies of all the countries involved.

Then, with such complete information it is possible to move in a manner to which there can be no objection.

We are strong for international good will; we know that every country must trade with other areas; we know that industrialization is the fundamental program of all underdeveloped sections; we want to do all we can to help and encourage all of these.

WHAT IS REASONABLE?

On the other hand, a decision must be reached as to what is reasonable and what is unreasonable.

Who should make this study?

Should it be the American Cotton Manufacturers Institute? Should it be by a congressional committee or a tariff committee—under Government sponsorship; should it be by the Textile Workers Union?

As long as the study is thorough, made by impartial statisticians, it hardly matters who does it—as long as it gets started pretty soon.

Such a sudy would have to consider not only wages—but also workloads, fringe benefits and anything alse that could enter into a comparison of costs.

When we were in India in May 1955, it was remarked to us a couple of times that while their wages were very low it was also true that their workloads didn't compare with ours—that they usually had at least seven men doing the work of one man in an American cotton mill.

In Japan, also, we were told that their workloads didn't compare with ours.

Fringe benefits are an element that should be included exhaustively, as these are mentioned pretty nearly everywhere.

Perhaps our protective system can be worked out so that wherever economies improve, these would be given consideration in the tariff approach.

All of this may not be easy—but it seems to be the only answer to the mess for which we are headed.

Thus far from all we can learn, the only thing that has been done by the industry has been to emphasize what is generally regarded as the Japanese situation.

NO BACKWARD COUNTRIES

However, the writer believes it is timely to repeat some of the things he has reiterated frequently since his eight months world air tour in 1955.

First we must recognize that there are no longer any backward countries from the viewpoint of industrial thinking.

Some may be underdeveloped and face real problems in their industrialization—but they are alert—and have leaders in each case who understand our know-how, and who are determined that their people shall have at least a little of all the things which we enjoy.

We must recognize that the so-called backward countries have ambitions for betterment, just as we have.

The drive for industrialization, to give needed employment, is one phase of combating poverty—and a very important phase.

Textiles invariably are the first step in industrialization of an underdeveloped country.

Then come the needle industries, sewing.

Establishment of these textile and garment industries comes quicker than anyone of us is willing to believe.

EXPANSION DEMANDS EXPORTS

Once established, it is a definite sequence that there must be expansion, and with expansion comes the need for seeking export outlets. This applies everywhere.

Logically this means more and more goods from low economy countries coming into international competition wherever we have markets—as well as the likelihood that we are bound to feel the combined impact here in this country in our own direct markets.

In addition, some of our own export markets are likely to become self-sufficient in the course of the next 25 years.

One particular instance of this is in the Philippines—and there are others also.

To indicate how conditions can be reversed it is well to remind that 30 years ago India was a tremendous customer of Great Britain. India imported from Manchester something like 1.6 billion square yards of cotton cloth annually in those days.

In 1955 India shipped over 100 million yards of cotton cloth to England—and Manchester gloated over the fact that the Indians gave them permission to ship about 16 million yards of novelty goods into India.

It is reasonable to assume that South Africa will be self-sufficient in textiles in 20 years.

UPHEAVAL IN WORLD MARKETS

We must consider that there has been a tremendous upheaval in foreign markets—involving big losses of trade by a number of countries which are now engaged in the desperate struggle to replace their lost markets.

Just a few instances to illustrate:

Holland has lost Indonesia which was formerly one of its important markets.

France lost Indochina and is now in the process of losing north Africa—both very important markets to her.

Germany has lost the Balkan States' business which was very important to her before World War II.

England has lost most of South Africa among other markets.

The net result of all this is that each country is striving to replace these serious losses.

Germany has made big inroads over England in South Africa. Holland has made a strong bid for the South African business.

In Johannesburg, which we called one of the best listening posts in the world for information on textile developments everywhere, except India—but including the Iron Curtain countries, we sensed a bit of this unsettlement and highly competitive feeling that is current in all areas.

CANNOT POINT A FINGER

In our world survey of textile and apparel industries, it is a mistake to point a finger at any one country.

True, the immediate problem may rest in one particular center—but if we are to show ourselves as understanding of what is really going on in the world—then our approach must cover a review of the economics of practically all areas, as proposed.

Textile importing nations everywhere will become less and less dependent upon their present suppliers during the next 25 years.

This will affect all of the textile exporting countries, including ourselves.

Such a course has been obvious for some time—but it is becoming more and more pronounced, particularly when one realizes the hopes and ambitions of many countries which are still immature in the production of textiles and apparel.

We have not begun to feel the effects of the dislocation that has taken place since the last war.

Japan finds herself struggling because some of her former markets are still lukewarm because of World War II.

Indonesia was one of Japan's big markets—and Indonesia has been described as "broke"—plus the fact that the reparation problem between these two countries was never settled satisfactorily. (EDITOR'S NOTE.—Japan and Indonesia arrived at a reparation settlement agreement recently.)

The writer did hear a complaint in some countries in Europe—as in Greece—that the French had found ways and means to circumscribe the Organization of European Economic Cooperation which the writer was told did not permit export subsidies.

Those are merely a few instances of the many things that are going on which got very little attention over here.

EFFECT OF LOSING MARKETS

Now let's consider a few of the other elements which are likely to develop as formidable influences during the next 25 years—and for which we should be preparing right now.

To start with, when the Philippines become self-sufficient in textiles to a large degree, several nations, including Japan and ourselves will have lost another good customer.

When we were in India in May 1955, considerable concern was expressed there about the textile manufacturing strides being made in Pakistan.

Pakistan, which was a purely agricultural country less than 10 years ago, has already installed some 2 million spindles.

Some of the India cotton textile executives regarded Pakistan as a greater threat to them than any other textile industry.

In recent months some of our textile executives here have become aware of the potentialities of India, although this writer has been pointing to this for their consideration for more than 2 years.

Generally, India has a textile industry about half the size of that of the United States—from the point of view of the mill operation.

India has been producing something like 5 billion square yards a year in its mills, under conditions involving restrictions on new machinery and employment.

The alert executives in India have ambitions like ours. They want to expand—and when the opportunity permits they will expand.

India produces about 1½ billion yards of hand woven fabrics a year.

RED CHINA INDICATIONS

One of the most important revelations was that which we encountered in Singapore in May 1955—where we learned that the Red Chinese were shipping cotton goods into the Malayas—subsidized by the Peiping government to get money exchange.

Since, there have been other important developments in Red China.

We printed a dispatch some months ago that Red China had ordered 5 million spindles from Japan. Thus, Red China could have a textile industry as big as that of Japan within the next 15 years or so.

It is fundamental in commercial activity everywhere to want to grow.

When there are indications that the home trade has been satisfied, next thoughts turn naturally and logically to export markets.

The writer feels that, in a way, he "discovered" the fact that Hong Kong had become an important textile producing area.

Hong Kong has over 300,000 spindles running more hours per year than the spindles in any other country. They estimated it as the equivalent of about a million spindles running 1 shift.

Someday Indonesia will have its own textile industry.

Taiwan has textile ambitions according to reports from our correspondent.

Someday Australia will expand in textiles.

In June 1955, Egypt had ambitions to have 3 million spindles—modern—during the next 10 years.

Egypt was doing everything possible to discourage imports and to encourage home production of textiles.

Little Israel has been making substantial progress in textiles and they are seeking foreign markets.

There are several factors in Europe that can have much significance during the next 25 years.

SPAIN HAS POSSIBILITIES

Spain had something like 100,000 looms—mostly old. She was interested in modernizing, but she didn't have the money nor the credit.

It is reasonable to assume that these problems will be overcome some way over a period of years, and then Spain can become one of the top textile-producing countries of Europe.

Portugal has a smaller industry, but its executives are alert, think in terms of modernization; and they have been interested in foreign markets.

No one knows what the common market of Europe is going to mean, but the best guesses are that this will be attended by modernizing of equipment, an increased business among the common-market nations, and that the United States will be among those who will suffer from the further losses of export markets.

BEHIND THE IRON CURTAIN?

Next, and by far not the least to be considered, is what has been going on behind the Iron Curtain.

The firsthand reports of our own correspondent, direct from Russia, have indicated that the Communists have big ambitions in textiles.

While in Johannesburg in June 1955, the writer heard a great deal about textile progress among the satellite countries, such as Czechoslovakia, Hungary, and Poland, and endeavoring to compete on a cut-price basis. Austria must also be considered in this category.

This is merely a quick, general overall picture. Perhaps the writer has overlooked many angles that should be in this recapitulation.

However, there should be enough in this article to make one realize that the world is on the move in textiles and that if our own textile industry means anything to us in employment, or in national security, then we should already be seeking out every bit of information that is available that will permit a fair comparison of the economies under which our industries here in America must work and those in the other nations of the world.

Relationship Between Agricultural Policies and the Plight of the Small-Business Man

---

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. BREEDING. Mr. Speaker, recently while in my home area, the Fifth District of Kansas, I was presented with several petitions authorized by local small-business men, which I believe point up graphically the relationship between the administration's ruinous agricultural policies and the economic plight of the small-business man.

In my area, as in many other areas of the country, when the purchasing power of the farmer is reduced, the small-business man of the community is the first to reflect his customers' economic loss.

Secretary of Agriculture Benson's proposed cut of 22 cents in the wheat-support price structure will, I feel certain, have a disastrous and far-reaching effect on the small-business life of this country. I believe that conclusion is forecast dramatically by the below-listed petitioners; they state quite plainly, "Our incomes are almost wholly dependent upon the purchasing power of the farmer. The announced cut in wheat supports from $2 to $1.78 is a devastating blow to us and the farmers alike. This 22-cent cut in addition to the previous 37-cent cut over the past several years is bringing bankruptcy to the door of small-business men."

At the risk of seeming repetitious, I should like to underscore a statement made recently by the distinguished chairman of the House Agriculture Committee: "Our economic depressions have been farm led and farm fed."

Congressman FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BREEDING: We, the undersigned businessmen, appeal to you to do all possibe to reverse the deliberate moves of the administration to institute further cuts in farm income. Our incomes are almost wholly dependent upon the purchasing power of farmers. The announced cut in wheat supports from $2 to $1.78 is a devastating blow to us and farmers alike. This 22-cent cut in addition to the previous 37-cent cut over the past several years is bringing bankruptcy to the door of small-business men. Other commodities, as you know, are similarly affected. We look to you for outspoken and courageous leadership in all-out effort to salvage our rural economy, our small towns, and cities.

Eisenhower Policy: "Don't Rock the Boat"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. MULTER. Mr. Speaker, our prosperity, our allies, and our prestige are vanishing. Some of the reasons for this disastrous accomplishment of the Eisenhower administration are eloquently set forth below in an article by Gerald W. Johnson, which appeared in the February 17, 1958, issue of the New Republic.

The article follows:

OUT OF CONTROL

(By Gerald W. Johnson)

Perhaps the situation is better, but it is arguable. At last we have launched a satellite a la Russe—but two of our nations are missing. Syria and Yemen have gone down the drain, and reports from Iraq are not reassuring. President Eisenhower is interested in maintaining civilian control over outer space, but democratic control of surface space is steadily dwindling. A cynic might infer that the President's interest in outer space is sparked by a foreboding that democracy is going to have to get off the earth.

But it is probably something quite different. It is more likely the President's fear, or the fear of those around him, that the American people are likely to get out of hand unless they are constantly reined in. It appears now that the Army was all set to go with this satellite in 1956. If it had been permitted to proceed our satellite would have led sputnik by a matter of 2 years; instead, it is trailing by 4 months.

It is perfectly true that the satellite, in and of itself, amounts to little; but the prestige attached to being the first in outer space amounts to a great deal. The administration, however, is not worried about prestige. It is worried about the budget, which for more than 20 years has been largely out of control of the established financial interests; and it is an article of faith among the well-heeled that when the budget is out of control of sound bankers, ruin is upon us.

The historical fact is, of course, that during the 20 years in which the budget was intelligently used for the support of the Nation, rather than the support of the bond market, the national economy climbed from a state of complete prostration to a level of wealth and power that it had never touched before. But we got rich without paying due deference to bankers; and it is wrong to get rich in that way.

So for 5 years the administration, manned at the top by millionaires, has been employing every imaginable device to dampen down this roaring energy that has, in fact, made us wealthy and great, but that has wrecked the nervous systems of thinkers of the Harry Byrd type—men who do not believe that the modern world really exists, but is an illusion created by wizards led by the monstrous Roosevelt, a merger of Merlin, Cagliostro and Eblis, commander of the Jinn.

They have not been able to have their way entirely. Pressure of outside events has forced their hand from time to time, and sputnik nearly upset the applecart altogether. But they have done enough to drag us down from the leadership of the free world, and to inspire the Russians with hope that they may, after all, take over the earth without firing a shot. It is a considerable achievement, even if the profit thereof is being collected by the Communists, not by us.

Unfortunately for them, however, the universe seems to be governed by certain laws that cannot be set aside even by Executive order. One of them was neatly stated years ago by the corn-fed bard, Walt Mason: "O human head! Majestic box! O wondrous can, from labels free! If man is craving fame or rocks, he'll get them if he uses thee!" But he will not retain them unless he continues the use indefinitely.

It is undeniable that the Republican Party used its head when it nominated Eisenhower, back in 1952, but that effort apparently exhausted it. The administration was barely 3 months old when Eisenhower announced unctuously that the party had at least succeeded in "raising the moral tone of Washington," and on that very day a knave snatched $165,000 of newly printed money right in Washington—more cash than had been stolen in a single grab during Truman's 7 years. Right then this superficial observer began to suspect that this administration, like Warren G. Harding, "lacks mentality."

That impression has not been erased by anything that has happened since. The loss of Congress in 1954 deepened it; so did the relegation to the rear of the men who put Ike across in 1952—Dewey, Saltonstall, Lodge, and their associates—and the disappearance from our sphere of influence of Indonesia, Siam, Egypt, Syria, Yemen, as well as the growing coolness of India and Western Europe, who can't actually leave us, but obviously would like to.

The sombre fact is that the banner of the great crusade turned out to be no oriflamme, but a wet blanket, and its war cry is a whispered, "Don't rock the boat." How long the American public will continue mesmerized is debatable, but eventually it will discover that it is being led away from the battle. For as loss follows loss, the strategy of the adminis-

tration is to launch no counterattack, but to deny that any real loss occurs. The progress of the cold war can be aptly described by adapting the phrase of a long gone British editor: "In the face of continuing defeat Mr. Eisenhower folds his hands; Mr. Dulles wrings his hands; and Mr. Khrushchev rubs his hands."

Roll Call Comes of Age

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 29, 1958

Mr. HIESTAND. Mr. Speaker, one of the highlights of each week on Capitol Hill is the arrival of our own "unofficial" congressional newspaper, Roll Call. It is perhaps the only nonpolitical report that Congressmen and Senators receive about their colleagues. More than that, however, it helps to knit Capitol Hill people into a community whose common interests, aside from politics, are reflected with each new issue.

Recently Roll Call came of age journalistically. Its editor, Sidney Yudain, has promised regular weekly publication. But in accepting this responsibility Roll Call is requesting that Members of Congress and their staffs, who benefit from each issue, share in making weekly publication possible by paying for their subscription just as they would with any "hometown" newspaper.

I have been proud to enter a subscription to Roll Call for myself and members of my staff, and I urge my colleagues on both sides of the aisle to do the same so that this new Capitol Hill tradition, the Roll Call, may have a full and prosperous adult life.

No doubt Members of Congress would be interested in reading the following article which was included in the Washington Report column by Larston D. Farrar of the February 1958 issue of the American Press:

WASHINGTON REPORT

(By Larston D. Farrar)

Roll Call, the little Capitol Hill newspaper that was started 2½ years ago by Sidney Yudain, secretary to Representative ALBERT P. MORANO (Republican, of Connecticut) as a sideline, has now moved into its own comfortable quarters and, with the opening of Congress this year, became a weekly.

The little newspaper—it consisted of a mere four pages at times in the early part of its career—was published first on June 16, 1955. Except for a 4-month break during the 1956 election campaign, it has been published on a bi-weekly basis ever since.

Within months of the time it began to appear, Roll Call became known as the most quoted little paper in the Nation, and it still holds that title.

"This is the first successful newspaper devoted strictly to Capitol Hill in the history of the Congress," Mr. Yudain boasted in his first weekly issue. "Several earlier attempts had been made, but publication ceased after a few issues. Roll Call is the first weekly newspaper the Hill has ever had.

"The more frequent publication will permit this newspaper to keep a closer tab on Capitol Hill news, to bring up-to-the-minute happenings to our readers, and to better serve our advertisers * * *"

The new headquarters are at 433 New Jersey Avenue, SE., only a block and a half from the Capitol Building.

Sid Yudain, the editor and publisher, was no novice in the newspaper business when he started Roll Call. He started in the newspaper business as a youngster and was promoted fast—during early World War II days—to an editor's post. Handsome enough to be a movie star (he was in Hollywood for awhile, in fact), he was in the newspaper business in Connecticut when he came to Washington as secretary to Congressman MORANO.

FERTILE MARKET

As he agrees, Capitol Hill is a more fertile market for a newspaper these days than when his unlucky predecessors started out decades before him. There now are 10,000 persons on Capitol Hill, all of them drawing top salaries (many in the $10,000-a-year-and-up bracket), and a $100 million building program is underway. Obviously, Roll Call is serving a hometown market of people away from home very successfully, and advertisers are finding that they can reach this lucrative market through the Capitol's own lively newspaper.

We not only hope for Roll Call's continued success, we believe in it and confidently predict it.

Connecticut Contest Winners Find Moral Lessons in Huck Finn

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include two prizewinning essays in a contest for schoolchildren in the New York Herald Tribune.

The essays, which appeared in the February 22 edition, were both written by residents of Connecticut. One, Reeve Lindbergh, is a resident of my district, a student in the seventh grade at Darien Junior High School.

Christie Macaluso, a seventh grader at St. Joseph's Cathedral School, Hartford, Conn., answered the challenging title, "What Huck Finn Means to Me," with an eloquent treatise on tolerance, and equality of man.

Master Lindbergh is more the poet, more the weaver of dreams and fancy as he stands his ground, his magic world of Huck Finn, against the encroachment of the poor, ignorant grownup.

Both boys are to be congratulated, and I know that my colleagues will enjoy reading their interesting essays on a boyhood character dear to us all.

WHAT HUCK FINN MEANS TO ME—WHY TAME A WANDERING CHILD?

(By Christie Macaluso)

(EDITOR'S NOTE.—Third prize winner, Christie Macaluso, is 12 years old and is in the seventh grade at St. Joseph's Cathedral School, Hartford, Conn.)

"Unless you become as little children, you shall not enter into the kingdom of heaven." God did not say become as adults but as little children. There must have been a reason for this. God also said "Blessed are the poor in spirit, the hungry, those who weep, the hated, and the separated." Mark Twain personifies all this in his lovable character Huckleberry Finn, in the book by the same name. Huckleberry Finn befriended and enjoyed the company of Jim, a runaway Negro slave. All children, like Huck, are born without prejudice. The pigment of Jim's skin did not make any difference to Huck. They played together, they fished along the river together, they protected one another, and were faithful to one another. That Jim was a Negro meant absolutely nothing to Huckleberry Finn. Outside appearance meant nothing to him. Their main attraction was not in the outside, or the physical. They acknowledged that they both had souls, that they both thought alike, that they both enjoyed walks together, and loved riding on their raft down the river.

If a person was rich, and suddenly became poor, he would still be the same individual inwardly, even though he may be looked upon as a bum. He has the potential to pick himself up, and grow again.

To me, the book proves that the Negro and the white can, in the South, and anywhere in the world, integrate. They both have souls, and in the eyes of God they are born equal.

Adults seem to teach children to build a wall up between them and the "nigger," the Jew, the "Guinea," or the "Frog." Mr. Clemens, in his book, Huckleberry Finn, tells us, in his masterly way, that we are all born equal. The Declaration of Independence states in its second paragraph:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Mark Twain seems to whisper into our ears, as we read through his book: "Down with the walls of ignorance, down with the walls of prejudice, and up with brotherly love, up with honesty, up with righteousness, up, up, up, to goodness, always and in all ways!"

(By Reeve Lindbergh)

(EDITOR'S NOTE.—Fourth-prize winner Reeve Lindbergh is 13, and is in seventh grade at Darien Junior High School, Darien, Conn.)

Huckleberry Finn. The most wonderful boy in the world. What child, girl, or boy, hasn't heard of him? Who hasn't poled a raft, sometime, somewhere, down the rushing Mississippi as Huck, with a close friend as the inseparable Jim. Even if the Father of Waters is a million miles away from your home, there's always a brook or trickling stream, that with a lively imagination can be turned into a Mississippi. A whistling on the roof, a call to Tom, an old widow and her sister who mean well, but all bring back wonderful memories to the grownup, and open a new world of adventure for us, the children.

You may have your Lochinvar, and Robin Hood, and all. But I'll bet that half of the children in our land would rather be pirates

with Tom and Huck than Galahad, or Lancelot, with some fair lady on the pillion.

I think that Mark Twain was a hero above all heroes. His book wasn't fiction. It was real life, with a touch of magic in it that most people don't notice. Ask any child what is so enchanting about that ragamuffin, Huckleberry Finn, and you've wounded them straight through the heart. They'll mumble out some defending answers, and inwardly vow to take bloody revenge on the would-be assassinator.

You may have your Galahad
And Lochinvar and all,
But give me a Missouri boy
With smudge on cheek and chin,
And a wooden raft, and a heavy pole
And a wistful way of talking,
And a large straw hat,
With a great wide brim
And I'll send your yoeman squawking!

Grownups can't seem to really understand why we want to be like Huck. They know the book is good and encourage us to read it, but not to follow it. "Be Peter Rabbit or Mary Poppins, or * * * or Becky, in Tom Sawyer."

"Oh, Mother," is the only outcome from a talking like that, and the young adventurer usually runs out the door. You see!

Huck the adventurer, Huck the wanderer. "I don't," a parent grumbles, "want my kids to get ideas. Why, Huck never settles down."

Oh, you poor ignorant grownup. Huck could never quit wandering even if he had wanted to. It was in his blood, and he couldn't stop it any more than a fish could stop swimming.

"Stop your foolish wandering,"
They begged, but he would laugh.
"Do you want the trees to crumple;
The buds to wilt and die?
The earth to stop her harvesting;
The river not to run?
The brook to stop its trickling;
The woods not to run wild?
Then why, my helpful neighbors,
Would you tame a wandering child?"

Ask any grownups what they think of Huck and the upshot will be: "He's a likeable young ragmuffin. He's all right. He's much too free to be a safe child. He's good for laughs." Laughs. Oh, grownups. They insult him as if he were ordinary or something.

Not that I have anything against grownups, it's just that they usually don't know what they are talking about. They're not insulting Samuel Clemens' creation, or a book that's left on a table somewhere. They are killing the dream of adventure, the goal of a million wanderers, the undisputed hero of the country child, and the ambition of the city one. Galahad will leave the girl at a certain age, and a high school boy will take his place in the saddle.

Fair Elaine, or Guenevere will be replaced on the pillion by a new and modern fair lady, but Huckleberry Finn will live forever at the top of children's hopes, and at the back of a teenager's mind. As each new reader closes the book to lie in dreams of glory, he'll find himself poling down the Mississippi with that prince of adventure, Huckleberry Finn.

Tax Law Loopholes Invite Mill Liquidations

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 6, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a specific proposal for correcting that tax loophole in the Internal Revenue Code which has caused so many textile mill liquidations in recent years. The proposal was submitted by Mr. Solomon Barkin, research director, Textile Workers Union of America, AFL–CIO, to the House Ways and Means Committee on February 4, 1958:

TAX LAW LOOPHOLES INVITE MILL LIQUIDATIONS

Within recent years scores of important textile mills have been closed with consequent losses of thousands of jobs because financial speculators have been able to make quick profits at the expense of the National Treasury. The TWUA has urged Congress to close the loopholes which make this possible.

The Internal Revenue Code allows a corporation to deduct from its net income in any taxable year the amount of its net operating losses suffered during the 5 preceding years (called carryforward) and the 2 subsequent years (carryback). Since the tax is applied to net income after the deduction of the loss carryover, the corporation's income tax is reduced.

When a corporation's ownership changes hands or it is reorganized, the loss carryover privilege is transferred with the corporation. The limitations on the use of this privilege are inadequate. When there is a change in ownership (where 50 percent or more of the stock changed hands during a 2-year period) the carryover is denied if a plant is closed within 2 taxable years of the date when the new owners purchased the stock. In a reorganization, if the stockholders of the corporation which suffered the loss retain less than 20 percent interest in the corporation which secured control of the business, the carryover is reduced. This provision is helpful to some corporations which have lost money because it permits them to offset the losses of one period with the profits of another. As a result their income is more stable. They are also thereby encouraged to invest in their business.

But financial speculators have bought out loss corporations, holding them just long enough to become entitled to the loss carryover rights and have then liquidated the business. The workers have been thrown out of jobs; the community has lost a plant; and the United States Treasury has been deprived of millions of dollars in tax revenue.

These predatory interests have been active in the textile industry. They have set their sights on companies which have lost money and offered financial deals to the owners which have discouraged them from considering renovating and modernizing their companies. After the loss company's sale, the speculators either closed them immediately or held them just long enough to qualify under the tax law for the loss carryover privileges. The buying interests offset the profits from other ventures against the loss carryover from the textile company which they had acquired.

Some of the more striking illustrations of textile plant closings attributable to the use of the tax carryover provision are the following:

1. Acquisitions of textile plants by corporations in unrelated businesses: Wanskuck Co. (Rhode Island woolen and worsted company) by the New England Butt Co. (iron castings and machinery); Boot Mills (Massachusetts cotton mills) by the Overseas Discount Corp. (holding company); J. L. Fead & Sons (Michigan underwear plant) by United Industrial Syndicate (holding company).

2. Acquisitions of textile companies: A. D. Juilliard Co., by United Merchants & Manufacturers.

3. Acquisitions by outside companies which later acquired nontextile interests: Gera Mills, Inc., by the List interests which bought electric and other companies; Botany Mills acquired by A. M. Sonnabend, a real-estate and hotel operator and subsequently bought companies in luggage, pearl, machinery, dolls, retail and other businesses; Powdrell and Alexander, acquired by George Meehan interests which subsequently acquired the Cincinnati Pepsi-Cola Bottling Co.; the American Woolen and Robbins Mills bought by Textron which liquidated most of them and engaged in many other businesses, including steamships; Utica Knitting Co., acquired by the J. A. Newman interests which later invested in other plants.

TWUA PROPOSAL

The TWUA insists that the loopholes in the carryover provisions of the tax law be closed and has proposed amendments which would deny the use of the carryover privileges in the case of a change in ownership of a corporation if a business is terminated at any time during the 3 years subsequent to the date of change. This rule would be applied whether the change in ownership is a result of purchase of the corporation's stock or a reorganization.

Remarks by Secretary of Labor James P. Mitchell at the 75th Anniversary Banquet of the Civil Service

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. BROWNSON. Mr. Speaker, since the advent of democratic government, one of the most significant and important reforms to take place has been the replacing of the so-called "spoils system" with a comprehensive program of gathering to the Nation's rolls dedicated and capable career employees. One of our country's proudest moments had its 75th anniversary January 18 of this year. It was on this date in 1883 that our first Civil Service Act became law.

The Honorable James P. Mitchell, Secretary of Labor, as the principal speaker at the Indianapolis banquet in commemoration of the act's 75th anniversary, not only traced the progress of the program's development, but also presented the challenge which the future holds in store for all who are friends of the civil service.

Secretary Mitchell's remarks show him to be well deserving of the praise lauded upon him in the following quote from the Federal Agencies Banquet Committee's general chairman, John T. Sempa's invitation:

It would do us great honor if you will accept this invitation to attend as the principal speaker at our banquet. We are certain that there is no person in our country who has greater interest than you do in the welfare of all employees of the Federal Government and private industry; therefore, your message will be of intense interest and enlightenment to us.

So that all Members of Congress and others interested in this vital subject many have the benefits of Secretary Mitchell's remarks, I ask that his speech be inserted in the CONGRESSIONAL RECORD.

The address follows:

REMARKS BY SECRETARY OF LABOR JAMES P. MITCHELL AT THE 75TH ANNIVERSARY BANQUET OF THE CIVIL SERVICE, INDIANAPOLIS, IND., JANUARY 18, 1958

It is a real pleasure to meet with you, who are friends of the civil service here tonight.

Prior to the passage of the Civil Service Act 75 years ago today, the famed spoils system was the usual method of operation in the United States Government. As you know this system held that Government was the prize of the winning political party, to be cut up and distributed to the party favorite.

This philosophy, that left administrative chaos, abuse and inefficiency in its wake, was finally done away with by the merit system.

The Civil Service Act has been responsible for attracting a core of dedicated career employees who guarantee to this country efficient and capable Government administration, responsive to the needs and wishes of the people, and unprejudiced by considerations of political favor.

I am extremely pleased to have this opportunity today to say that in the years I have been in Government, and they are mounting up now, I have observed and worked with civil servants on every level and I have taken the greatest pleasure in going back to the critics of Government service in other parts of the country and telling them point blank that nowhere in the world is any organization so fortunate to have so many thousands of capable, dedicated, enthusiastic, intelligent, and topflight people as Government.

What really astonishes me is the degree of ignorance that exists in regard to the Government's work. Ask people what Government is and does in some places and they reply it is a big, expensive organization with headquarters in Washington that eats up the taxpayer's dollars by sending memos back and forth like a colossal ping-pong game.

Seventy-four years ago there were 14,000 men and women in Government. Today there are better than 2 million. The Government has grown precisely in proportion to the needs of the expanding population and growing country. What does the Government do?

Over half of all Government civilian employees work for the Defense Department, manning the complex defense establishment that is the shield of the free world. They design and fire our missiles. They help in the operations of the Army, Navy, and Air Force—freeing our 2 million servicemen for active training. Another 25 percent of all Government employees work for the Post Office. The rest are engaged in many different kinds of work. They print our money and then collect it back in taxes. They risk their lives in the underworld to maintain our laws, control the trade in narcotics, and guard our borders against undesirable aliens. They represent us to other nations. They operate dams. They bring the benefits of electricity to millions of farm families. They maintain extensive repositories of knowledge and conduct practical experiments with farm animals and farm soils as you here in Indiana certainly know. They administer laws like the Fair Labor Standards Act.

In short, the number of Federal employees that sit at desks and write memorandums is a fraction of the total, and an important fraction. Government is the biggest and busiest business in the country. It's big because the United States is big. It's busy because our responsibilities are many and our needs constantly growing.

Like all good things, the Federal service gets better with improvement, and constant attention to improvement is the price of good Government.

In recent years there has been tremendous improvement, generated from the President's conviction that the people in Federal service represent the Nation's best. A new appointment system was established that opened the way to full, permanent careers under the merit system for qualified persons. A low-cost group life insurance plan was established. Unemployment-compensation benefits have ben extended to Government workers for the first time. The ban on permanent promotions was removed and the ceiling on the total number of permanent appointments allowed has been lifted. A pay raise was granted. These are just a few of the improvements that have been made in recent years. But the need for improvement is constantly growing along with the need for more and different Government services.

One need is that of bringing the Government pay scale into a reasonable balance with that of private industry.

Just 4 days ago the President outlined his recommendations for Federal pay raises. There is a widening gap between Federal and non-Federal salaries, and these recommendations are designed to close that gap as well as improve Federal service generally. I want to present these recommendations for your consideration now:

First, Classification Act adjustments will be proposed to provide an increase of at least 6 percent to all grades of employees.

The emphasis in this adjustment is on the middle and top brackets which include the scientific, engineering, and managerial positions upon which the security of our country in a large measure rests. The present salaries of such professional men are not commensurate with the responsibility they carry compared with non-Federal professional men with equivalent responsibility. On the other hand, the raise has been extended across all Federal grades, as a matter of simple need and justice.

Secondly, the entrance level for college recruitment and intermediate salary rates for scientific, professional, and managerial grades will be adjusted upward.

Thirdly, pay incentives are provided for those who demonstrate marked proficiency in doing their work.

And finally, numerical limitations on the three highest grades have been removed altogether. The elimination of this ceiling permits more reasonable salaries for key scientists and executives.

These four steps—increasing the general pay level, offering higher entrance pay to college graduates, eliminating the ceiling on the top grades, and providing incentive payments for high proficiency—are steps toward the challenging future. They are not yet law and their eventual form will depend upon the deliberations of Congress. Nonetheless, they display in positive form the President's interest in making the Government equal to the challenge that confronts us.

That challenge can be stated in a single word: manpower. The tasks that the Government is called upon to perform are growing more and more complex, while the incentives for entering and remaining in Government service grow less impelling as industry service becomes more attractive.

Let me give you an example. Just last week, in Washington, the first President's Award for Distinguished Federal Civilian Service were announced. The recipients included an engineer who had developed the Sidewinder guided missile, a soil scientist whose studies into the nature of matter had opened entire new chemical fields, a career ambassador who had represented the country during a tense international situation, a Bureau chief with a remarkable record of maintaining the Constitution and enforcing our laws, and a department official who had made impressive contributions to the development of legislation.

These awards typify and bring into focus the manpower situation of Federal service. From one end of the occupational ladder to the other, Government is represented. This places Government in competition with private industry for the skilled manpower it needs. It is hoped the President's pay and other proposals gain for Government its fair share of the manpower pool.

A vital and important element in attracting, retaining, and developing to their highest capabilities men and women of exceptional ability is the 75-year-old merit system. For by offering to applicants a guaranty that their careers will be advanced on the basis of merit, without any other consideration, the Government can demonstrate its character as a fair and honest employer. By offering to those already in Federal service a guaranty that Government can more than match all the advantages offered by other employment, the civil service and proposed improvements will continue to maintain a solid, sound, and progressive core of workers to carry the Nation's work forward. Certainly, no more stimulating challenge could confront you and could be more worthy of your complete and continued dedication on this 75th anniversary.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. O'HARA of Illinois. Mr. Speaker, today we commemorate the anniversary of Estonian independence. On this occasion we pay tribute to a heroic people who, having enjoyed the fruits of freedom and independence for two decades, are now the unwilling subjects of the U. S. S. R. The tragedy of Estonia is a telling, if tragic, lesson for the West.

By the terms of the peace treaty of 1920 that brought an end to Soviet-Estonian hostilities, Moscow recognized Estonian independence and pledged to respect its national sovereignty and territorial integrity. This pledge became the base of all subsequent Soviet-Estonian relations. In 1932, both nations concluded a pact of nonaggression. A year later they became signatories to the London protocol defining aggression. And, of course, both nations were members of the League of Nations and were thus bound by its precepts and agreements to live in peace.

The first Soviet breach of faith occurred in autumn of 1939 when at gunpoint the Estonians were forced to conclude a pact of mutual assistance which permitted the stationing of Soviet forces on Estonian territory. In an obvious attempt to sanctify or legitimatize their illegal act the Soviets included in the pact an article which restated the Soviet pledge to preserve and respect Estonian sovereignty and territorial integrity. In less than a year, however, the Soviets invaded Estonia and forcibly annexed that country to the U. S. S. R. By this act of aggression the Russians destroyed the entire fabric of relations that had been carefully and hopefully—at least

for the Estonians—built up since the peace treaty of 1920 and destroyed with it Estonian freedom and independence.

On this anniversary of Estonian independence day it is well for the free world to ponder the tragedy of this small Baltic nation. We look forward hopefully to the time when again the people of Estonia will enjoy the sweet fruits of freedom.

"You Keep Seeing Your Children Go Hungry"—St. Louis Argus Columnist Buddy Lonesome Spotlights a Not Unusual Case of Clean, Neat Household With Empty Larder

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. SULLIVAN. Mr. Speaker, I was deeply moved by a recent article in the St. Louis Argus written by Columnist Buddy Lonesome and built around a heart-rending letter his paper recently received from a distressed and desperate mother of five in a family where hunger has become too frequent.

Mr. Lonesome, a reporter who believes in the direct approach, was also moved by the woman's letter, but as a careful newspaperman decided to investigate the facts first hand before printing the letter.

What he found was a scrupulously neat home—clean sheets on the beds, clean furnishings, shabbily dressed but clean children—a family grateful to a neighbor for having given them some wood with which to keep warm—a family grateful for a little help.

If the facts are as Mr. Lonesome found them to be—and I am sure they must be—the particular family involved in this news account should certainly find help forthcoming in our city. The Argus columnist points out, however, that this is not an isolated case—that "there are hundreds, nay thousands of these people. They are ill fed, ill housed."

Mr. Speaker, the existence of so much hunger—and it is literally hunger—in our cities and towns at this time of recession is a national disgrace. Children in a million or more families in this country are being deprived of the opportunity to grow as healthy and happy youngsters.

A similar situation existed 4 years ago, during the recession of 1954. At that time, I introduced a food stamp bill to establish a national system of distribution of surplus food to all of our needy. Since those days, the need for such a measure has continued unabated. Even during periods of so-called prosperity and boom, we have millions of Americans on the thin edge of malnutrition not out of choice—not in order to reduce or lose weight—but because their incomes are insufficient to enable them to live decently. They exist below the absolute minimum level of nourishment.

Mr. Speaker, for those who doubt the existence of such conditions, I commend the following article from the St. Louis Argus by Columnist Buddy Lonesome entitled "Our Poor and Needy":

[From the St. Louis Argus]
OUR POOR AND NEEDY
(By Buddy Lonesome)

It's an undeniable fact that times are hard. While the experts continually assert there is no depression, it is also irrefutable that many, many St. Louisans are now out of work, hungry, sheltered because of their landlord's charity or taking beggarly jobs at miserably low pay. There are hundreds, nay thousands of these people. They are ill-fed, ill-housed. Because there are so many in similar travail, it is perhaps unfair to pinpoint one person's disastrous state of life. But the following letter touched me where I live. It was the desperate plaint of a woman continually scrambling for heat and food—not a new car, new house, new furniture or new clothes—but necessities. It follows:

"DEAR MR. EDITOR: I am a mother of five children and am desperately in need. I have 4 children home and 1 in the hospital and we have no source of income.

"I know there are hundreds of people just like us here in St. Louis, but you keep seeing your own children go hungry, or half-fed and you can't find a job; and all of a sudden you feel like something has just got to change. My husband hasn't done very much work since he came from Korea. I work whenever I can find a job but because I am asthmatic, jobs don't last very long. When my boss finds out, I always get fired.

"But to get down to the facts. I don't have food to feed my children and my landlord is about to put my children and myself out and I have no place to go. If I did, I couldn't pay my way there either. I can only wait until night when my children are asleep and cry my eyes out and pray as hard as I can that tomorrow will bring something for us. But nothing has come as of yet.

"I can't send my little girl to school tomorrow because she goes to Dunbar Branch and has to carry a lunch and I don't even have money to buy bread or anything else for her to carry. She doesn't have a warm enough coat to go back and forth from school, and home for lunch even if I did have anything to give her.

"I am 25 years old and would like a job, any kind of job that pays a salary. I don't have a high school education but my learning is fast and good. My husband is a construction worker and could get a job, but is unable to get a permit or paid up union card.

"We would like to know if you can help us. So we are writing to ask if you can help us' out. We are very desperate. I have no way of knowing if you will read this letter and laugh and throw it away or what.

"But if wishes are ever granted and God is willing, you will help us out. And maybe we both can get jobs to support our family and needs. Thank you very much and may God bless you.

"MRS. ETTA J. GARNER."

As you've probably guessed by this time, and despite the popular misconception, newsmen aren't completely hard-hearted. In fact, most of them will stand pretty still for a good, misty yarn. Along with Sonny Hawkins, Argus photog, I went to the house on Elliott to check the woman's story. We also felt duty-bound to personally assure the lady that nobody, but nobody, writes such a poisonous letter that it gets thrown in the wastebasket. In fact, if you can provoke a reader to call you nothing but a so-and-so, at least you have scratched his veneer. As for laughing at mail received, this corner stopped that after 6 months in this biz.

On visiting Mrs. Garner, the most impressive thing to me was the scrupulously neat way she kept her house. And with five kids underfoot, and the blatant ache of an empty larder, that's really doing something. The Garners live on the first floor, occupying a living room, bedroom, and kitchen. The living room had a big bed in it, along with the sofa. The sheets on the bed were clean, and the white leatherette covering two straight-back chairs was clean. The children were shabbily dressed, but clean.

When we walked in, Mrs. Garner declared that she was so happy now, maybe we ought not to worry too much about her. She said her husband had gotten a part-time job in Ferguson washing cars, and while he came home cold, he did manage to bring home money to buy a little food. "And bless Jesus," she cried, "we now have heat in the house." A neighbor who lived across the back alley, had given the family an armful of wood. "We didn't have any wood during all those cold days, last week, and had to stay huddled up in bed. I even started to send Yvette to school, today, so she could get warm. But thank God, somebody helped us."

That seems like such a little to be thankful for, doesn't it. Heat, just enough to keep the children warm. With the present hue and cry for scientific and technological advances in this crazy, tilted world, it is utterly primitive that so little has been done to feed and clothe the needy. Nor can it always be shrugged off with the inevitable cliche about individual enterprise. Until our needy are taken care of, how can the rest of us be really comfortable? As world citizens, not just Negroes, we have so far to go and so much to do. Meanwhile, we must also help in any small way we can, to bridge the void the Government is taking so long to recognize. When your neighbor is hungry, give him a crust of bread, when he is cold, give him a stick of wood. The favor just might be returned—later.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. McCORMACK. Mr. Speaker, the year 1918 saw the end of the bloodiest and costliest war the world had known until that time. Belligerents and neutrals alike were glad to see the human carnage stop and they all welcomed the return of peace. To some peoples 1918 ushered in a new era; it brought them a prize for which they had been fighting for generations and even for centuries. In that year they regained their national independence and freedom. The Estonians were one of these peoples.

The Estonians had settled in their historic land long before our present era. There in the northernmost outpost of Europe they led a quiet and contented, but strenuous and hardy life. They constituted one of the smallest and homogenous ethnic groups in Europe, seldom numbering more than 1 million people. But they succeeded in maintaining their national identity and freedom. In 1710, however, their country was overrun by the Russians and they were forced to accept Russian regime

imposed upon them. For more than 200 years they lived under Russian oppressive rule and they never liked it. Their chief desire during all that time was to be free, but they were unable to attain their freedom without help from others. But some events in the course of the First World War worked in their favor. With the Russian revolution of 1917 czarist autocracy was overthrown and that government's authority over other nationalities was shattered. Thus Estonians felt free, and on February 24, 1918, they proclaimed their independence.

That was exactly 40 years ago, and unfortunately the new and independent Estonia born on that memorable day is no more. It became one of the first victims in the course of World War II. Since then the unhappy Estonians are suffering under totalitarian tyranny. But their hope for freedom and their desire for independence is not dead. It is living in the hearts and minds of Estonians still struggling for their liberty. Their sincere friends in the free world join them in the celebration of the 40th anniversary of Estonia's Independence Day and hope that soon they will attain their cherished goal of freedom with justice.

Toll Television

EXTENSION OF REMARKS
OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. BROWNSON. Mr. Speaker, I am not at all sure whether Congress should interpose its judgment on the Federal Communications Commission in the matter of pay TV. The RECORD has been well filled with effective arguments against pay TV. I have read these articles carefully and preserved many of them for future reference. Under unanimous consent I am today inserting in the RECORD two articles presenting logical arguments on the other side of the picture solely in the interest of making both sides of this discussion available to my colleagues.

[From the Wall Street Journal of February 21, 1958]

TOLL TELEVISION

Opponents of pay TV have based much of their argument on the premise that it would eventually result in viewers being forced to lay out hard cash for entertainment now available for nothing. Subscription television people, on the other hand, are busy pointing out what they insist are the advantages of the plan—better quality shows, new movies, and Broadway plays, etc. And the Federal Communications Commission has decided to decide the question.

The quality of television offered the public today ranges from the terribly good to the good and terrible. Aside from the few outstanding dramatic, variety, and cultural shows, it seems unlikely to us that many viewers would be willing to pay for the run-of-channel output. Subscription television interests, however, are ready to risk their capital in the belief that people will pay for superior offerings.

If pay TV does come up with a consistently salable product it would force the networks to upgrade their own shows. If it fails to attract enough coins it will have been a nice try. Either way the public has nothing to lose.

And because it is the public who will really pass judgment, the FCC would do well to stop stroking its chin and let a full-scale experiment get underway.

[From the New York Times of February 23, 1958]

THOUGHTS ABOUT TOLL TV

(By Jack Gould)

The broadcasters have not covered themselves with glory in their all-out assault on pay-as-you-see television. In the last few weeks their screams of apprehension have done more to make the public aware of toll TV than even the system's promoters have managed to accomplish. By their frantic determination to make certain that subscription TV is stillborn the broadcasters may have given new impetus to the idea of a box office in the home. They are protesting too much.

While in their newscast the networks have been reasonably objective about toll TV, individual stations have recklessly editorialized in their own behalf. If their partisan propagandizing continues, the whole matter of TV editorializing may need review.

The Columbia Broadcasting System has wined, dined and entertained Members of Congress at a public function where representatives of the network's affiliated stations were solicitous hosts to the legislators from their home States.

The House Interstate and Foreign Commerce Committee accommodatingly adopted a resolution urging the Federal Communications Commission not to authorize a trial until such time as Congress had a chance to pass on the subject, which presumably would be in a few decades.

PROTESTS

The viewer on the sidelines would seem entitled to come to the conclusion that the broadcasters protest too much. If toll TV is so certain of success and destined to wipe out the existing system of advertising-sponsored TV, there must be something to be said for it. What are the broadcasters and the cooperative Congressmen trying to hide from the set owner and why are they so positive that the individual must be protected against himself?

This corner is of the opinion that toll TV faces very formidable odds; that the public is so accustomed to receiving entertainment without direct charge that it would be an uphill fight to persuade it to pay.

Perhaps, if only because of the vehemence of the broadcasting industry's campaign against toll TV, it is time to reexamine pay-as-you-see.

One of the main arguments of the broadcasters is that there is something sacrosanct about the present system, that because the airwaves belong to the public it is their inherent right to receive programs without charge. Actually, of course, a great deal of the spectrum is assigned to private commercial use for services the public does not hear.

Every station operator using the airwaves makes profits that are his and his alone. Under the present system the advertiser also benefits financially from the use of public property. To suggest that the promoters of toll TV are embarking on some undemocratic scheme because they want to use the airwaves for personal profit is just so much nonsense.

Another argument is the question of the public's interest. With toll TV, it is suggested, the mammoth profits will drain away all of today's talent and the public will be denied its present service. But less attention is paid to another form of denial. Large segments of the national audience nightly are being denied certain types of programing because such shows do not coincide with the understandable business objectives of sponsors. But must our culture over the air be restricted to one set of commercial standards?

DISSERVICE

The toll operators in this respect have done themselves a serious disservice by ignoring the economic realities of a mass medium. There has been loose talk, for instance, that seeing a single ball game might cost $1 and that a month of movies could run $9. These figures reflect the archaic reasoning of people accustomed to doing business in theaters or stadiums; they are incompatible with the more efficient distribution machinery that is home TV.

Toll TV should not be discussed in terms of dollars but rather in nickels and dimes. At 10 cents a family the potential national gross for The Bridge on the River Kwai could run to $4 million. It is conceivable that for 15 cents a week a family could see and hear outstanding scientists give three hour-long lectures leading to college credits. A world series game with a mass boxoffice could cost a nickel. After My Fair Lady has finished its Broadway run in 1975, a family of 5 might have to chip in only 2 cents apiece to see it.

When thinking about toll TV runs along these lines it becomes clearer that there is more than one way of judging what is the most democratic way of using the TV airwaves. It is possible that the public's enormous mass buying power, expressed through a convenient home box office, might drastically reduce the price of many things not all people can afford to enjoy today.

The real danger posed by toll TV—and one not adequately realized by the FCC—is that there may be too few subscription TV facilities, that pay-as-you-see TV won't have a chance to get started on a basis assuring its maximum potential. If, for instance, it is severely restricted, then its promoters will be out to make the maximum number of dollars just as the sponsor wants the maximum number of potential customers. In such circumstances there is real danger of the old pursuit of mass preference.

But if the FCC were to screw up its courage and throw open the unused ultra-high frequency channels to all and sundry who wanted to try toll TV, there might well be the multiplicity of choice. Probably the most democratic mass medium of today is the phonograph-record business. The millions who want Elvis Presley can hear him; those who want the Budapest String Quartet can have that.

If toll TV can be established with sufficient rival attractions so that the public can exercise discrimination, then there well could be the TV equivalent of, say, the Paramount Theater and the Little Carnegie. The great weakness of the present form of television is that it doesn't pay to cater at prime evening hours to small minority audiences; but with sufficient outlets those small audiences could pay for their fare and assure their producer a profit.

LOBBYING

Today's broadcasters in the long run will only defeat their own purpose by asking the public to close its mind to the possibility of change; in lobbying so vigorously for the status quo, they are only betraying their fatigue and age. If they want to battle toll TV, the way to do it is by showing on the air that it is unnecessary. But when they don the holy mantle of special privilege and suggest that they are the Nation's supreme and only big brother, it is time to call a halt.

The toll TV producers may fall on their faces but it is in the American tradition that they should have their chance. At least they are not frightened by the ultimate test: that the public can realistically register its

likes and dislikes by granting or withholding its patronage. Today's broadcasting industry never really has known such a stimulating influence of civilizing discipline. Perhaps today's broadcasters basically are terrified by the prospect of the unknown: the viewer having something to say directly about what he sees.

A Permanent Cure

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. WILSON of Indiana. Mr. Speaker, the extent to which the American people are becoming concerned over the economic plight of their country is forcefully indicated by the widespread response our colleague from New York [RALPH W. GWINN] has had to his proposals as embodied in H. J. Res. 355.

Briefly, his proposals would get the Federal Government out of competition with private business and would pave the way for certain other reforms which seem to be enthusiastically desired by many people. One of the greatest newspapers in the Middle West, the Indianapolis Star, has written splendidly in behalf of the GWINN proposals.

Under unanimous consent, I wish to include in the RECORD a sound and thoughtful editorial which appeared in the Star of February 17. I commend it to all members of this body as most worthy of consideration. It is as follows:

A PERMANENT CURE

Almost everybody is against the Federal Government going into private business, but almost nobody ever does anything about it. Congressman RALPH W. GWINN of New York is an exception. On the theory that you cannot cure socialism little by little, he wants the Federal Government to quit messing in private enterprise fields all at once. To make the cure permanent, he has proposed a constitutional amendment which has received less attention than it deserves.

GWINN's proposed 23d amendment was conceived by a Californian, Will's E. Stone, president of the American Progress Foundation. It would do three things: repeal the Federal income tax, outlaw foreign aid and forbid the United States Government from engaging in any business, professional, commercial, financial or industrial enterprise except as specified in the Constitution. There is rather convincing evidence that, while wiping out the onerous Federal income tax, the amendment would save the taxpayers more than $33 billion and still leave the Federal budget more than $600 million in the black.

By careful analysis of the latest complete information available to him, Stone has developed a set of statistics which tell the story vividly. In its own way, it is a frightening story. Based on official reports for the full year of 1954, the Federal Government is operating 500 Federal corporations for which no constitutional authority exists. They control 40 percent of the land area and 20 percent of the industrial capacity of the Nation. They operate at a loss of more than $10 billion a year, which must be made up through taxes.

Besides the people directly employed by the Federal corporations, another 1 million persons on the general Federal payroll devote their time exclusively to servicing the corporations. Their salaries amount to $4 billion a year, while the goods, facilities, and services they use add another $12 billion a year.

Two more items complete the rollcall of costs. Using an arbitrary figure of $50 billion as the resale price of the Federal corporations to private industry (the inventory is 4 times that), the application of this amount to the national debt would reduce interest payments on the debt by about $1,250,000,000 yearly. It would also knock off another $1,250,000,000 in amortization costs.

The total saving to the taxpayer by getting the Government out of business, where it has no call to be anyway, would be $28,500,000,000. By doing away with foreign-aid giveaways, the saving would be advanced to $33,169,000,000. In the year for which these figures applied, the total Federal income-tax collection was $32,495,000,000. Thus, without any income-tax collections at all, the Government would have been $674 million richer had it not been operating and servicing any of the questionable Government corporations in 1954. The sum would probably be even greater today. The saving would buy a lot of national defense without either deficit financing or additional taxes.

The appeal to the pocketbook of the proposed 23d amendment is tremendous. The appeal to national morality is equally strong. The Federal income tax is an iniquitous instrument which has been used for purposes never contemplated by the constitutional amendment which permitted it. The seizure of private wealth which it represents has grown to proportions which the framers of the original amendment regarded as too farfetched even to discuss as a possibility.

Since there is not much likelihood that the bureaucratic lobbies will allow the proposed amendment to originate in Congress, we commend it to sympathetic study by the State legislatures. Enough of them can put it before the people for ratification. It at least deserves that chance.

Assemblyman Vic Wallin Talks Sense About Awarding Scholarships

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. O'KONSKI. Mr. Speaker, much has been said about helping to finance the education of qualified students. I believe a sensible approach has been outlined in a conversation with me by Assemblyman Vic Wallin, of Grand View, Wis.

Vic Wallin approaches the subject with thought that the welfare of all people is bettered by equality of educational opportunities. Equality is extended in our schools from the 1st grade through the 12th, but from then on, education is quite preferential, the preference being ability to pay.

Colleges and universities are financed mainly through taxation, gifts, and student fees. If our university is a fair example, then the student fees amount to about 10 percent of the total cost. The 90 percent financed from other sources can only have its reward by good use of the knowledge gained by the students in their many and varied fields of technical training. Because of higher education, the reward to everyone has been of great value. It is true, as in all groups, every so often there is that someone who uses the advantage of his higher education solely for his own selfish aims. He forgets that his advantage was made possible only because of men dedicated to education. He forgets that he learned by simply reading of the discoveries that required perhaps years and years of thinking research by others. He forgets that the taxpayer he is exploiting, paid the major cost of his advantage of higher learning.

But we can be thankful that the great large majority of those with higher education not only better their own standard, but also the standard of all, if facts bear this out as being true, then it seems reasonable to suppose that higher education should be made available to more students.

It seems quite apparent that the deterring factor of so many students not entering college, or taking specialized training, is financial. This is evidenced by the fact of scholarships provided, certain limited loans made available, special training provided by private industry, and so forth.

The potential of creative thinking is certainly not centered solely in the minds of those blessed with sufficient financial needs. But creative thinking, like a seed, develops in relation to the richness of the soil in which it is planted. Educational training is merely a special soil to develop that potential thinking that might otherwise lie dormant.

But the potential of a young mind is not a recognized security for a bank loan.

To make higher education totally free would not be advisable. Being practical, we know that all minds cannot absorb higher learning. With students paying part of the cost, it serves as a screening. But that cost should not be beyond the reach of a worthy student with sufficient initiative to be willing to obligate himself.

Many students with good minds have been desirous of furthering their education, but with no funds to back them, they must seek work, some with intention of saving money to get that higher learning. But time slips by, and likewise the desire for schooling. And if romance enters the picture, the financial impact further removes the possibility of schooling. How much has been lost? Who knows? If a young person can get a 20-year loan to build a home, doesn't it seem reasonable that an educational loan to a worthy student could be of equal value, or perhaps many, many times more?

The question is, Should and can loans be made to worthy students without sacrificing incentive, nor placing them in the class of charity? The writer believes such loans can be made—loans which are just as basic and just as American as any bank or other type loan.

That thought has been brought out by the personal experience of the writer, who had the opportunity to help three deserving students to help themselves. Two of the loans were small, though

highly important to the student. The writer merely served as endorser to a bank loan. This was done for two reasons. First, it made the student recognize he had an obligation to pay, one that could jeopardize his reputation if he failed, except for good and sufficient reason. Second, he knew he was paying for the use of that money. It took away the thought of charity. With a bit of friendly help, he was financing his own needs.

The third student required a larger loan. It was also a bank loan, secured by endorsement. But in this case the student was asked to take out an insurance policy as a loan protection, as well as being an aid to peace of mind.

All three students repaid their loans as agreed. All three today have positions of responsibility. They have not only bettered themselves, but the people they serve. All because they had an opportunity to help themselves.

Based on that experience, the following plan is suggested:

First. The student must have a required scholastic standing.

Second. The student must be of good moral character.

Third. The student could borrow the funds needed, in periods as needed.

Fourth. The student would take out a term-insurance policy, as a loan protection.

Fifth. The loan would bear interest after completion of the schooling.

Sixth. The loan would be repaid by 10 percent of the earnings of the student.

Now, let us evaluate the plan. The first requirement would better assure training to a qualified mind.

The second requirement would tend to reduce the moral risk of the loan.

Advancing the funds as needed would serve as guidance to the student, and better assure that the funds were only used for purpose advanced.

Term insurance can be had at nominal cost. Covering such things as death, permanent injury, and such other risks as may be determined by those in best position to know. Coverage extending only on the unpaid portion of loan.

Interest rate low, to cover operation cost only.

Repayment of loan based on 10 percent of earnings. A flat sum requirement might lead to default through no fault of the student. No one can tell the economic level of the future, nor the earning level of any profession. But just about anyone can live on 10 percent less than their earnings. This system would actually make the loan self-paying. If the education gained cannot increase the student's earning power by 10 percent, then the education gained has been wasted. A long-term educational requirement will require a larger loan, but the potential of earning power and repayment is also increased.

True, students that are minors, there may be a question of loan recovery by law in case of default. However, it seems doubtful that anyone gaining a higher position by reason of education, would risk same by exposure of default in paying a debt that actually gave him that position.

Under this plan, the funds supposedly would be perpetuated. The whole question would resolve on the honesty of the youth given the opportunity to help themselves. The writer has faith in the honesty of those earnestly seeking to better themselves.

Now comes the important question. Where would the loan funds come from? The Government? It could, but first it would seem advisable that a plan should have first proven its worth under our free-enterprise system.

There is a source of funds available that could well be used for such testing. Whether its ability, luck, a mixture of both, or something else, the fact remains that everyone doesn't make a million dollars. But many that do, give large sums for scholarships, for research, for charity, and so forth. They establish funds to promote and aid certain causes, in the form of foundations. These are all worthy.

But what greater research can there be, than finding a system to release the potential creative thinking now permitted to lie dormant because of the lack of funds, funds that would keep on working through repayment.

It would require more of course, but supposing a fund of only $1 million dollars were set up. The program would have to be limited? Perhaps limited to a given area, but primarily limited to its true purpose of loans only to those worthy students whose schooling would otherwise end.

Some might require a loan for only 1 year, or 2 years. Others may be full term of 4 years, or even longer if such course required. With the increased earning power, on the 10 percent basis, the loan could be repaid in a relatively few short years. A million dollar fund would not take care of a great multitude of students, but it would be well sufficient to measure results. And once proven, more funds would be forth-coming.

Certainly no student that is really desirous of higher education would object to borrowing money for that education, when he knows full well that his increased earnings alone would repay that loan in a reasonable time. And as he starts paying, that same money can be used for another deserving student.

We are generous in our loans for material things. Perhaps it is time we consider some loans to tap and develop the true source of our wealth. The Creator did not distribute the thinking minds on the basis of dollar possession.

But the lack of dollars at the time when of greatest worth, has kept far too many good-thinking minds from being developed to fuller use. A potential of knowledge lost to the world because thinking development lacks a loan value.

As of today, the far larger share of higher education is paid by others than the student. That cost is not based primarily on quality of minds trained, but rather on the student's ability to pay his lesser share. But even on that basis, higher education is paying huge dividends to all.

Therefore, why should we continue to hold solely to a dollar system that denies many qualified minds from developing its true potential, when we know the thinking minds have not been distributed on the dollar basis.

Research in the field of higher education to find a system of more equality of opportunity, seems to be both due and worthy.

Since the above was written, the papers carried a front-page headline that it had been proposed that the Government grant a yearly scholarship of $750, up to four years, to students with special mind ability. There is no desire to detract from the value of scholarships, but this seems much like rewarding a student for being born with a special talent. This brings to mind the Biblical story of the talents, where the reward was not based on the talent or talents possessed, but on the use of same.

Therefore, if such scholarship constituted a certificate of recognition, and carried a repayable loan value of same amount, the end result would be the same as far as educational opportunity is concerned, and this same fund could be used again and again for the same purpose of developing other gifted minds to fuller extent. It could well be a gain to all.

New Hampshire Industry in the Forefront To Promote Scientific Achievement

---

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. BASS of New Hampshire. Mr. Speaker, in this day of scientific advancement we are all anxious to pay tribute to those who are assisting in the field.

My good friend and neighbor, Mr. Horace D. Gilbert, is one of the many Americans doing his best to help our country.

The magazine article printed below is self-explanatory:

MINIATURIZATION AWARD ANNOUNCED

Plans to establish an annual miniaturization award which will recognize the greatest contribution by an individual or firm to the advancement of the concept of miniaturization have been announced by Horace D. Gilbert, president of Miniature Precision Bearings, Inc., Keene, N. H. An independent committee of miniaturization authorities representing industry, education, Government, and technical publications will administer the award.

In making known the award, Gilbert explained that "in recent years there have been spectacular improvements in the significant trend to miniaturization resulting in major advances for consumers, industry, and the military." The purpose of the award will be twofold: to honor the individual or firm who has made the greatest contribution toward these improvements; and to stimulate further activity within industry toward advancement of the concept of miniaturization. Entries are expected from a wide variety of product groups.

As an example in this breadth of miniaturization in industry, Gilbert noted that "min-

iaturized products can be found in the electronics, medical, musical, office equipment, and precision instrumentation fields, among a host of others."

Award entries are being judged on the following sets of criteria:

1. Products, components, or parts which show outstanding ingenuity in solving problems, make use of new design concepts and special materials and develop new type components or parts that extend the frontiers of miniaturization.

2. Individual companies or organizations which have broadened the horizons of miniaturization by creating a better understanding and use of the concept through education, research, engineering, and standardization.

Entries outlining the contributions toward the concept of miniaturization should be submitted to the awards committee, Miniature Precision Bearings, Inc., Precision Park, Keene, N. H.

Present plans call for the presentation of the award in the form of a piece of statuary at a dinner in New York next March.

Estonia Is Still on the Map

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on commemorating the 40th anniversary of the proclamation of independence of the Republic of Estonia:

ESTONIA IS STILL ON THE MAP

Maps are very important, but they never tell the human story behind the lines and colors. When one looks at a map of Europe today, he sees that the Baltic States are all the same color, usually red. They are red because they have been incorporated into the U. S. S. R. One of freedom's brightest beacons, Estonia, has been swallowed up by the Russian octopus.

Before 1940 a map of Europe would have shown a small, proud Estonia crowning the eastern shore of the Baltic Sea. Its people were an ethnically distinct group, proud of their history, dating from 3300 B. C., with an individual culture, a growing economy, and a love of independence that had survived a long succession of foreign rulers. Probably the single most important fact is that Estonia is a buffer state, a state caught between two larger powers.

Estonia had been independent from its early beginning until the 13th century. Then it found itself a pawn in the power politics of larger, aggressive neighbors, culminating in Russian rule in 1710.

Estonia, nonetheless, remained an outpost of Western culture, preserving its own spirit of independence and catching the fervor of 19th-century European nationalism to press its politically more backward rulers for reforms. With reforms painfully gained, the Estonian people were able to progress economically and culturally. The emancipation of peasants and the growth of an intellectual element were the firm basis for a national awakening. By the time of World War I Estonian nationalist movements in full force were seeking autonomy.

When the czar fell, Estonians gained from the Russian provisional government the permission to form an ethnic Estonian province under the authority of a popularly elected Estonian National Council which was to seek the status of an autonomous state in the Russian Republic. With the aid of the confusian in Russia itself, Estonia proceeded rapidly toward realizing their centuries-old dream of complete independence.

World War I broke upon the heads and hopes of Estonia and faced them with a new occupation by German troops who invaded Estonia in the wake of the retreating Bolsheviks. One day before Germany completed its operation, on February 24, 1918, the executive committee of Estonia proclaimed that "as of today Estonia within its historical and ethnic boundaries, is an independent, democratic republic, neutral in the present war."

Estonia's neutrality was respected as little by Germany as by Russia. The small Baltic state was faced with the difficult task of fighting both nations at once.

Success finally came to the valiant nation in 1920 when the U. S. S. R. signed a peace treaty renouncing all rights to Estonian territory. In 1932 a further guaranty was agreed upon, a nonaggression pact. Estonia was building its foundations of sovereignty upon the treacherous sands of Soviet paper promises.

World War II began for the successfully independent Estonia publicly with a declaration of neurality, privately by its secret consignment to Russia has a result of the infamous Ribbentrop-Molotov agreement.

Russia began immediately to push all its efforts toward the seizure of Estonia. Estonia was forced to sign a mutual assistance pact on the grounds that it could not guarantee Baltic security. Russia then presented an ultimatum on June 16, 1940; acceptance would mean military occupation. The people of Estonia, faced with overwhelming odds, grimly resigned themselves to their fate, their only hope that an international crime of such proportions would not go unpunished.

The Western World was quick to recognize the illegality and immorality of the Soviet behavior. Sumner Welles, American Under Secretary of State, said on July 23, 1940, that the independence and territorial integrity of the Baltic States were deliberately annihilated by devious processes. The United States has consistently refused to recognize the forcible annexation of Estonia. We realize that the Estonian people are a strong bulwark of anticommunism. We acknowledge the sufferings of these people who are steadfastly refusing to surrender their integrity, their patriotism, their religion, and their culture, even at the cost of their lives.

Some people have escaped from the horror that is Estonia today. They stand in the midst of the free world community and ask for our aid and sympathy. They know better than we the terrible price of freedom; they stand as burning examples of man's unquenchable desire for independence. They stand as reminders that there is still a part of the world living in darkness in this progressive 20th century.

Soil Bank: GOP Curve

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle of February 19, 1958:

SOIL BANK: GOP CURVE

The Soil Bank Act has turned out to be just about the biggest curve the Eisenhower administration has thrown at the country's farmers to date.

There are gross inequities which have been and are being practiced in the administration of the act, as hundreds of farmers in Kershaw County and across the Nation were promised the privilege of signing up for soil-bank payments and now have been turned down flatly.

This, needless to say, is in direct violation of a section of the Soil Bank Act, which states in words clear that all producers be given "a fair and equitable opportunity to participate in the acreage reserve program."

In nearly every instance the offices reported to farmers wanting to sign up acreage that no money is available, yet the Eisenhower administration insisted that the soil bank be continued this year.

The thing that really snows the farmer under is that the administration, in view of the above situation, has not, to date, offered a plan or even talked of one which would remedy the situation.

The Chronicle feels that the Government, since it insisted on the soil bank's continuation, has a moral obligation to the farmer, not to mention the right provided in the act itself.

Benjamin F. Fairless Receives Silver Quill Award of National Business Publications, Inc.

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 10, 1958

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the proceedings of the state of the Nation dinner of National Business Publications, Inc., at the Sheraton-Park Hotel in Washington, D. C., on January 31, at which Vice President RICHARD M. NIXON presented the 1957 Silver Quill Award of National Business Publications—highest tribute of the business press—to Benjamin F. Fairless, longtime head of United States Steel and now president of American Iron and Steel Institute, for distinguished service to the progress of Government and industry through unparalleled business leadership. In keeping with Silver Quill tradition, Senator HARRY F. BYRD, who was last year's recipient, served as chairman of the selection committee which unanimously named Mr. Fairless to receive the 1957 award.

The excerpts follow:

INTRODUCTORY REMARKS BY MASTER OF CEREMONIES RUSSELL C. JAENKE, EXECUTIVE VICE PRESIDENT, PENTON PUBLISHING CO., AND CHAIRMAN OF THE BOARD, NATIONAL BUSINESS PUBLICATIONS, INC.

It is always our hope that the state-of-the-Nation dinner may serve as a forecast of good things to come. At our head table there are leaders from government and industry who have graciously consented to briefly answer one specific question related to our future security. All have agreed to operate under a tight 3-minute rule.

We are also privileged by the presence of a group of distinguished journalists. They have likewise graciously agreed to ask the questions which are to be answered. I have the high honor of introducing this question-and-answer sequence which is themed "What Price Security?"

Inquiry by Roscoe Drummond, Washington columnist, New York Herald Tribune: Secretary Seaton, I believe all of us agree that supplies of water and electric power are indispensable to national security. At the same time, I believe all of us realize that, within recent memory, in various parts of the United States, there have been shortages of both and that the demands for both are continuing to grow at a terrific rate. Now, this is my question: Can you tell us what is being done to assure that we shall have plenty of water and power to meet all of our future needs?

Response by Fred A. Seaton, Secretary of the Interior: That is a very good question—maybe I better say a series of questions. The question of whether America will have just enough plain, ordinary water, in the next 25 years, could quite likely be the No. 1 domestic problem of this country. And, of course, whenever you talk about water you're talking about its corollary, which is electric power.

Now, I think that the Government of the United States is thoroughly aware of the twin problems. We recognize the fact that, by 1980 at the latest, the combined electrical industries of America—private, public, and Federal—will have to expend somewhere in the magnitude of hundreds of billions of dollars, in order to satisfy the electrical needs of the country. Translating that another way, it means that we shall have to triple the kilowatt production of America, at least by 1980, if not by 1975.

When you talk about water you have to realize that, in 1957, the industrial requirements for water equaled the agricultural requirements for water and that's the first time, in our history, that that has happened. We expect that, by no later than 1980, two-thirds of all the water requirements of the country will be soaked up by industrial appetite. In the last 4 years, the Government of the United States has increased the reservoir capacity of water in the United States by some millions of acre feet. We realize that that is only a start on the problem. I should like to hazard the guess tonight that the real and eventual answer to it is the successful solution of the problem of making saline and brackish water into potable water—in other words, taking the waters of the oceans and taking the brackish waters of the Middle West, the West, and some places in the East, and converting them so that, not only industry, but also human beings can use it.

That latter involves a very fascinating story. I think that scientists who are versed in the field will all admit that the world has come further in the direction of solving that problem, since 1953, than it has in the previous 150 years of human existence. We now have laboratory experiments in the Office of Saline Water of the Department of the Interior that indicate that we can convert sea water to human use for a cost of about 60 cents a thousand gallons. We are testing that out this next year in two pilot plants. If that is successful, we will have solved at least two-thirds of the problem of conversion, in the ratio of economical cost to human and to industrial use.

When we were in school, Roscoe, you and I, we were taught and we worried about the fact that it took 67,000 gallons of water to produce a ton of steel. Today, when you think in terms of the rayon industry, the synthetics in clothing and synthetic rubber, you are talking in terms of water used per ton that makes the 67,000 tons for steel look like something that came out of elementary school, which indeed it did.

I don't think there's any question but what the Government of the United States is on top of the job and I don't think there's any question but what the nations of the free world are all conversant with the problem and are all working together. And I should hazard the guess that, in the next 15 or 25 years, we shall have solved this problem of the saline and brackish water reduction. If that should happen, I should like to remind the ladies and gentlemen here tonight that that probably will become one of the greatest revolutions in all the history of industry in the world—from the time when history was first recorded—because you can almost dream forever about it.

If you could make all of Australia fruitful, if you could return the Middle East to the days of Babylon and Carthage before they were destroyed, and if you could make all of the land expanse of the United States and its possessions and territories fruitful, you would stop a lot of the problems of the world. The people wouldn't be hungry and you could move industry almost where you wanted to.

Today, the limit on the decentralization of industry is not so much the corporate investments that people have but the question whether industry can even have water. And that's perfectly true, if you realize that 1,200 communities in this country had a water shortage last year, and, particularly when you realize that some of our industrial concentrations in the East have run out of water. They can't find it in the streams; they can't find it in the ground. If we don't solve that problem, it doesn't make any difference what industry wants to do or what technology finds out it can do. Then you are concentrated to the areas where water is available.

Inquiry by Ned Brooks, news commentator, Three-Star Extra, NBC: Senator McClellan, throughout the Nation, people are shocked by recent disclosures of unethical practices by certain labor organizations and among certain union officials. From testimony before your select committee; from your own private store of related information—do you feel that such unbridled activities constitute a contributing factor to our present security predicament? In other words, Senator, have we concentrated too much on meeting the demands of labor for its individual worker, but not enough on labor meeting the demands of our economy in its expanding role as world leader?

Response by John L. McClellan of Arkansas, chairman, Senate Select Committee on Labor Activities: I believe you have asked two questions, or at least, you have asked one question in two parts. First, you asked: Do I feel that the improper labor practices revealed by this committee's investigations constitute a contributing factor to our present security predicament?

Well, now, our present security predicament involves many phases and many aspects. My answer, with proper qualifications, is in the affirmative. I do not see and I seriously doubt that such improper practices, as have been revealed, are a direct or, necessarily, a major contributing factor to what you term our security predicament. They could be, and they very likely are, an indirect factor, in that any practice in labor-management relations that tends to pollute the economic stream or to, in any way, weaken our economy would, in my judgment, definitely have some adverse impact upon our national strength and security.

With respect to you second question—I do not necessarily think that we have concentrated too much on meeting the demands of labor for its individual workers, but rather that we have done entirely too little toward the prescribing of standards of conduct and of ethics needed for the protection of the rights of the workingman and of management and of the general public. Also, we have done too little to prevent the exploitation by some criminal and disreputable elements that have infiltrated the labor movement. So far as I know, labor has met the demands of our economy in its expanding role as world leader. We have not experienced, so far as I can tell, any appreciable shortage in the personnel required to meet our production demands.

Inquiry by Robert T. Hartmann, chief, Washington Bureau, Los Angeles Times: Mr. Douglas, when I was a very small boy, I used to ride my bicycle out to Clover Field in Santa Monica to watch some of your first Douglas airplanes being flown. You have just come back, I believe, from watching your Thor intermediate rocket test flown in Cape Canaveral. As a pioneer, both in the air age and the space age, would you give us your views on two very controversial questions of the day. First, do you believe that we should rely on Government to spark our missile program or should the role of private enterprise be increased in the research, as well as the production end? And second, has your company ever been hampered by contracting with the various military services on a competitive basis and is this now slowing up our progress? Do you think that a single centralized Defense Department agency would be more efficient and economical?

Response by Donald W. Douglas, Sr., chairman, Douglas Aircraft Co.: You have touched on a subject very close to my heart. America was built on the foundation of free competitive private enterprise.

I do, indeed, believe that private enterprise should be encouraged in essential research of development and production for national defense. Our strength stems from our industrial, self-supporting enterprises, and not from official oligarchies. Private enterprise and individual initiative—the people, the dreamers and the doers—are the very essence of our resources.

We have the broad base of our entire industrial establishment, with all of its technological skill, management experience, and manufacturing plant capacity to anticipate and fulfill the requirements of our Armed Forces.

Private industry, as exemplified by the Nike and Thor projects, with which I am familiar, has demonstrated its ability to coordinate effectively the skill and resources of many different companies toward a common goal. This technique has given us some of our most important missile systems. Currently, it is being applied to some of the most advanced concepts, such as the Nike-Zeus antimissile system.

Private enterprise, in short, can do the job if it is given timely, clear-cut and firm decisions by the military, with the necessary, but only the necessary, amount of supervision by governmental agencies. Here, I am happy to add, I have been greatly encouraged, in recent weeks and days, by the fact that congressional climate and signals being called from the Pentagon on matters of defense reflect a refreshing climate of private enterprise philosophy.

This brings me to another part of your question. I do not believe that our company's proper functioning has been hampered by contracting with the military services on an independent, competitive basis. I believe that a certain amount of rivalry between the services is constructive.

It seems to me that the last part of your question concerns the current subject of reorganization of the Defense Department. Personally, I should like to see the Defense Department return to the size and system as it was in the days of Mr. Forrestal, the first Defense Secretary. Then, it was a small

policymaking and coordinating agency over the three services. The Army, Navy, and Air Force developed and procured their own weapons under the policy guidance only of the Defense Department.

If you give the existing departments authority to make the proper decisions, in the first place, and have the right men at their heads, many of our troubles will vanish.

A pyramid of committees and agencies is no substitute for men of vision, courage, and ability. We have such men in America. Let us give these men an opportunity to do the job. We've done it before and we can do it again.

Inquiry by Albert Clark, chief, Washington bureau, Wall Street Journal: Senator KNOWLAND, you have recently introduced legislation to amend existing labor laws for the purpose of providing additional protection for rank-and-file union members. Will you elaborate on the provisions of your proposal and how they could assist the Nation in securing its leadership in technology and productivity?

Response by WILLIAM F. KNOWLAND, of California, Senate minority leader: The workers bill of rights I have introduced in the Senate provides the following:

1. The election of union officials by secret ballot.

2. A recall provision so that members may replace union officials who misuse their positions of trust and responsibility.

3. Procedures for approval by a majority of union members on the question of calling or continuing strikes.

4. Registration and public disclosure requirements of union welfare funds.

5. Safeguards for members against unauthorized use of union funds or dues.

6. Protection for members against arbitrary or cohesive actions by union officials.

7. Limitation on trusteeships by national and international unions over local unions to not exceeding 1 year.

8. Penalties for cases involving management collusion with union officials against the interests of the union members and the public.

In my judgment, these provisions will help safeguard basic human rights of union members and give them a representative voice in the management of the affairs to which their salaries are contributed.

Our bill of rights for the working man and woman does not and should not constitute an indictment against all labor officials. Many of these individuals, past and present, have labored unceasingly in the best interests of their fellow man and the Nation. Unions have played in the past and will assume in the future an important role in the strengthening of our national economy. Unions will continue to grow in membership and importance. They must also grow, I believe, in responsibility to their members and to the American public.

The American way of life had its foundation fixed on maintaining the God-given dignity of man and the noble aspirations of free men in a free society. In order to assure the success of our purpose, we must always insist that with power must go responsibility. This concept cannot help but strengthen our leadership and our productivity.

Inquiry by Leslie E. Carpenter, Washington correspondent, Arkansas Gazette, Houston Post, Tulsa Tribune: Dr. Waterman, in our efforts for scientific supremacy in the space age, are we placing too much emphsis on an all-out numbers game? By that I mean would the national interest be better served if the Federal effort—the spending effort—were directed at quality rather than quantity? I wonder, for example, if an intensified effort to interest high-school students in science would produce more geniuses, or if it would only add to the total number of scientists without enriching the quality? Does it really matter that Russia is graduating a larger number of scientists than we, or is it the quality of a graduate that means the most? And, also, would national security benefit more by providing our scientists already qualified with larger research and development opportunities, rather than placing so great an emphasis on training more new scientists?

Response by Dr. Alan T. Waterman, director, National Science Foundation: Your question brings out essential elements in the situation. It would certainly be a great mistake to consider this an all-out numbers game. However, many of our boys and girls with high aptitude for science or other professional careers are not developing these talents adequately for this modern age. Thus, from among the top 25 percent of young high-school graduates, only about 6 of every 10 go on to college. It is, of course, true that, by intensified effort, one cannot produce high natural aptitude, but, by intensive training, one can develop such aptitudes to the fullest. Merely to increase the numbers of scientists and engineers will not only fail to solve the problem—it will complicate it.

Our emphasis must be on quality—quality in native ability, quality in training and quality in performance.

Quality in native ability we have in abundance, latent among our youth, from all walks of life. But, we must identify these young people early, give them every encouragement and opportunity to develop their aptitudes to the fullest—whatever these may be—for their own future and that of our society.

Quality in training for these young people we must insist upon. This means superior teaching and superior teachers, together with the equipment and materials they should have.

Quality in performance, in science and technology requires that we push forward the frontiers of science with all the vigor at our command. This means full support, both financial and moral, to our competent basic research scientists and engineers for their needs. This includes, especially, the construction of costly capital installations, such as those required for nuclear physics, astronomy and the exploration of outer space.

These goals are clear. But, above all, we must have the determination to achieve them. This will not be easy. In this, every organization, every citizen, every parent must realize his responsibilities and play an active role.

Inquiry by Marquis W. Childs, Washington correspondent, St. Louis Post-Dispatch: Mr. Moss, as you so well know—much has been said, both pro and con, about the adequacy of public information regarding the needs and developments of our defense establishment. You have been forceful in your statements about the withholding of news and my question is directed to that vital area of security. How realistic is the price we are forced to pay for a dubious security based on withholding information from the public, which must be partner to any effort to secure our future and the necessary financing? Also, Mr. Moss, is it not damaging to the unity of knowledge and action so essential to adequate preparedness to withhold information—then use it as a scare technique when appropriations are sought from Congress by the military?

Response by JOHN E. MOSS, of California, chairman, House Subcommittee on Government Information: You've correctly identified the article we buy when we withhold facts from the people—dubious security. The truth is, of course, that real security cannot possibly result from our being misinformed, or uninformed. The only result is dangerous ignorance, or worse—complacency.

The key to this question goes to the heart of our democratic process. Our system of self-government requires the people, through their representatives, to make the important policy decisions which guide our Nation's actions. To make such decisions intelligently, the people must know the facts, must be aware of the alternatives and must not be stampeded by misleading or incomplete information.

When the people don't know the truth, they cannot possible make the correct decisions. When that happens, it is only too easy for Government leaders to claim that only those on the inside can deal with the important problems of the day. The result of that situation is clearly spelled out in history—recent history, I might add. Whenever the people lose control over decision making, there are many only too willing to take over and run things.

That's the importance of full and complete information in a democracy, as I see it. Obviously, we pay a price that is too high—a price that destroys the market place—when the vital information needed to live and act intelligently in this modern world is withheld from the people.

Years ago, we used to be able to talk about long-range and short-range effects, but modern technology has compressed both time and effect into terribly short moments. Take your example—raising funds for defense appropriations. In the past years, an uninformed Congress and a complacent people—lulled into dubious security by suppression of facts—could talk economy and slash defense budgets without permanent damage. The next budget, the next Congress could act to restore the situation and the harm would be repaired.

But this is 1958, the era of sputnik and intercontinental missiles with atomic warheads. A wrong decision now could be fatal. We can no longer afford the luxury of mistakes. Our Nation must make its decisions promptly and correctly, because there may be no time tomorrow to recover from today's mistake. Instead, we are being spoon fed a few facts here, a few facts there, each accompanied by a request for money.

The people must know the truth—whether it is good or bad. The people must have the facts, must be told the whole story, to be prepared for the crucial decisions of this day. A leadership that fails to discharge this responsibility to its people—a responsibility to tell the full truth—is committing a tragic blunder that could well destroy everything we believe in.

Inquiry by William McGaffin, Washington correspondent, Chicago Daily News: Secretary Brucker, for hundreds of years, armies have traveled thousands of miles to fight for liberty at home and abroad. Now we are told that ours is a land-locked army; that the American Army has hardly a modicum of mobility with which to meet and master space-age attack. We also hear that any future war is going to be a pushbutton affair. So—Mr. Secretary—what we would like to know from you is: Who's going to guard the pushbuttons?

Response by Wilber M. Brucker, Secretary of the Army: I welcome that question. Two years ago, on this same occasion, my question was: "Is the Army obsolete?" Last year, my question was: "Is the Army outmoded in the atomic age?" This year: "Is the Army landlocked?" Well, we're making progress. Or, I might say, by Jupiter, we're holding our ground.

And now about mobility and the integrity of our national defense. I realize that I represent the Army, but it isn't fair for me to forget that there are others in this great national defense team of ours—the Navy, the Marines, and the Air Force, along with the Army, with which I am particularly familiar. What a great team it is. And how powerful and mighty that team is, working together.

With respect to this matter of the team, your Army is, of course, an indispensable part of it, but, together, it's an indestructible team. And the person who perhaps knows that best tonight is crafty Khrushchev. The deterrent strength that the United States has at this time is great. Without boastfulness, may I say to you that, with over 2½ million dedicated men and women under arms, and with over another million civilians in the services, it is a great force for our country.

Now, with respect to this business that you ask about—mobility—may I be pardoned to answer that just directly. What you mean is, can we move and get there in a hurry? Yes; in either a global or a limited war. Some think that the most likely is an atomic war with atomic equilibrium. That is not likely any more so than national suicide. So, the Russian effort will undoubtedly be to nibble away country by country by subversion or otherwise in order to take over.

The question comes, Are we ready to demonstrate our mobility to the world? Two examples quickly come to my mind.

We put on an operation a year a half ago called Operation Firm Link. You know that in Asia, at that time, the Chinese Communists and the Russians had been talking about Uncle Sam as the "paper tiger." You remember that phrase, certainly. Well what happened? It was necessary to demonstrate to the people of the area that we could do something; that we were not just a paper tiger but, at the same time, would not brandish the sword. We had to demonstrate quietly that the United States had the power. So, in the country of Thailand—at Bangkok, to be particular—this exercise called Operation Firm Link was conducted. Inside of a very few days, the Navy had its great power concentrated on Bangkok Harbor; the Air Force had its great planes flying in, the Marines came with the Navy, and our Army sent two battle groups from far-off Japan, by way of the Philippines, and flew them to Thailand. In the vicinity of the Bangkok Airport, the Army parachuted to earth. Then they marched through the city of Bangkok, dissipating forever the word "paper tiger" attached to the United States. The cheering tens of thousands who lined the streets were enough to carry the word around all of that part of the Asiatic world.

Again, quickly, as to operational mobility—over 2 years ago, by plane, we carried a regimental combat team located at Fort Campbell, Ky., and we flew them over to Tokyo. Using those same planes, we picked up a regimental combat team that had been on duty there and brought them back to Fort Bragg, N. C., in 10 short days. And we're going to do better than that.

So, when they talk about the Middle East and are we ready, or when they talk about some other place in the world—and I would not mention names, because that's not perhaps the thing to do—all I can say to good Americans is, here are two examples of what you can expect, if that occurs.

Now, I am mindful of the fact that the Army has a lot of other missions. The Army has the mission of ground defense against air attack. Involved in this is the anti-missile missile that Mr. Douglas just spoke about. What a great trust that is at this moment, in addition to all the rest, to develop a weapon which will destroy the incoming missiles going over 10,000 miles an hour before they hit. We're in the midst of that. We've been working 18 months on that development and we're now getting some of it in the hardware state. We're pushing fast. It will be the third generation of the Nike family along with the Nike Ajax and the Nike Hercules—the Nike Zeus. We're very proud to have this air-defense role.

But, ladies and gentlemen, it's not missiles and it isn't the anti-missile missile that's the ultimate weapon. Please don't misunderstand it. I listened carefully to the last part of that question. Ours will never be a push-button defense. No responsible military man will ever support that, because he knows that, in the last analysis, the ultimate weapon is man himself. It's dedicated young men like these who are up here tonight who will live for their country and fight and die for it if necessary. That's the quality plus that will keep America and the free world free.

Inquiry by Charles O. Herb, president, Society of Business Magazine Editors: Mr. Brundage, it is recalled that the President, in one of his 1952 speeches, is quoted as saying "The facts must be given to the American people; they must know our aims, the reasons for them, and the cost of attaining them." Therefore, if we are really getting set to engage the Nation in a total venture to assure our security, should the people not feel some concern regarding their ability to pay for the program, within the framework of our existing economic system?

Response by Percival F. Brundage, Director, Bureau of the Budget.—My answer is definitely yes. The people are showing that concern and they are more interested than I think they have been for years that they are getting what they need—the value for what we are spending. The President has already set forth, in the state of the Union the budget and the economic messages—a description of his programs, their purposes and what they will cost.

We must maintain a strong economic system to support the necessary programs—whatever programs are necessary, at home and abroad, which will contribute to our defense and that of the free world and continue to advance our standard of living. These programs take into account our total resources and they are many and varied and are well balanced in their aims and distributions. I am confident that the Congress and the people of the United States will support them.

ADDITIONAL REMARKS OF MASTER OF CEREMONIES RUSSELL C. JAENKE

We come now to another proud moment for the Business Press—the presentation of its silver quill award. You may be assured that there were numerous candidates of high degree recommended to the selection committee. But—in the ever-challenging area of business statesmanship—there could finally be but one name above all others.

It belongs to one whose deeds are already legend as a leader of industry. His is a rich record of no uncertain proportions and accomplishments. Let it therefore be clearly understood that it is we who are honored—beyond measure—in having the privilege of honoring him.

In truth—ladies and gentlemen—we are doubly honored and twice privileged. To make the quill presentation—we have back with us a man of conviction and action—a man beloved by all of us as a great patriot and good friend—a man who himself received our 1953 award.

Mr. Vice President, the Business Press is and always will be honored by your presence. We believe your annual return to our rostrum indicates a sincerity of interest and friendship which we intend to cherish and serve to our fullest ability.

We are delighted to have you here again to make the presentation—at this time—to another great American known to you and all of us simply as Ben.

REMARKS OF RICHARD M. NIXON, VICE PRESIDENT OF THE UNITED STATES, IN PRESENTING THE 1957 SILVER QUILL AWARD OF NATIONAL BUSINESS PUBLICATIONS, INC., TO MR. BENJAMIN F. FAIRLESS

Mr. President, distinguished guests, ladies and gentlemen—I have appeared many times in this room but never when the audience was one that had more influence. I have been talking to the man on my right and the man on my left and I learn more about this group, which is represented here, each time I come. But, when I realize that, represented in the Business Publications of America, there are 2,000 publications with a circulation of 40 million, I realize that this is the most powerful audience that has ever gathered in Washington, D. C.—and we are happy to be here with you tonight.

Now, your president said, very appropriately, I think, that this Silver Quill Award could not have been made to a man who deserved it more. As a matter of fact, there is only one thing inappropriate about the award and that is that it is 300 ounces of silver rather than gold—because the man we honor tonight is 1 who has had, as you know, a fabulous career and everything he's touched has turned to gold—almost everything, with 1 exception—which I will mention in a moment.

When the first song played was about Ohio, I suppose some of you wondered why. This man was born in Pigeon Run, Ohio, and all Ohio is proud of him, as is all of America—because he is the son of a coal miner and became the head of the largest corporation in the United States. He is a man who proved that it can happen in the United Staes of America and his whole life is one that makes us proud of the country we live in and of the American dream which we hope will always be with us. As a matter of fact, I was looking over his background. I have 4 pages here indicating the various organizations of which he is either president or trustee or director—17 major ones, each successful. As I said a moment ago, everything he has touched has turned to gold—except one. I notice that he is a director of the Pittsburgh Pirates. And may I say, Mr. Fairless, if you have any success with the Pittsburgh Pirates, come down to Washington—we need somebody for the Washington Senators.

Now, may I turn to a serious note, before making the presentation. When I was thinking tonight, as you were, about this man and his career and, as I listened to the various questions and the answers which were given to them here, I thought, as you must have thought, of the characteristics of our economy; of our society. And I thought, as you must have thought, that we have many problems today. Many of us, I suppose, might wish that we didn't have the problem of information about Government activities; the problem of an economy that, instead of always running level, goes up and down—although, in the long run, it goes up, as I will point out, in a moment. We perhaps wish that we didn't have the problems between labor and management in various segments of our society. And I think, perhaps, that all of us would recognize the truth of Thomas Jefferson's statement, when he said that there are those who prefer the calm and orderly processes of despotism to the boisterous turmoil of freedom. There are those who do, but there are not many of those of that type in the United States.

We have had problems and we have them today, but as we consider the past 50 years—the span of the working life, I should say, of our honored guest—I think we can realize the dynamism of our economy and the validity of our basic political and economic philosophy. In the industry which he proudly represents—50 years ago—the steelworker worked approximately 80 hours a week for approximately $20 a week. Today, he works one-half as long for 5 times as much, and in that 50 years, we have had 3 wars; we have had several recessions and, depending upon whether you call it depression or recession, 2 or 3 depressions. But, overall, as we look at the broad picture, we see that America has progressed, always forward, always upward, with a bet-

ter standard of living for our people. As we think of that progress, I think we recognize that it is due to a number of factors—to our form of government and the leadership we have had in Government; to our people; also to the leaders of management; the leaders of labor—to those in our economy who, working sometimes in competition with each other and sometimes cooperatively, have together produced the economic might of the United States. Mr. Fairless, of course, is one of those who has been in the forefront of that group.

We heard the song, Around the World in 80 Days. Mr. Fairless went around the world in 50 days and conducted an investigation for the President of the United States in the field of economic assistance to countries abroad.

Secretary Brucker said, a few moments ago, very properly, that, in the event of war, the ultimate decisive factor would probably not be missiles, but the man. He is certainly correct, if he talks of a hot war—a war that we may not have to fight. But our honored guest, today, in his 50 days around the world, reached another conclusion which we must also have in mind. We are engaged today in another type of war—one that has always been launched against us. It is a war in which the economy of the slave world has been pitted against the economy of the free world; one in which millions of people all over the world are trying to determine which way to turn—toward freedom or toward slavery. It is a war in which the leadership the United States enjoys is tremendously important because, if we show, in this country, that our system is an effective one and provides the good things of life for our own people; if we show, in our attitude toward other countries, that their best hope is in working with us—with what assistance we are able to give them—rather than working with the slave world; if this happens—then the hot war will never have to be fought, in order for the objective of world domination to be gained by those who oppose everything that we stand for.

Tonight, then, as we honor Ben Fairless, may I say we think of him as we should—as a leader of business, but we also—those of us who are here from Government—deeply appreciate, as all Americans do, the fact that he has given so much of his time and his energy for his Government and, particularly, in this service most recently rendered. I can think of no term with which to describe him more appropriately or more succinctly than to say that the man who receives the Silver Quill Award tonight is a statesman—a statesman of industry.

REMARKS OF MR. BENJAMIN F. FAIRLESS, LONG-TIME HEAD OF UNITED STATES STEEL AND NOW PRESIDENT OF AMERICAN IRON AND STEEL INSTITUTE, IN RECEIVING THE 1957 SILVER QUILL AWARD OF NATIONAL BUSINESS PUBLICATIONS, INC., JANUARY 30, 1958, WASHINGTON, D. C.

Thank you, Mr. Vice President.

Distinguished guests, ladies and gentlemen, your kindness to me has been so overwhelming that I hardly know what to say.

To be selected to receive the Silver Quill award is one of the highest and most welcome honors that has come to me in my professional life. And, to receive it from the hands of our country's capable and distinguished Vice President—a man for whom I have the highest personal regard—makes me feel very, very proud.

When Bob Harper wrote to tell me that I had been chosen by your award committee, I was naturally delighted. But, at the same time, I have to admit that I was also perplexed by certain doubts and misgivings which stubbornly persist.

Of course, I know that the award committee does a thorough job and checks on a thing like this pretty carefully. But, I can't help wondering if, when their ballots were counted, a clerical error didn't creep in somehow. The Silver Quill, after all, is a mighty big award for someone like myself who was frustrated in his life's ambition.

As some of you may know, I just got into the steel business by accident. What I really started out to be was a baseball player. And, as a matter of fact, some people apparently believe that I still am a baseball player. The other night, at a dinner in New York, a fellow referred to me as "that Pittsburgh Pirate"—with what degree of affection or confusion, I cannot say.

Unfortunately, I never got very far out of the sandlot league in our great American pastime. So, you can easily see how it would occur to me that, perhaps, somebody slipped up on tonight's award somewhere.

And, if that's how it happened, then I feel I should say a word of consolation to the conscientious members of the award committee. Gentlemen, I know and you know that there are many, many others far more worthy to receive the Silver Quill. But, I assure you that among all those you might have selected, you could not find anyone, anywhere, who appreciates it more. So, in the reassuring light of that rationalizing, I accept—with pleasure, with pride and with heartfelt gratitude—this very distinguished honor.

Tonight, I sincerely wish that I could turn the tables on you editors and publishers of the Nation's business press. If I could do so I would present to each one of you an award that I feel you deserve.

Each of you, to my mind, deserves recognition for the important work you perform in your 200 trade, technical and scientific journals. With clarity, judgment and deep insight you help those of us in business to understand better the complex issues that we face.

But, even more important than that, you help the American people to achieve a better understanding of business—its problems, its legitimate needs and hopes and the way in which our free enterprise system works to serve the best interests of our society.

Obviously, this is the kind of job that never ends. Just as obviously there is no other group that I know of that is more qualified to do it. And, I believe that this work for better understanding of our own system is one of the most compelling and challenging responsibilities of our time.

We face today a divided world. We have seen it stained by blood over the bitter issue that divides us. Two powerful forces—freedom and slavery—repel each other. Both have now split an fused the little world of the atom but, thus far, the larger world we both live in remains only split and confused.

Clearly, at such a time in such a world, we must not be and cannot be divided among ourselves. Lincoln warned us that a house in that shape cannot stand. We know that at present one of the foundations of the free structure of the world is the economic strength of America. And, our Nation's economic strength grows by a system of free enterprise as free men and women understand, support, and conduct it.

That strength thus far has been great enough to rally the Western nations of the world to the virtues of resistance and the values of freedom. We have been and, hopefully, will continue to be the encouragement not only of the West, but the entire world.

We do so, fundamentally, by offering the finest example of freedom's great practical as well as ethical worth. We may not have as yet a successful space satellite. But, we do have, in action, for all the world to see, a successful society of free people—who save, risk, and profit under an economic system which provides material and spiritual values and individual lives of dignity, opportunity, and unequaled comfort.

If that were not so one might wonder, then, why millions come to our side each year, and why millions more risk death to escape from the East to the free world. If it were not true we might believe that the barbed wire borders, the check points, guns, guards, and dogs were there to keep us out instead of doing what, in fact, they are doing—keeping the slaves in.

Thus, it seems to me that surely one of our greatest challenges—yours, mine, and every American's—is here in our own house. We should stand together to keep it strong. And, we should be working together to keep it growing not only for ourselves and our children but to help keep steadfast this great faith in freedom.

Not of our choice but by our very progress as a society, we have been thrust into leadership of the free nations. As leaders, we cannot permit confusion and division to misguide us. And, that is why you gentlemen, with your skill and wisdom in ways of making clear to the American people how our free enterprise system works and how it can continue to grow, do such an important and award-deserving job.

In recent months we have been split and confused over the temporary—and I emphasize temporary—dip in our rate of progress. We hear again of a cure for it that, strangely, sounds exactly like the treatment prescribed for a boom. It involves one of the discredited and bewhiskered economic arguments of Lord Keynes. And, it seems to me, that it is based on a serious lack of understanding of our system and the sound way true progress has been and can be achieved. The debate is now at that dangerous stage in which more heat than light is shed.

Certain labor leaders declare that the reason key industries are now operating below capacity is because of a lack of consumer purchasing power. This reason sounds so simple and the cure, bigger and bigger wage increases, so appealing that I suspect many persons want it to be true. But neither the simple sound nor the natural wish for more make it a valid reason.

If it were true, of course, then we would have a dandy remedy for any temporary downturn and a pat formula for all future progress. All we would have to do would be to double everyone's wages and then, under this concept, we would all be twice as well off. But, unfortunately, even in theory it doesn't work out that way.

I suppose that this isn't precisely the way an economist would look at it, but I think of our national wealth as being stored in a gigantic warehouse. Packed inside are all the goods, services, foods, and fiber we produce. The money we use is merely a receipt for what we produce and bring to this national warehouse.

At the other end—the shipping side—we bring our receipts, or money to exchange for other things we require. Now, if we double the amount of receipts and do nothing about the amount of goods, we have not added one bit to our national wealth. All that happens is that now we have twice as much money to buy the same amount of things. And, of course, in short order we pay twice as much as before.

Many Americans recognize and have experienced the truth of this very simple illustration. In labor's camp there are wise leaders today who understand perfectly that we cannot take out of our national warehouse more than we put in. They know, too, that it is what we can actually buy with our pay rather than the number of dollars we get that really counts.

Still, the consumer purchasing power theme is played, again and again, very cleverly and apparently very carefully timed in relation to forthcoming bargaining sessions. It is a beguiling as well as confusing melody and, I suppose, on the rank and file of labor it has the same lulling effect that the songs of sirens have on sailors. The results are the same, too.

Now, the minute anyone says something like this in a speech—as I have tonight—he

is immediately accused of being against wage increases and the labor unions. I wish to make it very clear that I am not opposed to either. In fact, I am emphatically for both. As to unionism, I could hardly feel otherwise. My father held a union card; my brother held one, also. I signed the first corporation-wide contract in the steel industry with the United Steelworkers of America. The late Phil Murray and I shook hands on it.

I am not, nor have I ever been against wage gains. And when I say "wage gains" I mean ones that will buy more. I think everybody should get more as it becomes possible to create more. But increases in general wage-rate levels to make real dollars and sense (spelled s-e-n-s-e) must bear a fair relationship to advances in national productivity. And, in the last 10 years they haven't. A 26-percent gain in industrial productivity has been more than absorbed by a 61-percent rise in wage rates.

Consumer purchasing power, reflecting the real income and the confidence of spenders, is one of the vital parts of a prosperous America. But it is a power that has to be earned to be effective. It cannot be assumed by attempting to take a share at the expense of somebody else. The difference between the 26-percent gain in output and the 61-percent gain in wages is illusion. It is a phony as far as increasing consumer purchasing power because, of course, it represents inflation.

While it sounds perfectly delightful to stuff more money into pay envelopes, it must be understood that, if new wealth or efficiency is not created, that money must come out of someone else's pocket, who is also a consumer. Total purchasing power in the market place is not raised by as much as a fraction in this way.

What any man earns in our system stems from the value of what he produces; and, therefore, a real increase in his earning power comes about as he increases his productive power. So the really puzzling question is how can a man become more productive?

Now, a human being is truly a marvel and at the same time something of a mess. He has the mind of a giant but the muscles of a pygmy. With his mind, his imagination and wondrous creative powers, he can write a book, paint a picture, or sculpt a statue. He may search and find in science the secrets of the universe. But when he had to depend solely on his muscles for his basic needs—his clothing, food, shelter, and comforts—he was a sorry specimen and lived a primitive life.

Of course, he no longer has to depend on his muscles. Over the years we have developed a great army of inanimate slaves which add productive power to each workingman. These are the machines and tools which, in our national warehouse, are the capital goods, the product of savings invested. They permit each man to turn out many times more than he could if he depended only on his muscles.

So the next question is, then, how do we get more of these aids to productive power? And the answer is, bluntly, from profits. Profits under our free system are not something we need apologize for because with profits we have the real key to more productive power and thus earning power and thus progress.

The new machinery and tools which enable a workingman to increase his output and which equip the new workers joining the labor force each year would not be available without profits. Whether they are used directly by being plowed back into the business or indirectly as an incentive to investors, profits start our forward motion in providing rising living standards.

The corollary argument to the consumer-purchasing-power theme is that wage increases can be subtracted from profits without price increases. In answer to this notion, the Saturday Evening Post recently carried a pertinent editorial using the steel industry as an example:

"Suppose the 1946 level of steel prices had been maintained through 1956. And suppose the industry had shipped what it actually did ship during that decade. Assume further that wage rates and other costs rose as they actually did during this 10-year period. Where would the steel industry stand today?

"Well, on the basis of official, published figures, it would be more than $21 billion in the red.

"The steel industry would have operated in the red in 9 out of the 10 years. Its losses in 1955 and 1956, taken together, would have been at least equal to the entire sum spent by the industry for its postwar expansion.

"Of course, none of this could have actually happened, since the whole industry would have been bankrupt long before it could have accumulated a deficit of this size. The shipments could never have been made since the plants which made the shipments possible could never have been built. Failure to recover costs would have prevented expansion.

"Steel prices, like any other prices, must reflect increases in the cost of doing business, including wages—or you go out of business."

To show up the absurdity of any significant wage increase coming out of profits you need only compare the size of a 5-percent increase in wages with total corporate profits. In the highest year on record, 1950, such a wage increase would take about 20 percent of all corporate profits before taxes.

A squeeze like that on profits would have three inevitable effects: It would stop investment cold, lower productivity, and increase unemployment. And that, I submit, is hardly the pattern of progress or the way to strengthen our economy.

The mystery is why anyone would think wages should come out of profits in the first place. The result is to pinch off a principal source of additions to productive power. And, since the only way we can hope to live better is if we produce more for our national warehouse, then the minute we take from profits we are, in effect, subtracting from living standards.

So, I think it is time we replace confusion with understanding of the real source of our economic strength. And the time is overripe for us to end the squabble over dividing what we have and get on about the business of multiplying more for the greatest number of our people.

For one thing, we can cease trying to get more by taking it from someone else. In particular, I mean trying to take from profits to put into wage envelopes. No one really gains in that attempt—least of all the workingman. As unemployment increases, production drops and progress halts. Instead of raising costs, prices, and the cost of living, let us rather raise productivity, progress, and the standard of living.

That is what we all want. A balanced overall movement forward with wages, profits, and productivity going up in and not out of step. And I am confident that this is well within our abilities, despite the marking time we may have to do this year as inventories are pared down.

Ahead of us is a new era—a space age as some call it. It will be a time of tremendous technological change. In my opinion we are just now at the doorstep of a new warehouse for America. One that can be filled with greater wealth, more new things from more new processes in the next 5 years than we have ever seen before in our history.

As the result of research and development financed by American industry because profits made it possible to do so, there is a great backlog of new ideas, theories, and principles building up in our Nation's laboratories. To translate them into new jobs, factories, machines, and finished products will require tremendous new investments.

Those investments, however, will not be forthcoming unless a real incentive—a prospect of profit—entices investment. And, unless those investments are made we will, indeed, slip behind the Russians. Not just in single, spectacular scientific achievements, but in the real race we are running and in which our free system far excels their slave system. I mean our success in providing better living standards and an opportunity for a better life for more people.

Let us admit and have done with it that the Russians have impressed the world. But, let us also recognize that they have done so with a policy of fear and an instrument of terror. I think we would much rather be what we are, the encouragement of a world yearning for freedom and for a better life in peace to enjoy useful progress.

Lincoln said it for us a long time ago. Speaking on Washington's birthday in 1861 at Independence Hall, he referred to the inner meaning of the Declaration of Independence as "giving liberty not alone to the people of this country but hope to the world for all future time."

That hope was never needed more than in the year 1958. We provide it as we stand together, adhere to and apply those economic principles which can make America stronger than ever in a greater age of progress than any so far known. For that goal and to keep alive that hope of all men for a free, undivided world at peace, we stand together—or fall.

Thank you.

Politics and Recession

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 10, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Helen Hill Miller, which appeared in the New Republic magazine of February 10, 1958. In the article the writer points out the weak spots in our economy and the possible solutions and their effects. It is a stimulating analysis which should be read by all.

POLITICS AND RECESSION
(By Helen Hill Miller)

Within the past 3 weeks, the main alternatives for dealing with this recession in this election year have become visible. The President, in his state of the Union message, said: "There are solid grounds for confidence that economic growth will be resumed without an extended interruption"; his budget and his economic report are based on that view. From Capitol Hill, various Democratic Senators have made cause-and-cure speeches—one by Paul Douglas ended with a reference to hucksters of sugared rose water. The Joint Committee on the Economic Report has heard panels of private economists with backgrounds ranging from the National Industrial Conference Board to the AFL–CIO. Walter Reuther and Harlow Curtice have exchanged opening rounds preparatory to the auto industry's forthcoming wage negotiations. The Keyserling-oriented Conference on Economic Progress has issued Wages and the Public Interest,

charting the losses sustained when the economy operates at less than capacity. The Federal Reserve has said little, but again reduced the discount rate.

So the milling around at the starting gate is mostly over; very shortly, the horses will be off on the 1958 handicap. The race has one confusing aspect. Each owner is ready to prove that his entry is by Sputnik out of Full Employment. Yet each is a horse of a different color, and each jockey wears silks that are the traditional and identifiable symbols of a well-known stable.

Meanwhile, the railbirds, amateur and professional, are exchanging knowing and incompatible judgments on the condition of the track, how it got that way, and the likely qualities of the entries in negotiating this sort of going.

Those who say the track is faster than most people think suggest that this is in part an inventory recession, somewhat comparable to the two preceding dips. The economic report notes that in 1957's "final quarter inventories were being reduced, on balance, at an annual rate of $3 billion, or possibly more. * * *" These are the optimists; once shelves have been cleared new orders cause a pickup, temporary, perhaps, but still a pickup; it might come this spring.

A larger group, who believe that the track will prove fairly heavy, underline the importance of the capital-goods recession, citing the National Industrial Conference Board's estimate that "authorizations for new investment by the 1,000 biggest manufacturing companies were 31 percent less during even the third quarter of 1957 than they were during the corresponding quarter of 1956.

Certainly the impact exerted on the economy by the steep rise in expenditures for new plants and equipment, from $26.83 billion in 1954 to $37.03 billion in 1957, is now spent; the annual rate for such investment in the first quarter of 1958 is estimated at $35.52 billion, as compared with $36.89 billion a year before.

And the productive capacity which recent investment has put in place seems, for the time being, to have outrun the capacity of consumers to absorb its output in a number of important lines. The Detroit automobile man who said, "They've just got to buy the new models; we have so much money in them," may have a 'shock coming.

For even before industry stepped up its capital investment, consumers had been making major investments in their kinds of capital equipment: First, housing and then durables to fill the garage and equip the kitchen, the utility room, the TV-hi-fi corner. More and more, the market for these has become a replacement market.

The multitude of private decisions, by individuals and by corporation boards, which caused these changes in the condition of the track, are taken by the railbirds as the sun and the rain, with only general grumbling. But their comment on other factors in the running includes personal epithet directed at the track's management and those of its membership who also have entries in the 1958 handicap.

Tight money has not only been an economic fact of the last months, it has been a policy. For 2 years, the Federal Reserve has been a crusader against inflation; in putting on the brakes against a too-rapid rise, did it hold the pressure too long, and cause a slowdown? Does hindsight now prove that Reserve Board Chairman Martin should have seen the start of a recession in December 1956, when the Federal Reserve's index of industrial production hit a peak of 147?

Or are the current disabilities of the economy service connected? During the last half of 1957 was an important downward fillip given by the sudden $2 billion cutback in new orders for military hardware that came after Humphrey-Wilson-Eisenhower, with the debt limit in mind and budget balancing in view, clamped an expenditure ceiling on the Pentagon last midsummer?

Such questions bring the talk around to specific horses—which ones have what it takes, and how well will they be handled? To take three heavily backed favorites.

RESERVE CHAMPION

If monetary policy continues to be the front runner, will the Federal Reserve establish itself as a versatile horse, good when the track is fast, and good again when it is soggy? Its fanciers advance the following points for use in judging its conformation:

1. Last September, as soon as the change of Secretaries at the Treasury took effect, an informal committee composed of Treasury Secretary Anderson, Presidential Economic Adviser Hauge, Council of Economic Advisers Chairman Saulnier and Reserve Board Chairman Martin was formed for occasional meetings with the President. This gives administration members a 3-to-1 advantage in putting their views to Martin in the presence of the President. But it gives Martin:

(a) More frequent access to the President, with less speculation than when special appointments appeared on his calendar:

(b) A chance to approach simultaneously, and at times to find a mutually agreed meeting of minds, among a group whom he formerly had to see piecemeal;

(c) A mechanism which he can display to Congressman WRIGHT PATMAN, perennial easy money advocate and intrepid member of the House Banking and Currency Committee, in satisfaction of PATMAN's insistence that the Federal Reserve should be more responsive to the administration.

2. The Federal Reserve has obtained wide publicity for its change of direction last November when its often raised discount rate was showily cut; and in addition to its psychological impact, the switch saved the bond market at a time when the Treasury's head was bumping on the debt ceiling.

3. The reduction in margin requirements for stock market operations in January was made with even more attention to psychology: by coming as a surprise, it caused a market rally as an initial reaction; with more conditioning, Wall Street would have concluded that the Federal Reserve too was a prophet of gloom and doom.

4. Then there is the matter of the system's reserve requirements. Differentials now exist between central city, reserve city and country banks. Relaxation of these differentials would make available sizeable sources of credit now frozen as reserves. Federal Reserve Chairman Martin has stated at congressional hearings that the present system of reserves is outmoded. Agreement as to how and when to reach a different level is being sought within the system, and the American Bankers Association also has a committee taking a look.

The Federal Reserve now possesses the legal discretion to change the relations between the requirements for central city and Reserve city banks, but to reorganize the entire structure would necessitate congressional revision of the Federal Reserve Act. Normally, this might be difficult, but a proposal which would have a marked effect on greater credit availability could hardly fail to please Congressman PATMAN—and the credit feature might carry over the line other changes that in another context would have rougher going—among them an upgrading, salarywise and therefore in status and protocol, of the head of the Federal Reserve System to a position more on a par with the Secretary of the Treasury.

EXECUTIVE SUITE

Touters of the administration horse put great emphasis on sputnik's success as a sire. Congress is being asked to provide new obligational authority for major national-security purposes of $44.3 billion for fiscal year 1959 compared to an estimated $41 billion for fiscal 1958 and an enacted $41.3 billion for fiscal 1957. At the same time, a spurt of economic speed at the 1958 getaway is being arranged under existing authority; the lag which set new orders back to $7.9 billion during last July–December is being compensated by a push toward $13.4 billion worth between January and July 1958. These orders are bankable; and while the prime contractors will take a little while to get into production, they will hold on to their work force and start subcontractors working promptly. New order recipients are fairly concentrated—auto manufacturers have little to gain, and while aircraft companies do stand to gain through the missile program, the factories in which they make airplanes will not be much affected. But purchasing power will be put into circulation. At the same time, contracts for less spectacular items—standard textiles, for instance—used by the military can stimulate recovery by being bunched now instead of spread out over the year. Later on, the leveling out of such orders will again be deflationary, as will the civilian cutbacks recommended in the budget, but meanwhile the economy may pick up momentum again.

CAPITOL CLOAKROOM

Enthusiasts for horses from the Democratic stable, by contrast, stress past successes of colts from full employment. In Congress they may well raise certain budget items above the levels asked for by the President. Before the session is over, to the $3 billion expected to be approved for additional defense, perhaps as much as an extra billion may be voted into the economy for civilian measures—housing, reclamation, urban redevelopment and slum clearance, veterans, roads; it would be more if a school construction bill should pass.

Even more than in most races, the upcoming handicap will gain in interest as the finish line at next November's polls comes closer. By March, when the February figures on unemployment are published, the railbirds will be able to see how sticky the track really is, and perhaps hedge a bet or two. In January, nearly one-third of the major labor market areas in the country—45 of them, and the largest number since November 1954—were classified as having substantial unemployment. Last November, Secretary of Labor Mitchell began to warn of rising unemployment totals and last week he predicted that 4 to 4.5 million would be unemployed this month. Because of recent increases in the number of workers covered by unemployment insurance, the present all-time highs in claims are not comparable with previous recessions, but the figure of 3.4 million unemployed in December is expected to rise in February to a figure even higher than Secretary Mitchell allows. In addition to unemployment, there is increasing underemployment, with workers on involuntary short time; overtime has practically disappared, and average weekly hours in manufacturing were down to 39.3 in December as compared with 41.0 a year before. The newest unemployment, moreover, is among men in their prime working years. So the purchasing power of many wage earners is undergoing attrition.

The professional dopesters who have just testified before the Joint Economic Committee came up with a nearly unanimous opinion that while industrial investment will still maintain a high total, and consumer income will still continue strong, they do not see any firm factor inherent in the economy that is likely to push into resumed growth soon.

firm factor inherent in the economy that is likely to push into resumed growth soon.

If their judgment seems accurate as the finish line of the race comes near, the jockeys will have two options: They can use the spur of increased Government spending. Or they can lay on the whip of a tax cut. If they

use the spur, central direction can be given to the new spending, and those who view with alarm a growing deficit of civilian facilities—schools, roads, hospitals—at a time of rising population will prefer this form of stimulus. If they use the whip—an increase in tax exemption levels for individuals or their dependents, for instance—they will provide, uniformly across the country and in hands that will not hold it long, a quick access of purchasing power. Down the home stretch, the jockeys on the frontrunners will watch each other closely to see whether the race is to be completed without these forms of stimulus, or whether to match the effort as soon as some arm is raised, some heel is active.

Innuendo and Association Guilt

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SHEEHAN. Mr. Speaker, in his article entitled "Innuendo and Association Guilt" in the Washington Star of February 21, Mr. David Lawrence makes the point that never in the heyday of his anti-Communist crusade through congressional committee procedure did the late Senator McCarthy ever indulge in the amount of hearsay stuff, innuendo, and guilt by association which has characterized the hearings currently being held by the congressional subcommittee now investigating the affairs of the Federal Communications Commission.

The conduct of Dr. Bernard Schwartz, who dealt in gross overstatements and wild accusations, has been singularly free from criticism by the liberal elements in the country who were so united and determined to destroy Senator McCarthy. Apparently, these self-styled liberal elements rationalized two different concepts of conduct, one concept when it suits their philosophy, and another when it does not.

Mr. Lawrence's article follows:

INNUENDO AND ASSOCIATION GUILT—ALLEGED WRONGS OF MCCARTHY HEARINGS SEEN REVIVED, AND WITH LESS BASIS

They seem to be intent here on making a martyr of the late Senator McCarthy. For never in the heyday of his anti-Communist crusade through congressional committee procedures did he indulge in the amount of hearsay stuff, innuendo and guilt by association which has characterized the hearings currently being held by the congressional subcommittee now investigating the affairs of the Federal Communications Commission.

Someone writes a letter to someone else saying it might be a good idea to contact a Senator or a Presidential assistant or the office staff of the Vice President to get some influence brought to bear on the subject of the grant of a TV license. Someone else says he hears through a friend that another friend heard that maybe some relative of the President by marriage may have been importuned to help to exert influence. Promptly the headlines are filled with the innuendoes, and the public is led to believe there is guilt by association.

Few on the so-called liberal side—not even the various civil liberties organizations which are zealous defenders of individual rights when persons are seemingly accused unjustly of association with Communist fronts—are clamoring for a fair and orderly way of conducting the congressional hearing in question.

It's just too bad that the persons involved in the TV-license controversy were not accused of some sort of Communist connection. They would have had lots of defenders. The speechmaking would have been loud and long on the subject of the violation of personal liberties and the Bill of Rights.

To take refuge in an aphorism of the days of the McCarthy controversy, it isn't the "objective" of the House committee's current investigation which is to be criticized, but only the "methods" used.

Certainly, every corrupt influence should be exposed. Certainly, this is the job of a congressional committee in the public interest. Certainly the members of the Federal Communications Commission should not be subjected to pressure by anyone—either inside or outside Congress. But there is a right way and a wrong way to expose the improprieties whereby such pressure is exerted.

The right way, when stumbling on a name mentioned in a letter or in an executive session hearing, is to get hold of the person involved and get his side so it can be simultaneously presented to the public for what it's worth. Instead, there has been a lapse of several days between the time of the disclosure of some alleged connection or improper pressure and the establishment of the exact facts. The "leaking" to the press of staff memorandums prepared for a congressional committee has become a favorite device by which innocent persons are crucified.

If officials are to be held up to the public as charged with some wrongdoing, they should have an opportunity to confront those who make the charges and even to cross-examine them through counsel. This is supposed to have been the net result of the debate which arose in connection with the hearings conducted by the late Senator from Wisconsin.

But somehow, although there has been on the part of the general public an acceptance of the wisdom of such reforms, there is little sign that Congress, itself, has paid much attention to them. Every wrong allegedly committed in the McCarthy hearings has been committed over again in recent hearings but with even less basis for the charges than in the controversy over Communist activities and associations.

If it is wrong for Senators to visit members of an independent commission and to plead for their constituents, there is no law on the statute books and no rule of either House that says so. If a lawyer hired by an interested party can argue with a commissioner about a pending case, then a Senator can, too, and so can a Presidential assistant or anybody else—provided the Commissioners themselves do not adopt a rule or code declining to permit such contacts, which they really should do.

There is, of course, a conflict of interest problem that has not yet been cleared up. Should a Commissioner who is financially obligated to an attorney disqualify himself from the case or refuse to see the attorney? This is a matter of propriety. It does not mean that the commissioner is unable to deal with a case honestly on its merits. But judges on the bench have often disqualified themselves if they had any financial relationship with a client or his representatives.

Had the current inquiry been confined to a clarification of this point and of the doubtful right of Senators and House Members to discuss pending cases with members of independent commissions, it would have been a constructive thing. But to allow names to be bandied about in the press, without any more basis than has been uncovered thus far, is to put innocent persons unjustly on the defensive in the court of public opinion.

Titoism Serves Communist Purposes

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. CLARK. Mr. Speaker, a young Czech anti-Communist exile, Mr. George Brada, came from Munich, Germany, to visit the United States. Mr. Brada has been a critic of the policy lines which in the West tend to support Titoism and has condemned them as illusory and dangerous, urging instead active steps for abolishment of communism without war as they are formulated in the policy of liberation suggested by leading men in the United States Senate and Congress.

Ten years ago, on February 25, 1948, the communization of Czechoslovakia, and the enslavement of the Czech and Slovak peoples was completed. The Czech, Slovak, Hungarian, Carpatho-Ukrainian, and Sudeten German exile leaders believe that on this occasion, the attention of the free peoples should be called to the fate of these unhappy peoples and that the illusionary politics of the past which had brought only the perpetuation and strengthening of communism in the East, should be replaced by realistic and intelligent new policies.

Mr. Brada's article is self-explanatory. I enclose it in the following and recommend it to the attention of my colleagues:

TITOISM SERVES COMMUNIST PURPOSES

Harrison E. Salisbury, a New York Times correspondent, toured recently Communist Eastern Europe. He talked with chiefs of state, Communist Party leaders, diplomats, and plain people, and after his return he published in the New York Times a series of five articles, the last one on October 25, 1957, under titles like "Eastern Europe Is Now Seeking More Democratic Communism" or "Eastern Europe Seen as a Third Force."

Mr. Salisbury's ideas are, indeed, quite clear and unequivocal. In Mr. Salisbury's words:

"The average Serb or Croat * * * supports President Tito."

He also wrote the words:

"Kadar is a moderate man compared to the alternatives."

Mr. Salisbury condemned the following:

"The United States now has rudimentary programs for Yugoslavia and Poland, but the rest of the region is a policy of desert. No official can explain precisely what diplomatic nonrecognition of Albania, Bulgaria, and East Germany is supposed to achieve. Nor how nonrecognition of Premier Kadar is expected to help either Hungary or the United States."

Toward Communist states, Salisbury recommends "* * * an American program based on mutual self-interest that emphasizes friendship, interrelations, mutual interests, steadily strengthening contacts."

He salutes "* * * the courageous and creative action of the Ford and Rockefeller Foundations which moved into Poland after October and reestablished intellectual contact with the Poles while the State Department endlessly debated what, if anything, to do."

But the State Department has not yet made up its mind to give Poland meaningful economic aid, criticizes the New York Times correspondent.

Mr. Salisbury closes the series of his articles with pregnant words of clear suggestions:

"But to be effective United States influence must be exercised through channels where power actually exists—through the cultivation of friendly contacts with the Communist rulers, closer association with opinionmaking members of the intelligentsia, training and technical guidance of the new technological cadres. Soft, rather than hard, sell is clearly indicated."

These blunt and clear words are a classical expression of the plans of those who want friendship and cooperation with Eastern Communists. They will go into the history.

These words show also clearly why the entire theater with the Titoism and Gomulkism was staged by the Communists. It serves Communist purposes. It gives economic aid to Communist states, so that they can, undisturbed, build their sputniks; it paralyzes any real concrete policy of liberation, any real intelligent anti-Communist stand and any real intelligent behavior at all; it brings friendly contacts with the Communist rulers (and not with the enslaved peoples) and encourages international Communists in the entire world to further ambitious actions; and it alienates, makes apathetic, and paralyzes the peoples, whose sympathies are with the West, but who are left abandoned in their slavery by those who cultivate friendly contacts with their Communist slaveholders.

That is what the Communists and Harrison Salisbury desire.

It is a pity that this kind of propaganda—these, for free men, self-destructive and utterly unrealistic ideas—can be propagated officially in Europe where the articles of the New York Times are quoted practically as official American views. It is a pity and an inexcusable damage and one-sidedness helping the cause of communism, that, while the Chicago Tribune, the McCormick, and the Hearst press never appear in the American Houses, such stuff as the above mentioned is spread in Europe for official American funds.

Alarm and Concern Over Proposed Extension of Power Facilities of TVA

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the executive committee of the Greater Wilkes-Barre Chamber of Commerce which expresses concern and alarm over the proposed extension of the power facilities of the Tennessee Valley Authority:

Whereas, the executive committee of the Greater Wilkes-Barre Chamber of Commerce is concerned and alarmed by the proposed extension of the power facilities of the TVA, particularly because the availability in the TVA area of cheap power (subsidized by all of the taxpayers in the United States) is making it extremely difficult for the Greater Wilkes-Barre area to compete with the TVA area in attracting and obtaining new industry; and

Whereas said executive committee feels that allowing the TVA to issue $750,000 of revenue bonds would place it beyond the effective control of Congress for many years to come: Now, therefore, be it

Resolved, That the executive committee of the Greater Wilkes-Barre Chamber of Commerce is opposed to the passage of the Kerr and Davis bills, and hereby urges its Representative, the Honorable DANIEL J. FLOOD; and its Senators, the Honorable EDWARD MARTIN and JOSEPH CLARK, to oppose both of said measures when they come before the Congress for adoption.

Passed by unanimous vote of the executive committee of the Greater Wilkes-Barre Chamber of Commerce at the regular meeting held February 12, 1958.

EDMUND H. POGGI, JR.,
President.
JAMES CRAELEY,
Secretary.

Importance of Weapons Development in Our Times

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by Col. Denis Mulligan, of the firm of Powers & Mulligan, industrial consultants, Montclair, N. J., on the occasion of the annual meeting of the Aluminum Association held in New York City on January 31, 1958.

Colonel Mulligan is a distinguished lawyer with a record of service to his country both as a graduate of West Point and an early member of the Civil Aeronautics Board. His astute analysis of the significance of the Russian satellite, Sputnik I, and its impact on the people of the world, impresses me as being worthy of being reprinted in the RECORD:

IMPORTANCE OF WEAPONS DEVELOPMENT IN OUR TIMES

Today I shall express one man's views on the probable impact of weapons development on the relative military strength of our country and Russia during the next 3 to 5 years. As a reader of news and opinion I struggle, as you do, to grasp the importance of this subject to ourselves and our children.

Nearly 4 months ago weapons development became alive in the minds of our people as the man-made Russian satellite, Sputnik I, whirled around our planet Earth at a speed of 17,000 miles per hour. The press and radio have given much space and voice to to questions raised by Sputniks I and II on mass psychology, diplomacy, on economics and education. These remarks will be confined to their military significance.

My aim is to stimulate your thinking on the need for balanced judgment and action by the United States on weapons development in these parlous times.

I. RUSSIAN THREAT

You and I were born into an era of large-scale wars. At this period in our lives the world is divided into two opposing camps. With our allies, we lead one. Russia, with hers, leads the other. Before committing themselves, neutral nations watch to see which side is likely to prevail. Men of good will hope and pray that the differences between the two world leaders will be settled by peaceful means.

With no rattling of swords we must ponder grim facts:

The Government of Russia has declared its intention of bending our will to hers. Hitler made a like declaration. Few took him seriously until he took the world into a holocaust.

Russia's method of bending peoples and nations to her will is quite clear. Little more than a year ago the blood of Hungarian freedom fighters ran in the streets of Budapest. Her ambitions are like unto others who attempted world conquest. While none of them succeeded for more than a brief span, the undoing of their attempts was at awful cost to their victims.

Only recently has our public begun to be aware of Russia's submarine program, on which later I shall provide a few figures. Most revealing is its timing. Her propaganda for years has reviled our policy of containment aimed at her. Her submarine program set in motion long before our policy of containment, has one basic objective: that is to prevent the United States in time of war from going to the assistance of our allies or receiving assistance from them across our two oceans. Russia's submarine program is confirming proof that her main military target is the United States of America.

Our essential stake in this contest with a strong and self-declared enemy is the survival of thousands, perhaps millions of people, who would be sacrificed in the struggle if we do not deter our enemy from plunging the world into another global war.

In this precarious passage the policy of our Government is to maintain military power sufficient to deter Russia from risking a war that would destroy her Government, millions of her people, and much of her property values. We must maintain such adequate military power in the foreseeable future and keep our allies convinced that we are doing so, on a collaborative basis.

II. A FUNDAMENTAL OF WAR

From a cursory study of the fundamentals of war it is apparent that a nation should possess an adequate balance of assets that must be maintained if that nation is to win not separate battles, or campaigns, but the war. In modern war a primary asset is a nation's developed weapons and capacities to produce and reproduce them.

This asset standing alone, is not enough. Wisdom and the courage of men must accompany the use of weapons. Sound policy and leadership must govern the overall direction of successful military effort. Nations, like individuals, in war and peace, make gross mistakes. The past 16 years record striking examples of such mistakes.

One of these examples is taken from our own book. After his retirement as Chief of our Armed Forces in Europe, Gen. Lucius Clay addressed an audience in New York City. He dwelt on the Berlin airlift. It was an outstanding feat in air transportation. Deeper in its meaning for us was the reason for the feat. In the emergency leading up to it, manufactured by the Russians, General Clay had at his command in Europe only two United States infantry divisions ready to fight. Our allied support was no better. Thus, in the late forties we had allowed to deteriorate our military forces of 1945, the greatest ever assembled. Our boys wanted out, and the folks wanted them home. Nearly all of us must share the blame. We were blind to, or would not see, the Red danger, for which we have been paying so dearly and will continue to pay for years to come.

Another example poses a speculative but interesting question. What would be our present state if Russia had not precipitated the war in Korea in 1950? A not unreasonable answer is that by this day in January 1958, we would have become Russia's vassal,

and a badly punished vassal. Eight years ago our military power had begun to crumble and our arms were gathering dust in a number of areas. By springing the Korean adventure in mid-1950, Russia sprung our current military buildup. An incidental deduction from this fact is that we are not contending with an invincible enemy in matters of military policy and direction.

III. HISTORY OF WEAPONS

The story of weaponry is as old as man's history. Since the 20th century began the peoples of the West have been increasingly concerned with armament races. These races stem from the industrial revolution. That revolution was relatively young when the Napoleonic wars were fought. Our War Between the States was somewhat affected by it. Breech-loading cannons were used in 1863 at Gettysburg. Grant and Lee got some help from wired telegraphy but that is about all they got from telecommunications now represented in our wondrous system of telephone, radio, and television. By 1914 the industrial revolution had marked effect on military thinking and action. The machine-gun, not solely because of its capability, but because of its availability in quantity, caused the stalemate on the Western Front. This weapon created radical changes in tactics and closed the long chapter of maneuver of masses of troops in the open.

World War II turned in good measure on air power. Poland and France were quickly reduced to submission with the aid of German Stuka dive bombers. Aerial warfare grew in scope and fury until Japan capitulated a few days after the dropping of atomic bombs from B–29 bombers on two of her centers of population. To this group I need not elaborate on the many other weapons of complicated design and construction which were employed in World War II.

As the curtain fell on that war, science, technology, and military requirements had presented us with a new order of weapons. Humanity became aware of an awesome weapon, the atomic bomb, predecessor of the thermonuclear, or H-bomb. Development had begun on a faster means of carrying the A-bomb, jet powered aircraft, improvements in which have been rapid. The third we recognize in the V–2 rockets which the Germans fired against England 12 to 13 years ago.

Clearly identified in World War II was the new military-industry team, which must succeed together if modern wars are to be fought and won. From the production capacities of our factories flow the hardware weapons resulting from the research and development of our scientists and engineers. This growing dependence of the military on industry and science is accompanied by an ominous phenomenon—that of total war. Fifty years ago warfare was mainly the business of professionals. Now, as our forces at the front rely more and more on the home front, from which our weapons come, the enemy extends his targets to destroy the sources of our supply.

From any deliberation on weapons development and utility it appears that the emergence of effective weapons has been slow. The machine gun of 1914 had its roots in Dr. Gatling's gun patent of 1862. Massive use of combat planes in World War II came about 40 years after the Wright brothers' first man-carrying flying machine. Admittedly, by concentrating vast sums of money, facilities, and brains, we got the atomic bomb years in advance of normal processing. But there were years of study behind the first concrete step in that program.

There are the involvements of cycle time. An official of the Woolworth chain of stores has estimated that there is a lapse of 7 years between the time a new article is first considered by his company and its stocking on Woolworth counters. One of our foremost aircraft manufacturers last year estimated that a large jet-powered cargo airplane of a type familiar to his company would require 8 years from design to delivery of the first production model. In military usage, to the usual design-development-production cycle there is added another time lag due to service testing and proving and training of military personnel in its operation and maintenance, before a new weapon becomes operational for combat organizations. In World War II our AAF flew no aircraft in combat that was not under development before we entered that war. Based on these factors and other estimates, I doubt that we or Russia will have operational long-range missiles during the next 3 to 5 years.

IV. ESTIMATE OF PREVAILING SITUATION

From this background of the subject we can proceed to an appraisal of the existing situation.

Sputniks I and II enter and take the center of the stage. They have ignited our imagination and anxiety. Lineal descendants of the German V–2 rockets, they are a scientific and technological achievement of first magnitude. Their effects have been attested to by world opinion. They are very sobering in their implications for us and other anti-Russian nations because means may be developed to enable their successors to drop nuclear destruction on our centers of population.

Definitely, the sputniks are part of the Russian missile program. Our scientists and technicians have been deeply stirred by them. It has been computed that the thrust of the propulsion unit that launched Sputnik II was about double that of any propulsion unit we had under development at the time of its appearance.

Comments on the technical nature and operation of the sputniks will be rudimentary. They are creatures of the science of rocketry which to some extent was known to the Chinese after they discovered gunpowder in the 12th century. Application of rocketry in war has been halting and slow. The German V–2's are the best known prior example. Another is the bazooka, a recoilless rifle developed by our Army ordnance, which was effective against tanks in World War II. Our intercontinental ballistic missile (ICBM), very distant relative of our childhood roman candle, designed to range 5,000 miles, behaves like a bullet after it has left the muzzle of a gun. Thereafter, the ICBM is on its own. To hit its target, at the top of its trajectory it must pass through a tiny area in space at a precise velocity. To do so the rate of combustion of its propellant must be wellnigh perfect, as must be other elements in the operation of this missle. It is no simple trick.

In this area of military art and science there are many imponderables. Major powers do not abandon proven organizations nor proven weapons until events force such changes. Let us look at Russia. Her standing army today probably is as big as any in her history. Her Migs over Korea and subsequent disclosures show that she is not neglecting her air force. Her navy is the second largest in our 1958 world. She has commissioned approximately 500 submarines, most of them built since 1945. While Russia's naval record is not impressive, her new undersea fleet is something to conjure with. Listen to Admiral Rickover: "At the outbreak of World War II, Germany had 57 U–boats or only about one-tenth the number now possessed by the Soviets. Of these, only 22 were oceangoing submarines. Yet, before that war was over, the German submarine fleet killed over 40,000 men and sank 14 million tons of allied shipping." Russia has the A–bomb and the H–bomb. She has announced the firing of an intermediate ballistic missile, and the flight of the sputniks is proof of her advances in rocketry. This rough assessment of her military strength points up the need for continuing concern over our balance of forces and attention to our weapons development.

What is our position? Our Army, Navy, and Air Force—what have they been doing in weapons development?

Army's situation since 1945 has been trying. Our Government and public have supported greater appropriations for air power. Perhaps the next global war will be won in the early rounds by our Air Force and naval aviation. Meanwhile our Army with painful recollections of Korea, must be prepared to carry the brunt of the action in limited, or local wars. For greater mobility the Army is developing an aviation service with all that entails. It has modernized its armor, introduced atomic cannons, and has under development or in production missiles—from the Dart with a range of 2 miles to the Jupiter with a range of 1,500.

Since 1945 our Navy has been in a state of transformation. Nuclear bombing has doomed the battleship. The Navy's building program includes a number of huge aircraft carriers. Navy's combat aircraft now are jet propelled. Because of successful testing of the atomically powered submarine *Nautilus*, Navy is going forward with the building of a fleet of atomically powered subs. Five of these have been launched. There is indication that the Navy is planning or building nuclear-powered submarines from which to launch above or below the waves intermediate-range ballistic missiles with nuclear warheads. The Polaris missile is being developed for this purpose. It is only one of a number of missiles that the Navy has under development or in production.

The combat type equipment of our Air Force also has been transformed from piston to jet propulsion, and has been modernized in other respects. Our air defenses, in addition to the power of bombs, guns and rockets, are being strengthened by a worldwide alarm system composed of a network of radar and other electronic devices. Beginning in World War II and gaining momentum about 7 years ago, the Air Force has been engaged in the missile program. This program embraces small rockets affixed to aircraft for firing at other aircraft or at ground targets, the intermediate ballistic missile with range of approximately 1,500 miles, through the giant intercontinental ballistic missile with range of 5,000 miles or more. These ballistic missiles, like others in the program, are designed to carry nuclear warheads to their targets.

From this brief review it is apparent that we have virtually a new inventory of modern weapons. The design, development and production of this inventory is largely the work of many of the most reputable scientific institutions and strongest industrial organizations in our country.

This résumé reveals something not so obvious. Neither the United States nor Russia is relying on an ultimate weapon. Both have developed a balanced family of weapons. There never has been and probably never will be an ultimate military weapon.

V. CONCLUSIONS

The effects of the sputniks can be positive or negative. Much scare information has been publicized about them. They can prove very damaging if because of them we allow the enemy to panic us. In this interlude men alone, or in groups, will grab for power, personal or political, for business, for professional recognition. Our public is in a quandary. Our leadership is on the spot because of this latest development in weapons development. We have been in worse jams. A few hours after the first Japanese bomber appeared over Pearl Harbor, we had lost a large part of our Navy's surface strength. Within 24 hours we discovered we could not cooperate in aerial combat with our allies because we lacked certain radar equipment which was not available in quantity until months later. At that time we had pitifully

few combat aircraft with which to help ourselves or our allies. We came out of that trial with credit.

The sputniks have given us a jolt which can prove beneficial. Research and development efforts will be accelerated with short- and long-term gains for the general economy, as well as for the military. In material things our armament programs since 1940 have given us substantial dividends in expanded technology and productive capacities for peacetime living. In a laboratory not far from where I live men are laboring to generate and control extremely high temperatures for application of atomic fusion to civilian uses. Atomic fusion promises a superior type of energy for power production than does atomic fission. This undertaking had its genesis in the development of the H-bomb.

Our country now is engaged in a great armament race. May Providence guide us to the end of the course, and with humility may we seek His guidance. We should pace ourselves so that we shall retain our spiritual and material gains. The measures we take should not cause our dollar to rot. That would give to Russia a bloodless victory. Our defense organization and programs are under attack. They can stand some overhauling. Doubtless, the Congress before midsummer will enact legislation which will effect changes in our defense preparations. In any reorganization of the administration of our weapons development system our military should be permitted to share the authority because our military will be held responsible for the employment of our weapons. Nor are all of our problems born of clashing personalities and politics. We have some real ones in technological fields, such as in the rival schools of liquid versus solid propellents in the missile program.

To counter the sputniks we should have enough time if the job is comprehended and tackled with vision and vigor. The men in the Kremlin know much better than most Americans what has deterred them from taking the big gamble of hot war during the past several years. Ready to strike is our retaliation force of hundreds of well shaken-down B–47 bombers, manned by seasoned crews, distributed over bases, worldwide, a percentage of them constantly armed and in the air. Gradually B–52 bombers of greater load-carrying capacity and range are arriving at bases prepared for them. These bombers are carriers of the so-called special weapons, of which we have an ample store. By 1963 our long-range missiles are scheduled to become operational. In that event another chapter will begin to unfold.

SUMMATION

At this juncture in our lives we are confronted by a strong, self-declared and seemingly implacable enemy. To better insure our safety as individuals and collectively as a Nation, because of the monstrous weapons now within Russia's hands, we must plan intelligently and act resolutely in this field of weapons development.

Inconsistency of the Present Administration

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, it perhaps is not news that the administration fosters policies inconsistent with each other. However, I call to the attention of our colleagues one example of this inconsistency. The following editorial appeared in the New York Journal-American of February 20, 1958:

INCONSISTENCY

The administration seems to be working at cross-purposes with itself in its proposals on taxes and postal affairs.

President Eisenhower, in his state of the Union message, implored both labor and management to forego, or at least defer, demands for wage increases on one hand or actions to increase prices on the other, in order not to spread inflation.

Shortly afterward, the President declared it to be administration policy to avoid any increases in Federal taxes, which of course would add to living costs.

Now the administration has a bill in Congress to increase postal rates, or the price of mail service.

In actual effect, the administration wants to do exactly what it has asked business management not to do. And one consequence of any postal-rate increase would be unemployment in some fields of merchandising, when the administration already has an unemployment problem on its hands.

How does the administration explain or justify its inconsistency?

The administration ought to be consistent with itself and to consider the public, as it is asking both labor and business to do.

Ethical Practices Codes of the AFL–CIO

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. ZELENKO. Mr. Speaker, I am pleased to place into the CONGRESSIONAL RECORD a letter from AFL–CIO President George Meany to affiliated national and international unions dealing with observance of the ethical practices codes of the AFL–CIO. The letter is based on a resolution approved by the AFL–CIO executive council at its meeting in Miami Beach, Fla., on February 7, 1958:

To Presidents of Affiliated National and International unions.

DEAR SIR AND BROTHER: This letter is written to you pursuant to a resolution of the executive council concerning the observance of the ethical practices codes. These codes, you will remember, were adopted at various times during 1956 and 1957, and were reaffirmed by an overwhelming majority vote of our second constitutional convention at Atlantic City in December 1957.

The ethical practices codes are elements of the fundamental policy of the AFL–CIO. They implement the provisions of our constitution, with its requirement that the AFL–CIO and its affiliated unions steadfastly oppose corruption.

It is the purpose of this directive to call to the attention of all affiliates of the AFL–CIO that the ethical practices codes, as a matter of right and of constitutional policy, must be observed and enforced. As events during the past 2 years have indicated, the codes are both a symbol and a weapon in our common effort to keep the American labor movement clean and democratic.

The six ethical practices codes deal with "paper" locals (locals without members); health and welfare funds; racketeers, crooks, Communists and Fascists; investments and business interests of union officials; financial practices and proprietary activities of unions, minimum accounting and financial controls; and union democratic practices.

While substantial steps have been taken in recent months to bring about complete compliance with the codes, some unions, while not by any means ignoring the objectives and recommended procedures contained in the codes, have not yet taken steps to insure complete compliance.

Without going into the detailed requirements of the codes, the executive council has directed me to call to your particular attention code No. 6 dealing with democratic processes.

This code provides that each member of a union should have the right to full and free participation in union self-government. This should include the right: (a) To vote periodically for his local and national officers, either directly by referendum vote or through delegate bodies; (b) to honest elections; (c) to stand for and to hold office, subject only to fair qualifications uniformly imposed; (d) to voice his views as to the method which the union's affairs should be conducted.

It provides that each member of the union shall have the right to fair treatment in the application of union rules and law—in return for which the member must undertake to carry out the responsibilities of union citizenship.

The code provides that the convention, as the supreme governing body of the union, must be held at least every 4 years; and that the term of office for all union officials should not exceed 4 years.

It provides that officers must be elected, either through referendum vote or by vote of delegate bodies, under fair rules that contain adequate safeguards for honest and free elections.

It provides that conventions of the union should generally be open to the public, and that proceedings or accurate summaries should be available to the membership.

It provides that membership meetings of local unions must be held periodically, with proper notice of time and place.

It provides that, in order to insure democratic, responsible, and honest administration of trade unions, the AFL–CIO and its affiliated unions should have the power to institute disciplinary and corrective proceedings, including the power to institute trusteeships where necessary.

The executive council again wishes to emphasize, however, that the code specifically states that such power to institute trusteeship should be exercised sparingly and only in accordance with the provisions of the union's constitution, and autonomy should be restored promptly upon correction of the abuses requiring trusteeship.

The executive council and executive officers of the AFL–CIO recognize completely that the forms and procedures of union government do and should vary widely from one organization to another. But we recognize with equal clarity that the basic democratic rights of union members, as set forth in the ethical practices codes, must be guaranteed if our trade-union movement is to remain strong and capable of meeting the great challenges of the future.

It is the purpose of this directive to call to your attention the requirements for action contained in the ethical practices codes and to insure that your union is fully in compliance with this policy position of the AFL–CIO.

In compliance with the constitution of the AFL–CIO and the resolution adopted by the executive council at its midwinter meeting, the executive council calls upon your union

to take all applicable steps to assure complete compliance with the ethical practices codes by April 15, 1958. Extension of time will necessarily be permitted for those unions in which convention action is required under the terms of their own constitutions to take these steps.

I feel certain that in providing full compliance with the ethical practices codes, your trade-union organization will enhance its ability to perform its fundamental role: to serve the membership faithfully and effectively.

Fraternally yours,

GEORGE MEANY,
President.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. ZELENKO. Mr. Speaker, I am pleased to place in the CONGRESSIONAL RECORD a statement by the AFL–CIO ethical practices committee on labor legislation which was adopted by the executive council at its meeting in Miami Beach, Fla., on February 7, 1958:

The ethical practices committee at the request of President Meany, has reviewed the different proposals for legislation relating or purporting to relate to improper activities in labor and management.

In studying these proposals, the ethical practices committee has been governed by the mandate of the recent constitutional convention of the AFL–CIO, which by its resolution on new labor laws:

1. Reaffirmed AFL–CIO support for the Douglas bill, S. 2888, to require full disclosure of welfare fund finances, whether these funds are administered by unions alone or by unions and employers together or by employers alone.

2. Declared no objection to legislation making public the reports unions are now required to file with the Department of Labor under the Taft-Hartley Act.

3. Directed the executive council to give continuing study to what legislation may be desirable to aid the labor movement in achieving its legitimate aspirations and authorize the council to support any such measures as it finds to be necessary and appropriate.

4. Instructed the council strongly to oppose all proposals which under the pretext of protecting workers from corruption seek in reality to weaken unions or to undermine their ability to fulfill their proper responsibilities.

All of the legislative proposals which have been offered thus far were, in substance, considered by the convention, in adopting the foregoing resolution. In light of this, the ethical practices committee believes that there is no basis or justification for any change, modification or amplification of the AFL–CIO position on these legislative proposals at this time.

The AFL–CIO should continue to strongly oppose legislative proposals which, in the name of protecting workers from improper activities, would undermine self-government within the labor movement or weaken labor unions as the collective bargaining representatives of employees.

The AFL–CIO should continue strongly to support the Douglas bill to require full disclosure of all welfare fund finances and the bill which has been offered to authorize the Secretary of Labor to make public the financial reports unions are now required to file under Taft-Hartley.

In recommending this policy for the AFL–CIO on these legislative proposals, the ethical practices committee at the same time, wishes to record its conviction that the AFL–CIO must continue in the future, as it has so effectively done in the past, to meet its responsibility for keeping its own house in order. Failure on our part to meet this responsibility can only result in governmental assumption of what are properly trade union functions.

Freedom and democracy are the essential attributes of our movement. Labor organization lacking these attributes, like Hitler's labor front, Franco's and Peron's syndicates, and Moscow's captive unions, are unions in name only. Authoritarian control imposed by government is contrary to the principles upon which our labor movement and our democratic institutions depend. Licensing of labor unions or steps in that direction, in the name of combating corruption, must be resolutely opposed by a free labor movement proud and worthy of its name.

One of the most effective ways of keeping our own house in order is compliance by all affiliates with the ethical practices codes. The recent constitutional convention of the AFL–CIO confirmed and adopted these codes. Further, the convention called upon each affiliated national and international union to take whatever steps are necessary within its own organization to comply with the provisions of the codes of ethical practices.

In light of this convention mandate, the committee recommends that with the authorization of the executive council, the president of the AFL–CIO should send a directive to all affiliates calling for compliance with the codes by an early date—April 15 is suggested. Of course, if compliance with any code provision by an affiliate requires convention action on its part, the compliance date for such provision should be the affiliate's next convention.

The ethical practices committee is aware that most affiliates of the AFL–CIO have always complied with the codes and require no directive to continue compliance. However, a directive such as we suggest would insure total compliance and also would have the salutary effect of pointing up the fact that the labor movement is vigilantly and effectively engaging in self-regulation.

Respectfully submitted.

ALBERT J. HAYES,
Chairman.
GEORGE M. HARRISON,
DAVID DUBINSKY.

The Courts and Insanity

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. KEATING. Mr. Speaker, there are very real problems in Federal jurisdictions concerning the handling of defendants who claim they are insane. It is incumbent upon Congress to clarify the issues in this important area. As a first step, a questionnaire will be circulated by the House Judiciary Committee to elicit the views of judges, lawyers, psychiatrists, and penologists who have been actively concerned with this subject.

James Clayton, able reporter for the Washington Post, has penned a perceptive analysis of the knotty problems involving insanity and the courts. He has pointed up the complexities which face parties, attorneys, the bench, law-enforcement officials, and Congress in this field.

I am extremely hopeful the House Judiciary Committee after receiving answers to the questionnaire will undertake the complete survey of criminal insanity in Federal jurisdictions which I have proposed. Such a study can bring order out of the chaos Mr. Clayton outlines so well. In order that more people may have an opportunity to read this penetrating article, I am inserting it at this point in the RECORD, under leave previously granted:

COURTS TAKING NEW LOOK AT CRIME AND SANITY

(By James Clayton)

A profound battle, termed by some a revolt against the basic premise of the criminal law, is being fought these days in the district courthouse here. On its outcome rests, at the very least, the future of our prisons and our mental hospitals. At the most, its outcome could recast the entire philosophy of our criminal law.

Like most battles in the history of law, this one is being fought over a narrow question: When should a man charged with crime be released from responsibility for his acts because of mental disease? But the battle is larger and the stakes are greater than that.

Beyond this immediate issue loom the larger issues of society's basic concepts of criminal law. There is a challenge here to the very principles of retributive punishment and the philosophy which lies behind the theory of detention as a deterrent to crime.

There lurks, behind the relatively narrow confines of the Durham-rule debate, the even more startling question of whether or not most crime is not essentially the consequence of mental aberration. And beyond that is the corollary issue of whether, if this be so, mental hospitals instead of prisons may not be the answer to an infinitely larger percentage of our crime.

BASIC ISSUES SUBMERGED

These basic questions, however, seldom reach the frontline of this battle—perhaps because the participants feel that this is not the time or the place to argue basic issues; perhaps because they think the battle must be fought on narrower grounds before the basic questions are asked; perhaps because the details of the individual skirmishes drive the focus away from the primary questions.

No one argues in the district court or the United States court of appeals that we should or should not treat criminals as mental patients; that we should or should not build more hospitals instead of more jails. But these are the logical projections of the arguments which are advanced daily in courtroom conflicts among prosecutors, lawyers, psychiatrists, and judges over the responsibility of the individual for his crimes.

The daily skirmishes, then, become the scene of the battle. The great issues submerge, like the great bulk of an iceberg, and only the smaller, the more dramatic, the more personal problems emerge to haunt the public:

Can Dallas Williams, classed by psychiatrists as presently sane but dangerous, be confined to a mental hospital? Is Charles Jenkins, a man with a sociopathic personality disturbance, morally or criminally responsible for the robberies he committed? Should society execute Russell Carter, a disturbed, weakminded youth, for the murder

of a 15-year-old girl or should it treat him as being mentally ill?

THE ULTIMATE LOGIC

This battle, whether it be over the basic issue or over the more pressing one, just now, of criminal responsibility, is not a new battle and, therefore, perhaps not a revolutionary one. It began long ago, in some forgotten place, when some now-forgotten man first said that a criminal should not be punished because his mental condition was such that he could not be held responsible for what he did.

The problem then and the problem now is how society is to determine precisely when the condition occurs. The step, however, from this starting place to the ultimate end of this line of thought (i. e., that all crime is the result of mental troubles) is so great that any discussion of even the narrower issue takes on the appearance of a revolt.

Throughout history, changes in this field have come slowly because of the traditions of the criminal law. These traditions hold that a man is responsible for his crime as long as he is mentally able to form an intent to do wrong. They also hold that criminal law must protect society, punish the evildoer, deter others from crime, and rehabilitate the criminal.

THE REASONABLE CREATURE

The practice of excusing men from responsibility for crime because of a mental condition developed from the concept of criminal intent. Punishment should be imposed only on those who freely choose to do wrong, i. e., who are mentally capable of having an evil intent. No one seriously debates this concept. No one argues that a man who freely and deliberately chooses to do wrong should not be punished.

The argument arises over how society is to decide when one really can make a free choice to do wrong. For years, the courts have based this decision on a philosophy which holds that man is a creature of reason. This, the argument goes, is so because man, unlike an animal, knows through reason what is right and what is wrong. Because of reason, he can control his actions to conform with what he knows is right.

On the basis of this philosophy, the criminal law developed the rule that a defendant can be excused from crime if his mental processes are so deranged that he does not know the difference between right and wrong or, even if he does know the difference, he is unable to embrace the right. This rule was laid down by the House of Lords in England in 1843 in the case of Daniel M'Naghten. It has been widely copied elsewhere in the English-speaking world and is the standard rule in most American courts.

But as knowledge of the human mind developed, first philosophers and then psychiatrists began to doubt that man can control his actions solely by reason. Other parts of man's mind—bits called impulse, instinct and emotion—weigh heavily with or against reason when man decides what he will do.

If this is true, they argued, the exceptions from criminal responsibility must be expanded. If man's reason is not the sole governor of conduct, to punish him for a crime he could not help committing even if he knew it was wrong serves no purpose other than to deter others.

And, the argument goes, deterrence is a motivating factor in human conduct only if one accepts the theory that man acts primarily because of fear. Many philosophers now reject fear as a prime motivator in life, although others insist that it is.

Jurists, as well as philosophers, have long been aware of these conflicting schools of thought. Thurfman Arnold, when he was sitting on the court of appeals here in the mid-1940's, acknowledged this conflict and decided that it could be reconciled only by a major change in the public attitude toward criminal law.

Some accommodation was made, however. Many American courts, including our own here in Washington, adopted the irresistible impulse test as a companion of the M'Naghten rule. This held that a man can be excused if he committed a crime because of an urge so great that he could not resist.

To some judges and psychiatrists, the adoption of this rule marked a major step away from the old right-wrong theory in the criminal law. But to others, the force of the two rules combined still placed the emphasis upon right and wrong and the ability of man, by reason, to distinguish and to do the right.

To those who say that the irresistible-impulse rule was the break with the past, the court of appeals here took only a short, simple step, inevitable and evolutionary, when it adopted the Durham rule July 1, 1954. This group, led by Judge E. Barrett Prettyman, holds that the Durham rule merely extended the established rule to apply the defense to all acts which would not have been committed except for a mental disease. * * *"

In the Durham case, the court formally discarded the McNaghten and irresistible-impulse rules and adopted as the new test the rule that an accused is not criminally responsible if his unlawful act was the product of mental disease or mental defect.

The McNaghten rule, the court said, was inadequate because it was based on only one symptom of mental illness, the ability to tell right from wrong, and because it failed to take account of psychic realities and scientific knowledge. The irresistible-impulse test, the court wrote, failed to recognize any mental illness which is characterized more by brooding or reflection than by immediate action.

To two groups of thinkers who disagree sharply on the validity of the Durham rule, this was a revolutionary change. One group, headed by Judge Wilbur K. Miller, suggests that the Durham rule should be overturned. The other group, whose spokesman is the author of the Durham opinion, Judge David L. Bazelon, thinks that the decision was necessary to keep the law abreast of science. The courts can make such changes, this group argues, because insanity is a part of the common law and open to change by the courts unless Congress rules otherwise.

This, then, is the philosophy behind the quarrel over the Durham decision. Opponents of the new rule say it is designed to make an unneeded and invalid change in the philosophy of the criminal law. Its proponents either agree that it is designed to make a change and insist that the change is necessary, or argue that it does not modify the basic philosophy because that modification was made when the irresistible-impulse test was adopted.

What then, precisely, have the Durham rule and the 34 other opinions by the court of appeals since 1954 on the topic of insanity meant to the administration of justice in the District of Columbia?

First, the entire burden of determining when a defendant should be acquitted because of insanity has been shifted to the jury. Formerly, the judicial system shared part of that burden when it had the judge instruct the jury to return an acquittal because of insanity if the defendant did not know right from wrong, was unable to embrace the right or was moved by an irresistible impulse.

Now, the jury must acquit if the defendant committed the crime because of a mental illness. The trial judge can give it no help in determining when this situation exists.

Second, the Durham rule has broadened the scope of psychiatric evidence. Formerly, psychiatrists had to direct their testimony primarily to the right-wrong concept—a concept which many of them felt had no validity. Those who did not so confine their testimony were, in the words of Justice Felix Frankfurter, making "shams" out of the M'Naghten rules. Those rules, Frankfurter has said, "are very difficult for conscientious people and not difficult enough for people who say, 'We'll just juggle them.'" Now, most psychiatrists feel that no juggling is necessary because they may testify in their own way about the defendant's entire mental process.

Third, these opinions have increased the Government's burden in criminal trials where insanity is an issue. The Government must now prove not only that a man committed a crime but that any mental disease which he may have had did not cause him to do it. It is testimony on this negative causality which bothers the prosecutors.

United States Attorney Oliver Gasch says psychiatrists tell him that it is almost impossible to determine whether any mental illness did not produce any particular crime. This means, he says, that the Court has imposed an almost impossible burden on the Government. However, Dr. Winfred Overholser, superintendent of St. Elizabeths Hospital, says he believes that psychiatrists can testify on causality in most cases.

Fourth, the Durham rule has made the role of the psychiatrist both more and less important in these trials. On the whole, the court of appeals is giving less weight to the psychiatrists' opinions now than it did before but it is giving more weight to their facts. Accordingly, there exists a greater need for psychiatrists to explain to lawyers, judges and juries what they are talking about. Many psychiatrists have not yet recognized the need for such explanations or learned how to make them.

Fifth, the court of appeals is demanding a more sympathetic approach from prosecutors and trial judges toward cases in which the insanity issue is raised. It has insisted that every conceivable opportunity be given for a defendant to raise the defense of insanity. And it has resisted efforts by either the Government or the trial courts to hinder the defense or to undermine it by anything other than psychiatric testimony.

Around these five points, most of the criticism of the Durham rule and the court of appeals has centered. Prosecutors and judges argue that the appellate court is demanding more than psychiatry and juries can produce. Psychiatrists, they said, are not far enough advanced in their science to discuss fairly the connection between mental illness and crime and, furthermore, have not yet learned to communicate what they do know. And juries, these critics argue, are not equipped intellectually to handle the larger and more difficult problems now placed in their hands.

Supporters of the court of appeals and of its effort to adjust law to psychiatry will agree that psychiatry has not yet learned to communicate. They also are not sure that psychiatry is far enough advanced to meet the new requirements placed on it, but they insist that if it is not, this is the time for psychiatrists to admit their shortcomings and to tell what more they must have. Juries, these advocates insist, can understand the issues and make wise decisions if the prosecutors, psychiatrists, defense lawyers and judges will work to make them understand.

There are two more arguments used by critics of the Durham rule. One is that the increased number of acquittals by reason of insanity will end the deterrence value of criminal law. This, as noted earlier, is a fundamental criticism of the entire approach. Another is the fear that those so acquitted will soon be freed from mental hospitals to roam the streets again.

Congress stilled some of this criticism when it passed a law requiring that anyone ac-

quitted by reason of insanity be committed to a mental hospital until he regains his sanity and is no longer a threat to society. Dr. Overholser admits that this places a greater burden on his staff, but he thinks that a man released as cured after 5 years in a mental hospital is less likely to commit crimes than one released after 5 years punishment in prison.

Critics of the Durham rule also take comfort in the fact that the McNaghten and irresistible impulse tests have been discarded only here and in New Hampshire. They further note that every State court and every Federal court before which the Durham rule has been argued has rejected it.

They neglect to point out, however, that 2 of the 5 Federal courts which have turned down the rule said they were sympathetic but were unable to change the rule in their jurisdictions. Four State courts have rejected the rule out-of-hand, 2 have said merely that it isn't the law in their States, and 1 has said that it would like to adopt the new rule but is bound by the legislature not to.

From watching this argument and counterargument, one receives the distinct impression that much of the confusion now present in our courts comes either from an inability of lawyers, judges, and psychiatrists to grasp the problems before them or their refusal to admit that they have grasped them. The lawyers still ask the same questions they asked before the Durham decision; the psychiatrists still give the same answers. A pattern, once learned, is hard to break even when the appellate court insists that it must be broken.

A perfect example is the case of Charles N. Jenkins and that notorious term, the sociopathic personality disturbance. When Jenkins was on trial, 3 psychiatrists testified that he had this particular type of mental trouble (a type characterized by antisocial action and general meanness), but each classified it differently: 1 called it a disease, 1 a disorder, and 1 a defect.

Then the prosecutor and the defense lawyer fought over which category Jenkins should be in and which of the categories came within the Durham rule. After considerable confusion, which certainly made the jury's job no easier, the trial judge ruled that the trouble, whatever it was called, was a mental illness within the rules. The jury then convicted Jenkins, agreeing that the robbery he committed was not the product of this illness, whatever it was called.

The judge's ruling, apparently, was precisely the solution the court of appeals had in mind when it wrote, "Unexplained medical labels * * * are not enough." It later expanded this to say, "It is for the jury * * * to decide whether a given psychiatric diagnosis, if accepted, brings the accused within the legal definition of insanity."

Yet doctors, lawyers and judges still squabble over whether a sociopath has a mental disease. It was a key term up for discussion last Monday when a noted panel of two psychiatrists and two lawyers discussed the entire problem before a medical society.

But whether these men agreed with the court of appeals or not, they are bound by its ruling that it doesn't matter if a sociopath is termed a victim of a disease, a defect, a disorder or a pink cow. What does matter is the facts which led the doctors to that conclusion; the jury will then use those facts to decide if a mental illness sufficient to produce a crime was present.

It is, then, on these side issues that the battle is fought. Many who would support the Durham rule, if it stood alone, have joined the cry against it because of these complicating factors. Some of this criticism is brought about by a failure to comprehend the issues; some of it is brought about by a belief that the court of appeals is not, itself, playing fair with the rules.

This belief, one of the most serious charges possible because it is an attack on the intellectual honesty of the court, is based on the court's recent reversal of three convictions. In these cases, the court upset jury verdicts on the ground that a reasonable jury could not have reached the verdicts which those juries reached.

These reversals have raised the eyebrows of even some of the court's strongest supporters. They wonder if the appellate court is trying so hard to change the basic philosophy of criminal law that it is neglecting the very principle which it laid down in the Durham case of giving the jury the final determination of the sanity of defendants.

Thus, for these various reasons, many persons have joined to attack the Durham rule. There are those who disagree with the philosophy that treatment is more effective than punishment; they see the court of appeals, in its Durham rule and its application of the rule, as seeking to impose this philosophy. There are those who feel that the court of appeals is being intellectually dishonest when, in their view, it breaks its own rules because it disagrees with the results the rule produces. There are those who feel that the Durham rule itself is too vague to work successfully even though it is a step in the right direction.

All of these groups are working together to get a congressional investigation of the problem in hopes of obtaining clarifying legislation—clarifying in the sense that it backs their own particular view. Gasch has supported this move, some Congressmen are interested and Dr. John R. Cavanagh, one of the foremost anti-Durham psychiatrists, has added his weight.

Opposed publicly to such an investigation is Dr. Overholser, who says that legislation would only complicate by solidifying a rule in a changing field. The Durham rule's most eloquent supporters agree in private with Overholser. They fear that such hearings would confuse rather than clarify, would remove the argument from intellectual grounds to personal ones and would stir emotion rather than reason.

Sitting happily on the sidelines are many lawyers and psychiatrists. They would be pleased to return to the pre-Durham situation. Then, at least, they knew the rules. Now, they don't know them and they aren't too worried about trying to learn. Perhaps, they think, if the rule is ignored, it will just go away.

Space-Age Vehicles

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. ASHLEY. Mr. Speaker, I would like to call to the attention of the House the newest contribution by American industry to the defensive strength of our country. Willys Motors, Inc., Toledo, Ohio, internationally known makers of military vehicles, particularly the famous universal Jeep, has now successfully developed for our military services a completely new concept of lightweight tactical vehicles. These flat-platform, 4-wheel-drive, 4-wheel-steer vehicles, can be rushed by air to any danger spot in the world. They require an absolute minimum of space to transport.

The authoritative trade publication, American Metal Market, gives details and specifications in an article published in its February 11 issue, which I submit for the RECORD:

[From the American Metal Market, February 11, 1958]

WILLYS DEVELOPING NEW FAMILY OF LIGHT SPACE-AGE VEHICLES

WASHINGTON.—Reflecting changing concepts of needs conforming to the jet and space age, particularly with an eye to possible defense transport requirements, an entire new family of lightweight tactical military vehicles is being developed by Willys Motors, Inc., it has been disclosed. The successors to the old World War II and Korean-war jeeps are emerging from the drawing boards, the engineering and design department, the mockup shop, and one is now coming off the assembly line at the Willys plant in Toledo.

The vehicle coming off the line is still earthbound in name—the mechanical mule—but its chief action at present is with the Army's famous 101st Airborne Division, the Screaming Eagles. This forerunner of the new Willys space-age tactical military vehicles is also being supplied to the United States Marine Corps.

This new family of vehicles with low silhouettes, high interchangeability of parts, improved payload-to-weight ratio, extreme ruggedness, and economical operation and maintenance will make current ¾-ton military vehicles obsolete.

All of the new Willys family of vehicles is tailored for airborne military operations of the future. They will have profound effects on the science of logistics and, indirectly, on tactics and strategy of any future war, the developers declare.

The adaptability and convertibility of these versatile vehicles ranges from that of missile launcher, recoilless rifle platform, and aircraft control tower to personnel carriers, frontline ambulance, and ammunition carriers.

The mule, as supplied to the military forces, weighs around 900 pounds, is able to carry 1,000 pounds, or more than its own weight, over the roughest of terrain, up to 60 percent grades, and at speeds up to 25 miles an hour.

Technically designated as the M–274 (half-ton weapons carrier), the platform is constructed of extruded magnesium, 95 by 48 inches, and lightweight metals are used wherever possible to reduce overall vehicle weight. It has a road clearance ranging from 11.5 inches under the motor to 12 inches at the rear under the axle.

III. More About Reuther—Old but Still Affirmative—The Reuthers as Students in Russia

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, several times the ideas absorbed by Walter and Victor Reuther when they spent some 2 years in Russia have been inserted in the RECORD.

In view of the fact that, from shortly after his return down to the present day, Walter P. Reuther has been an advocate of violence and lawlessness, an article by George Todt in the Valley Times of California dated January 30, 1958, may be

helpful to some who are inclined to think that, because Walter does not drink, chew, smoke, or abuse his family, he is a good American.

GEORGE TODT'S OPINION—REUTHER WORDS REVEAL CHARACTER

"By their fruits ye shall know them." (MATTHEW vii: 20.)

The most revealing insight into the political and social philosophy of Walter Reuther has come to us in the form of a personal letter written when the gentleman was spending 18 months in the Soviet Union right after the depression.

He and his brother Victor were then engaged as instructors in the automobile plant at Gorki, close to Moscow. At that time the brothers were in close touch with Gladys and Mel Bishop of Detroit, a relationship which has since turned sour. Somehow one of the letters has turned up for publication in the Saturday Evening Post (August 14, 1948, issue) since then.

For reasons of his own, Mr. Reuther does not like to discuss the contents of this letter. Here is an exact copy of the important document which I copied from the Post. It can also be obtained by writing to Human Events (Editor Frank C. Hanighen, 1835 K Street NW., Washington, D. C.) and enclosing 20 cents in coin with your request.

It is precisely because of this potent letter, which Mr. Reuther fears Senator GOLDWATER will question him about in the forthcoming Senate rackets probe at which he has been invited to attend, that he is crying "foul" in advance—and this is the very reason he is now laboring desperately to have his interrogation carefully circumscribed so that he will not have to talk about this controversial and heretofore somewhat "hush-hush" matter.

Without further ado, allow me to give you a carefully copied replica of the excerpts of the Reuther letter published in the Post nearly 10 years ago. Then compare its philosophy with that contained in Senator GOLDWATER'S address which was quoted yesterday. After that, you can be guided by your own conscience. Here is the Reuther communication:

"DEAR MEL AND GLAD: Your letter of December 5 arrived here last week from Germany and was read with more than usual interest by Wal and I. It seemed ages since we have heard from you, and so you might well imagine with what joy we welcomed news from Detroit. It is precisely because you are equally anxious, I know, to receive word from the 'workers fatherland' that I am taking this first opportunity to answer you.

"What you have written concerning strikes and the general labor unrest in Detroit, plus what we have learned from other sources, makes us long to be back home with you in the frontlines of the struggle. However, the daily inspiration that is ours as we work side by side with our Russian comrades in the factory, the thought that we will forever end the exploitation of man by man, the thought that what we are building will be for the benefit and enjoyment of the working class, not only of Russia but of the entire world, is the compensation for the temporary absence from the struggle in the United States. And let no one tell you that we are not on the road to socialism in the United States. Let no one say that the Union of Soviet Socialist Republics are not on the road to security, enlightenment, and happiness.

"Mel, you know Wal and I were always strong for the Soviet Union. You know we were always ready to defend it against the lies of the reactionaries. Here the workers, through their militant leadership, the proletarian dictatorship, have not sold out to the owning class like the SP (Socialist Party) in Germany and like the Labor Party in England. Here they have against all odds, against famine, against internal strife and civil war, against capitalist invasion and isolation our comrades here have maintained power, they have won over the masses, they have transformed the Soviet Union into one of the great industrial nations of the world. They have laid the economic foundation for socialism, for a classless society. Mel, if you could be with us for just one day in our shop, you would realize the significance of the Soviet Union.

"Here (in Russia) are no bosses to drive fear into the workers. No one to drive them in mad speedups. Here the workers are in control. Even the shop superintendent has no more right in these meetings than any other worker. I have witnessed many times already when the superintendent spoke too long. The workers in the hall decided he had consumed enough time and the floor was then given to a lathe hand who told of his problems and offered suggestions. Imagine this at Ford or Briggs. This is what the outside world calls the ruthless dictatorship in Russia. I tell you, Mel, of all the countries we have thus far been in, we have never found such genuine proletarian democracy. It is unpolished and crude, but proletarian workers' democracy in every respect. The workers in England have more culture and polish when they speak at their meetings, but they have no power. I prefer the latter.

"In our factory, which is the largest and most modern in Europe, and we have seen them all, there are no pictures of Fords or Rockefellers and Mellon. No such parasites, but rather huge pictures of Lenin. Red banners with slogans 'Workers of the world—unite.' are draped across the craneways. Such a fine spirit of comradeship you have never before witnessed in your life. Superintendent, leaders and ordinary workers are all alike. If you saw your superintendent as he walks through the shop greeting workers with 'Hello, comrade,' you would not distinguish him from any other worker.

"Three nights ago we were invited to the clubhouse at Sosgor (Socialist City) to attend an evening of enjoyment given by the workers of the die shop. A division of the Red army was also present as guests. In all my life, Mel, I have never seen anything so inspiring. Mel, once a fellow has seen what is possible, where workers gain power, he no longer fights for an ideal, he fights for something which is real, something tangible. Imagine Mel, Henry Ford throwing a big party for his slaves.

"Mel, we are witnessing and experiencing great things in the U. S. S. R. We are seeing the most backward nation in the world being rapidly transformed into the most modern and scientific, with new concepts and new ideals coming into force. We are watching, daily, socialism being taken down from the books on the shelves and put into actual application. Who would not be inspired by such events?

"Let us know what is happening to the YPSL (Young Peoples Socialist League) and also the Social Problems Club. Carry on the fight for a Soviet America.

"VIC AND WAL."

Postal Disintegration

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial in the February 1958 issue of the Postal Transport Journal which highlights the waste and inefficiency in the regional reorganization of the postal service under the present Postmaster General.

The editorial follows:

(By Wallace J. Legge)

On January 28, 1958, the Post Office Department announced, in a press release, the elimination of two levels of management in the regional structure. Although the National Postal Transport Association represents approximately 1,000 of the employees involved in the change, we were neither consulted nor advised. The first official word we received on the reorganization was the press release of January 28, which was sent to newspapers and magazines. This is a regrettable incident in labor-management relations and is contrary to assurances previously given by Department officials that National Postal Transport Association officers would be notified of pending changes affecting our members.

The latest reorganization of management eliminates 99 district transportation offices and 91 district operations offices. This means the dislocation of approximately 1,000 PTS employees alone, many of whom are in high salaried levels. Even if a considerable number of these people are placed in regions and stationary installations, it will mean that some of them will have to tear up established homes and move to regional headquarters. For others, it will mean reduction of salary and taking up new and unfamiliar assignments. Employees in other organizations who have sweat out opportunities for promotion may find these promotions postponed.

Considering the hardships involved, we question whether the discontinuance of district transportation offices will be efficient and economical enough to justify the dislocation of so many people.

At the risk of being repetitious, we point out again that when the Post Office Department created the 15 regions, staffed by high salaried officials, NPTA disputed Department claims of economy and efficiency. When the program was put into effect, postal officials claimed that decentralization would result in better postal service at less cost. Since that time there have been many changes in postal field operations, and as each change was announced, the Department claimed additional savings and improved postal service. For example, the consolidation of the Los Angeles PTS Terminal and the Los Angeles Post Office would save $400,000. The consolidation of districts in 1 region would result in savings of $180,000; and so on, ad nauseam.
